The books and papers received during the month were laid on the table, and a number of letters which had been already circulated to the Committee, were read and recorded.

ROBT. GOMPERTZ,  
*Honorary Secretary, S. P. A.*

## NELLIAMPATHY.

Proceedings of a Meeting held at Nelliampathy Meeting Room, March 27th, 1903. PRESENT:—Messrs. G. L. Duncan, H. M. Hall, A. R. Jones, G. Murray, W. L. Ranking, P. W. E. Watts, G. H. Welchman, and J. C. Abbott, *Honorary Secretary*. Mr. H. M. Hall in the Chair.

**Hospital.**—Read letters re state of Apothecary's Bungalow and removal of Apothecary and Hospital, to which no reply had been received. After some discussion it was resolved, that a list should be circulated asking members to subscribe towards the maintenance of the Hospital and a proposal made to the Sircar offering to share some of the cost of upkeep of same provided a habitable Bungalow was built for the Apothecary.

**Labour Bill.**—Papers were read and recorded.

**Delegate to Brazil.**—The Association expressed its opinion that this step was unnecessary.

**Roads.**—Read letters re state of road from Palghat to Wallagy to which no reply had been received.

The Association expressed its sympathy with the Memorialists re linking up of Palghat, Cochin, and Dindigul by broad gauge railway.

Mr. C. Hall was elected Honorary Secretary in place of Mr. J. C. Abbott who is leaving the district.

A vote of thanks to the Chair terminated the proceedings.

(Signed) H. M. HALL,  
*Chairman.*

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, APRIL 18, 1903.

[No. 16.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 24th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*April 14th.—Weather—*Westerly breezes. Hot days. Blossom showers have set in, but have been very local, some estates have had nearly two inches, some half an inch, some a quarter, and some nothing. *Works—*Pruning and manuring. *Coffee—*Healthy. *Labour—*Sufficient. *Health—*Good. *Interesting item—*We give our congratulations to the estates which are getting such fine prices, but it would be interesting to know, why the prices vary in neighbouring estates under the same proprietor, coffee being cured under the same conditions.

#### IN CENTRAL AFRICA.

##### COFFEE AND ELEMENTARY SCIENCE.

THERE has been a certain amount of correspondence recently in the *Central African Times* with reference to Coffee and the Coffee Bug. The latest letter before us bears the signature of Mr. JAMES INGLIS. It contains some interesting information about coffee cultivation in these parts, and a certain amount of elementary scientific instruction. If about the latter there is some flavour of the copybook headlines whereby moral precepts were imparted to us in our youth, there is also a flavour of knowledge which, however elementary, has to be borne constantly in mind by every planter who wishes to be more than a mere sower of seeds and waiter for crops. We learn from Mr. INGLIS' remarks that it is a well-known fact that coffee is not doing well, not only in the district of Cholo, but to a more or less extent all over the country. Under these circumstances, it should, as he remarks, be considered to the interest of every planter to listen patiently to each theory, especially when none of the former schemes to produce healthy plants and paying crops has been of much service. We would add: "always

provided that too much time is not devoted to listening to theories, to the detriment of practical effort, investigation and experiment." In Central Africa, it is said, the cultivation of coffee is very primitive, and little is done to make the physical properties of the soil anything but what Nature has made them. Things are very different in India, where manuring is largely resorted to, and where there has even been a reaction towards a more primitive method of cultivation—as exemplified in the Leeming system.

Branching off into the world of science, Mr. INGLIS alludes to another well-known fact, a fact in Nature, *viz.* that every plant is controlled by its surroundings, and more or less adapts itself to environments; but if those are not congenial the plant suffers in health, and is thereby unable to resist the first attack of any disease. *Apropos* of this he reminds us that plants are living things, and in many ways resemble the animal kingdom, in fact, so close has been the resemblance that the classification of the lower organisms are still a source of dispute between them. The simple rule of distinction is that plants live and grow, while animals move, live and grow, though in many cases the lower organisms of plant life also move, a well-known example being the *Protococcus*, to be seen in water when left standing in a vessel for some time. Plants, like animals, require food, but they, as a rule, possess the power of obtaining it from the mineral kingdom, whilst animals require for their food either vegetable or animal substances. Plants being dependent, to some extent, on the mineral kingdom for their existence, the physical properties of the soil on which they live are, to a greater degree, more important than the mineral composition, because these properties act and re-act on each other in determining the quality of any given land. Cohesiveness or tenacity is the resistance offered by a soil to penetration, and is important in relation to air, moisture and warmth, beside the resistance to be overcome by the root-system penetrating into and ramifying the soil in quest of food. It is further remarked that there is a relation between the root-system and the size of leaf-surface in plants which is effected by the nature of the soil on which they grow. If there is a large leaf-surface on the plant there is usually a large root-surface required to supply the food. But as the food is taken up by the roots the upper growth entirely depends on them, and, to a large extent, the leaf-surface tell us what the roots are doing. In the case of shallow and cohesive subsoils, even when there are

no visible signs of the former by stony outcrops, the want of depth and obstruction of subsoil to perfect root-system is noted by the stunted appearance of the plants and the production of numerous small shoots.

Referring again specially to Central Africa, Mr. INGLIS states that the leading characteristics of most of the cohesive subsoils there are weak hygroscopic power and impermeability to moisture. These soils are, however, strongly retentive of moisture when once saturated, and are apt to become waterlogged. In porous or sandy subsoils the root-system of some plants go down to a great depth, but in cohesive subsoils the inter-spaces containing air are very small, and when such soils become saturated all the air is driven out, resulting in a very insanitary condition to the functions of the roots of plants. Such conditions of soil are productive of unhealthy plants, their system is weakened, and they cannot resist disease attacks, spores (seeds) of which are always floating about in the atmosphere and alight on any wounds caused by insects, etc., and unless the plants are in good health the disease will get the upper hand and show itself in the offspring (seed) and later in the death of the plant. He then adds:—"That the soil is not the only cause may be inferred from the fact of a sucker producing good crops, which would tend to show that there is also something wrong with the upper parts of the plant as well as the lower." In all this there is nothing new, there is little that is not elementary. Nevertheless these words from Central Africa should not be dismissed lightly. In India, as well as in Central Africa, there is need for planters to remember facts such as those here touched upon, and to try to adapt conditions of culture to the necessities of both plants and soils.

### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

The following is the full text of the

#### Madras Planters' Labour Act

as finally passed by the Legislative Council of Fort. St. George:

MADRAS ACT No. OF 1903.

*An Act to regulate the conditions of labour in the planting districts of the Presidency of Madras.*

WHEREAS it is expedient to regulate the conditions of labour in the planting districts of the Presidency of Madras; It is hereby enacted as follows:—

#### CHAPTER I.

##### PRELIMINARY.

1. (1) This Act may be called the "Madras Planters' Labour Act, 1903."

Short title, extent and commencement.

(2) The provisions of this Act shall extend to such local areas within the Presidency of Madras as the Local Government may by notification direct.

Provided that the Local Government may, in like manner, at any time, direct that such provisions shall be withdrawn from any such local area or any part thereof.

(3) Such provisions shall come into force and shall cease to be in force in any local area or part thereof on the dates specified in the notifications relating thereto.

2. When the provisions of this Act have been extended to any local area, the provisions of the Workman's Breach of Contract Act, 1859, shall cease to apply to contracts with regard to estates in such area between a planter and a maistry, or a planter and a labourer or a maistry and a labourer, but shall apply to such contracts as aforesaid so soon as the provisions of this Act are withdrawn.

Effect of extension and withdrawal of Act.

Provided that the extension of this Act to any local area shall in no way affect the enforcement of any contract entered into before such extension and that the withdrawal of this Act shall in no way affect the enforcement of any contract entered into before such withdrawal, but such contracts shall continue to be enforceable under the Workman's Breach of Contract Act, 1859, and this Act respectively.

Interpretation-clause.

3. (1) In this Act, unless there is something repugnant in the subject or context,—

(a) "Employer" means the planter or maistry for whom a labourer is bound under a labour contract to work.

(b) "Estate" means land not less than ten acres in extent whether held by one person or by more persons than one as co-owners and whether in one or more blocks and situated within any local area to which this Act has been extended which is being prepared for the production of, or actually produces, tea, coffee, pepper, cardamom, or cinchona or such other products as the Local Government may by order duly notified specify.

(c) "Labour contract" means a contract penally enforceable under this Act to labour for hire on an estate otherwise than as a domestic servant.

(d) "Labourer" means any person who enters into a labour contract with a maistry or a planter.

(e) "Magistrate" means a magistrate of the first or second class, and includes a magistrate of the third class when he is specially empowered by the Local Government to perform the functions of a magistrate under this Act.

(f) "Maistry" means any person entering into a contract with a planter for the supply of labourers to work on an estate.

(g) "Planter" means any person owning, managing or superintending an estate or the chief person for the time being in charge of an estate.

(2) All words defined in the Indian Contract Act, 1872, and used in this Act shall have the meanings respectively assigned to them by that Act.

CHAPTER II.

#### LABOUR CONTRACTS GENERALLY.

4. (1) Every contract between a planter and a maistry, and every labour contract shall be in writing and shall be in such form and shall contain such particulars as the Local Government may by rules made under this Act direct, and every labour contract shall be signed in the presence of a magistrate, or of some other person expressly authorized by the Local Government by name or in virtue of his office.

Execution of contract between planter and maistry and of labour contracts.

Provided that a contract for a period not exceeding two months may be signed in the presence of two witnesses, if the labourer's home is not more than fifteen miles from the estate, or if the labourer

Provided that a contract for a period not exceeding two months may be signed in the presence of two witnesses, if the labourer's home is not more than fifteen miles from the estate, or if the labourer

neither is nor is about to be accommodated in coolie lines permanently maintained on the estate.

(2) It shall be the duty of the magistrate or other person before whom such labour contract is signed to see that its terms are fully explained to and are understood by the parties.

(3) Where the magistrate or such other person as is expressly authorized as above considers that the labourer is not in a fit state of health to undertake the journey to the estate or that he is incapacitated by reason of any obvious bodily defect or infirmity for labour on the estate, he shall not permit the contract to be signed in his presence.

Power of magistrate when labourer is unfit.

Maximum term of labour contract.

Contracts purporting to set aside this Act are invalid.

be of any effect.

Contracts not in accordance with section 4 are unenforceable.

entering into it.

8. Notwithstanding anything to the contrary in the Indian Contract Act, 1872, it shall be competent for any person of the age of sixteen years and upwards to enter into a labour contract.

Persons aged sixteen may enter into labour contract.

Provided that no labour contract entered into by a woman without the consent of her husband or guardian (if any) shall be enforceable under this Act, if such husband or guardian objects to its enforcement.

Proviso.

9. Either party to a labour contract may determine it on giving at least three months' notice in writing of his intention to the other party, and, if objection be taken to the notice, on showing to the satisfaction of a magistrate that he has reasonable grounds for determining it, and on repaying any sum found by the magistrate to be due by him to the other party in respect of such contract.

Determination of labour contract upon notice given by either party.

10. A labourer may determine his labour contract at any time without notice on showing to the satisfaction of a magistrate that he has reasonable grounds for determining it, and on repaying any sum found by the magistrate to be due by him to his employer together with a further sum of three annas for every working day of the unexpired period of his contract or a period of three months, whichever may be less.

Determination of labour contract by labourer without notice.

11. (1) If a labourer is alleged by his employer or claims to be disabled from completing his labour contract by reason of accident or illness, and is unable to agree with his employer as to the terms on which the contract should be determined, the employer may, and if the labourer so desire, shall, send the labourer if he is able, to travel, and if not, send notice to the nearest magistrate who if on enquiry he finds the labourer to be disabled from, completing the contract, shall declare the contract to be determined, and such order shall be final.

(2) The magistrate making such declaration shall likewise make such order as he may deem fit regarding the repayment of any money found by him to be due by either party to the other and may also direct that the employer shall bear the

whole or a part of the cost of the labourer's journey to his home.

(3) In any case in which the magistrate shall find that the accident by which the labourer was disabled was due to the negligence of the employer, he may order any sum not exceeding three months' wages to be paid by the employer to the labourer as compensation.

12. When the labour contract of a labourer is or has been determined under section 11, the magistrate may, if he thinks fit, on the application of such labourer's wife, husband, father, mother, son, or daughter who may have entered into a labour contract to work on the same estate as such labourer, cancel the labour contract of such wife, husband, father, mother, son, or daughter.

### CHAPTER III. GENERAL PROVISIONS RELATING TO ESTATES, MAISTRIES AND LABOURERS.

13. (1) Every planter shall keep such registers of all the labourers and other persons employed on his estate and of their dependants in such form as the Local Government may by rule or special order prescribe.

(2) Such registers shall always be open to examination by the officers mentioned in section 16.

14. Any labourer who is incapacitated by illness or accident from work shall during such incapacity be entitled to food or subsistence allowance at the rate of two annas a day and to lodging as well as medical care, at the expense of the planter upon whose estate he is employed.

Maintenance of registers of labourers and dependants.

Provided that such labourer shall not be entitled to receive during such period his wages in addition.

Provided further that nothing herein contained shall prevent the employer from taking steps for the determination of the contract under section 11.

15. Every planter shall at his expense provide for the labourers employed on his estate such house accommodation, water-supply, sanitary arrangements and medical attendance as the Local Government may by rule or special order prescribe.

Planter shall provide house accommodation and other conveniences for labourers.

16. The District Magistrate, the Sub-Divisional Magistrate, the District Surgeon, and any other officer specially empowered by the Local Government in this behalf by name or in virtue of his office, shall have power to enter and

Power of certain officers to inspect estates.

inspect all lands and houses wholly or partially used by or for labourers, and may require that all such labourers, or any particular class or classes, or individual or individuals of them, shall be brought before him, and that a copy of the labour contract of any labourer shall be produced, and may make any enquiries which he thinks proper touching the condition or treatment of such labourers, and the employer shall be bound to comply with every requisition and to answer every enquiry so made to the best of his ability.

17. (1) If it appears to the Local Government upon the report of a District Magistrate that any estate or portion of an estate is unfit for the residence of labourers or of any class of labourers, by reason of any sanitary defects which can be remedied, they may call upon the planter to remedy such defects within a period to be stated.

Power to call on planter to remedy sanitary defects,

(2) If the planter neglects or omits to remedy such defects within the period so stated or if the estate or portion of the estate has been reported as unfit for residence from causes which it

or to declare estate unfit for residence.

is impossible to remedy, the Local Government may declare the estate or portion of the estate to be unfit for the residence of labourers or of any class of labourers.

(3) After such declaration has been made and so long as it remains in force no labourer, or no labourer of the particular class to which such declaration relates, shall be bound by any labour contract to work on such estate, or portion of such estate, as the case may be.

18. Any labourer desiring to make a complaint that his employer or any person acting on his behalf has personally ill-used such labourer, or has been guilty of a breach of any of the provisions of this Act or any of the rules made thereunder, or desiring to make an application under section 21, may without forfeiting his wages during his absence but subject to the provisions of section 19 absent himself from his work for the time necessary for the purpose of proceeding to the nearest magistrate and making his complaint to such magistrate.

19. If after such enquiry as the magistrate thinks fit, he is of opinion that the complaint is frivolous or vexatious he shall dismiss the complaint, and shall specify in his order the number of days during which the complainant has been absent from his work in consequence of such complaint, and may direct that the labourer shall forfeit to his employer a sum not exceeding double the amount of his wages for these days.

Provided that the magistrate shall not take any action regarding the payment of compensation to the accused under the Code of Criminal Procedure, 1898, or other law for the time being in force.

20. If after such enquiry the magistrate finds that there is sufficient ground for proceeding with the case, he shall dispose of the case according to law.

21. (1) If upon the application of any labourer, it is proved to the satisfaction of a magistrate that the wages of such labourer are wrongfully withheld, the magistrate may award to such labourer the amount which appears to be then due to him, and also, by way of compensation, such further sum, not exceeding that amount, as to the magistrate seems just.

(2) A magistrate making such an award may, if the labour contract has not already determined, on the application of the labourer, declare such contract to be cancelled, without prejudice however to the continued liability of the employer in respect of the amounts awarded.

22. Whenever it is proved to the satisfaction of a magistrate—

(a) that any planter or maistry has been convicted of any offence causing injury to the person or loss or damage to the property of any labourer working under a labour contract for such planter or maistry, and under the Code of Criminal Procedure, 1898, triable exclusively by the Court of Sessions, or

(b) that any planter or maistry has been twice convicted of any such offence against any such labourer and under the said Code triable by a magistrate, or

(c) that any such labourer has been compelled by the planter or maistry for whom he works or by any person placed by such planter or maistry in authority over him to perform any work while he was unfit for it, or has been subjected to ill-usage by such planter or maistry or person,

such magistrate may, if he thinks fit, on the application of the labourer aggrieved, cancel the labour contract of such labourer, and award to him compensation not exceeding thirty rupees.

23. When on complaint made it is proved to the satisfaction of a magistrate that any maistry who has received from a planter an advance of money in consideration of his contracting to supply labourers to work on an estate has failed duly to supply or to maintain the supply of such labourers, the magistrate may direct that the maistry shall repay to the planter, within a reasonable time to be fixed by the magistrate in the order, such portion of the advance as, taking into consideration the number of labourers, if any, supplied and the period during which they have been-supplied, the magistrate shall deem proper.

Provided that if no labourer has been supplied the magistrate may direct that the whole of the advance shall be repaid.

#### CHAPTER IV.

##### PENALTIES AND PROCEDURE.

24. Any maistry who

(a) fails without sufficient cause to present himself at an estate upon the date specified in his contract; or

(b) having contracted to remain upon an estate for a specified time fails without sufficient cause so to remain; or

(c) fails to account for the money advanced to him by a planter in consideration of his contracting to supply labourers to work on an estate;

shall be punishable with imprisonment which may extend to three months or with fine which may amount to five hundred rupees or with both; and the magistrate may award to the planter out of the fine such compensation as he may deem fit.

25. Any planter, or any person acting under his orders, or on his behalf who wilfully obstructs any inspection or enquiry made under this Act or omits to comply with any requisition made under section 16 shall be punishable with fine which may extend to two hundred rupees.

26. Any planter or maistry and any person placed by a planter or maistry in authority over a labourer, who compels any labourer to perform any work knowing that he is at the time unfit to perform such work shall be punishable with fine which may extend to two hundred rupees.

27. (1) Any planter who wilfully omits to provide house accommodation, water-supply, medical attendance, or sanitary arrangements in accordance with the provisions of this Act or of any rule made thereunder shall be punishable with fine which may extend to five hundred rupees and the convicting magistrate may order him to comply with such provisions within a reasonable time to be fixed in the order.

(2) If the planter wilfully omits to comply with the order within the time so fixed, he shall be punishable with fine which may extend to twenty rupees for each day during which the omission continues.

28. Any labourer who without reasonable grounds absents himself from his work, or neglects or refuses to work, shall in addition to forfeiting his wages for the days during which he has been absent or has neglected or refused to work be liable, on conviction by a magistrate, to pay to his

employer a sum not exceeding four annas for each such day, and may also be sentenced to imprisonment for a term not exceeding seven days.

*Explanation.*—Ill-usage of such labourer or failure of the employer to fulfil any condition of the labour contract is a reasonable ground within the meaning of this section.

**29.** Whenever an employer or a person acting on his behalf complains to a magistrate that a labourer has deserted from the estate upon which such labourer has contracted to work or without reasonable cause has failed to present himself on the estate at the time specified in his contract, such magistrate may, without previously examining the complainant, issue summons for the attendance of such labourer, or a warrant for his arrest, and fix a day for hearing the complaint.

**30.** (1) Every labourer who deserts from an estate upon which he has contracted to work, or without reasonable cause fails to present himself on the estate at the time specified in his contract, shall be punishable with imprisonment for a term which may extend to one month or with fine not exceeding fifty rupees, or with both.

(2) Out of any sum received on account of the fine levied under this section shall be paid to the employer any money found by the magistrate to be due to him by the labourer.

**31.** If it appears to the magistrate trying a labourer for deserting from an estate that such labourer was arrested without sufficient cause, such magistrate may impose a fine, not exceeding fifty rupees, on the person at whose instance such labourer was arrested, and the magistrate may award to the labourer out of the fine such compensation as he may deem fit, and may, if he thinks fit, on the application of the labourer, cancel the labour contract of the labourer.

**32.** When any labourer is convicted under section 28 or section 30, the magistrate so convicting or sentencing him shall, on application made on behalf of the employer, endorse on the labour contract the period of absence from his work in respect of which such labourer has been convicted or the term of imprisonment, if any, to which he has been sentenced or both, and the period so endorsed shall be added to the term for which the labourer contracted to serve, and such labourer shall not be deemed to have completed his labour contract until he has served for the period so endorsed in addition to the period specified in such contract.

Provided that the additional period so endorsed shall not exceed the unexpired period of his labour contract on the date of the offence.

Provided also that no such endorsement shall be made if more than twelve months have elapsed since the date on which his original labour contract would have determined.

**33.** (1) When any maistry has been sentenced to imprisonment for an offence under section 24 or when any labourer has been sentenced to imprisonment for any offence under this Act the planter with whom such maistry has entered into a contract or the employer of such labourer or any person authorized to act on this behalf for the planter or employer may apply to the magistrate at any time previous to the expiry of such sentence that such maistry or labourer be forthwith made over to him with an order to complete his contract or his labour contract as the case may be.

(2) On such application being made the magistrate may, if the maistry or labourer consent, cancel the remainder of such

sentence and may direct the maistry or labourer to be made over or forwarded to the applicant together with the order applied for.

**34.** Every person who obtains an order of a magistrate under the last preceding section for the making over or forwarding of any maistry or labourer shall be liable to defray the expense (if any) incurred in such making over or forwarding; and shall, before the order is issued, deposit with the magistrate such sum as is in the magistrate's opinion necessary to defray such expense.

**35.** On the expiry of any sentence of imprisonment on a maistry or labourer for any offence under this Act the maistry or labourer shall, if the planter or employer so requests, be produced before the magistrate, who shall direct such maistry or labourer to complete the performance of his contract on pain of further prosecution and punishment in case of his refusal to do so, and no conviction under this Act or imprisonment under such conviction shall have the effect of releasing any maistry or labourer from the terms of his contract, or labour contract, as the case may be.

Provided that no such direction shall be given, in the case of a labourer, if more than twelve months have elapsed since the date on which his original labour contract would have determined.

**36.** (1) Whoever, knowing that a labourer is bound by his labour contract to labour for any employer, voluntarily entices or attempts to entice the labourer to leave his employer, or harbours or employs any labourer who has, in contravention of the terms of his labour contract, left his employer, shall be punishable with imprisonment for a term which may extend to one month, or with fine which may extend to two hundred rupees, or with both.

(2) The convicting magistrate may award to the employer with whom the labourer has contracted the whole or any part of any fine levied under sub-section (1).

**37.** Any employer who without reasonable cause fails within a reasonable time to comply with the provisions of section 11 shall be punishable with fine which may extend to two hundred rupees.

**38.** Whoever abets any offence against this Act shall be punishable with the punishment provided for such offence.

**39.** Whoever commits any offence against this Act shall be triable for such offence in any place within the Presidency of Madras in which he may be found, or in any other place in which he might be tried under any law for the time being in force.

**40.** Notwithstanding anything contained in the Code of Criminal Procedure, 1898, offences under sections 24, 26, 28, 30 and 36, and the abetment of such offences, may be compounded at the option of the complainant.

**41.** Nothing in this Act shall be deemed to prevent any person from being prosecuted under any other law for any act or omission which constitutes an offence against this Act, or the rules made thereunder, or from being liable under any other law to any penalty higher than that provided by this Act for such offence.

Provided that no person shall be punished twice for the same offence.

## CHAPTER V.

## RULES.

42. (1) The Local Government may after publication make rules—
- Power to make rules.
- (a) prescribing the form or forms in which labour contracts shall be made;
- (b) specifying the particulars which shall be stated in such labour contracts;
- (c) prescribing the registers of labourers and of other persons employed on the estate and of their dependants which planters shall be bound to keep and the returns which they shall submit;
- (d) regulating the accommodation, water-supply, sanitary arrangements and medical attendance which planters shall be bound to provide for the labourers;
- (e) for the guidance of officers appointed under section 45; and
- (f) generally, for carrying out the purposes of this Act.
- (2) In making any rule under this Act, the Local Government may direct that every breach thereof shall be punishable with fine not exceeding in any case five hundred rupees.
- Power to fix penalty for breach of rule.

## CHAPTER VI.

## MISCELLANEOUS.

43. Any money ordered to be repaid under section 11, or section 23 or any sum awarded under section 21 or section 22, or any sum payable to an employer under section 19 or section 28, may be recovered on application to a magistrate having jurisdiction where the person from whom the money is due is for the time being resident, by the distress and sale of any moveable property belonging to that person which is within the limits of the magistrate's jurisdiction.
- Recovery of sums due under Act.
44. The Local Government may, by notification, order that processes issued by the courts, or by any specified courts, in a Native State under any Act for the enforcement of labour contracts in force in such Native State shall subject to such conditions and restrictions as may in such notification be prescribed be executed within the presidency of Madras as if they were processes issued under this Act.
- Power to direct execution in the presidency of processes of courts of Native States.
45. The Local Government may authorize any officer by name or in virtue of his office to make any enquiry necessary under or for the purposes of this Act and such officer shall be guided by such rules or special order as the Local Government may prescribe.
- Power to authorize officer to make enquiry.

## COFFEE NOTES.

**Heavy Shipments of Mexican Coffee.**—A Press dispatch from Vera Cruz says that large shipments of Mexican coffee are being made from that port to New York. The steamship *Havana*, of the Ward line, is said to have carried a record-breaking cargo of 1,350,000 pounds of coffee and the *Esperanza* of the same line is to leave for New York with nearly an equal amount. Developments in the coffee market, the dispatch adds, have convinced merchants there that there is no immediate hope for a rise in prices, but on the contrary, the tendency will be lower, and the merchants, hence, are making all haste to unload their surplus.

**Ruinous Export Duties on Coffee.**—Dispatches from the Island of Curacao say that steamers are leaving Maracaibo

empty of coffee. The merchants of Maracaibo are reported as saying that they cannot pay the present export duties, which, they add, are more ruinous to them than was the blockade of the Venezuela coast by the fleets of the allied Powers.

\* \* \*

**The U. S. Coffee Market.**—The situation in the coffee markets is unchanged, says *Tea, Coffee and Sugar* of the 18th ultimo. Quietness prevails generally and no improvement may be expected immediately. The statistical situation is pleased to indicate that all that the most pessimistic bears forecasted for 1902-03 is going to eventuate. Prices are low and will not probably sink lower, but buyers seem more the less disinclined to come out. The trade, evidently, supplied its wants well in the recent actions. Exchange in Brazil is higher which should induce a freer movement of coffee and be tempting for exporters. Offers from Brazil are, however, at about the parity of values in New York and trading, hence, is not disposed to make connections. Rio No. 7 was offered at 5½c. c. and i., Santos Nos. 3 to 9 5.85c. c. and i. and Santos Nos. 3 to 7 at 6.20c. c. and i. Rio and Santos receipts hover around the 30,000-bag mark. The spot market for invoices closed firm for the lower grades, the quotations being 5½c. for Rio No. 8, 5¼c. for Rio No. 7, 6¼c. for Rio No. 4 and 6½c. for Santos No. 4.

The market for futures is uninteresting. Prices fluctuate a little, according in the main to whatever chances to be the strength or weakness of Havre or Hamburg, and these are unimportant. Amusement only greets the various reports that come to hand of the attempts of the Sao Paulo planters to improve their situation, chiefly by harum scarum and impossible financial legislation.

In milds, the market is sharing the quiet condition general with the trade. Quotations are unchanged though steady for both West India and East India growths. It is reported that the export duties on Columbian coffees are to be removed, but as the waters on the rivers are very low the movement of the coffee will not be accelerated any thereby. Good Cucuta was quoted at 8½ to 8¾c.

**Coffee Trust Idea Amusingly Received.**—A report from Rome that a group of English, Italian and Brazilian capitalists are busily engaged in forming a trust to corner Brazilian coffee is ridiculed in Mincing Lane.

## THE AMUSING SIDE.

The rumor that an amalgamation is being formed to control the output of coffee from Brazil is discredited in London. The report has its amusing side. Emanating from Rome, it credits English and Italian merchants with the promotion of the combine. Now England deals less in coffee than probably any other leading country except Switzerland, and it consumes by far the lowest quantity in comparison to population. Italy's consumption is not very much greater. If all the coffee importers in Italy and England were combined their influence on the world's coffee market would have, it is said, an insignificant effect. But English coffee merchants say that they are totally unaware of any suggested combination. They are inclined to think that the rumour which was set about a year ago to the effect that a "combine" was in course of formation, has only just reached Rome and been retailed in the report to hand. London, except from the financial point of view, and Rome are about the last places in the world where the promotion of an important "coffee" combine would be looked for. The principal markets are New York, Havre and Hamburg, and if a serious attempt were to be made to control the coffee output of the world it would in all probability start in one or other of all three of these places. Alike at New York, Havre (which is the speculative market), and Hamburg attempts have been made at "corners" in

coffee, but they came to nothing. Brazil, to which the reported "combine" is said to have turned its attention, is the largest coffee-producing country in the world. It turned out over fifteen million bags—a bag represents about a cwt.—last year, and this year the estimated production is put down at eleven million bags. The total imports of coffee into Europe from all countries last year was 67,000 tons, of which 357,000 were distributed. The consumption in Germany was 171,430 tons, in France 85,750 tons, while England consumed less than 15,000 tons. Very little Brazilian coffee is used in this country, Englishmen who drink this kind of beverage preferring the finer coffee of Central America and India.

The United States, however, is by far the best customer of Brazil with regard to coffee, and the greatest coffee-drinking nation in the world. It consumes no less than 380,000 tons last year—more than was consumed in the whole of Europe. The prospect of a coffee "combine" in any part of the world is regarded (says the *St. James's Gazette*) as extremely improbable at the present time. There is a visible supply in the market to last ten months, and to gain any benefit a "combine" would have to lay out several millions sterling to buy up the greater part of the immense stock in the markets. In view of the over-production which is taking place in Brazil and other parts, the advantage even if this course were reverted to could be only of a temporary character, and would not pay.—*Manchester Review*.

### TEA NOTES.

**The U. S. Tea Market.**—Although the volume of business in tea is much diminished and shrinking fast, the market continues strong, says *Tea, Coffee and Sugar* of the 18th ultimo, and such, the indications are, it will remain. This is not without disappointment to the American trade. An easier market is now desired, and that, too, by first hand men, who have some of the tea more or less in demand still unsold.

They are looking into the future, and a weaker market here would prevent higher prices in the East at the opening of the markets, now not so far distant. It may be taken for granted that the traders are planning to bull prices, and they will be assisted in this if the American market shall persist in showing the strong position it for some time now has been presenting. The effect in America would be to disarrange the usual and wished-for procedure of business. It is to be expected that buyers would hesitate to buy the new teas, preferring to use the old ones in stock, and this would tend to throw the new teas into the hands of the few who can afford to make purchases not based on orders. A weaker market, hence, means a clearer situation all around for the trade at large; the continuation of the present situation, a muddled one.

Meantime, prices are firm for Greens and Pingsueys and steady for all the other kinds. The exportation of Congous continues in good volume, but while the situation of this tea is thereby improved, it has not, so far, affected the price quotations for the tea. The less desired grades are very cheap.

**Decision in Tea Coverings.**—The classification Board of the United States General Appraisers has sustained the F. F. Jaques Tea Company of Chicago regarding the classification of certain tea coverings. The question was whether the tea in dispute was packed in usual or unusual coverings, within the meaning of section 19 of the Customs Administrative Act of June 10, 1890, and, if unusual, subject to an additional duty of 45 per cent. as manufactures of metal, under paragraph 193 of the Tariff Act of 1897. The importers contended that the articles were usual and necessary coverings of imported tea, and were, therefore, free of duty, according to the ruled stated in "Leggett's case."

The United States Circuit Court for the Northern District of Illinois in the case of the Collector *vs.* Jaques held such canisters to be free of duty as usual coverings and affirmed a decision of the Board of General Appraisers to the same effect. The Board, following the decision in the Jaques case, sustained the contention of the importers and reversed the decision of the Collector.

Mr. K. C. Popoff, who recently visited Ceylon, has estates near Batoum covering about 900 acres in extent, and of this about 450 acres are under tea, which is called Russian tea, though it is grown from tea seed obtained from Ceylon, India, China, Java and Japan. The industry is quite in its infancy; but from a climatic point of view it has much in its favour; and Mr. Popoff is the more hopeful inasmuch as all classes of Russia have taken to tea drinking. Of course the tea grown on the Batoum estates pays no duty, which places it at an advantage over imported teas. The best is sold at Rs.3.60 a lb., and the inferior at the minimum price of Rs.1.50 per lb.

As regards the particular kind of tea that Russians generally favoured Mr. Popoff said to a representative of a Colombo paper: "It is very difficult to say, but I personally prefer China tea, because it is not so strong as your tea, and, I think, has a better flavour." But this predilection is explained by the fact that Mr. Popoff only drinks China tea as it was years ago, and not in its present state. Mr. Popoff is not sanguine that tea can be grown elsewhere in Russia, than in the Caucasus, except in departments of Central Asia. But in such places as the Crimea or Bessarabia it would be impossible to grow it.

The Resolution about the Ceylon Tea Cess that is to be proposed at the next General Meeting of the Planters' Association of Ceylon reads as follows:

"That Government be asked to increase the Cess for a period of eight months, from 30 cents to 50 cents per 100 lbs. of tea, the Cess to be reduced at the end of this term to 20 cents per 100 lbs."

The last portion has excited some surprise.

A London correspondent explains that, though answers in regard to the proposed increase of the Ceylon Tea Cess were requested by the 10th March, it was not made a condition that only answers received by that date would be allowed. In the interval that elapsed between that day and the 16th, the day of the Tea and Produce meeting, several more replies were received, and as they were mostly "Yeses" the scale was again turned. Since the meeting one answer, a "No," has been received. Some discussion took place at the meeting as to the exact bearing of the answers which supported another lakh being devoted to greens in addition to the Rs.280,000 already set aside. Technically no doubt they were against the increase, but it was urged that they were in favour of giving additional support to green tea, which was also the object of the proposal of the Thirty Committee. They were in fact a qualified No, but they were also qualified Yes. Eventually it was decided to wire out to Kandy the total number of votes and particulars of the three solutions of the difficulty supported here, and to let the people there thresh them out for themselves.

**Indian Tea in London.**—A special telegram to the *Englishman* reports that 28,166 chest of tea were offered on the 6th instant at the Tea Sale in London. There

was a strong market up to 7d., above which there was no great tone noticeable. A number of Assam Pekoes and Pekoe Souchongs were taken out and there was a general enquiry, other grades not getting full attention. Lately there has been too large a proportion of teas between 7d. and 9d. For the moment buyers hold enough of this range.

\* \* \*

Mr. N. Bonaparte Wyse, who returned lately to Ceylon from a visit to the French Far East, to see the Exhibition at Hanoi, and assist at the connected International Congress of Orientalists, states that they grow tea of their own there, and have also easy access to the Chinese article. The conditions are very favourable to the grower of tea and the only interest which Ceylon teas aroused was in the way of provoking a comparison. The comparison was in Ceylon's favour. They were very much interested in seeing what Ceylon had done in this respect. They make very common teas there, which, however, satisfy the natives. The French are not tea-drinkers to any extent as you know, and the natives are perfectly content with the sort of tea they have. But now that they have seen Ceylon teas and know their commercial value, they intend to improve their own quality. They are making arrangements to send out men from Tonquin to Ceylon to study methods of manufacture and cultivation, etc.

\* \* \*

Green tea is less wholesome than black, when drunk in liberal quantities, and it is said that the loss of popularity of the former in Great Britain has been due to the nervous depression and sleeplessness that it caused. Here's a pointer for grocers who wish to rush the sale of black teas. Let them advertise these facts, and also dwell upon the wholesomeness of black tea as a beverage. —*Merchants' Review.*

\* \* \*

**Ceylon Tea.**—There are, according to the *Grocer*, two main circumstances which are now operating with some force in strengthening the position and brightening the outlook for Ceylon tea; and, whatever counteracting influences may be silently at work, it is pretty certain that the Ceylon description, in response to the revival that has been witnessed elsewhere, is commanding much greater attention than it did a short time ago. This improvement is entirely due to the demand and supply being more evenly balanced than before, or, more correctly speaking, the change for the better is owing to a reversal of the movements in tea generally by consumption, both here and abroad, overtaking production. For a long time previously, the tendency of supply and demand was quite the other way, until producers were almost despairing of any relief in the shape of brisker markets. Recent advices have been very favourable to this view of the situation, in making it clear that the exports of tea from Colombo to the United Kingdom during February were only 7,750,000 lbs., against 8,000,000 lbs. in the same period last year, and did not amount to more than 15,750,000 lbs. for the first two months of 1903, in contrast with 17,250,000 lbs. in 1902.

Whilst shipments from that quarter to this side have been going on at a diminished rate, the landings of Ceylon tea here have naturally been very much lighter than in the preceding year, comprising only 14,752,400 lbs. in the first two months, against 19,246,200 lbs. in 1902; and, although the deliveries at the port of London at the same time have been curtailed to 15,150,900 lbs. this year, to February 28, as compared with 16,607,000 lbs. in 1902, the stock by the above date was reduced to 19,482,550 lbs., as opposed to 22,349,800 lbs. in the year just named. The statement, however, that the clearances of Ceylon have lately been increasing, comes like a contradiction to our opening remarks, where it is asserted that consumption is "overtaking production"; but we refer there more particularly to the rapid strides in the export of green tea to North America and Canada. Home deliveries last year were, moreover, artificially swollen by anticipatory duty payments on tea as the time for the delivery of the Budget approached, which have helped to make the entries for 1903 smaller than they really

are; and it also deserves to be mentioned that, according to some authorities, the quantity of "green" tea to be manufactured during the coming season is likely to comprise about 12,000,000 lbs., whereas in 1902 it was comparatively trifling, viz., only 2,000,000 lbs.—amounts which, under ordinary conditions, would be turned out and shipped from the island solely as black tea of the commoner grades.

Thus it would seem that the Ceylon tea industry is in a more healthful condition than for two or three years past, as with an extending consumption and no greater area of lands under cultivation, prices in future are not unlikely to be of a more remunerative nature to producers; and should a reduction in the Customs duty take place here, a double relief would be afforded to the trade. Messrs. George White & Co. observe:—"London clearances of Ceylon tea in 1902 were rather over 101,000,000 lbs., or, say, nearly 8,500,000 lbs. per month; while, should only the estimated quantity of about 94,000,000 lbs. calculated to be available for this country during 1903 reach us, it would give under 8,000,000 lbs. per month for our requirements. Climatic and other reasons, both in India and Ceylon, have combined to place British-grown tea on a much sounder basis of value than for some time past, as with an increasing consumption we have arrived at an almost stationary supply, and the future appears more full of promise than it has been for a long while. An expansion in our total deliveries of all tea may reasonably be expected during 1903, and if Ceylon is not well represented on this market, which, after all, is her principal customer, the wants of buyers will be supplied from other sources."

## NOTES.

### The British Tea Duty.

A London correspondent telegraphs that Lloyds are quoting insurance against a reduction of the tea duty at 45 per cent., which shows that a reduction is considered far from impossible.

### The Ceylon Tea Cess.

The Meeting of the Ceylon Planters' Association to decide the question of whether the tea cess in Ceylon should be raised or not, which was fixed for the 25th instant, has been postponed till 2nd May.

### Java-Quinine Tender.

The result of the annual tender held at Batavia on March 25 is as follows:—Of 2,508 kilos. Ed. II. offered, 93 kilos. were sold at an average of 20fl. per kilo. (about equal to a unit of 7½ cents Amsterdam), against 18fl. per kilo. at the previous tender. The next tender will take place on April 29.

### London Company Dividends.

The Eastern Produce and Estates Co., Ltd., pays a final dividend of 1½ per cent., making 3 per cent. for the year; and carries forward £6,620. The South Wanjah Tea Co., Ltd., pays a dividend of 5 per cent., and carries forward £37.

### Indian Labour for Ceylon.

The Madras Government have passed the following Order:—Messrs. Edgar Turner and John Hill, Tea Planters of Ceylon, are visiting the Madras Presidency as the representatives of the Planters' Association of Ceylon to report on the labour market for Tea Estates in that Colony. All Collectors and District Officers will be requested to render them such assistance as may be possible in carrying out their mission.

### Quinine Auction in Batavia.

Consul B. S. Rairden reports from Batavia, January 6, 1903, that the last public tenders for quinine for the

year 1902 were received at the office of the agents of the Bandoeng quinine factory, in Batavia, on December 30. The entire quantity (about 2,145.12 kilograms, or 4,729 pounds) was sold for 16.65 florins (\$6.69) per kilogram (2.2046 pounds), or a unit price of 0.0607 florin (2.44 cents), as against the unit price of 0.06 florin (2.4 cents) realized at the sale of the 27th of November, 1902.

#### The St. Louis Exposition.

Foreigners who intend to send exhibits to the Louisiana Purchase Exposition to be held at St. Louis are desired to bear in mind the following regulations which have just been issued by the Secretary of the Treasury :

1. In order to secure entry free of duty, every package destined for the Exposition should have affixed to it by the foreign shipper one or more labels, which should be about 8 x 12 inches in size, and should bear across the face, in plain letters, the inscription, "Louisiana Purchase Exposition Co."
2. All packages should be plainly marked as follows :
  - (a) The President, Louisiana Purchase Exposition Co.
  - (b) Name of consignee or agent at port of first arrival in the United States.
  - (c) The shipping marks and numbers.
  - (d) Name and address of the exhibitor.

#### The London Tea Market.

Weekly special telegram dated 8th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that buyers are operating very cautiously and that the market for medium liquoring Pekoes and Broken Pekoes is weak, while the market for common Pekoes and Broken Pekoes is weak. The price of fair liquoring Ceylon Pekoe Souchong is 6 $\frac{3}{4}$ d. (the same as last week) and the average 7 $\frac{3}{4}$ d. (the same as last week). The average for the same period last year was 6 $\frac{7}{8}$ d. Reuter reports that the tone of Ceylon tea is steady, Broken Pekoe irregular, slightly easier in some cases, while Pekoe Souchong is firm and steady, Fair Pokoe Souchong is quoted at 6 $\frac{1}{2}$ d. (same as last week) and the average for the week is 7 $\frac{3}{4}$ d. (same as last week). 18,000 packages of Ceylon tea were offered for sale and 15,000 disposed of; while of the 30,000 packages of Indian tea offered, 23,000 were sold at an average of 8d. ( $\frac{1}{8}$ d. down). Common qualities of Indian tea firm, others irregular.

### GENERAL ARTICLES.

#### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—February 28, 1903.—Ninety days' Bank rate on London opened on Monday at 11 $\frac{1}{8}$ d. and closed this evening steady at 11 $\frac{3}{8}$ d.

Business all over the country was much interrupted this week by Carnival but a good supply of rubber bills is reported from the Amazon, which will probably last all month, and if much rubber were to arrive from the Acre, perhaps into April. In spite of the holidays the value of coffee shipments (*embarques*) for the week ended February 27th was £35,000 larger than for the corresponding week last year, amounting for the four weeks ended on 27th February to £1,446,000 as against £1,302,000 last year.

Declared sales were 39,000 bags more than for the corresponding week last year but show a falling off compared with the previous week, of 57,000 bags.

The boom in cotton to which we refer elsewhere will also assist the market but against it must be put the payment for the Bolivian Syndicate and probable heavy expenditure for war material.

For the present we see no reason to anticipate any alteration in the conditions ruling exchanges. The supply of bills seems to be ample to satisfy demand and so long as coffee prices keep up and shipments of coffee and rubber continue on the present scale, which will probably be for four or five weeks at least, will be maintained.

There is some talk of the port scheme again, but, whatever may be determined, it is likely that some time will elapse before much can be actually drawn for on this account.

A correspondent writing from London lately explains the rise in Brazilian and other securities as follows:—"there has, he says, been a large business done in Argentine and Brazilian stocks in consequence of the Religious Association law passed in France, which resulted in very large sums being diverted from French to other securities particularly Argentine and Brazilian, for which the market is now much wider than formerly." Since the date of this letter we note, however, that Brazilians have weakened a little.

RIO DE JANEIRO, February 28, 1903.—Joint Entries at Rio and Santos for the week ended February 27th were again very large being 14,644 over the previous week's and only 15,586 less than the corresponding week's last year of which they represent 92 per cent.

Up to 27th February the total entries for the crop at the two ports were 2,784,360 less than last year's of which they represented 77.6 per cent. There seems, therefore, every probability that even without the early entries looked for in May the total crop for Rio and Santos will be nearer to twelve than eleven million bags.

*Embarques*, in spite of carnival, show no falling off, on the contrary, they were 18,300 bags more than the previous week's and 41,556 over last year.

Stocks at Rio and Santos consequently fell off and on 27th February were 69,579 bags less than the previous week's.

Declared sales fell off again being 57,000 less than the previous week's but still 29,000 more than last year's.

Currency prices declined, the average for the week for Rio n. 7 being 4\$575 per 10 kilos. as against 4\$705 the preceding week and 4\$608 last year.

New York spot prices average the same as the previous week 5.61c. compared with 5.71c. last year.

SANTOS, February 28, 1903.—A quiet market, firm on the part of Commissarios and little interest shown by exporters, that was the position during the week, only yesterday and to-day a better feeling and a stronger market being noticed, owing to better news from consuming centres principally Havre which went up 1 fc. The better feeling abroad is attributed to a telegram from Messrs. Prado Chaves and Co reporting good prospects for the steps to be taken by the State Congress which is called for the 5th March.

The requirements are practically unchanged. Primes, Superiors and Goods in good demand. Low coffees more difficult to sell at fair prices. Primes quoted to-day from 4\$900 to 5\$000. Superiors 300 réis and Goods 600 réis below. Peaberry and washed coffees more or less unchanged against last week. The business during the week is a medium one, declared sales being 101,000. Orders for Superiors ruled between 28s. 9d. and 29s. 6d. and for Good Average 1s. 3d. to 1s. 6d. below. The disparity between our market and Europe amounts to about 200 réis. Various sailing vessels are loading cargoes of choice Superiors upwards.

Entries 104,000 and *Passagens* 100,000, were, considering one holiday this week, heavier than the previous week, and keep the market in Europe and States down, although the quantity for sale is really moderate. As regards the March entries it is generally believed that they will match at least February entries or perhaps, be bigger.

Shipments are very fair, amounting to 157,000 and our stock is decreasing being to-day 942,279 and may be expected to figure shortly at some 800,000 bags.

The *Pauta* went down last week 30 réis and is now 440 réis again.

The business of the month was during the first fortnight a good one and the greater part of the exporters made reasonable profits on their holdings, but the latter part of the month was dull and business was not pleasant for exporters in general.

**The Coffee Crisis.**—The first stage of the crisis, says Dr. Pinto in an interesting article published in the *Estado de Sao Paulo*, was devoted to the study of its causes. But now that it is everywhere recognised that the only cause of depreciation is "over-production" or disequilibrium between demand and supply, it only remains to apply that knowledge and take steps to re-establish equilibrium. Innumerable schemes, more or less visionary or impracticable, have been proposed and rejected, until opinion has at last crystallised

round the proposal of the Planters' Congress to eliminate 20 per cent. of production by means of an export tax payable in kind. This, in principle, is identical with the measures recommended by the New York Coffee Congress.

The reasons why elimination of the coffee at the port of shipment, with the consequent heavy loss incurred for transport, was preferred at the Sao Paulo Congress to elimination at the plantation itself are enumerated as follows:—

- (a) Because it is easier to execute and more difficult to evade.
- (b) Because it ensures publicity and the exact quantities dealt with being known and certified to.
- (c) The measure does not depend on arbitrary classifications, as difficult to establish as impossible to enforce.
- (d) No classification could be established that would permit of the precise elimination of any predetermined quantity.
- (e) The elimination of lower grades by means of prohibitive taxation would be a direct burden to planters and, moreover, would not be uniform, because in no two plantations are the percentages of low grades the same, especially in some districts of the State.
- (f) Mere prohibition to export low grades would not necessarily result in their elimination. Inferior grades would then be stored on the plantations for export later on and there would be no real decrease in the supply but only a dislocation, or conversion of a visible into an invisible supply.
- (g) The decrease of 20% in the volume carried by the railways would prevent any hope of reduction of their tariffs.
- (h) Finally, the taxation in kind will raise prices of low grades for which a demand will naturally spring up for payment of the tax.

A session of Congress has been called to consider the most practical means of carrying out the recommendations of the planters by whom the following question must be decided:—

Should the percentage to be eliminated be fixed at 20 %, or should it be variable?

It may be counted on as certain that the price of coffee will rise immediately the measure is voted, stimulated by the moral effect such a measure must produce and by the immediate demand that will spring up for shipment before the measure comes into effect. For that reason, Mr. Pinto says, it would be advisable to limit the *interregnum* as much as possible and prevent coffee from being unduly accumulated in the consuming markets with consequent fall of prices later on.

The tax should, Mr. Pinto believes, be progressive and not absolute, because the suppression of 20 per cent. of each year's crop cannot guarantee a corresponding reduction of the world's supply. If crops should exceed 14,000,000 bags, as had already occurred, the elimination of 20 per cent. might be insufficient to secure equilibrium. A progressive tax would have the advantage of being less burdensome to the planter, as its increase would correspond to advantages already realised. Mr. Pinto proposes that the tax should commence at 15 per cent., and be raised to 20 per cent. in 1904, 25 per cent. in 1905, and 30 per cent. in 1906 and so on, until supply and demand be balanced. Supposing 15 per cent. to be adopted, the percentage of value paid by exporters will not, he says, really exceed 10 per cent., because the 15 per cent. payable in low-grade coffees would not represent more than 10 per cent. on the value of the higher grades really shipped.

The rise in prices that must, Dr. Pinto thinks, necessarily accompany a decrease of quantity, would stimulate the holders of stocks abroad to hold out for higher prices too, and the speculation for the rise that would infallibly follow would help to force prices up.

**Note of the Editor, B. R.**—Unless the coffee eliminated be actually destroyed the effect on consuming markets will be neutralized or, at least, very much attenuated.

Economically, such a measure cannot be defended. To wilfully destroy the fruit of so much labour is to destroy wealth and is unpardonable. Moreover, we venture to predict that in the long run it will not produce the desired effects as far as planters are concerned, for several reasons.

In the first place is it certain that the measure will secure the requisite contraction of supply? In 1901-1902, the supply of Brazilian coffee was over 15,500,000 bags, and consumption only 10,000,000. To merely secure equilibrium 5,500,000 would have to be eliminated, or over 28 per cent.

In view of the enormous visible supply that on 1st February amounted to 12,769,000 bags, equivalent to 80 % of the world's total

consumption is it certain that mere equilibrium between supply and demand could secure the certainty of a rise in prices in proportion to the quantity sacrificed?

The condition of 1901-1902 may be repeated at any time. *The coffee trees are there and only require favourable climatic conditions to give fifteen millions again or more!*

Besides, will not the payment of the tax in kind act as a stimulant to production of lower qualities and by bringing more coffee than ever into the market counteract partially, if not wholly, the effect of such a measure?

Until a rise of both gold and currency prices really take place the planters alone would pay the tax, which would be deducted from the price paid for exportation.

Apart from the uncertainty of a proportional rise of price abroad, it seems more doubtful still whether currency price would rise at home in proportion and, indeed, impossible. Should it even happen that sterling prices abroad rose in proportion to the reduction of supply, since the aggregate value of the coffee exported would be the same, exchange perhaps might also remain unaltered and prices at home rise also in a similar ratio. Planters, however, would be paid only for actual export and not for the part that had been burned and so in spite of the rise of prices, the higher value would be counteracted by the loss in quantity and planters would receive precisely the same in currency and sterling as before. Should, however, prices rise more than 20 per cent., exchange would inevitably rise too and, perhaps, more than coffee and react on currency prices, which might not rise at all, so that, instead of the same value, planters would then get positively less than formerly.

If, then, with less quantity the same sterling value, or more, be realized by whom is the cost of the production, transport and destruction, of the part eliminated to be borne and paid? Clearly by consumers. But the rise of prices must in the long run affect demand and, upsetting the equilibrium with supply, provoke a fall of prices once more.

Again, the scarcity of lower grades would raise their prices and level those of higher grades downwards and thus destroy the ratio between the value of the tax in kind and of shipments estimated by Dr. Pinto at 10 per cent.

It is impossible to interfere with the working of natural law without causing disturbance somewhere and, with an inconvertible currency such as ours to deal with that reflects its own instability on every single phase of National life, no scheme that fails to take account of all its phenomena can have any prospect of success.

The proposal to eliminate and destroy coffee is not only repugnant on the face of it because it entails the wilful destruction of wealth, but is impracticable, because, do what we will, it is impossible to touch production without influencing exchanges and provoking reaction and *vice versa*.

To burn coffee only to find ourselves in precisely the same or worse position than we now are would be too ghastly a result for such an experiment, but after all only what we should deserve.

A genius writes to the *Jornal* saying that if only Government will buy up all the coffee and store it in cases prices must go up because orders cannot be executed. Precisely, but where's the money to come from? It's wonderful what a lot of rot is written over this subject and published by papers that should know better.

*O Estado de S. Paulo* says that Dr. Padua Salles has returned unsuccessful from Minas, the Government of that State refusing to entertain the idea of eliminating coffee at all. The Government of Minas and Rio will not undertake to do more than create prohibitive export duty on low types. *O Estado* says that the Government of S. Paulo now proposes to ask for authorisation to raise an internal loan of 10,000,000\$ to be loaned to planters for security of the coming crop.

From Parahyba it is reported that large numbers of retun gunny bags are arriving, 60,000 having come in one ship alone. At one time such bags were allowed in duty free, but this was put a stop to by Dr. Murтинho, when Minister, when the bags were abandoned and bought in at auction at nominal prices. It does not seem quite fair to either the jute factories or to the Revenue as these bags have been practically sold with their contents, when exported and are consequently as much a fresh import as if they had never entered the country. Did exporters allow for the re-importation and pay producers the equivalent it might be admitted, but, as it is, it means so much taken from manufacturers and the Treasury which suffers.

## PRODUCE AND PLANTING.

"*Experto Credo*," writing to an evening contemporary upon the importance to the tea producer of a reduction of the duty, imparts some hints to consumers of tea. He writes: "As a practical tea-taster I can tell consumers how to avoid paying so much duty on the tea they use. The fine Indian teas which are sold at 2s. 6d. and 3s. per lb. pay no more duty than the common teas sold at 1s. 3d. or 1s. 6d. per lb. One pound of fine tea will yield as many cups of good strong beverage as 2 lbs. of the common and cheaper sorts, and if you buy it you have only paid 6d. to the Revenue instead of 1s.; the other 6d. is spent on the tea itself, and you have a fine-flavoured, delicious beverage instead of a tasteless one. In consequence of the persistent advertisement in shops that there is no higher price than 1s. 8d. or 1s. 9d. per lb., the great majority of consumers are totally unaware of the existence of the fine qualities produced in Ceylon and India, and do not know how much more economical and palatable they are than the cheap kinds pressed upon their attention. Those who would like to try them should ask for Orange Pekoe or Broken Pekoe, guaranteed pure Indian or Ceylon. The bulk of it goes to Ireland, where the finest teas are used, but it can usually be obtained from old-fashioned family grocers of good repute."

A series of lectures to grocers' assistants are in course of delivery at the Heliot-Watt College, Edinburgh. Last week tea was discussed, and Dr. MacDougall, who lectured, gave the following particulars on the subject. He said tea was introduced into Europe about 1610, and was first drunk in England about 1660. It was at that time imported from Holland at some 60s. a lb. In 1670, the East India Company began to import it, and many thousand pounds weight were brought into the country. In the following century the imports had increased to millions of pounds. In the first quarter of the eighteenth century green tea cost from 12s. to 30s. per lb.—black from 13s. to 20s. It was long thought that green and black tea grew on different plants, but the only difference was in the mode of preparation. In black tea the leaves, when pulled, were thrown together in a heap, a slight fermentation resulted, which caused the darkening in colour. A similar darkening from an exactly similar cause might often be seen in hay. The leaves of green tea were at once exposed to a high temperature, which checked all tendency to fermentation. By the end of the eighteenth century the use of tea had become general, and since then the imports, as he need hardly tell them, had increased enormously. In 1800 the weight imported was upwards of 23,000,000 lbs.; in 1880 above 208,000,000, and in 1899 more than 289,000,000, the value of that year's imports being ten-and-a-half million pounds sterling. Of the 1899 imports 86 per cent. came from British colonies. Up to 1850 the price was very high—from 6s. to 8s. per pound—and, as a result of this, imitations were very plentiful. The leaves of the willow and blackthorn were dried, a little tea added as a flavouring, and the mixture sold as tea; into the question as to who was responsible for this wholesale adulteration he did not intend to venture. But it was appalling to think of what people in those days drunk under the name of tea; the consolation was that the consumers fondly imagined the mixtures to be tea, and there was great power in imagination. The duty per lb. was first 2s. 2d., then 1s.; in 1865 it was lowered to 6d., and in 1890 to 4d.; now he believed it again stood at 6d. The traveller Bruce found more than a hundred districts in Assam where the wild plant was growing under the very noses, as it were, of the residents. In 1840 the Assam Tea Company commenced its cultivation, and sixty years later, in 1900, there were more than 300,000 acres under cultivation, the industry giving employment to half a million persons: in that year the exports were 107,000,000 lbs. From about 1840 to 1880, coffee plantations had flourished in Ceylon, but in 1881 the coffee plant was attacked by disease, and since then tea had practically taken its place. In 1867 the area under tea in the island was ten acres; in 1891, 230,000 acres. In 1873, 23 lbs. of tea were sent out of Ceylon; in 1901, 70,000,000 lbs., and the latest return was 139,000,000 lbs. The tea-growing countries of the world were China, British India, Ceylon, and Japan—that Great Britain of the East, which in 1898 exported 61½ million lbs., chiefly to the United States. In 1899 Natal produced 10,000,000 lbs., and each succeeding year had added about 300,000 lbs., so that South Africa had a future before it as a tea plantation.

America, too, had to be reckoned with, for experiments in tea-growing had already been made in South Carolina.

The amount of coffee consumed in the United States continues very large. February deliveries were 621,716 bags, a gain over February, 1902, of 111,207 bags. The imports as reported by the United States Government for seven months of the trade year were 518,796,866 lbs., against 695,820,456 lbs. for corresponding period in 1902, and 430,798,494 lbs. in 1901. America is now importing close to a thousand million pounds annually. The tea consumed is less than one-tenth of the coffee consumed, or, say, approximately, about 86,000,000 lbs. The imports for seven months ending January, 1903, were 90,953,228 lbs., against 59,344,573 lbs. same time in 1902, 75,388,986 lbs. in 1901. In some cities and towns the consumption of tea may be increasing, but throughout the country it does not appear to be so.

Messrs. C. J. Leech & Co., in their last report on the coffee market, state that another dull and uninteresting series of markets has been experienced, with an almost total want of speculation owing to the absence of anything calculated to induce operators to take a view. Receipts have been on a large scale, and would seem to point to a total of about twelve million bags Rio and Santos for the present season, which would compare with 15½ million bags in 1901-2. The demand in Santos has slackened, and the stock there, which decreased rapidly to 946,000 bags by the 4th instant, increased again to 1,012,000 bags on Friday. Nevertheless, holders have evinced but little inclination to reduce prices, believing that the law to eliminate 20 per cent. of the Rio and Santos receipts, when it comes into operation—if it can ever be applied—will work wonders. A cable received in Havre on the 10th instant reported that the law was passed at the second Meeting of the States Congress at Sao Paulo. This measure, which is the invention of the planters themselves, is not likely to accomplish the desired result, for the knowledge that the 20 per cent. is to be eliminated will encourage individual effort to make up the quantity in some way or other. Receipts in Santos last season were 10,166,000 bags; destroy 20 per cent., and on that basis there is left a quantity still in excess of consumption. The present season will probably reach eight million bags reduced by drought, but eliminate the 20 per cent. from this and the balance is still too large. Last August frost was reported to have seriously damaged the crop on which the whole future turns—namely, 1903-4 season—and it is difficult to decide what figure to adopt as a basis, for allowance must be made for increased yields from maturing trees. The future is dark and uncertain, but from all accounts the Santos producer is really feeling the pinch of low prices, and the new crop may be reduced owing to a partial abandonment of plantations, or inability of others from want of means to maintain proper conditions of cultivation.—*H. & C. Mail.*

## INDIAN AND CEYLON TEA SHARE VALUES.

BY MR. G. SETON.

*Further appreciation during February.*

From the following figures, compiled, as usual, by Mr. George Seton, of the Indian Tea Share Exchange, 120, Bishopsgate Street, E.C., it will be seen that the market value of the shares of the forty-five representative companies has again advanced to a moderate extent. With one or two exceptions, the advance has been "all along the line."

Face value of 45 companies' shares	...	...	£9,500,000	
Market value	...	1st July, 1897 (top point)	...	12,000,000
"	...	1st January, 1902	...	7,000,000
"	...	1st September, 1902 (lowest point)	...	6,050,000
"	...	1st January, 1903...	...	6,600,000
"	...	1st February, 1903	...	6,800,000
"	...	1st March, 1903	...	7,000,000

So that the recovery has been just to about the level of the beginning of 1902. As the grand total of the share and debenture capital of the one hundred and seventy tea companies registered with sterling capital, in the United Kingdom (exclusive of private-owned estate and companies registered, with rupee capital, in India and Ceylon) amounts to about £19,000,000, the fluctuations

of the entire volume, based on the above figures, may be thus roughly estimated:—

Face value of (about) 170 companies ...	£19,000,000
Highest market value, 1st July, 1897 ...	24,000,000
Lowest market value, 1st September, 1902 ...	12,100,000
Present market value, 1st March, 1903 ...	14,000,000

This shows a rise in value from the lowest point of nearly 16 per cent., but there is still a depreciation from the highest point of nearly 42 per cent., or, taking 100 as representing the top value, the lowest level would be represented by just over 50 and the present level by 58.

Notwithstanding the present, rather uncertain outlook as regards dividends for the producing year 1902, Mr. Seton considers that, with the restoration, or partial restoration, of public confidence in the stability of the industry, a further moderate hardening of values is to be expected. It may be noted, however, that the better prices now ruling in Mincing-lane, coming, as they have done, late in the selling season, are just barely compensating for the very low prices at which the first half or two-thirds of the crops were sold during the Summer and Autumn of last year.

### COFFEE IN LONDON.

Large supplies of Central American kinds have been offered, says the *Produce Markets' Review* of 21st ultimo, and the pressure at the auctions is becoming heavier than it has been for two years. The Costa Rica crop is coming forward very much earlier than usual, and 55,000 bags have already passed the hammer compared with only 17,000 bags at this date last year. The crop of 1902 was, however, very late, but this year is abnormally early, and it is evident that the end of the heavy auctions must come much before the usual time. On this account those who wait for the heavy pressure and consequent low markets in May or June will very possibly find all the best Coffees sold and the lowest point passed. Moreover, this year the export demand is quite the reverse of last year; large parcels of fine quality are being shipped to the continent. East India has not been so freely offered, but better supplies are promised next week. Prices have advanced 1s. to 2s. from the very low rates of last week. In the terminal market quotations have gradually eased off, but are only about 6d. lower than a week ago.

### TEA IN LONDON.

INDIAN TEA.—There is no change of importance, says the *Produce Markets' Review* of March 21, 1903, and prices on the whole remain steady with a slightly easier tendency for some of the medium grades. The deliveries up to date are, as was generally anticipated, smaller than at the same period last year, while the demand continues moderate, but this inactivity in buying has made no material impression on prices. Practically the lowest quotation is from 6d. to 6½d., and only a limited quantity is obtainable at the former rate, as holders still refuse to accept any reduction in prices for the common descriptions, a quantity of which was withdrawn from the public auctions. As the market is closed in Calcutta with shipments to the United Kingdom of 145,000,000 lbs., which is between 7,000,000 lbs. and 8,000,000 lbs. short of last season, it is more easy to ascertain the actual supply to meet the consumption. The bonded stock now stands at about 63,000,000 lbs., or, taking the consumption at an average of 12,000,000 lbs. per month, about five months' deliveries. At the same time, it must not be overlooked that the quantity of tea held by the trade is considerably smaller than last year. At the public sales 30,616 packages were catalogued for public auction, 22,408 were sold in the room, and the balance has been somewhat freely dealt in, especially the lower qualities.

CEYLON TEAS.—Moderate supplies again prevailed at the auctions on Tuesday, and with stronger competition, a distinctly better tone was noticeable, and firm to higher prices resulted. The lower grades of Whole Leaf were in more demand, and in many cases showed an advance of ¼d. per lb. on last week's rates, while very ordinary Pekoe Souchongs fetched 6½d. Broken Pekoes, however, occasionally showed weakness in the medium and finer descriptions, but the lowest kinds remained firm, 7½d. still being practically the lowest quotation. The supply of Fannings has been very moderate, and they continue to realise high rates. At the public sales 20,560

packages were brought forward, of which about 1,900 were withdrawn.

CONGOU TEA.—At the public auctions held on Wednesday 1,222 packages were offered, and, although the bidding was not brisk, fully recent prices were obtained in all instances where sales were effected. There has been a considerable enquiry for the lower descriptions of Black Leaf kinds, and a steady business has been done in them at firm rates.

OTHER CHINA TEAS.—The demand for Caper continues quiet, and there is little of interest to report. A fair business has been transacted privately in Green Tea, but there is no alteration in prices to quote.

### TEA AND SPOONS.

A correspondent writes to the *Grocer*:—

Whatever is the "tea trade" coming to? I received this morning enclosed circular, with spoon and reply-paid telegram. How very considerate the senders are! We have only to forget sending reply telegram, and I presume we should soon have this special offer with the spoons and liberal advertising matter at our doors. I prefer leaving such generosity alone, and to sell "Own Blends."

[Enclosure.]

London S. E.—Dear Sir,—Owing to the astonishing success of our "Tea," we are making special efforts to secure at once agents everywhere, and we therefore beg to make you the offer for your district. Subject to your full approval we are sending 30 lbs., at 1s. 8d. per lb. (to sell 2s). carriage paid (100 lb. orders will be 1s. 7d). With this we will send a plentiful supply of advertising matter (specimens by this post) and also twelve solid nickel silver tea-spoons free as per enclosed, to give the first twelve buyers of a quarter-pound packet. Thanking you in anticipation.—We are, yours faithfully.—Tea Company. To save carriage we send a reply-paid telegram form, but please only use if the tea is not to come on.

## RUSSIAN QUESTION IN ASIA,

In Tibet and Chinese Turkestan.

Record of 3 years' Exploration.

BY CAPTAIN H. H. P. DEASY,

With Appendices, Maps, 80 Illustrations.

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experience of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan.

## TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, March 12, 1903.

There has been decidedly more activity in business done in tea during the past week. Wholesalers are showing more disposition to buy, and a fair trade has been done at fully advanced prices. The London market is very strong. In Indian teas there has been great activity and the prices are fully 1½d. per lb in advance of what they were two months ago. The great boom, which has been in activity of late, had its origin in the concerted action on the part of importers to feed the market rather under than over requirements, and to the shortage in crop. The visible supply of all tea on January 31 was 17,000,000 lbs. less than the year before, and 27,000,000 lbs. less than two years ago. Ceylon expects to send 10,000,000 to 15,000,000 lbs. less in 1903 than it did in 1902, and India will not send much more than last year, owing to the scarcity of labour and the stoppage of extensions. It is anticipated that the crops will be stationary for the next four years, but consumption will naturally increase.

MONTREAL, March 12, 1903.

The movement in teas is quieter this week, though prices on all grades rule firm. A lot of Japans was secured by one house at a price which allows them to offer it to the trade as low as 16½c., but the market price ranges from 18c. for medium to 24c. for finer qualities. Ceylons on the foreign markets advanced 1c. per lb. last week. There has been a fairly good demand for Ceylons, principally from western buyers, and in this way the business done was of fair proportions.

## ABOUT JAPAN TEA.

In the *Spice Mill* Mr. Alfred Adelsdorfer gives some "Expert Testimony" on the Art of Buying and Firing for the U. S. Market. He writes:—The total average consumption of all kinds of teas in the United States is about 90,000,000 lbs. per annum, of which 40,000,000 are Japan teas.

China teas, including Congous and all green teas, are fired on the plantations and are packed there in chests, ready for export after being stenciled or labeled. As every European and American buyer has access to and sees samples of finished stock, the buying of China teas is comparatively simple. It takes, of course, expert knowledge and judgment, but no very large premises and no factory.

In Japan, however, it is different. Large firing plants with modern machinery are necessary in order to make the satisfactory teas required by present demands.

Japan teas are shipped from the interior to native commission merchants in the settlements of Yokohama and Kobe. The teas come down from the country in a half fired state, called "raw" tea. Samples of these are first shown to foreign firms by native brokers about May 1st, and from then on until June 15th the first crop teas, which cannot afterwards be equalled in quality, must be bought.

The best teas (in the cup) grown in Japan come from Hachioji and Enshu. The style of the former is rather poor, but the style of the latter is fair, and in my opinion Enshu teas are the best teas grown in that country, taking draw and style into consideration.

The teas from the Suruga district have excellent style but only fair cup. The low grades come from Ise and other lowland districts.

One can acquire the buying, blending and firing, only by actual experience in Japan after having had a previous thorough training in fired Japan teas, knowing the requirements of various sections and customers in the United States.

After having bought the raw stock, the firing and blending is peculiar to each establishment. As the larger buyers of the United States want the same firing every year under their own chop marks, import orders are given to be filled as near the previous year as the season will permit.

The work required to buy the raw leaf, to examine same, to fire and blend to suit the taste of each customer, is enormous. Some idea of the immensity of the undertaking may be had when I state that our firm (M. J. Brandenstein & Co.) alone have over a thousand special orders to fill every season, nearly every customer having his own labels. Some buyers want very stylish goods

others are very particular on cup, some again want style and cup; some want light firing, others, well toasted teas, etc., etc.

It is comparatively easy to satisfy buyers who have educated their trade to good goods, but mighty difficult to pick out goods that will eventually suit the tea drinker when dealers think that "any old thing" will do as long as it is cheap; it is just the same in teas as it is in roasted coffees.

Notwithstanding, that anyone, to do this business in Japan, must live in a foreign country away from Europeans and have a thorough knowledge of the tea business, with the hardest kind of work and worry, there have been more failures than successes. Even the few firms who have made a success, have very little profit to their credit as compared to any business of the same volume in the United States. There are now only nine European firing houses left in Japan and they buy and manufacture about 90 per cent. of the teas exported from that country. "With only a few of us left" in Japan we all hope that this part of the tea business in the future will, for the hard work involved, show better results than in the past, especially to those firms who buy and make the best goods possible and have the interest of the future of the article at heart.

## THE INDIAN TEA MARKET.

MESSRS. CARRITT, MORAN & CO.'S REVIEW OF THE SEASON.

The following passages are taken from Messrs. Carritt, Moran & Co.'s Indian Tea Market Review, season 1902-3:—

Season 1902-3 has closed with an actual crop through Calcutta and Chittagong of 175 millions, of which shipments to the United Kingdom have totalled 145½ millions; the corresponding figures for last year were 174¼ and 153 millions, respectively. The quantity sold on the Calcutta market totalled 47½ millions or 27¼ per cent. of the crop. In respect of quality the crop has been barely up to average standard, and taken all round has not been equal to that of last year. Assams have, in some measure, been disappointing: at no period during the season have they stood above ordinary average quality, and like last year the supply of good Autumn teas has been small. Cachars and Sylhets have, as a rule, been good, Terais fair, and Darjeelings, with the usual exceptions, have been attractive. Dooars teas in the early months were plain and somewhat indifferent, but towards the close of the rains they rapidly improved, and this district was fortunate in producing a particularly good Autumn crop which commenced early and was consistently desirable until the close.

From Southern India supplies have again found their way to this market in small quantities; the offerings throughout the season have totalled 2,000 packages, which have realised an average of about 5¼ annas. The teas have been well received, considering that they are strangers to this market. The system of manufacture, in Travancore, more especially, seems to be chiefly directed towards cup character, in which a colory liquor is apparently the desideratum, and aimed for consequently at much expense of style and appearance. London having hitherto been the exclusive market, this tendency is explained, and the teas are doubtless right for that centre. In Calcutta, however, much importance is attached to make and shape, and generally stylish appearance in teas of the same level of value, and Travancore teas could undoubtedly be made a great deal more attractive than they are.

The effects of weather as affecting supply have been phenomenal; the cold season set in early, and at the same time so earnestly that a few days sufficed to upset all calculations, and a continued shortage became evident as the season grew older. The local market responded immediately to the altered conditions and prices advanced appreciably and steadily from sale to sale. London, however, was slow to recognise the changed aspect, it eventually broke away from its dead level of value, but only for a time, and in spite of a heavy shortage in supply, not only from here but also from other countries of production, it again set back. The sullen and sensitive tone which existed in the home market for many weeks, difficulty in moving up values, and a non-responsive trade generally must at the time have been a great disappointment to sellers and productive of serious reflection on their part.

The relations between buyers and sellers in London in the latter months have, perhaps, never been so pregnant with suppressed antagonism as indications seemed to pourtray, and in this was

probably seen the inconsistency of the position of the home trade. Sellers, however, have since had the balance all in their favour, they have seen their opportunity to force the market and have taken advantage of a position which, though new to them, was assured and justifiable. They have had to carry the stocks, but it has paid them to do so, and it has been no burden to them. Buyers have retaliated by holding aloof and relying upon hand-to-mouth dealings to see them through, but it could not last long enough and they were unable to keep pace with consumption.

At the close of the twelve months therefore the producer finds his position strengthened very considerably, but it should be recognised as the outcome of a short yield and a still further deficient supply, so far as London is concerned owing to the increased off take in Calcutta by new markets. These are the factors that have formed the backbone of the sellers' position, enabling them to carefully nurse the home market in a way that has not hitherto been experienced in the trade, and with results so satisfactory to themselves.

To producers, the season, though full of encouragement at the close, has again shown disappointing results. The position on their side is undoubtedly stronger and a brighter future is before them, and it is not difficult at present for them to appreciate both, seeing that the recent recovery in prices has imparted financial encouragement to some slight degree.

Although the crop this year has been short of estimates and expectations, the supply has been sufficient. The total outturn was actually in excess of last year; had this excess gone to London the position there would have been one of extreme anxiety; outside markets, however, saved the situation, for they not only absorbed the increase through Calcutta, but a great deal more, and their worth has never been brought home to the producer so strikingly as during the past season. The history of the past seasons' trade with countries other than the United Kingdom is extremely satisfactory.

The supply placed on the local market for disposal in 1901-2 showed a very marked decrease on previous figures, and, consistently, Indian tea lost much ground in the markets of the world outside London. Last year, however, Calcutta received a somewhat larger proportion of the crop, the increase was small, but it gave these markets the opportunity to recover lost ground and new ones to come in. The progress made in the twelve months necessitates an extension of last year's figures and comparison with those of Ceylon, which will once more substantiate the assertion that the more reasonably liberal the supply to this market, the more will our fresh outlets expand and afford relief to London.

The figures for America are particularly good, but the most noteworthy increase has taken place in our trade with Russia. This demand is not a new one for Indian tea, but it is new to this market and the transfer from London of a very large portion of these interests is the most welcome and satisfactory feature of our dealings with foreign markets. The quantity she has taken has been very considerable and she has been a more reliable and consistent customer than the Colonies.

The past year has seen a definite start made in the manufacture of green teas, and in respect of value these types have, as a rule, compared favourably with ordinary blacks from the same garden. A fair quantity has been made totalling about  $1\frac{1}{2}$  million pounds, and in the Calcutta market  $\frac{3}{4}$  million pounds have changed hands at an average of  $5\frac{1}{2}$  annas per pound.

The class of green tea chiefly produced has been the unfinished type, which has met a ready demand for certain outlets. That more attention will be given to green tea in India seems probable, but at the same time there is some hesitation in taking up and providing for its manufacture. This is to be understood, as in the present state of the industry producers do not see their way to increase their outlay by the cost of additional and necessary machinery, and to embark on a new enterprise without having some inducement, which, as in the case of Ceylon, might take the form of a bonus. The manufacture of greens in India would not have been started last year had it not been the Association's bonus that originally induced it; the American and Canadian markets can take greens freely, and if India does not make them she cannot hope to push her trade with these centres to any appreciable extent.

In anticipating the ensuing season's events during the past year furnish useful indications. At the moment the producer's position is strong and his prospects good, better than they have been for some years; home consumption is free, stocks light, (they will probably be abnormally low in July next) and buyers carry no burden

in the shape of dear tea and difficulty in moving it. To maintain their position and further improve it the producers' policy is clearly suggested in keeping the crop within reasonable limits and in being fully alive to the certainty of a return to starvation prices as a result of the taking of any liberties in the direction of supply.

The recent bed-rock level of value has in some measure influenced better and less tea, but there is no disguising the fact that weather has been the prime mover. At this juncture it would be extremely unwise if the recent advance in value should be met by converse working and reflected in a freer system of plucking, the drawbacks of which may be further aggravated by weather favourable to yield.

In contemplating the approaching year's crop there is nothing to convey an impression that it will be a heavy one beyond the assumption that two moderate yielding seasons are likely to be followed by one of abundance or that growers will be persuaded by the advance in value to aim for quantity. The ensuing season can, therefore, be anticipated with much confidence; prospects are exceptionally favourable from every point of view, and with careful working in the districts and judicious handling in the markets, there is every reason to look forward to a prosperous year.

### “OUR INFANT TEA INDUSTRY.”

Dr. Charles U. Shepard, Special Agent, Tea Culture, U. S. Department of Agriculture has favoured the *Spice Mill* with “An argument in favour of the Restoration of the Duty on a Bounty on a Merchantable Article.”

The United States now form the only exception among civilized tea-drinking nations, and, indeed, among all civilized countries. (Belgium, alone and consuming very little tea, excepted,) where imported tea is not subject to a duty. Free trade Great Britain imposes a tax of 12 cents. per pound on all teas, although they come almost wholly from her own colonies. In France the duty is over 20 cents. per pound, and latterly there has been an effort to increase it to over 40 cents. In Russia the duty on medium to good teas is 45 cents. per pound. Not that these countries—unless the last mentioned—desire to encourage any infant industry, but the tax on tea constituting only about  $\frac{1}{2}$  per cent. on a cup of that beverage is easily borne and collected, and the revenue therefrom proves very welcome to distracted ministers of finance and generous Congresses.

So far as Pinehurst interests extend it is a matter of little concern whether foreign tea be dutiable or not; the novelty of the product is sufficient to insure the sale of its drop in the bucket. But as regards the establishment of a national tea industry, it can never be brought about except by the imposition of such a duty on foreign teas as shall counter-balance the difference in the price of American and Oriental labour. This fact was abundantly demonstrated on the occasion of the repeal of the war tax on foreign teas. A number of moneyed men had been seriously entertaining the thought of embarking in tea planting to a very large extent; but on the revocation of the duty immediately dropped all consideration of the subject. Unfortunately the tea industry, like those of the cane and beet sugar, requires a rather large initial expenditure and the services of an experienced director—one versed not only in agriculture and manufacture, but a good tea judge and a general business man. It is almost needless to indicate that one who can fill these desiderata is always worth a good price in the markets of the world and that it must take a great many acres of tea gardens to contribute enough profit to retain his services.

Aside from the fact that an immense number of at present unemployed people, men, women and children, might find remunerative occupation, and large areas of now useless land be profitably cultivated, a new factor in diversifying our resources might be among the advantages of starting an American tea industry. An example may be taken from a portion of Texas, whose phenomenally fertile prairies have been rendered comparatively valueless by the ravages of the cotton boll weevil, and in which the United States department of agriculture will establish a tea experimental station, with a view to afford the planters of that section a new and hopefully profitable avenue of labour.

It may be well to introduce a short historical sketch of recent efforts, *pro* and *con*, in regard to a duty on foreign teas in the

United States. For several years previous to the Spanish war the leading importers and large distributing houses in the tea trade became more and more convinced of the necessity of the restoration of the duty on tea as had obtained during and for several years after the war between the States. They claimed that there existed a steady decline in quality and price, whose effect was to inundate this country with the sweepings of Oriental factories and to rob all trade, except in the cheapest sorts, of a reasonable profit. Opposed to them were the handlers and retailers of the inferior grades, who contended that a duty must prove a hardship on the poor—the consumers of the cheapest commodities sold under the name of tea. The struggle was carried year after year to the committee on ways and means of the House of Representatives but neither political party dared to propose the bill for a duty on tea.

Then came the Spanish war, with its attendant enormous expenditures, which were promptly met by war taxes, and among them was the duty of 10 cents per pound (about one-twentieth of a cent. on each cup) on foreign teas, introduced by that fearless statesman, the Hon'ble B. R. Tillman, Senator from South Carolina. It found very little opposition and became law. But its object was wholly to raise the "sinews of war" and by no means to protect an infant industry.

Last spring, the war being long past and a large treasury surplus on hand, it was natural that the provisional war taxes should be repealed, and it was done by Congress; the duty on foreign tea ceased with the expiration of 1902. An important body of large importers opposed the repeal; they demonstrated that the effect of the duty had been to exclude the cheapest, rubbishy, sorts; that the Oriental tea producers had been obliged, in order to keep the American prices at about those ruling before the duty was established, to contribute the greater part of the tax on the cheaper varieties and a considerable portion of that on the better grades. In other words, the duty had protected the stomachs of the poorest classes from sorts of tea which never should be allowed entrance into this country; but had otherwise hardly affected the price of the poor man's beverage.

The importers predicted that the repeal of the duty must necessarily be followed by the flooding of the country with wretched teas, at, of course, very low prices, but the maintenance of the former prices for the medium grades. And such, I believe, has been the result.

So far as Pinehurst is concerned, I would quote from an editorial in the Colombo (Ceylon) *Observer*, the leading British commercial journal of Asia, of December 23, 1902: "There is probably no more interesting tea growing experiment in the world at the present moment than that of Mr. Shepard, at Pinehurst, South Carolina, which is now brought under the auspices of the United States department of agriculture."

Why this kind notice, and why the unremitting attention of other notable journals, not only of the British Indies, but of Great Britain and other countries pecuniarily interested in the production of tea? Surely not from any personal favouritism nor any other scientific or other interest in a little farm of less than 100 acres in tea. No, there is an ominous "cloud on the horizon no bigger than—Pinehurst."

Every now and then there creeps to the light the expressed fear lest the Americans may awake to the possibilities of tea production at home; that the present prodigious effort to unload on our shores the surplus of the Indian and Ceylon tea crops, backed by the subtle influence of more than \$70,000 each year from the purse of the Ceylon "Cess" and probably, shortly, by a yet larger sum from the Indian Association, may have to be doubled in the future, and that the effect on the tea shares of Mincing Lane, now bolstered up by the hope of an enlarged American trade, may be disastrous.

And what intervenes to prevent the consummation of an American tea industry? Simply the difference in the price of labour and cost of supervision in the Orient and the United States. This may be calculated at 12 to 15 cents per pound of made tea. Should this obstacle be removed, either by a duty on foreign teas or a bounty on the American ones, there can be no doubt of the successful inauguration of this new industry with all its attendant advantages, both to the labouring classes and the owners of now waste lands in the Southern States.

There is another feature which should command attention. Our country has recently plunged into the duties and dangers of a world power. Our navy is, perhaps, the fourth in efficiency. But it might not be able to protect our foreign trade if drawn into an

ocean war with one or more of the large naval Powers. Whence, then, could come our supplies of tea and coffee? And as coffee cannot be largely produced in the United States, on account of climatic conditions, what other resort can there be for the enlarged demand for tea but in American gardens? Finally, should a plant disease attack and destroy the Asiatic tea gardens, as was the case with the Ceylon coffee estates this emergency might be met by the production of abundant American tea plants.

## DISTRICT ASSOCIATIONS.

### NORTH MYSORE PLANTERS' ASSOCIATION.

#### THE ANNUAL GENERAL MEETING.

We extract the following from the Minutes of the Proceedings of the Annual General Meeting of the North Mysore Planters' Association held at the Kadur Club, Chickmagalur, on the 18th ultimo:—

PRESENT:—Messrs. C. H. Godfrey (*President and Acting Honorary Secretary*), in the Chair; H. Pilkington; F. Clifford; J. L. Stewart; W. P. Allardice; H. G. Bonner; Proxies received from Messrs. C. H. Browne; O. Scot-Skirving; F. J. Parton.

#### THE HONORARY SECRETARY'S REPORT.

The Honorary Secretary presented his report in the course of which he said:—

*Accounts and Working.*—I beg to lay before you the Annual Report and Accounts for the past year.

The expenditure on the Casket presented with address to H. H. the Maharajah on the occasion of his installation slightly exceeded that voted at last Annual Meeting—it was when on view in Bangalore greatly admired and the Committee trust you will not object.

A saving has been effected by the abolition of a peon; even if necessary the post owing to plague was a difficult one to fill.

*Crops.*—Surely this may be recorded as the Bumper year, in the advent of which many of us had I fear begun to lose faith. The quality would no doubt be good enough but for the over stocked state of the market.

*Plague.*—This fearful epidemic is slowly but surely gaining an assured grasp of our District—and in some parts has caused an appalling loss of life. In considering the measures employed to meet it, it must be remembered that despite wide world endeavours for the past six years to discover a sure means of effectually combating it; none has been found and we can only trust to Government doing its best in the way of an unstinted aid to those who have to evacuate their homes and it might be suggested an increase of the Medical staff and necessaries in affected areas.

*Coffee-Stealing.*—Only one case has been brought forward and a reward of Rs. 50 paid the informer.

*U. P. A. S. I.*—At the Annual Meeting of this body we were represented by the then Acting Honorary Secretary and myself.

(a) It is to be regretted that the Resolution they brought forward on the Currency incident of 1901 was not carried, but no doubt the firm attitude assumed helped greatly to carry through the Resolution brought forward by the S. M. Association and ably supported by Wynaad.

(b) *Cess.*—Your representatives refused to commit themselves in any way to the much talked of voluntary cess; it should be noticed that a Standing Sub-Committee was elected to deal with this and perhaps if they are unable to put anything practical before us this year—the subject may be dropped.

(c) A subscription of £150 to the Paris Shop (which had really been promised in 1901) was agreed to—but there is considerable diversity of opinion as to whether any practical benefit will arise from this source.

(d) *Brazil delegate.*—An application for a grant-in-aid was made to the Government of India and they have just replied agreeing to a third of the sum asked; whether under the circumstances the project can be prosecuted with a thoroughness and speed sufficient to enable it to be satisfactory is, I fear, doubtful.

(e) *Differential duties.*—The support of the U. P. A. S. I. to this project has been solicited by Sir H. Vincent, M.P., as far as we are concerned, this will I hope meet with your approval.

(f) *Planting member.*—It should be remembered that at the next Meeting the election (or re-election) of some one to fill this two years' post will come up again.

(g) An alteration was made in the voting of the Council your representatives agreed, but subsequent events made me at least doubtful of this—a return to the former usage, but with the Chairman having additional powers of voting might meet the original difficulty sufficiently.

*Labour Law.*—This has at last been passed through the Madras Council and while giving the Madras Government every credit for its good intentions it is to be deeply regretted that chiefly through the uncompromising attitude of the Government (note Government of India) the result is a measure which appears likely to be of little if any benefit to this District, and might easily be the reverse. A large mass of correspondence relating to the measure is placed upon the table.

*"Graham Anderson Memorandum."*—I met the S. M. Association representation and agreed to the conference between ourselves—and the Durbar Representatives be held at Mudigeri; Messrs. Stewart, Allardice and myself were elected to represent us; unfortunately the two former were unable to turn up and the same being the case with two of the S. M. Representatives, the burden fell upon Mr. Harris and myself.

#### THE PRESIDENT'S ADDRESS.

Mr. C. H. Godfrey, the President, in the course of his Address said:—

I think the Report you have just heard tells you as much as you will care to hear in most matters but on one or two points I wish to add a few words.

*Rule 5. U. P. A. S. I.—Currency.* To a certain extent your representatives were hampered by having to bring forward our Resolution as an amendment instead of an original motion and being thus confined to speaking once—when introducing it—and losing the right of reply. (It might be noted for future guidance that of two or more Resolutions sent in that which reaches to Secretary first claims precedence.)—Considering the side issues raised on the one hand and the attitude of indifference arising from a feeling of hopeless impotence on the other; I trust that the ultimate result may be considered sufficiently if not entirely, satisfactory.

*Cess.*—I would propose that at the next meeting we support the dropping of this subject if no really practical scheme is brought forward by the Sub-Committee.

*Differential dues.*—I would also ask you to consider the probable wisdom of supporting these.

*Brazil delegates.*—I much regret that my absence from the country will prevent my taking an active steps in pushing this project—already a terrible delay has occurred in starting the same—however an exhaustive list of questions prepared originally for Mr. A's friend is ready—and it only remains to select a suitable delegate and last but not least provide the necessary funds.

Unfortunately the grant-in-aid of the Government of India amounting as it does to less than the average Member of our Association pays it annually in the way of a veiled tax—the result of the success of its currency policy—is but a poor "send off."

Possibly on further representation the amount may be increased—also the various Local Governments may generously assist as they did in the matter of the Paris Exhibition, but it must be remembered that they suffer with us rather than the reverse from the depression in our industry; and it is the Government of India (which is I am told about to declare another huge excess of income over expenditure) from whom we have a right to ask and expect assistance.

*Labour Law.*—I now pass to this most important subject (please see letter for Chairman of U. P. A. S. I. and portion of my reply as per letter book.) You will see that as Councillor for this Association I thought it right to protest against the terms of practically unqualified approval, in which the Planting Member spoke at the final introduction of the Bill in the Madras Council.

I believe I shall voice the general sentiment of the District in saying the Act, even in its amended form, is a bitter disappointment to us. I have received several letters on this subject from members who were unfortunately able to attend.

*"Graham Anderson Memorandum."*—The subjects touched on in this covered a very wide range—the object of all was however the same, viz. obtain assistance through our Local Government in tiding over these terribly hard times.—I fear we were hardly able to come to any definite conclusion—but, however, that may be—we may rest assured that we have the full sympathy of the Government and may count on its aid if any practical scheme can be laid before it. At the outset it could hardly go further than it did in promptly responding to our application by sending so eminently capable an official as Mr. Madhava Rao, who by his courtesy and keen appreciation reduced the difficulties of such a meeting and discussion as far as possible. His report will shortly be considered by the Government and the result no doubt communicated to our Associations. Meanwhile I think I am at liberty to say that we can count on the Government consulting us before introducing any Labour Act—a proposition on the subject will shortly be laid before you. One pleasing announcement Mr. Madhava Rao was able to make, viz. that the Anjur bridge was to be taken in hand almost immediately.

#### RESOLUTIONS PASSED.

Two subjects were formally discussed as the result of the above Report and Address resulting in the passing of two Resolutions.

1. Proposed by Mr. J. L. Stewart.

Seconded by Mr. W. P. Allardice.

That the following Resolution be brought forward by our Representatives at the next U. P. A. S. I. Annual Meeting:—

"That the system of voting in the Council revert to that in use prior to 1902—with this exception:—That the Chairman shall have a vote equivalent to the largest voting Association, but he shall not vote for the Associations which he represents."—Carried unanimously.

*Labour Law.*—Proposed by Mr. H. G. Bonner. Seconded by Mr. C. H. Godfrey.

That (1) "This Association addresses the Mysore Government with a view to retard the introduction of a Labour Act (such as

Agents for LEA & PERRINS'

WORCESTERSHIRE SAUCE.

**CROSSE**

By Special Warrant  
Purveyors to

&

**BLACKWELL'S**  
LTD.

His Majesty  
The King.

**CELEBRATED OILMAN'S STORES.**

at recently passed in Madras) for the present. The Act as passed the Madras Council being apparently eminently unsuitable for District.

(2) This Association requests the co-operation of the S. M. P. A. with the above.

Carried *nem. con.* Proxies for the management of a large number of Estates were recorded in support of above.

The Committee having resigned—the election for office-bearers 1903 resulted as follows:—*President*—Mr. O. S. Skirving; *Honorary Secretary*—Mr. F. J. Parton; *Committee*—Messrs. W. P. Illardice; C. H. Browne; L. King Church; J. L. Steward and C. H. Odfrey.

The Proceedings concluded with a vote of thanks to Mr. C. H. Odfrey.

## MOTHER AND DAUGHTER.

It is remarkable how greatly our estimate of ourselves and our abilities differs from the estimate formed of us by others. If the thing were practicable, many folks would realise heavily by selling themselves at their own valuation (if they could find customers), and afterwards buying themselves back on the basis of other people's notion of their worth. The more numerous and the harder the blows aimed at our self-conceit in the days of our youth, the better for us. They pulverise, as it were, the worser part of our nature, and nothing survives the process but what deserves to endure. "And what are you?" asked a Lord Chief Justice of England of a witness who had just given some rambling and discreditable evidence. "I employ myself as a surgeon," said the witness. "But does anybody else employ you as a surgeon?" "Are you a surgeon?" asked the judge. And thereat the witness collapsed.

It is claimed for all medicines that they effect cures, though the fact is that some do and some do not. Mother Seigel's Curative Syrup has been very extensively used for thirty-five years, and is to-day the principal domestic medicine in sixteen different countries. The number of cures it has effected (especially among persons suffering from indigestion and bilious diseases) is quite

incalculable. Of the many thousands of testimonials as to its efficacy voluntarily given, here is an interesting one from a mother and daughter. "For several years," writes Mrs. Hutchison, of Newcastle Road, Jesmond, N.S.W., on October 19th, 1902, "I suffered agonies from indigestion and liver complaint. I could neither eat, sleep, nor work—in fact, did not know what it was to enjoy a single hour of freedom from pain. I was attended by two of the cleverest medical men in the Newcastle district, but their treatment failed to bring me any relief. Indeed, I went steadily downhill, and began to fear that my case was beyond the aid of medicine. I grew weakly and thin, and became dejected, when, two years ago, I was advised to try what Mother Seigel's Curative Syrup could do for me. It was a happy decision, for before I had taken a quarter of the first bottle my health was much improved. I continued to take the medicine according to the directions for five weeks, by the end of which time I was cured. The cure is evidently a permanent one, for I have remained well and sound to the present day."

"This is good testimony—testimony to be proud of. But it don't stop here. Mother Seigel's Curative Syrup not only cured Mrs. Hutchison of her indigestion and liver complaint, but, in the case of her daughter Agnes, arrested the progress of an insidious and dangerous malady which, if allowed to range unchecked, might have had fatal results. Here is Mrs. Hutchison's own description of her daughter's case: "My daughter," she says, "was in a very bad way. She was suffering from severe nervous debility. She wasted away to a skeleton, and appeared to have no blood in her body. She was so weakly that she could not walk without assistance, and was often compelled to keep to bed for days together. The doctors seemed to be much in the dark as to her ailment, and as impotent in treating her case as they had been in their treatment of mine, so I determined to experiment on her with the medicine which had proved such a boon to myself. The result was that within two months a few bottles of Mother Seigel's Curative Syrup changed her from a helpless invalid into a hearty, healthy, happy girl. She remains as well as one could wish her to be."

Mrs. Hutchison is well known in Jesmond and Lambton, and has lived in these places for twenty years. She is a native of Scotland, and came to Australia in 1872.

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

**CURES**  
**RHEUMATISM, NEURALGIA, GOUT,**  
**SPRAINS, SORENESS, SCIATICA,**  
**LUMBAGO, HEADACHE, BACKACHE,**

And all Aches and Pains usually treated by outward application.

**IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.**

*It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/1½ & 2/6.*

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

## MARKET REPORT.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated March 27th, 1903, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

		Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903	...	1,286,835	923,632	66,822
1901-1902	...	1,438,239	976,113	66,231

30,481 pkgs. INDIAN } Total 51,106 packages were offered in public auction  
17,846 " CEYLON } this week.  
2,779 " JAVA }

In view of the nearness of the Budget, which is expected to be taken immediately after Easter, it is natural that duty payments should be upon the smallest possible scale, as buyers would protect themselves against possible reduction in duty by taking only small quantities from Bond. Under these circumstances it is surprising that duty payments continue so little below the normal. Although clearances are smaller than in March last year, it must not be forgotten that they were then comparatively heavy. They are now sufficiently large to indicate considerable shortness in the invisible or duty-paid stock, which doubtless accounts for the steady market ruling at the present time.

A year ago duty was paid upon probably 15 to 20 million lbs. above requirements in anticipation of the Budget, this quantity afterwards proving a serious incubus over the market;—from which this year it is entirely free. Thus the real strength of the statistical position only becomes apparent when this reduction in duty-paid stock is considered in conjunction with the shortage of nine million pounds in the bonded stock in the United Kingdom.

NEW MARKETS.—The quantities of Indian and Ceylon tea sent from Great Britain to various countries is an indication of numerous fields to which the attention of shippers might be drawn.

The markets of North America are partially supplied direct from India and Ceylon. Much of the tea consigned from England to Germany is probably destined for Russia, which also takes large quantities from the countries of production. The Argentine Republic shows an increase in the use of both Indian and Ceylon

tea, while progress in South Africa is encouraging. Many of the minor consuming countries show satisfactory increases.

INDIAN.—General animation was the chief characteristic in the week's auctions, bidding being stronger for all grades except perhaps broken descriptions. Common teas showed an advance of about  $\frac{1}{4}$ d. per lb., while medium and better grades were also somewhat dearer market. The following averages are worthy of note:—"Ass. Fron. T Co. Ledo,"  $1\frac{1}{2}\frac{1}{4}$ ; "Seeyok,"  $1\frac{1}{2}\frac{1}{4}$ ; "Ass. Fron. T Co. Lattakoojan" and "Ass. Fron. T Co. Sookerating,"  $1\frac{1}{2}$ .

Week's av. of tea sold on Garden Account 1903, 27,579 pkgs. 8·08d. 1902, 32,669 pkgs., av. 7·01d.

Tea sold on Garden Account 1st June to date 1902-3, 989,011 pkgs., av. 7·46d. 1901-2, 1,133,184 pkgs., av. 7·74d.

CEYLON.—The market showed a decidedly improved tone, a rise of about  $\frac{1}{4}$ d to sometimes  $\frac{1}{2}$ d per lb. taking place in all whole leaf teas up to 8d, while broken descriptions also showed a steady market, and teas with special point met with good attention.

Average for week 7·95d, against 7·01d in 1902.

Ceylon tea sold on Garden Account 1st January to date 229,842 pkgs., av. 7·64d. 1902, 279,570 pkgs., av. 7·16d.

JAVA.—With good competition the market showed occasional rather dearer prices, especially for the lower grades. 108 packages "Goalpara" averaged 9 $\frac{1}{2}$ d.

Some interesting figures have been issued showing the area under tea cultivation in Java in the year 1900 to have been about 38,900 acres, while total exports from Java during the five years ending 1901 are given as follows:—

	1897.	1898.	1899.	1900.	1901.
Lbs.	8,771,499	9,734,587	12,615,661	16,617,949	17,323,877

Bank Rate 4 per cent. Exchange on London three months' slight discount. Calcutta  $1\frac{1}{4}\frac{3}{4}$ . Colombo  $1\frac{1}{4}\frac{3}{4}$ .

## QUININE.

Last week the market closed with a small business at 1s 0 $\frac{1}{2}$ d for second hands on the spot, and 1s 0 $\frac{1}{2}$ d to 1s 0 $\frac{3}{4}$ d for May delivery. This week, however, the market has been very quiet, and on Wednesday there were spot-sellers at 1s 0 $\frac{3}{4}$ d per oz., but no business is reported.

(AVERAGE FOR ALL INDIA 8·08d., MARCH 27TH.)

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

[VOL. VIII.]

MADRAS, SATURDAY, APRIL 25, 1903.

[No. 17.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 1st proximo. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*Weather*—Extremely hot, about 90 in the shade. Extraordinary shortness of rain. *Crop prospects*—A fair blossom has set, and there is more to come out with the next rain. *Works*—Pruning and manuring. *Health*—Generally good. *Labour*—Sufficient. *Interesting item*—The want of rain is delaying the sowing of the paddy fields, so the paddy will be late and interfere with labour at gathering time.

#### Kotagiri.

*22nd April.*—*Weather*—Very close and hot for the last two weeks. Yesterday and to-day slight showers with a lot of thunder, but the air has not cooled much as yet. *Blossom* came out very irregularly owing to the very local nature of the showers, but the little that has blown seems to be setting well. Spike for a second blossom is rapidly forming. *Crop*—We have seen the very last of this now, and all Estates that have not undertaken Leeming's system are nearly through with their pruning. All low-country labour has been paid off and there is a general dearth of work, and most managers are away on holidays. A few Estates have done a certain amount of manuring. *Labour*—Plentiful, for the little work on hand. *Health*—Fair, considering the time of year. *Interesting items*—The Annual General Meeting of the Nilgiri Planters' Association is called for the 8th proximo. The annual inspection of the Kotagiri and Coonoor Volunteers on the 24th instant. A wedding took place at Kotagiri on the 14th instant, Mr. C. H. Brock to Miss Scott; the seventh wedding that has taken place in Kotagiri during the past 40 years.

### AGRICULTURE IN THE CENTRAL PROVINCES.

THE Central Provinces Department of Agriculture is setting an admirable example to the rest of India. It is giving increasing attention to the development of agriculture on scientific lines, to agricultural education, and to crop and other experiments. Planters may not concern themselves very much about agricultural education, but it must be clear to them that India's chances of prosperity are greatly advanced by anything that tends to lead agriculturists generally to discard inferior in favour of superior methods. To them it may matter nothing whether their estate coolies have or have not been taught the rudiments of agricultural science; but at least they will note with interest any indication that the official world in this country is awaking to a sense of its duty in regard to the points we have specially referred to above. In the Central Provinces Experimental Farm work has hitherto been concentrated in Nagpur; a process of decentralisation has now been begun. The foundations are being extended, the establishment is being enlarged, the scope of operations is being widened, and there is evidence that a Department of Agriculture worthy of that name is likely to be established in the Provinces within the next few years. Naturally, the products that have to be dealt with include neither tea nor coffee; but it is no small thing to have one Administration holding up the light for the guidance of others. We can but hope that the Madras Government will profit by this light, and that Southern India will soon have a larger number of scientific experts and a better organized Agricultural Department. We do not overlook the fact that some improvements have been attempted of late; but, judging from Madras reports and those from the Central Provinces, work in the latter is being conducted more systematically, more enthusiastically and vigorously, and according to a better considered scheme than in Madras.

The idea is to train young men for employment in these Departments of the Government where a knowledge of agriculture is desirable, and to train the children of agriculturists in practical agriculture. Then again, two new experimental farms have been established, making a total of three. It is proposed to form District Agricultural Associations and to issue a Vernacular Agricultural Journal. Demonstrations are to be carried out in the villages by a trained staff; cultivators are to be induced to imitate the experiments that are made.

It is admitted that progress must be slow, it is realised that sporadic efforts will be of little avail; the hope is expressed, however, that if demonstrations of carefully selected practical experiments are carried on continuously for some few years, some ultimate success will be achieved. Probably many of our readers are imbued with the belief that the conservation of the Indian agriculturist cannot be shaken. To judge from indications of various kinds this is not the case. Even the poor ryot and the poorer farm-labourer have cast some of their old habits, and among the more enlightened classes there are indications of still greater changes. From the Central Provinces comes news that the training of sons of agriculturists in practical farming has "caught on." Some District Councils have granted scholarships. Similar support has been given by some of the Feudatory States. There is much evidence to show that there is a distinct movement amongst the more enlightened native gentlemen towards agricultural improvements. The Director of Agriculture reports that the old attitude of distrust and doubt towards any suggestions for improvement of local systems of cultivation has very largely disappeared, new proposals being now welcomed and given a trial.

Experiments in manuring were made, and experiments in regard to preventing "smut" in wheat. Details of these would have no special interest for our readers. Certain Indian edible gums and tanning materials were investigated. *Paspalum dilatatum* was tried, and is regarded as having failed. As for the aloe and its fibre, it is remarked that the results of the inquiries of District officers show that there is no regular cultivation of the aloe plant in the Provinces. In some parts, however, the aloe plant has been grown as hedges round small fields or gardens. Some Deputy Commissioners are of opinion that caste prejudices would interfere with the industry if it could be successfully started. In Damoh, where the Deputy Commissioner had aloe fibre extracted in one of the estates under the Court of Wards, the work, it is reported, was very distasteful to the people, and is looked upon as a degrading form of labour. One of the drawbacks to the extension of the industry is that the manufacture of the aloe fibre is a tedious process, and the contact of the juice and pulp with the body causes irritation. It is very doubtful whether in these Provinces aloe will ever be grown on a large scale. The plant takes four years to come to maturity, and is not such a profitable fibre crop as san hemp (*crotilaria juncea*). Some interesting allusions are also made to inquiries into the rearing of tassar-silk worms, and Deputy Commissioners have been asked to make a detailed inquiry during the camping season into the state of tassar cultivation in their districts, and the steps which it is necessary to take in order to give effect to the wishes of the Administration.

#### COFFEE NOTES.

The ad. of a coffee firm in a London contemporary says: "The large consumption of coffee in the United States of America and on the Continent in comparison with the United Kingdom is owing to the fact that the coffee trade is more studied there, and, consequently, a more palatable article is produced. In this country, unfortunately, the grocer is tempted to buy his coffee from the colour and size of the raw berry, and not for its intrinsic liquoring qualities—consequently most of the pure coffee sold does not satisfy the

consumer, chiefly because the liquor is thin, washy, and flavourless."

\* \* \*

**Coffee Market of San Francisco.**—C. E. Bickford, of San Francisco, in his last coffee report says: "The market has been generally quiet in tone, but deliveries for the past thirty days show the demand for local consumption to be fast approaching its normal level. The shipments overland are increasing and to this date are larger than for some years past. Prices have undergone practically no change, with the exception of Salvador, which, for good, unwashed, has improved  $\frac{1}{4}$ c. under a temporary scarcity of that particular grade, sales going freely at  $7\frac{3}{4}$ c. Other qualities of Salvador have not been affected. First hand stock consists of 5,579 bags Costa Rica; 1,066 Nicaragua; 14,232 Salvador; 22,985 Guatemala; 2,470 Mexican, and 11,506 various; in all 57,838 bags."

\* \* \*

Some very inanè propositions have been broached in Brazil by way of reducing the coffee supply, says *Tea, Coffee and Sugar* of March 25, and a jewel of a dream among those dreamed by the dreamers there proposes the prohibition of the export of low-grade coffees except when sent out as concrete propagandas to accustom the world to drink coffee. Anent this proposition an English source comments in a pat way: "We read that it is low grades that are to be eliminated, and that two-thirds of the 20 per cent. are to be destroyed, and the other one-third to be roasted and exported by the Syndicate Agricoles, free of duty, in order to educate the taste of coffee-drinkers throughout the world for Brazil coffee! A curious proceeding to send out your worst sample, and one not calculated to accomplish the desired object one would suppose."

\* \* \*

**The U. S. Coffee Market.**—The market in coffee is exceedingly quiet and apathetic, says *Tea, Coffee and Sugar* of March 25, and so provoking is the listless state that traders are impatiently calling for the coming of such price conditions that the Brazilian growers may feel to the quick the consequences of their over-production.

In other words, let prices fall below the cost of production and then perhaps the disturbing superabundant crops will have their end. The trend of events is that way. In the speculative market there has been a drop of about 25 points, and the tendency is towards the 4·10 record mark of January last and one year and a half ago. The market is within 5 points of this nadir now, and it would not be a surprising event if it should quickly register a new lowest record.

In actual coffee prices are a little easier for the lower grades and unchanged for the upper. The spot mark for invoices closed dull at  $5\frac{1}{4}$ c. for Rio No. 8,  $5\frac{1}{2}$ c. for Rio No. 7,  $6\cdot10$ c. for Rio No. 4, and  $6\frac{1}{4}$  to  $6\frac{3}{8}$ c. for Santos No. 4. The Brazil markets are easier; an offering, resulting in no sale, was 25,000 bags of Santos Nos. 3 to 7, averaging No. 5, at  $5\frac{5}{8}$ c. & f.

The market for futures is depressed by the heavy statistical position, which grows worse with each succeeding day. The movement of Brazil is large for the season, and therefore extra discouraging as indicating a 1902-03 crop in excess of 12,000,000 bags. All the same, it is strange, incomprehensible to many, that despite the low prices, the contract market should be so repelling to investment. Not in a long time

business has been so dull, and for so long in duration. A return to activity has been the hope and the expectation, but it seems as far off as ever.

In Mild grades quiet conditions also prevail. Stocks are increasing but interest has not developed among buyers, who seem to look for lower prices out of the growing stocks. Prices are steady, however. Good Cucuta is quoted at  $8\frac{1}{4}$  to  $8\frac{3}{4}$  c.

Mr. Seligsberg, of Lewisohn Bros., says: "Although there is talk of a large growing Brazil coffee crop, I would not be surprised, from what I have gathered during my visit in Brazil, if crops hereafter should be smaller."

Among the funny story tellers in the New York down-town jobbing circles, Mr. William Bayne, Jr., is credited with leading the list. Mr. Bayne is of the opinion that coffee futures will sell at 4c. per pound before the end of this year, and there are few who care to argue the matter.

A dispatch from Venezuela states that merchants of Maracaibo declare that the export charges on coffee are more ruinous than the blockade of the Venezuelan coast by the fleets of the allied powers.

Mr. Edward Bleeker, who is one of the best-informed mild coffee brokers in New York says, the fancy grades of Sumatra coffees are wanted less every year, owing to the high prices asked. About fifteen years ago the monthly deliveries of East India coffees were on an average of 25,000 mats, and now it is only one-third of this amount.

An ounce of ground coffee to a pint of water should make an infusion to suit the average consumer, but when the coffee blend is made of strong sorts, as, say, Rio or Santos and Maracaibo, less coffee should be used to the same quantity of water.

The following is an American story:

Coffeyville, Kansas, was known not so many years ago as a town of strong men and weak beverages. An eastern traveller who happened to be in the place during its pioneer hotel days, astonished the proprietor of the "Eagle House" there by the number of cups of coffee he consumed at one sitting.

"You seem to be very fond of coffee," remarked the proprietor as he set the fifth cup of the beverage before his guest.

"Only fairly so," replied the traveller gravely. "I never take more than *one* cup of it for breakfast. I am still in hopes of obtaining that quantity before I finish my meal. Will you kindly permit me to have a couple more cups of *your* preparation?"

Tributes to coffee from great master minds must continue as from the beginning when man discovered the berry, and the latest genius to acknowledge his indebtedness to coffee is Josiah M. Ward, the novelist, whose "Come With Me Into Babylon," brought out by Frederick A. Stokes & Co., New York, is one of the few permanent historical novels brought out during the Autumn season of 1902. Mr. Ward "owns up" to the sustaining power of coffee in the arduous research in Assyriology that the scope of his novel dictated, and confesses his debt to the stimulating power in the fragrant liquid in marshaling the facts and ideas and weaving them into a coherent plot that should augment interest as the story grew, fire the imagination into fascinating description and narrative, and in all be true to the times when Nebuchadnezzar flourished, Babylon ruled, and Nineveh fell. Critics are agreed that the work of Mr. Ward is a panorama of those ancient times done with telling effect, and we hasten to claim for coffee all the credit voluntarily granted. Nor is this a mere moiety. Great minds are generous and honest, and besides Mr. Ward's no other testimony is needed than that of Balzac.

Messrs. G. Duuring & Zoon's Monthly Market-Report dated Rotterdam, March 31st, 1903, says:—In the Dutch Trading Company's sale on March 17th, 24,023 bags sold at a further reduction of  $1\frac{1}{4}$  cents for Malang and  $1\frac{1}{2}$  cents for Panarekan and Madioen, good ordinary being quoted  $26\frac{1}{4}$  cents, against 28 cents last month, which being more in proportion to other descriptions encouraged the trade to buy with less reserve.

Next Trading Company's sale to be held May 5th.

First hand sales were of much less importance, the Java crop is getting exhausted. There was no pressure to sell and values both of Plantation and Liberian kinds were well maintained. Second hand business was particularly uninteresting, consisting almost exclusively of Santos Coffee for actual requirements, closing  $\frac{1}{2}$  cents cheaper for the month.

Arrivals in our market were very moderate indeed, both from Java and Santos. The latter amounting to 77,300 bags, against 73,200 bags deliveries, our stock exhibiting a trifling addition of 4,100 bags this month.

Afloat from Santos to Rotterdam:

22,500 bags per ss. *Halle* ... sailed March 11th.

Loading ss.: *Timor, Koning Willem III, Sindoro, Madura, Rhipes, Prins Hendrik and Teucer*.

Terme has been very slow during the month under review and values have been gradually giving way  $\frac{1}{2}$  to  $\frac{3}{4}$  cent, closing  $16\frac{1}{4}$  cents per May,  $16\frac{3}{4}$  cents per September, and  $17\frac{1}{8}$  cents per December. Dealings only amounted to 55,500 bags or 234,000 bags since 1st January. March contracts 214,000 bags, tenders 56,500 bags.

A dull tone has pervaded this market, buyers holding off, under the influence of general flatness and the full volume of receipts in Rio and Santos. Reports concerning next crop are not favourable and much stress is laid on the falling off of blossom. Some expect an early crop, which is contradicted by others. After the experience of so many years, but little importance is attached to Brazilian crop reports, the trade acting upon facts, not upon prognostications. Meanwhile the position of fazenderos seems to be getting very critical indeed and especially difficult to get the necessary advances. This is the only way to reduce coffee cultivation and to abandon

estates, no longer paying, which may ultimately lead to an improvement in values, as much looked forward to by the producer as by the trade. It is however of paramount importance to await developments, as any advance at present would necessarily stimulate production.

Some Central-American crops are expected to yield less than anticipated, as for instance *Costarica*. 200,000 bags were shipped with every indication of suspension of further shipment; estimates were 325,000 bags.

European stocks were 6,800 tons, more, but visible supply further decreased by 19,280 tons as against an increase during both last years. The diminution was caused by large deliveries.

\* \* \*

**Coffee in New York.**—A prominent mild coffee broker remarked that, notwithstanding the fact that this market is the lowest in the world for all grades of coffee, the demand still drags. The discouraging state of affairs here is shown by the fact that importers are now shipping their supplies of Sumatra coffee to Holland, and sales made recently included some 2,000 mats of Kroe at 14½c., 2,500 mats Timor at 14c., and 1,000 mats of second quality of Padang interior at 4¾c. per pound.

Mr. William H. Bennett, commenting on the situation of Central American coffee, said: "There is abundance of coffee in the interior, but the drawback is that it cannot be shipped. Notwithstanding the fact that jobbers are anxious to do business, there is no desire shown by them to market their holdings, unless they can replace same at less money."

Mr. Herman Sielken, of W. H. Crossman & Co., one of the largest coffee operators here, who has taken the bear side of the market for several years past, said: "We are bound to see lower prices for coffee under the present conditions of supply and demand. The ruse to eliminate 20 per cent. of the Brazil coffee crop is dying out. It is known that the coffee-planters met and, after passing a number of resolutions of an impracticable character, the matter rests and will rest for good."

It is estimated that about 70 per cent. of the population of the United States are habitual coffee-drinkers.

Venezuela, as was generally expected here, levied an export duty of 40c. per 100 pounds on all coffee.—*American Grocer*.

### TEA NOTES.

**The U. S. Tea Market.**—The tea market is quiet, says *Tea, Coffee and Sugar* of March 25, and in first hands sales are so few, owing to the exhaustion of stocks, that quotations are nominal, and these are unchanged from those ruling in the last two weeks. The expectation is that some activity will be again noted in a fortnight.

Except for the continued exportation of Congous the market is without feature. It is computed that nearly 20,000 packages have been exported, but time only will tell in the custom house figures. It is said as large a quantity again will be exported if the price bid will be accepted. This is below the asking price generally ruling in New York, and in view of the improving statistical position of the tea, will probably fail. The price of the tea in other respects has not improved, though in several quarters a hardening tendency is broached. It is but a symptom, seemingly an inspired one, and the fact remains that Congous have utterly failed to develop any buoyancy, to the surprise of the market and especially of certain speculative circles, which expected that the stringency and high cost of tea in general would react favourably on the superabundant Congous. Evidently the tea is more plentiful than anyone has dreamed.

Green teas and Pingsueys continue in unsupplied demand and therefore in strong position. Beyond doubt the Eastern markets will open much higher this year, and the combinations there, so well handled, will be able to dictate their own terms unless the possible but improbable coming together of American tea men, to abstain from buying for a month or

more, should eventuate or the stock of more than 100,000,000 pounds of tea now in the United States should compel consideration.

Advices from London say that in China teas inquiry continues strong for all common to good common Congous, and a fair quantity has changed hands at firm to better rates—low common to common Blacks 3½d. to 4d. per lb.; fair to good common 4½d. to 5d. per lb.; sweet Panyongs 4d. per lb. The little doing in better grades has been chiefly for export—medium to good medium Ningchows and Keemuns bringing 7d. to 10d. per lb., and Panyongs up to 7d. per lb. Canton Scented Capers are quiet, but firm—Foochow Scented Pekoes have sold from 9d. to 1s. per lb. Green teas continue to meet with good competition at firm rates. In Indian teas medium and better teas are tending to harder rates. In Ceylons all grades under 7d. are in fair demand and realized prices previously ruling. Broken Pekoes are irregular.

\* \* \*

**Dr. Shepard as a "Publicitician."**—*Tea, Coffee and Sugar* New York, continues to print articles in regard to Dr. C. U. Shepard, and his connection with the infant phenomenon tea industry in South Carolina.

Tea raising in America is one of those chimerical stories which, although interesting, can never make itself known and felt under the line of actual profitable results.

We must admit without argument that Dr. Shepard, as an advertiser stands equal to none other in business history or fiction, and as the one lone raiser of tea in the States, he has a unique opportunity, which he uses to the best of his ability.

The agricultural department at Washington could greatly benefit South Carolina, by using some of the money which has been so lavishly expended for the pleasure of Dr. Shepard's tea cultivation in instructing and aiding the average farmer of that State to raise native crops that would pay and bring profit to the State.—*Trade Press List*.

\* \* \*

The heavy rejection of Foochow and Congou teas recently has again brought the standard act into notice, says *Tea, Coffee and Sugar* of March 25, and there is renewed rebellion, especially in New York, against its enforcement. It is, of course, unfortunate that the teas in question should have had such hard luck, but being under the quality as established by law, they had no right of entrance into the land, and if the owners hewed too close to the line, they, with eyes wide open, took their chance, and it has proved they have lost. Not all of those injured pecuniarily have protested the law, and these even have acknowledged that their punishment justly fits their crime. We are pleased to record so much sincerity. The so-called indefinable definition of "quality" is a broad question, but most of the trade is agreed that the detracting effect of low-grade teas is something the country should be spared, and so the agitation of a few tea-men, interested in tea only so far as its sale brings them a commission, is not to be countenanced. Too few are benefited in the one case and too many harmed in the other. At the same time the complaint is well taken that recently the law has not been observed in the matter of the full attendance of appraisers in cases of appeal. It is true that a decision is more easily reached by two than by three judges in this special examination of tea, but the importance of the issue at stake should allow the appellant the benefit of every element allowed by law, entering into the final judgment.

**Japan Tea Shipments.**—Messrs. Smith, Baker & Co.'s statistical sheet, Yokohama, February 27, contains tables for the season 1902-03 regarding tea shipments from Yokohama and Hiogo. The shipments included 165 sailings, which, beginning May 2, 1902, closed February 24, 1903.

In that time 39,418,628 pounds of tea were exported. Of this quantity 4,563,858 pounds were shipped to New York by steamer or sail and railroad and 8,827,769 pounds *via* Suez Canal; 3,868,612 pounds were shipped to San Francisco; 17,544,930 pounds to Chicago (against 12,830,270 pounds during the preceding year); 4,363,884 pounds to Canada (against 6,480,964 pounds in preceding year), and 48,575 pounds to Europe, etc. The total exportations during the preceding year were 35,726,102 pounds. A handsome increase is thereby proved.

The exportation of Japan tea to New York remains unchanged from a year ago, 13,000,000 pounds. A change seems to be taking place, however, in the route used in shipping the tea. In the 1901-02 period 7,120,000 pounds were shipped *via* Pacific United States ports but the shipments have shrunk to 4,563,000 pounds, while *via* the Suez Canal they have increased from 5,900,000 to 8,827,769 pounds.

Chicago is becoming more and more the head-quarters for Japan tea distribution. The city gained in this respect nearly 5,000,000 pounds during the year closed. Canada called for less of the tea, a shrinkage of nearly 2,000,000 pounds being recorded.

The total arrivals at both ports were 301,987 piculs, against 292,223 piculs one year ago; settlements were 300,158 piculs, against 289,556 piculs one year ago.

May, June, July, and August were the heavier shipping months. The largest cargo at any time was that of the steamship *Iyo Maru*, 959,382 lbs.

\* \* \*

**Comparison of Ceylon Tea Siftings.**—A decision by Robert B. Armstrong, Assistant Secretary of the Treasury, dated March 10, 1903 to United States Appraiser, New York, runs as follows:—

"SIR,—The department duly received your letter of the 21st ultimo, in regard to the comparison of Ceylon tea siftings with standard 10, Japan dust or fannings (art. 19 of the regulations of February 11, 1903, T. D. 24223).

"In reply, I have to state that the department has consulted with the Chairman of the Board of Tea Experts, and he recommends that department's instructions of January 22, 1903, regarding such comparison, be continued in force for the present. The language of such instructions telegraphed you on the date mentioned is as follows: 'Instruct tea examiner to compare Ceylon tea siftings with standard 10, Japan dust or fannings.' You will be governed accordingly."

\* \* \*

Merchants in New York, who were hard hit by the rejection of a large quantity of Foochow teas, have appealed to the Secretary of the Treasury from decisions by the Board of General Appraisers in which only two members instead of three take part. The large block of tea rejected and the loss involved make it worth while to test the efficacy of an appeal from the technical violation alleged. The question of standard as governed by quality has again been brought into notice by the appeal. Word has been received from the Treasury Department that hereafter three appraisers must attend hearings on tea appeals.

\* \* \*

**Tea in New York.**—Messrs. Wisner & Co. received advices from Shanghai stating that no further supplies of green teas can be obtained from the country, as the whole of this season's crop has

been marketed. The point is of particular interest when the large size of this season's production of green teas is taken into consideration.

Offerings of small lots of fairly good Congou teas are made at 9½c. per pound.

London has again been in this market as a buyer of Congou teas. Recent sales for export to above place amounted to about 9,000 packages. The supply shows a further material decrease.

The deliveries of tea from New York warehouses during the month of February, it is estimated, were about 7,000,000 to 7,200,000 pounds.—*American Grocer*.

## NOTES.

### Cocoa and Chocolate in the U. S.

Cocoa and chocolate are great favourites with American consumers, the use of the articles increasing in a

marked manner year by year.

### New Quinine-Factory.

A factory has been opened in Maarssen, near Utrecht, under the style of Niederländische Chininfabrik, for the extraction of alkaloids from cinchona. It is started for "its own and foreign account."

### Tea and some Rivals.

According to the British Consul, imports at Coquimbo (Chile) in 1901 included 43 tons of Coffee, 59 tons of Tea, and 234 tons of Maté, the last representing a smaller value than the quadruple quantity of its Paraguayan rival.

### Old Ceylon Coffee Companies' Results.

The Madulseema Coffee and Cinchona Company, Limited, pays 8 per cent. of its preference dividend arrears; and carries forward £2,005. The Haputale Coffee Company, Limited, pays 4 per cent. of its preference arrears; and carries forward £1,689.

### Tea and Coffee Testing.

The art of testing tea is looked upon as a mystery, says the *Merchants' Review*, whereas coffee testing is essayed by grocers of not much experience. Yet tea reaches the wholesaler's salesroom in a finished condition, while coffee has to be subjected to treatment by the roaster before it is fit for the consumer's hands, and during roasting it may change in character completely. Coffee-testing is the real mystery, beside which tea-sampling is a cinch.

### Cocoa in the U. S.

The increased use of cocoa in the United States is shown by the importations for the last seven months. They were 37,819,315 pounds, while the figures for the same period one year ago are 28,976,817 pounds and two years ago 23,779,941 pounds. The supply is mainly derived from the British West Indies, from which 11,324,969 pounds were imported in the last seven months under review. From Brazil came 9,643,742 pounds and other South America 8,566,506 pounds. Of manufactured cocoa 555,353 pounds were imported, against 501,528 pounds one year ago.

## GENERAL ARTICLES.

### BRAZILIAN NOTES.

From the *Brazilian Review*.)

**Exchange.**—Extremes during the week ending March 6th, were  $11\frac{23}{32}$ d.—12d. for 90d/s Bank paper and  $11\frac{25}{32}$ d.— $12\frac{1}{16}$ d. for private.

The average Bank 90d/s counter drawing rate for the week comes out at  $11\frac{5}{8}$ d. the corresponding sight rate being  $11\frac{17}{64}$ d. against  $11\frac{3}{16}$ d. the average sight rate of the *Camara Syndical*.

*Naturday, January 6th, 1903.*—Ninety days' Bank rate on London opened on Monday 2nd at  $11\frac{1}{16}$ d. rose to  $11\frac{3}{8}$ d. on Wednesday, relapsed to  $11\frac{1}{2}$ d. on Thursday and then rose again, closing this evening with foreign banks drawing at  $12\frac{1}{16}$ d. and the Republica at  $12\frac{3}{32}$ d.

Whatever the cause of the intemperate rise of exchange may be there can be little question that it is ill timed, coming as it does just at the moment when planters are clamouring for higher prices and for renewed issues of paper money. What is the use, they will ask, of burning coffee if nothing is done to check exchange. Instead of more they are to get less paper money than ever. It is useless to point out to them that the money they will receive is of higher value. It is not so as far as payment of back debts and mortgage interest is concerned; and if allowed to continue will furnish a powerful and indeed logical argument for fresh issues of paper to keep exchange down and ensure stability. The inelasticity of a paper currency of determined quantity is one of its chief objections.

The causes of the present rise of exchange appear to be complex. In the first place bills are much more abundant than was anticipated, both rubber and coffee continuing to furnish comparatively heavy supplies, whilst good prices for cotton also add their mite. In March of last year when conditions of supply of bills was about the same or perhaps somewhat less favourable than now, exchange oscillated between  $11\frac{1}{16}$ d. and  $12\frac{3}{16}$ d. and no considerable advance was registered until May when selling for the new crop set in. In February last year there was, a decided bear movement to which the rise in March was only the natural reaction. This year, too, there has been a heavy bear movement and it is possible that the rise now witnessed is merely the rebound accompanying its unsuccessful liquidation.

By others the improvement is attributed to drawing against some operation realized in Europe, whilst, to others, again, it appears purely and exclusively speculative.

It is the lookers on who proverbially see most of the game, and for our part we believe that speculation has certainly heightened effects, the supply of bills enhanced as they have lately been by better prices and larger shipments than were counted on of both rubber and coffee, has certainly something to do with it and the effect is not entirely speculative nor attributable to outside influence.

The action of the Bank in covering periodically all it draws and particularly the fact that £114,000 were taken in this market for payment of the acre indemnity, does not look as if it were drawing against any extraordinary credit. The fact is that so long as there are more bills than money, with such huge sums at its disposal, the Bank is practically the arbiter of the situation and can virtually put exchange up or down as it chooses.

At closing, the movement appeared to be the genuine outcome of excess of supply over demand. Besides unexpected supplies of rubber and coffee bills, dealers took fright at the persistence of the rise and hurried to get rid of their holdings. Whether it will continue during the present week seems, however, questionable. It is possible that, to avoid possible surprise, coffee will be hurried

down as rapidly as possible and shipped out of the country before the new law comes into effect. Very large shipments may, therefore be looked for until July and perhaps a rise of prices here and abroad. All this would tend to add to the supply of bills and to keep rates steady, if not to send them up, at a time when it is usually at its weakest.

It is, however for many reasons impolitic to allow exchange to rise if by exercise of a little pressure it can be kept steady, and unless the current is unmistakably and irresistibly upwards, this is, we believe, the course that will be followed by the Bank and that rates will not be permitted to rise much over 12d. or to fall below  $11\frac{1}{2}$ d.

During the past week *Embarques* of coffee fell off considerably their value being £28,000 less than the previous week's and £32,000 less than last year.

**Coffee.**—Joint Entries at Rio and Santos were again very large stimulated no doubt by the higher prices and desire to escape the surtax of 20 per cent. Compared with the former week they showed an increase of 31,013 bags and of 21,240 compared with the corresponding week's last year of which, on 6th instant they represented 111.6 per cent.

For the current crop Entries on 6th instant were 2,763,070 bags under the previous crop's, of which they represented 78.1 per cent.

*Embarques* (shipments) were 23,563 bags less than the previous week's and 3,241 less than last year's.

Stocks fell off somewhat being on 6th instant 24,075 bags less than the previous week's and 360,733 less than last year's.

Declared sales increased being 26,000 in excess of the previous week's and 45,000 over last year's.

Interest is centred at present on the decision of the S. Paulo Legislature, where in spite of the general desire to do something considerable opposition may be expected to anything in the shape of wilful destruction of coffee. The bill presented by the executive offers two methods for consideration, "Elimination," or payment

## RUSSIAN QUESTION IN ASIA,

In Tibet and Chinese Turkestan.

*Record of 3 years' Exploration.*

BY CAPTAIN H. H. P. DEASY,

*With Appendices, Maps, 80 Illustrations.*

The task of surveying Western Tibet and Chinese Turkestan to the extent of some 40,700 miles of country, which was accomplished successfully by Captain H. H. P. Deasy, was naturally fraught with much peril from the climatic conditions of the country, the character of the districts to be traversed, and the hostility of the natives; so that the Founder's Gold Medal of the Royal Geographical Society which was presented to Captain Deasy last year, was but a fitting recognition of his important and extensive work. Captain Deasy who is a son of the late Lord Justice Deasy, is well known in Dublin circles. He left Srinagar in April 1896, accompanied by a sub-surveyor, an orderly lent by the Indian Government; a collector, and a following of servants. The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed. Besides this, about 250 peaks were triangulated including the giant Muz-Tagh-Ata which is calculated to be 24,400 feet high. In the concluding chapters the author sums up his experiences of the squeezing of the natives by the Chinese and deals at length with the civil and military administration in Chinese Turkestan.

ESPLANADE, MADRAS.

kind and subsequent destruction of the coffee, and payment in money of a heavy *ad valorem* tax on lower grades. Of the two there is no doubt the latter is preferable, the chief objections being the difficulty of enforcing it and distinguishing between grades, and the facility with which it can be evaded. It would of course lead to an enormous accumulation of stocks on the plantations which, in case of the measure failing to produce the desired effect and being repeated as probably would be liable to occur, could swell stocks so suddenly and to such an extent as to drive prices probably lower than they ever were before. From whatever side it is looked at the project seems beset with difficulties and pitfalls.

SANTOS, March 6th, 1903.—During the whole crop year we have not seen as dull a coffee market during the last week nor so little disposition to buy on the ruling market prices. The favourable feeling which the decrease of the world's visible (according to New York 252,000 and to Dunning & Zoon 19,000 tons) caused, was soon spoiled by the large entries here on Thursday (27,479) and at Rio. In consequence "Commissarios" who really do not hold a large stock, did not put more coffee than absolutely necessary on the market and the sales were relatively small 112,000 only being declared.

Yesterday the State Congress met at S. Paulo and the "Governor's" message, which was looked forward to with great interest, was published. The most important factor of it is the proposition to authorise the Government to impose the further export tax of up to 20 per cent. on all coffee exported from the State, payable *ad valorem* or in kind. Opinion here about this new law is very much divided. Whilst on the part of the commissarios great benefit is expected from it for all Brazilian interests. Exporters look at it very coolly and wait for some decision to be taken by the "Congress." The business done during the week consisted to a large extent of specialities, as Bourbons, etc. Bourbons fetched up to 5\$300 in very fine qualities old yellow coffee from 5\$800 up to 6\$500 and even higher. Fine washed are scarce. Fine Peaberry are in good demand, flinty fine demand up to 5\$400. Moka basis rules between 4\$600 to 4\$900 according to types.

Low coffees keep very quiet, Primes down to Regulars continue in the same position. Primes were sold from 4\$800 to 4\$900, superiors 300 rs., goods 600 rs., and regulars 900 rs. below.

The disparity between Europe and our Market is still some 200 réis and business is, by the high exchange, which closed to-day at 12½ d. private, only rendered more difficult still.

Orders from Europe and States came forward scarcer. Superior orders are running from 28/6 to 29/3, Good 1/3 to 1/6 lower.

Entries are large for the season amounting to nearly 136,000 and about 32,000 more than last week and so the receipts for this month point to over 500,000.

Shipments were, considering that the *Sabina* alone received over 80,000 bags, very poor from the general exporters and our stock remained practically unchanged, being to-day 933,357 bags. The engagements on the near steamers are also small.

The "*Paula*" remained unchanged last week.

**The Coffee Bill.**—The bill presented by the Government of Sao Paulo to the legislature accompanied by a long preamble expounding the motives of this extraordinary measure, are as follows:—

Art. 1°. The Executive is authorised:

I—to levy a tax from 1 July next not over 20 per cent. in kind on all coffee exported, or *ad valorem* on the lower grades which shall be appraised on the basis of the *pauta* or official valuation, in addition to existing duties. In the first case all the coffee received will be eliminated by a process to be determined.

II—to punish with fines, equivalent to ten times the value of the goods, all admixture made with intention to elude the stipulations of this law.

III—to grant subsidies up to 200:000\$ to shipping companies willing to reduce freights on coffee between Santos and other non-producing Brazilian States.

IV—to create official types of coffee with the object of regulating the execution of this law and ensuring taxation of higher types being less than that of lower.

V—to provide for the roasting of coffee for purposes of propaganda in those States of the Union where roasted coffee is admitted free of inter state duty.

VI—to promote the creation of commercial and industrial establishments for sale of Sao Paulo coffee abroad, granting favours to same.

VII—to fiscalise the trade in roasted and ground coffee in order to prevent admixture or falsification.

Art. 2. The Executive is hereby authorised to expend up to 10,000:000\$ in aid to planters and to undertake the necessary credit operations entailed thereby.

Art. 3. In case the Banco de Credito Agricola be not organised within the period determined by the respective law of December 1902, the product of the transit tax shall be applied to the service of the loan or payment of differences of exchange of and the subsidy mentioned in art. n. III.

Art. 4. Aid to planters shall take the form of loans on first mortgage, agricultural mortgage (*penhor agricola*) with collateral guarantee, on collateral securities alone, and be realized through the agency of Banks or agricultural syndicates approved and fiscalised by the Government.

Art. 5. No loan to any planter can exceed 50:000\$, on which interest at a rate not exceeding 8 % per annum shall be paid.

Art. 6. Loans on mortgage are not to exceed three years, with payment of interest annually and amortisations in three instalments of 20, 30, and 50 % of the loan. Loans on the other specified classes of security shall be for one year only, renewable for one year more on amortisation of at least 50 %.

Art. 7. The Executive is authorised to treat with the Union Government to promote the Meeting of an International Congress of Coffee Planters in this city, to determine the best manner to defend the interests of producers and consumers of this article.

Art. 8. The Executive is also authorised to come to an agreement with the Governments of other producing States of the Union for the protection of this product and execution of the stipulations of this law.

Art. 9. All dispositions to the contrary are hereby revoked.  
Signed: *Bernardino de Campos*.

## PRODUCE AND PLANTING.

Although with the exception of a reduction of the income-tax nothing is generally anticipated from the Budget in the way of relief from taxation, a faint hope is still expressed in some quarters that tea may possibly benefit. Hoping for the best, while expecting the worst, may, however, be described as the attitude of this small but sanguine band. There always is a degree of uncertainty about Budget proposals, and until people know the best or the worst they will indulge in conjecture. Traders are never quite easy at this time of year in view of a possible surprise.

The diminished supplies of tea indicate a more healthy condition of the markets. The shipments of tea to the United Kingdom from Calcutta and Chittagong for the season (twelve months) which ended on March 31 last were 145½ million lbs., as compared with 152½ and 162 million lbs. respectively in the two preceding years. The shipments of Ceylon tea to the United Kingdom for the first three months of the current year were 23¼ million lbs., as compared with 25¼ and 29 million lbs. respectively in the two preceding years. A finer character of tea is, therefore, to some extent assured if consumers will only have the good sense to give the preference to the higher grades instead of the coarser variety—in other words, if they will only pay a reasonable price for their tea, which it is always to their interest to do, as the better tea pays no more duty than the inferior varieties.

There seems some scope for the "tea pusher" in New Orleans. In a report recently received at the Foreign Office, His Majesty's Consul at New Orleans mentions that the inhabitants of this conservative city are beginning to succumb to the charms of tea. At present they are surprisingly sparing in their purchases, and only 10,238 lbs., valued at £391, were imported during the past year, but the prospect is evidently hopeful.

It is satisfactory to observe that notwithstanding the adverse conditions under which the tea industry has been conducted during the year 1902-3, some of the old Calcutta concerns, many of which are handicapped by heavy capitalisation, and have suffered both from labour difficulties and low markets, have succeeded in showing a respectable margin of profit. The Central Cachar Tea Company, Limited, with a capital of 10 lakhs of rupees and a cultivated area of 1,195 acres, i.e., nearly £56 per acre of tea, produced a crop of

nearly 8,000 maunds, which realised a profit of Rs.29,930, or nearly £2,000 sterling. The average price realised for the tea was only 4 annas 5 pies per lb. With the aid, however, of a balance carried forward from the previous year the Directors have been able to declare a dividend of 4 per cent. on the capital (thus making the average dividend for the last eight years 3 per cent.). Not the least satisfactory feature about the company is the prompt way in which the results of the year 1902 are laid before the shareholders. On the whole the Central Cachar Tea Company's shareholders may be congratulated on having some return for their money in these times of depression. We are glad to see that the Teesta Valley Tea Company, Limited, has declared a dividend of 5 per cent., the Pashok Tea Company, Limited, and the Margaret's Hope Tea Company, Limited, a dividend of 7 per cent. each; the East India Tea Company, Limited, 4 per cent., while the South Cachar Tea Company, Limited, have given their shareholders the handsome dividend of 15 per cent., a very creditable result to all concerned.

Continuing his lecture to grocers' assistants at the Heriot Watt College, Edinburgh, last week, Dr. MacDougall, referring to tea, described the rainfall in the Indian tea-growing district, and also the process of manufacture. Referring to coffee he said it was first brought from Abyssinia to Arabia, and in the middle of the sixth century was known as a beverage in Constantinople. It spread to Western Europe, and first appeared in London about 1652. That was the date of the first London coffee-house, the history of which was interesting. A Smyrna merchant had brought home with him a Greek maid-servant, who understood the preparation of coffee. She subsequently married the coachman, and together they started the coffee-house. Coffee spread to the West Indies and America, and was now also grown in India, Ceylon, Brazil, and British Guiana. In Ceylon and India it had lately been the victim of a fungus, which, as in the potato plant, choked up the breathing cells of the leaves, destroyed the plant, and spread itself by means of "spores" carried by the wind. So far there was no apparent cure for this disease. It first appeared in Ceylon in 1869, and in Southern India the following year. In 1876 it spread to Sumatra, and three years later to Java. In Dominica, and to a less extent in Jamaica, the "white fly" was a great enemy of the plant. So was the "scale" insect; while in Africa a beetle, nearly an inch long, tunnelled its way right up the stem of the tree. These facts induced the consideration of how far cultivation was actually beneficial to plants. It was an undoubted fact that the wild ancestor of the turnip, for instance, was a more healthy plant than the great swollen roots now grown. Yellow charlock was a similar plant to the turnip; yet "finger and toe," which so often ruined a turnip crop, had no power against the wild, vigorous growth of the charlock. In the same way, the fat stock seen at cattle shows were far more liable to disease than hardy, vigorous specimens. In any case, results proved that where either animals or plants were, so to speak, pampered, disease invariably appeared amongst them. It was the first outbreak of disease that should be watched for and vigorously fought; hitherto it had been too much the habit of planters and growers in all countries to neglect disease till it was out of their power to check it. Then they folded their hands and said, "It is the will of the gods." About 1880 Liberian coffee was discovered in West Africa. It contained, however, less caffeine than that of Arabia. Liberian coffee thrives best below an elevation of 1,500 feet: Arabian coffee above that height. That, he was inclined to believe, was the reason of the outbreaks of disease in places where it was grown below the 1,500 feet level. In the same way the larch of which the native home was the hill country of Central and Southern Germany, was constantly attacked by "cancer" when grown below a certain level in Scotland.

The Hull and District Grocers' Association recently discussed the question of pension tea, which according to the secretary is rapidly extending to every town and village in the country. The *Grocer* remarks *apropos*: "We can hardly say this squares with our own information, but there seems no doubt that the system is spreading, and no one who knows the lives of the poor needs to be told how powerful an inducement the prospect of a pension must be to them. Possibly it may be said that the working men have too much common sense to swallow all the bunkum that is told, and must know that to buy tea for the sake of a problematical pension is a very costly way of insuring. But recollect that it is not usually

the male head of the household who buys the groceries, and that there are vast numbers of poor women who have no time to try to read newspapers, and are apt to put too much faith in other printed matter that offers a specious suggestion appealing to them at the very point where they feel their weakness and danger and the need of some kind of insurance. Thus in the less enlightened village and towns it may be quite possible that the pension tea craze should spread, and soon reach the point it has at Barton-on-Humber, where the Hull chairman says the whole tea trade is now in the hands of the pension people. If the staple article of tea is to be taken out of the hands of the trained grocer and the trade transferred to an nondescript trader who can sell a packet the position certainly deserves the earnest attention asked for it by the Hull Association. The suggestion is to amend the Life Assurance Companies Act to meet the case. It is a question, however, whether more than this ought not to be done to keep the trade in tea and other foods in the hands of traders who have the technical knowledge necessary for the due protection of the public."

Recently M. Bertrand, of the Pasteur Institute, has analysed nine kinds of coffee with interesting results. The beans of one species (*Coffea humblotiana*) contained no caffeine, and in another species (*C. mauritiana*) only 0.07 per cent. was present. These two varieties are thus for all practical purposes free from the stimulating alkaloid. In Arabian coffee (*C. arabica*), obtained from various sources, the caffeine present varied from 0.83 to 1.60 per cent. Liberian coffee (*C. liberica*) yielded between 1.06 and 1.45 per cent. The new African coffee (*C. stenophylla*) appears very rich in caffeine, 1.52 and 1.70 per cent. being the result of two analyses recorded. *Coffea canephora* gave the highest caffeine content 1.97 per cent.—*H. & C. Mail*.

### COFFEE IN LONDON.

The *Produce Markets' Review* of March 28 says:—The auctions have been abundantly supplied with all descriptions, and the demand though rather more fluctuating than during the last few weeks has on the whole been good, and values have been well maintained. East India in particular, which had fallen to a very low level, has attracted more attention, and, though in plentiful supply, prices are from 1s. to 2s. dearer. Very full prices were paid for some of the choice marks of Mysore, the quality of which was quite equal to the best of recent years, and in that respect is a great contrast to most of the crops this year. The demand for Costa Rica has centred mostly on the medium size, and values are fully 2s. higher; but the bolder size has had to be sold at slightly easier rates. Of Guatemala and other export descriptions supplies have also been plentiful, and values have been rather irregular, closing a trifle cheaper. In the terminal market the heavy daily receipts have continued to depress values, which have fallen nearly 1s. per cwt., and are once more within 1s. of the lowest record.

### TEA IN LONDON.

INDIAN TEA.—The *Produce Markets' Review* of March 28 says:—With an improved general demand the bidding at the public sales was fairly active, and with few exceptions last week's prices were firmly maintained. As the financial statement by the Chancellor of the Exchequer will not be made until the second or third week in April, there may not be any material increase in the enquiry for duty-paid teas at present, as the trade will be inclined to reduce their stocks as much as possible. This does not apply, however, to teas in bond, as it is probable, owing to the statistical position, that a stronger market will prevail when buyers find it necessary to replenish their stocks. The prospects, therefore, appear favourable to holding a reasonable quantity in bond until after the Budget as a protection against a further upward movement in values, which it is generally anticipated will take place when the uncertainty of the duty question is cleared away. At the public auctions 30,265 packages were catalogued, and 4,936 were withdrawn. The common qualities were in good request, 6½d. being practically the lowest quotation for clean sweet tea, and the market closed firm at this price. For the medium grades, excepting some poor liquoring parcels which were not much sought after, prices were steady, with an improving enquiry, while the finer descriptions were readily taken at fully former rates.

**CEYLON TEAS.**—Supplies continue on a very moderate scale, and strong demand was evident at the auctions on Tuesday for all descriptions, but more particularly for the lower Whole Leaf kinds. Pekoe Souchongs and Pekoes up to 7½d. were well competed for, and sold at advancing rates, a further rise of ¼d. to ½d. per lb. being established, while only a few lots were knocked down under 7d. More attention was paid to medium Broken Pekoes than of late, although not quotably dearer, a firmer feeling prevailed. With the present strong statistical position, and the trade throughout evidently bare of stock under 7d. per lb., it is anticipated that when the duty question is settled, prices will advance still further. At the public sales 20,890 packages were brought forward, of which about 1,800 were withdrawn.

**CONGOU TEA.**—At the public auctions held on Wednesday only 7 packages were offered, while a fair business has been done privately. Prices generally are steady, low Black Leaf especially being wanted at fully previous rates.

**OTHER CHINA TEAS.**—There was but a poor demand for fine Souchongs at Thursday's public auction, and the market continues dull for these descriptions. Gunpowders were well supported, and a firmer tone was noticeable, especially among the finer sorts, and Young Hysons were unchanged. There is no alteration to quote in the Caper market, and only a limited business is reported. The following are the public sale figures for the week:—1,484 packages of Green Tea were brought forward, of which 680 were taken out, and 314 packages of Fancy were offered, about 200 being withdrawn.

## CEYLON TEA IN RUSSIA.

### WHY IT HAS TEMPORARILY DECREASED.

The amount of Ceylon tea exported direct to Russia since last September has shown a distinct falling off. The figures for the last three-and-a-half months as compared with the figures for the first three-and-a-half months of 1902 are as follows:—

From 1st January to April 14th:

1902.	1903.
2,607,437.	1,398,656.

These figures show a falling-off this year of 1,206,781, or nearly 50 per cent. Carrying the figures back to the 1st of September, we find that in 1901-02 6,038,112 lbs. were exported in six months to Russia; and in 1902-03 3,778,357 lbs.; showing a falling off of 2,259,755 lbs. It is interesting to record at the same time that the black tea—chiefly dust for brick tea purposes—exported from Ceylon to China has been up to April 14th this year 1,477,671 lbs., compared with 756,341 lbs. for the same period last year; on the other hand this week's "Price Current" shows that, while 4,210 lbs. of green tea was sent to Russia in the first three-and-a-half months last year, none is down for this year so far.

Our representative this morning made inquiries in authoritative quarters as to the cause of this, and a Russian tea merchant went exhaustively into the subject. He explained that the falling-off was noticeable in common Pekoes only. Of this quality, the Russian tea-drinker consumes sixty or seventy per cent., the rest being higher grade tea. Since September the price for Ceylon common Pekoe has gone up from about 32 cents in Moscow to 39 cents per lb.; and the result of the increase in cost at once resulted in a sudden drop in quantity. China common Pekoe, with which Ceylon tea is blended in the proportion of about 30-70 per cent., cost at this time in Moscow only 23 cents per lb.; and, though against their will, Russian tea merchants were obliged in their own interests to purchase China common Pekoe more extensively, the quantity of Ceylon tea blended with the China dropping from 30 and 35 per cent. to 20 per cent. At this juncture it may be well to mention why China tea—though necessity and cheapness cause the Russian tea merchant to purchase it—does not meet with favour, and would be much less used than Ceylon tea if the latter could be had at a low enough price. The Hankow season is in the early summer only, and the year's stock of China tea has then to be laid in. It is stored up during the Russian winter, and, when the cold weather breaks up again in January, the China tea—after going through a staling process for nine months, loses flavour and strength, and it is then more particularly that the Russian merchants like to sell Ceylon tea into requisition, for, with its freshness, and strength—as it is sold week by week—it helps to save China tea from insipidity.

Even this means of salvation was denied the Russian this year.

So dear was Ceylon tea that orders were general that less than ever should be blended with the China tea. And no doubt the tea drinkers were the sufferers. According to our informant, there is an obvious moral in this. "Planters," he said, "may be jubilant at an increase in their price they obtain for common Pekoe, but the argument hits both ways, and, according as the price rises, the quantity of Ceylon tea exported to Russia must inevitably decrease, and thus you will lose the hold you already have on the market." The speaker, however, sees better times at hand, and he thinks the price will become more reasonable. He stated explicitly: "We have nothing against the price of Ceylon common Pekoe in Moscow at 34 cents per lb.; but 39 cents is impossible."

### INDIAN TEA IN RUSSIA.

With regard to the satisfaction expressed in the Calcutta press because of the increase in Indian tea to Russia, there was nothing for Ceylon to be alarmed at, our informant said. On the face of it it seems unaccountable that Indian tea should have increased, because it costs the same as, or more than, Ceylon; but there is this to take into consideration—when Ceylon common Pekoe took a sudden rise in the market from 5½d. to 6¼d per lb., Indian tea was not similarly influenced, and Russian merchants gave orders for a more extensive, but temporary, purchase of Indian tea.—*Times of Ceylon.*

## FEBRUARY COFFEE MOVEMENT IN THE U. S.

Deliveries last month were large in the United States and only 3,062 bags behind January, although there were only 22 working days in February, against 26 days in January, so that they were really heavier. In Europe they were lighter. The visible supply March 1 again shows a reduction, leaving it 716,018 bags below the highest point which was reached November 1, 1902. A notable fact is the light deliveries of mild coffee, constituting little less than 13 per cent. of the total.

The receipts at Rio and Santos were the lightest for any month since June, 1902. Prices improved slightly during the month, but at the moment the market is working lower, especially mild sorts, which are in larger supply.

The receipts at Rio for the first eight months of the trade year 1902-03 were 3,034,000 bags; at Santos, 6,660,000 bags; at both ports, 9,694,000 bags, against 12,355,000 bags in 1901-02; 8,487,000 bags in 1900-1901. During three previous semi-annual crop years the receipts for this period averaged 81 per cent. of the total crop. On this basis the total receipts for the year should be about 12,000,000 bags.

The total visible supply of the world on March 1 was 12,517,226 bags, or just about the estimated total 1902-03 crop of Brazil coffee. Highest visible, 13,233,284 bags, November 1, 1902. On March 1, 1901, it was 7,276,668 bags, so that we have an increase in three years of 5,240,598 bags. This indicates the overwhelming production in spite of annual requirements of 15,000,000 bags.

The following statement shows the February movement in detail:

Stocks, February 1, 1903—	Bags.	Bags.
United States ...	2,500,241	
Europe ...	7,346,873—	9,847,114
Receipts during February—		
United States ...	445,779	
Europe ...	803,581—	1,249,366
Total supply, March 1, 1903 ...		11,096,480
Less stocks, March 1, 1903—		
United States ...	2,324,304	
Europe ...	7,451,662—	9,775,966
Deliveries, February, 1903—		
United States ...	621,716	
Europe ...	698,798—	1,320,514
Deliveries, February, 1902 ...		928,664
Increase as compared with February 1902 ...		391,850
Deliveries, July, 1902 ...		1,211,088
Deliveries, August, 1902 ...		1,302,949
Deliveries, September, 1902 ...		1,396,975
Deliveries, October, 1902 ...		1,545,611
Deliveries, November, 1902 ...		1,240,213
Deliveries, December, 1902 ...		1,183,298
Deliveries, January, 1903 ...		1,407,123
Deliveries, February, 1903 ...		1,320,514

Total deliveries, eight months, 1902-03 ... 10,607,771

Total deliveries, eight months, 1902	...	10,445,973
Total deliveries, eight months, 1901	...	9,316,222
Total deliveries, year ending June 30, 1902	...	15,516,663
Total deliveries, year ending June 30, 1901	...	14,329,925
Average deliveries, monthly year, 1902-03	...	1,293,051
Average deliveries, eight months, 1902-03	...	1,325,971

The February sales of options were 808,750 bags. The lowest price for No. 7 Rio was 4'65 cents for February and March; the highest, 5'45 cents for December.

Of the total deliveries in the United States, 541,619 bags were Brazil and 80,097 bags of all other sorts. Over 87 per cent. of the total deliveries were of Brazil sorts and 13 per cent. of all other kinds.—*American Grocer*.

## MANUFACTURES OF RHEA.

The Bengal Rhea Syndicate sent some time ago a small quantity of the fibre to Germany and Switzerland and have just got out a shipment of goods made from Rhea. A visit to Messrs. Jules Karpelès & Co., No. 1, Pollock Street, who are the agents in Calcutta for the Bengal Rhea Syndicate, amply repays one for the trouble of the journey through time-worn Radha Bazaar, and its purlieus. Mr. Ballarin, the energetic Manager of the firm, takes the keenest delight in showing the visitor, as Mr. Ballarin puts it, "What can really be done with Rhea." He lays before the astonished gaze of the visitor a number of articles from fine white Rhea cord up to a suit of clothes made out of Rhea cloth. It is undeniably a marvellous selection: the most delicately coloured and finely worked ladies' shawls, gentlemen's guernseys and other underclothing, cellular shirts, velvets of different kinds and colours, tray cloths, ladies' trimmings, finely-worked laces, incandescent gasmantles and even fancy imitation straw, the latter commodity being extremely pretty and cleverly manufactured. There is put before you a bundle of long dirty yellow and green fibre, coarse and hard, and it is almost impossible to believe that this is the article from which are manufactured all these beautiful wares. The texture of the articles is fine and closely resembling in many cases silk, but the goods appear to be somewhat heavier than silk, but at the same time give the impression of being delightfully cool. Another very great thing in favour of them is that they are absolutely dhobi-proof. The latter consideration cannot but carry weight in the "land of regrets," where one of the most regrettable things is the ruthless destruction of clothing by the pernicious dhobi. The yarns made from Rhea are exceedingly strong and clean, and in quality quite surpass the ordinary yarns.

So far only the manufacture of fine kinds of clothing has been attempted owing to the syndicate not at present being in a position to send to Europe larger quantities of Rhea. They have got about five thousand acres now under Rhea cultivation and are continually extending it.

"It will be about two years before we can hope to bring the goods into the market in any large quantities," said Mr. Ballarin, "and then the syndicate hope to flood the Calcutta market with cheap, durable and dhobi-proof goods."

It is expected that Rhea will take the place of both silk and cotton in the modern markets. It is cheaper than silk, though closely resembling it, and equal in price to fine cotton, but almost fifty times as strong as, and easier to work into cloth than the latter commodity. The present price of Rhea is about the same as American cotton, and decidedly below that of Egyptian cotton. The fight, however, is expected to be chiefly with the former cotton, as it is more largely used at present.

"Silk, hemp, and linen manufactures" said Mr. Ballarin, "will be principally affected by Rhea, which never rots. You can leave it for years in water, and it will never rot. The natives use it for nets. It is marvellously strong, and is in fact supposed to be the strongest fibre in existence."

It is quite possible that the syndicate will get out a machine in the near future for the manufactures of ropes, ordinary clothes and yarns, but the majority of the finer articles of wearing apparel will have to be made in Europe.

The consignment that Messrs. Jules Karpelès & Co., have got out is not for the market, but simply to show the public the value and extreme adaptability of the fibre. The goods are on show at Messrs. Jules Karpelès' premises, where the public are invited to inspect them.—*Englishman*.

## SOUTH CAROLINA TEA GROWING.

Mr. T. R. Tighe writes in *Tea, Coffee and Sugar*:—

### TEMPERATURE VEXATIONS.

In the matter of climate, the tea plant requires an equable one. Although the Pinehurst experience shows that under otherwise favourable conditions some sorts of tea may be exposed in mid-Winter to a temperature of 20 F. and even 15 F. without serious injury, the occurrence of comparatively slight falls of temperature in the Summer season materially interferes with the production of leaf. And as the practice prevails here of plucking the suitable leaf every one to two weeks throughout the season, i.e. altogether fifteen to twenty times, (and not only three or four times, as is done in China and Japan,) the interruption to the regular periodicity assumes importance, particularly as it appears to more or less seriously affect the subsequent flushing.

With further regard to the influence of climate, the results for the past few years have shown a marked advance in production, in spite of a deficiency in rain. The observation at Charleston have exhibited a steadily decreasing rainfall from 1897 until this Winter. In 1901 this deficiency amounted to almost two-fifths of the average yearly rainfall (about fifty-six inches). In Summerville the rainfall during the season of plucking leaf, April to October (inclusive,) steadily declined from 41½ inches in 1899 to 30 inches in 1902. When this precipitation is compared with that of the Oriental tea-producing countries for the same period, viz., sixty to one hundred and more inches, it becomes quite remarkable that the production of leaf in South Carolina should be as large as it is. Perhaps the comparison may also serve as a sufficient justification for what some critics have regarded as rather too elaborate and expensive a system for the conservation of water at Pinehurst. The inequality in respect to rainfall between this section and the Eastern tea regions naturally gave rise at the beginning of the Pinehurst experimentation to the hope that an artificial equalization of the water-supply by irrigation might successfully cope with an unusual deficiency in rainfall; and with the generous assistance of the United States department of agriculture an experiment involving the planting with tea of several acres of land, the construction of a cemented reservoir capable of holding 150,000 gallons of water and the equipment of a thorough system of sub-irrigation, by open-jointed earthen pipes, a well and pump was undertaken to test this supposition. Unhappily for the value of the conception, but most fortunately for the possible deductions, it has been found that the seepage from adjacent hills has exercised a greater influence on the production of leaf than did the frequent artificial application of water; although, as the plants are yet quite young, future observations may alter this conclusion. Those of the past are termed "fortunate for possible deduction," because if tea gardens do not necessarily demand irrigation in this climate a large outlay may be spared.

### IMPORTANCE OF DRAINAGE.

Of apparently as great importance to tea cultivation, and particularly to young tea gardens, is the perfect drainage, whether naturally or artificially, of the land. Tea plants will not tolerate stagnant water at their roots for more than a brief period, (say a fortnight,) without serious injury, perhaps destruction. It therefore behoves every would-be tea planter to take the most effective steps for avoiding such a calamity, primarily by the selection of a naturally well-drained site and thus avoiding the enormous expense of artificial drainage. Again, fertility must not be lost sight of. Otherwise the expense of providing proper supplies of plant food may constitute 20 to 25 per cent. of the total cost of the crop; that is a handsome profit in itself.

As regards the local climate and its effect on different sorts of tea plants, some progress has been made in estimating their value for industrial purposes. The greatest difficulty is experienced in getting in good order tea seed from the far Orient, not more than one consignment in four or five being, on arrival, susceptible of germination. Most of the Ceylon and about one-half of the British-Indian come safely. The cause of this loss may be found in the careless preparation and packing of the seed, or in the long distance to be traversed and the exposure to extremes of heat and cold. Should the fond hope of an American tea industry be realized, it must rest on seed raised in special groves which should be cultivated for seed only; i.e., not pruned beyond what is requisite

healthy growth and whose leaves should not be plucked. In reference to Ceylon seed it may be said that it is a waste of time and money to introduce any from the lower estates; and it yet remains an open question whether that from the higher altitudes (about 6,000 feet above the level of the sea) may be profitably imported. The Assam indigenous is also very tender and unable to stand the rigors of our Winter climate, at least in the open.

#### VARIETIES OF TEA PLANTS.

The Darjeeling variety, from the slopes of the Himalayan mountains, is rather difficult to get started, but is fairly hardy; it produces well, especially in the Autumn, and makes a fine tea, preferably black. There is none better among the British-Indian teas. The Kangra, which comes from a higher altitude along the same range, is a hardy dwarfish plant and produces only small crops; it is especially adapted for the manufacture of green. It makes a very fragrant tea. Among the various tea seeds from China, the most success has been obtained with that from the "Dragon's Pool" estate, near Hangchow. It is easily grown, fairly hardy; affords remuneratively large pluckings, especially in the spring and early Summer, and may be used for the production of either green or black tea. The tea is fragrant and delicate.

The Japanese variety is quite hardy and not difficult to establish. The plants, obtained from seed received from the Japanese Government, are not dwarfish, but not free producers of leaf. At some the yield per bush of dry tea hardly exceeds one ounce per annum. It is better adapted for the manufacture of green tea, which is fragrant and very delicate. That made at Pinehurst has in its cup qualities equalled the best imported.

#### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, March 19, 1903.

The market since our last issue has not been marked by great activity. Prices, however, maintain a resolute character. The London market reports of recent date denote increased strength and firmness, the stock of Indians on February 28 being 12,125,000 lbs. less than at the same date the previous year. Exports from Calcutta to the United Kingdom will close with a deficit on last season of about 8,000,000 lbs. In Ceylons there is a good general demand and the prices were maintained at full up basis. Many of the Ceylon gardens are much below their estimate and the shipments in consequence, during March must, of necessity, be somewhat limited. The development of Ceylon green teas has been advancing with remarkable rapidity and it is estimated that upwards of 12,000,000 lbs. will be manufactured during the current year, as compared to 2,000,000 lbs. in 1902, with a probable consequent decline in black Ceylons.

MONTREAL, March 19, 1903.

The movement on the local market continues light, and prices are firm. A few orders have been received for shipment after the opening of navigation.

#### TEA IN AUSTRALASIA.

The *Australasian Grocer* reports:—

SYDNEY, March 19.—The month under review has witnessed some new developments in the tea department. Strong and exciting conditions at producing centres have practically failed to be reflected in this market. Consequently importers have made a new departure by re-exporting teas to London for sale. It has been admitted that while better class Ceylons have advanced 4d. in London, this market has remained at a similar difference below cost. During the past week a rather better feeling has been experienced, and at the moment of writing buyers are operating more freely in finer descriptions ranging up to 13d. The cardinal feature of the month, however, in tea circles has been the attempted formation of a "Tea Merchants' Association." At the outset this venture gave promise of a successful issue, but, strange to say, as soon as its objects were published, a "rift in the lute" occurred, and a number of leading importers signified their intention of withdrawing. The work of formation, however, is still going on, and at an adjourned Meeting, to be held ten days hence, some

further developments may be expected. Among the objects of the Association have been suggested a recognition of certificated brokers; the limitation of sampling at public auction sales; the regulation of public auctions; the limitation of credit; the control of imports; and other questions more or less desirable or practicable.

MELBOURNE, March 19.—The tea market may, in view of the recent long spell of low prices, be fairly considered "booming." Costs of arrivals are very high, but something nearer covering rates are being generally obtained. The better class of teas are at present paying importers, and late shipments include but few commons, the majority being of higher qualities. A slight general falling-off in quality is apparent, and it is predicted that this is likely to continue. Although the teas, generally speaking, look well, the flavour is not up to what it was some time ago. In Ceylons, Pekoe Sonchongs, costing about 7½d. to land, have fetched from 6¾d. to 7d. being against importers. Some teas improve during the voyage, and others deteriorate. On the latter the importers always expect to lose, while, of course, they have the advantage in the former. Pekoes are very firm, and prices range at late sales from 7½d. to 11d. Common Orange Pekoes sold at 9½d., while fine brought 1s. 4d. The quantity of Indians offering is small, prices being from 6½d. to 1s. It is not expected that there will be much more Indian offering before July next, when the market here opens. At Calcutta, the first sales of new season's tea take place about the end of May. The Chinas that were on the market have been nearly all cleared up, and few are left in first hands. Prices show an advance of fully ½d. on December rates, and little has been available at under 6d.

ADELAIDE, March 19.—Tea has seen good business and import figures are satisfactory. The usual demand for desirable blending sorts has been met by constant arrivals from Ceylon and India. Clean desirable teas have found purchasers at fair rates.

BRISBANE, March 14.—Our market has not yet advanced in keeping with the cabled increases from Ceylon. Some good teas are offering at 8½d. to 10d. This seems to be the limit with some members of the trade.

DUNEDIN, March 7.—The market has been very firm and with cabled reports of shortage in shipments from Ceylon, all fine teas have been held for high prices. Business is largely confined to the various blends packed by wholesale merchants, some of whom advertise extensively. Many of the retailers, however, pack very good blends themselves. The demand for pure unblended Ceylons is growing steadily.

#### ANTICIPATING THE BUDGET.

##### TEA MERCHANTS PREPARE FOR REMISSION.

The *Daily Mail* writes:—

Tea merchants are at present afflicted with what might be termed "Budget scare." They are placing great faith in a report which has been privately circulated that the Chancellor of the Exchequer will remit the twopence which was added to the tax on tea in 1900, and again make the duty fourpence instead of sixpence on every pound.

The fact is hopefully recalled that when Sir Michael Hicks-Beach was in office he stated that while he could promise nothing with reference to spirits, he hoped when he was in the happy position of being able to relieve taxation to decrease the duty on tea.

Tea in bond being exempt from duty, merchants are now adopting a waiting policy, and frantic efforts have been made to lower the supplies in hand. Merchants declare that should their expectations be fulfilled a corresponding decrease will be promptly made in the price of tea sold in the shops.

Growers have been complaining that the extra duty rendered it impossible for them to continue planting with adequate profit. The following figures indicate the consequent decline in importation:—

INDIAN.				
1902-3	...	...	...	145½ million lbs.
1901-2	...	...	...	157 "
CEYLON.				
1902-3	...	...	...	96½ million lbs.
1901-2	...	...	...	99 "
1900-1	...	...	...	114½ "

Merchants allege that the remission of taxation will avert ruination of the growing trade and prevent an all-round increase of

prices to consumers. The fact that 17,000,000 lbs. of tea are sold by grocers monthly is substantial indication of the popularity of reduction.

The following are the duties imposed upon tea during the last sixty-seven years :—

Year.	Amount.	Year.	Amount.
	s. d.		s. d.
1836 ...	2 1	1857 ...	1 5
1840 ...	2 2½	1863 ...	1 0
1850 ...	2 2½	1865 ...	0 6
1853 ...	1 10	1890 ...	0 4
1854 ...	1 6	1900 ...	0 6
1855 ...	1 9		

Sugar merchants are also transacting business cautiously, and the market shows remarkable fluctuation. In financial circles in the City there is almost unanimous belief in the Government's intention to relieve income-tax payers, if only sufficiently to show practical sympathy.

### SOUTH CAROLINA TEA GROWING.

Mr. T. R. Tighe writes in *Tea, Coffee and Sugar* :—  
II.

The Experience at Pinehurst has not been sufficient to definitely determine various questions as to growth and manufacture of tea, as well as of public taste. Not only do different parts of the same country require different styles of tea, but in the same section changes in taste occur—if slowly. For many years there has been a steady decline in the quality of tea imported into the United States, the result of a constant struggle to cheapen the price and yet to maintain the profit to both wholesale and retail dealers. All the tea world knows that the American market does not attract the better class of Oriental teas; they command so high a price that they are consumed at home, or are sold to Russia or other purchasers, who are willing to pay handsomely for luxuries. Again, there is not one American tea drinker in a thousand who could conscientiously say that he prefers the almost colourless and tasteless liquor of the highest priced teas of the far East to the common or inferior teas, which are deficient in neither astringency or colour. But the antipathy towards delicate teas is not universal, as the Pinehurst experience shows. There seems to be a growing class in this country not unwilling to pay generously for fancy teas, provided they feel convinced that their price is not unreasonable. And thus it may prove true that the product of a garden yielding a decidedly smaller crop of very delicate tea may be more profitable than a very much larger yield from the same area of an inferior quality.

Again, other things being equal, the value and cost of tea are determined by the size of the leaf plucked, viz, the younger, smaller and tenderer the leaf the finer and costlier the tea. So far as the cost is concerned, it takes many of the smaller leaves to equal the weight of a single older and tougher one. To gather enough of the tenderest part of a tea shoot to make one pound of dry tea costs as many dollars as it does cents to pluck all the leaves, as is done at the great early Summer tea gathering in China.

### DISTRICT ASSOCIATIONS.

#### SOUTH MYSORE.

The Thirty-ninth Annual General Meeting of the South Mysore Planters' Association was held at the Munzerabad Club, Saklaspur, on Monday, March 30th, 1903. PRESENT :—Messrs. Anderson, C.I.E., Harris (*President*), E. M. Playfair, H. M. Playfair, J. H. Robinson, Russell, Taylor, Scholfield, Pittock, Butcher, C. Lake, W. L. Crawford, J. G. H. Crawford, Dennis, de Salis, Captain Foster, T. Hunt, T. Anderson, F. Norton (*Honorary Secretary*), and P. W. Whetherall (*Honorary Member*).

Messrs. Dennis, de Salis and J. Anderson were elected members. The President then addressed the Meeting as follows: GENTLEMEN,—The past year has been an eventful one. The majority of us can congratulate ourselves on picking record crops, and though prices have struck a very low level, all estates I trust will

on the year's working finish upon the right side and many show good profits. The passing of the Madras Planters' Labour Bill by the Legislative Council of Fort St. George is an event of great moment to our community, and is the consummation of many years of struggle. The Hon'ble Mr. Acworth had a difficult task to perform, as the opinion of District Associations differed considerably, and as some of them were strongly opposed in Council. With the assistance of Sir George Arbuthnot however he succeeded in carrying many points of importance, and in no way spared himself in his endeavour to shape the Bill into workable form. I feel sure this Association will, by acclamation, pass a warm vote of thanks to him. The hostility with which the Bill has been received in some quarters, and the latent, not to say belated affection, shown for Act XIII, which during the years of agitation was so strongly condemned, have been not a little remarkable. There has been a tendency to regard the Bill from an individual standpoint forgetful of the varied conditions of Labour in S. India. Doubtless anyone could suggest improvements, but taking a broad view, I recognize that what we have ever aimed at is not so much punishment for breach, as enforcement of, contracts; and also that it provides for reciprocity as regards execution of warrants, I cannot but think that we shall find it an instrument better suited to our requirements than Act XIII. I will not delay you by referring to all the objections which have been raised to the Bill, but as it is necessary for us at this Meeting to come to a definite conclusion regarding it I will draw your attention to a few of the more important. The Mysore Government has assured us that it will not introduce it without first conferring with us. We must therefore decide—

- i. whether we will pronounce in favour of it;
- ii. what modifications we shall suggest.

The Hon'ble Mr. Acworth has pointed out most clearly that though Local Governments will be allowed to make alterations to suit local circumstances, if anything opposed to the principles of the Bill were inserted, or if Act XIII were allowed to run concurrently with it, the Government of India would certainly disallow reciprocity regarding processes. We must therefore decide between the old Bill and the new, and in weighing their respective merits and demerits we must bear in mind, that though the circumstances of labour at present are easy they may again become strained the shortcomings of Act XIII as fruitful of loss and annoyance and the need of some form of extradition as urgent, as previously. Opponents of the New Bill will say let us wait till this state of things is reached, and then ask for it—but there is this to be said that by accepting it when labour troubles are few we should be able to test it dispassionately, discover its defects, endeavour to get them remedied, and thus be in a better position to meet the pinch whenever it may come. The constant attendances in Kutcherry will doubtless be vexatious and tedious, but this as far as the planter is concerned has been met by it not having been made obligatory for an agreement between a planter and a magistrate to be signed before a magistrate. No doubt the Bill is unsuitable to local labour, and though the proviso added to section 7 is an improvement it does not go far enough for us. I think, however, it should be possible without running counter to the views of the Government of India, to get our Local Governments to introduce certain clauses which would enable us to deal satisfactorily with this class of cooly and obviate his being subject to unnecessary vexation which he might be under the Bill as it stands. What I may call the inquisitorial sections 12—15 are probably anticipated with the least satisfaction. Under section 41 however rules may be made to regulate accommodation, sanitary arrangements, etc., and it should be our endeavour to induce our Local Government to frame such a will be in accordance with existing customs. It will not, I fear, be possible at this Meeting to discuss the Bill in detail, but I trust we shall come to a definite conclusion regarding the main issue as to whether we should ask for its introduction or not. This done I would suggest, should we decide in favour of it, the appointment of a small Committee to draw up a memo. of such modifications as may be desirable for submission to Government.

**Coffee Cess.**—You will have noticed that the Standing Committee have, owing in a great measure to lack of support, temporarily counselled the abandonment of this matter, not however without hope that it may be resuscitated at the Annual Meeting. Several firms of standing have expressed willingness to undertake the sale of our low-grade coffees, and what is now required is unanimity among ourselves. Many have expressed willingness to support the cess if a workable scheme be formulated, but if success is to attend

our efforts we must go further, and if I may presume to offer counsel it is this—

- i. decide definitely whether a cess is desirable or not;
- ii. and, if in favour of it, what the rate should be;
- iii. appoint a representative Managing Committee and give it *carte blanche* to deal with the funds as it may deem best.

I believe it only requires a sufficient balance in the Bank to set the matter going, but if we continue to refuse support till a cut and dried scheme is laid before us we shall never get any further.

**Delegate to Brazil.**—The Government of India has offered to subscribe Rs.5,000, provided we can raise the rest of the amount required, and it is for us to say to-day what this Association and what each of us individually are prepared to do in the matter.

**Plague.**—This terrible disease has unfortunately been very prevalent in what I may call the *maidan* portions of the Coffee districts, and has, to some extent, penetrated into the Mulnaad. The greatest possible credit is due to the officials in the Hassan District for the manner in which they have combated it, and especially to our subdivisional officer, Mr. Wetherall, who, by constant watchfulness and by wise and prompt measures, has kept Saklaspur entirely immune from it and prevented it from devastating Belur.

**Interview with Mr. Madhava Rao.**—Accounts of this have been circulated, and it only remains to record our thanks to Government for the sympathy it displayed and for sanctioning the Anjur Bridge which Mr. Madhava Rao announced at the interview. In conclusion, I beg to place my resignation in your hands, while thanking you for the support accorded me during the past year.

The Honorary Secretary read his report as follows:—

GENTLEMEN,—Having kept you well informed by means of circular letters on all topics that have been of general interest to you throughout the year, I have left myself but little to report on, and so will be as concise as possible. I have to congratulate you on having picked big crops—in some instances record ones—and though prices have not so far been high, they have not been so poor as one time we feared they would be. I think the most marked feature has been the adverse brokers' reports on the quality and appearance of the first arrivals of East Indian coffee, but these are simply the result of damage caused by heavy rain occurring during the early picking. I recommend that you send to Dr. Butler, Cryptogamic Botanist to Government of India, inquiries on all points on which scientific assistance is required, and whose paper on "Stump Rot" and its Treatment I lay on the table. Prospects I believe point to fair crops for the coming year. Our members, I regret to say, have fallen from 33 last year to 28 this year. Among our losses, we have to deplore the sadly premature death of Mr. Elder, of Sumshay Estate. Plague has been a source of anxiety to all of us, but I am glad to say that I have not heard of a single case on any Coffee Estate in our district.

The New Labour Law has been prominently before us during the past few months, and has been finally passed by the Madras Legislative Council. There can be no doubt that the Bill so passed is a very great improvement on the Bill as it was first printed. This has been largely due to the conciliatory attitude of the Madras Government, no less than to the marked ability of the Planting Member, to whom I think the cordial thanks of this Association are due, for the successful and tactful manner in which he helped to bring a by no means enviable task to a satisfactory conclusion. Before the New Act is introduced into Mysore, I feel assured that we shall have an opportunity of suggesting modifications and representing our views before the Government of Mysore. Our thanks are due to H. H. the Maharajah for having deputed Mr. Madhava Rao to confer with the representatives of the S. M. P. A. and N. M. P. A. on questions affecting our industry, but as the outcome of that conference is still under the consideration of the Government of Mysore, I cannot enlarge on the subject, but we may rest assured that our suggestions will receive the most earnest attention, and a remedy applied where possible. No more courteous or sympathetic official could have been selected to confer with us.

As regards weights and measures you will be glad to hear that the Government will shortly frame rules to regulate them.

The thanks of this Association are due to Mr. W. L. Crawford, for his able and interesting, and I venture to say convincing, report on the Leeming system. The Anjur Bridge has been sanctioned and will soon be put in hand and finished.

The postal arrangements of this district have shown an improvement lately, and members will only have themselves to blame if

they allow them to lapse into the state from which they have lately emerged.

This Association has to be congratulated on the election of our President as Chairman of the U. P. A. S. I.

The Coffee Cess is still in abeyance, and I have circulated the latest information on the subject, but the knowledge that Brazil is exporting coffee to India, and underselling us in what ought to be our own markets, should stir us all to action.

The Delegate to Brazil has not yet made a start, and we shall no doubt be called upon to subscribe and supplement the grant of Rs.5,000 from the Government of India. The Shevaroy Hills Association has already set us a good example.

The accounts are placed on the table and show a cash balance of Rs.129-8-3. I would draw the attention of members to the fact that Rs.315 are still due on the subscriptions for 1902-03.

I beg to place my resignation in your hands.

The accounts were audited by Messrs. J. G. Crawford and E. M. Playfair.

Mr. J. G. Crawford proposed that the Reports and Accounts be passed.

Captain Foster seconded and carried unanimously.

Mr. Graham Anderson then spoke as follows:—

I desire to refrain from saying anything which would in the remotest degree lead anyone to believe that after all the trouble which has been so unsparingly bestowed on the New Labour Ordinance we did not know our own minds during the 30 years denunciation and campaign against Act XIII of 1859 which latterly had become so encrusted with judge-made law as to frustrate the very objects for which it was originally extended to the planting districts of Southern India.

The Planters' Inquiry Commission exactly explained the position, when, after the most careful investigation, it announced its matured opinion that it was eminently desirable that some equitable arrangement should be made.

In regard to Mysore, it pointed out that the Province "was under British Administration when the planting industry developed . . . . . and that the paramount power is morally bound, especially in the case of Mysore, to extend to the planting industry in Native States as full a measure of its consideration and protection as in the case of British territory. This duty seems to us to rest on a three-fold basis;—the claims of the "States concerned, the claims of the planters and the necessity for removing from the recruiting tracts in British India a temptation which is found to be creating a special class of crime."

All that the Mysore planters asked for was, in fact, that they might be accorded reciprocity in regard to the extradition of persons guilty of criminal breach of contract, which had latterly assumed a form more closely resembling cheating and embezzlement than a simple failure to fulfil contract engagements.

"The very essence of the planters' appeal was for the introduction of simple improvements which would enable them to act with patience and leniency towards those who by giving a portion of their time to work at certain periods of the year are the means of supporting industrial enterprises which have congenial employment constantly available."

The Government of India, however, has already pronounced in no uncertain manner its unalterable determination that certain specific principles must be maintained if any alteration of the existing law is to be made, and it now appears that in view of giving effect to this decision, a very complicated Ordinance is unavoidably necessary.

I cannot but think, that it is a great pity that we must now accept this new and complicated law or resign ourselves to the certainty that neither reciprocity in the matter of the working of warrants and processes emanating from Mysore Courts, nor any form of extradition can ever be conceded.

If the Labour Ordinance in Assam had a moral restraining effect, so that Act XIII was found to work far better than it ever worked in Southern India, it may reasonably be presumed that convictions arising under the New Ordinance in one part of a district may have a salutary effect on unscrupulous persons in the other portion where the Ordinance is not in force. Although this would be a very slender protection to rely upon, it is worthy of some consideration before repealing Act XIII, however unworkable that Act has been found hitherto.

We must always regard Mysore as both a labour-recruiting ground for estates in portions of British territory and also as a

Province having very large labour requirements of its own. If the New Ordinance is introduced into those planting districts of Southern India which are situated in British territory our position in Mysore, as large employers of labour, will be rendered worse than it was before, unless we elect to ask for the introduction of the New Ordinance also and as I said before, if the New Ordinance is not introduced into Mysore we can never hope for any form of reciprocity or extradition.

The Planters' Inquiry Commission accurately stated our case in the following sentence:—"The gradual disappearance of the chief difficulties under which the British planter laboured and of which he complained for a long series of years from 1865 downwards, is, in our opinion, due to his power of enforcing Act XIII of 1859, imperfect as it is, in all the tracts from which he draws his labour, while the inability of the Mysore planter to enforce the Act in British India from which he draws nine-tenths of his labour has correspondingly been the source of his ever-increasing difficulties and the just cause of his complaints."

It has often been urged by those who know nothing about the unalterable and peculiar requirements of the country, that the best solution of the planters' difficulties would be to abolish the system of giving advances.

Such persons can never have read the finding of the Planters' Inquiry Commission which was as follows:—

"We find, therefore, that however much the planters would be benefited by the abolition of the advance system, its abolition is impossible under existing circumstances and that this method of meeting the planters' difficulties cannot be regarded as practicable."

In some old letters recently published by the *Madras Mail* it was recorded that the Duke of Wellington during the time when he was conducting military operations in Mysore and Coorg had actually to give out advances for horse-gram.

The advances given by Southern India planters have been the only means by which the working peasantry have been emancipated from agrestic slavery and from the clutches of usurious money-lenders.

Even now, it is a well-known fact that the coolies in South Canara are so tied down that they can only come up into Mysore for work at certain seasons of the year and frequently have to leave their wives and families behind as security for their return in a specified period.

From a perusal of the records of the United Planters' Association of Southern India which are laid on the table, it is quite evident that several Associations are not prepared to accept the New Labour Ordinance as a satisfactory solution of their difficulties.

One position in Mysore is a very peculiar one; we are greatly dependent on labour imported from British territory to compensate for the amount of Mysore labourers which is absorbed by the requirements of estates situated in British territory. Our brother-planters in the Madras Presidency have the security of being able to demand the extradition of offenders who abscond and return to Mysore; whereas the Mysore planter is absolutely unprotected owing to the fact that warrants and processes emanating from the Courts in this Province are wholly inoperative in British territory. If extradition is ever to be conceded to us we must accept the conditions under which it can alone be granted.

However undesirable a complicated Labour Ordinance may appear to us to be, we have no alternative but to accept it if advances are to be given to maistries and coolies in British territory and we must continue to remember that even Mysore maistries and coolies who may defraud us are quite safe if they once cross the frontier line. Surrounded as this Province is by the territories of the paramount power and owing to the facilitise of railway communication, the liability to loss and constant annoyance is an ever-increasing evil which we have to contend against.

When considering the order of the Government of Madras, dated 28th November, 1893, I had the honour to point out that in Mysore the plantations are generally dotted over an immense area which is cultivated with other crops with numerous villages, the inhabitants of which have their own industries to attend to, and it would be impossible to have an Ordinance which would only affect persons residing on estates and in no way influencing the conduct of those just outside their boundaries. In some places in Southern Mysore there are large bodies of local labourers who, living in the vicinity of the plantations, attend work occasionally or regularly, but return to their own homes either daily or weekly.

It would be obviously absolutely impossible to bring such people under any complex system of arrangements.

We have absolutely nothing to do with their houses, their water supply or sanitary arrangements. They are perfectly free to arrange for their own comfort and welfare as they please, but we do everything possible to help them when ill or in difficulties as they are so useful to us in helping to maintain our industry. Many thousands have thus been emancipated from agrestic slavery, have received advances to enable them to marry and settle down and become small peasant cultivators who give a portion of their time to us on our plantations.

The majority of labourers are honest, hard-working people, but there are many unscrupulous persons in every community and while wishing to treat everybody with leniency and patience, we have all had reason to deplore our utter helplessness to protect ourselves against the special class of crime which the Planters' Inquiry Commission found was prevalent wherever advances were given out.

After what I have said, I most sincerely hope that whatever resolution we may come to, we will not be regarded as an unreasonable or unappreciative body of men.

We all owe a deep debt of gratitude to the Hon. Mr. Acworth and Sir George Arbuthnot for their powerful advocacy on behalf of Southern India planters generally and for their untiring exertions to do everything that was possible to insure protection alike for the labourer and the employer.

I also venture to believe that I am only expressing the sentiments of all my brother-planters in Southern Mysore when I say we most fully appreciate the care and attention which the Government of Madras has generously bestowed on the preparation of the New Act, which, although it requires certain modifications to suit the special requirements of the Mysore planting districts, is a great improvement on anything of the sort that has ever been framed.

The *Madras Mail* has rendered conspicuous service to both the planter and the cooly and we will ever gratefully remember how cordially both the Government of Madras and the leading journals of the Presidency and Bangalore have endeavoured to place the planting industry on a better footing in regard to its labour arrangements.

We cannot, of course, be expected to express any definite opinion on the provisions of the New Act until it has been most carefully studied by the combined Mysore Planters' Associations in conference with the Durbar so as to arrange for those modifications which will be essentially necessary to make it suitable for application to the planting districts of this Province.

Mr. T. Hunt alone was not in favour of the Bill at present. As more local labour was being employed, he considered that Act XII was best for us; and that we should wait and see how the new Bill works before asking for its introduction into Mysore.

Mr. Harris proposed the following Resolution: "That this Association while recognizing that the Bill as finally passed by the Legislative Council of Fort St. George in a great measure meets the requirements of the planting community, it is aware that certain modifications are desirable to meet the peculiar circumstances of labour in this Province, and it takes this opportunity of thanking the Durbar for its gracious offer to confer with us regarding such modifications, by the introduction of which the Bill is capable of being made acceptable to us."

Seconded by Mr. Taylor and carried. Mr. Hunt alone objecting.

Proposed by Mr. Hunt—"That Messrs. Anderson, Harris, Playfair, W. L. Crawford and Norton be appointed to draw up a memorandum of such modifications as may be deemed desirable."

Seconded by Mr. Robinson and carried unanimously.

Proposed by Mr. J. G. Crawford—"That this Association desire to offer its cordial thanks to the Hon'ble Mr. Acworth for the able manner in which he assisted the passage of the Bill through the Council, and for the successful way in which he represented our interests throughout the deliberations."

Seconded by Mr. E. M. Playfair and carried unanimously.

**Reduction of Wages.**—Whose wages inquired Mr. Pittock?

Mr. Robinson proposed that one rate of wages should be paid throughout the district by members of the Association, for, as it at present stood, any member could pay what he chose. The system of groups of estates agreeing to pay the same rates had been a failure therefore he proposed one rate for the district.

Seconded by Mr. Pittock. Lost: 15 against, 4 for.

**Coffee Cess.**—Proposed by Mr. E. M. Playfair—"That those members who are not able at present to give a definite reply be requested to consult their Proprietors and Agents with a view to giving the required information in time to instruct the delegate to the next U. P. A. S. I. Meeting."

Seconded by Mr. G. Anderson and carried unanimously.

**Delegate to Brazil.**—Mr. J. G. H. Crawford proposed—"That this Association subscribe Rs.100 to the Fund and circulate a subscription list with a minimum of Rs.5."

Seconded by Captain Foster. Carried: 17 for and 2 against.

**Roads, Railways and Communications.**—Mr. W. L. Crawford hoped that the question of the railways would be kept before Government and if the main railway from Arsikerrri to Mangalore could not be undertaken, the Durbar be requested to consider the advisability of constructing a loop to connect Arsikerrri, Hassan-Saklasapur, Mudigere, Chickmagalur and Kadur.

Mr. E. M. Playfair expressed gratification that the Anjur Bridge had been sanctioned and pressed for its speedy completion, he was also pleased that the Arehully-Chickanhully had been finished, but all the Bridge across the Hessaragutta is constructed communication during the rain will continue to be suspended; and that the Honorary Secretary be directed to urge the early sanctioning of this undertaking, and draw attention to the bad state of the Arehully-Saklasapur Road and that the Belur-Gonibede Road requires re-metalling.

Mr. G. Anderson read an interesting letter signed by the leading merchants and land-owners of the district, asking him to gain the support of this Association to their urgent request for the extension of the Railway system.—Letter and reply recorded.

**U. P. A. Business.**—As the Bangalore Races are to be held unusually early this year it was resolved that this Association consider that the Annual Meeting should not take place till the first week in August.

Proposed by Mr. Robinson—"That Mr. J. G. H. Crawford should represent this Association at the next U. P. A. Annual Meeting."

Seconded by Mr. Taylor and carried unanimously.

Mr. G. Anderson then read the following memo. on Stump Rot and Diseased beans, after which Dr. Butler's letter on Stump Rot and its Treatment was read.

I have read with great interest and attention Dr. Butler's monograph on "Stump Rot," and beg to thank the Honorary Secretary for having favoured me with a copy.

The subject is a most important one and I am naturally very glad to find we have been doing what is right in order to check the damage resulting from the pest. The soil on Coffee Estates may be said to be parasitic as it contains decaying roots and vegetable debris which are preyed upon by numerous varieties of fungi.

We are now told that the fungus which causes "Stump Rot" has been identified at Kew as *Rosellinia radiciperda* (Massee).

I recently had the pleasure of sending extracts from the Kew Bulletin for 1895, to the Wynaad Planters' Association, which gave information relative to the Pepper disease in Munzerabad. I ventured to express the opinion that the information afforded pointed to the probability of the Pepper disease being caused by some form or variety of "Stump Rot."

The description of the scourge as forwarded to Kew was as follows:—

"It is not the Pepper alone that is attacked, but even saplings and undergrowth of the forest trees which spring up very rapidly, suffer also. All over the plantation, at various points, this disease attacks these young saplings in patches of from 5 to 10 or 15 yards square and I may say kills them outright. This has led me to think it must be of a fungoid nature."

The Kew authorities in reply said:—

"The disease singularly enough is closely allied to that causing serious damage to vines and orchard trees in Europe;—*Dematophora necatrix*."

As some parts of this Pepper Plantation were formerly affected by Anbury or Club-root, it is interesting to note that the use of quicklime is recommended for both diseases.

In regard to Club-root the investigations already made at Kew have proved;—

"That the development of the *Plasmodiophora* is favoured by the presence of acids and checked by the presence of alkalis."

The action of certain manurial applications is thus specified;—  
—Worthington Smith.

**Manures used.**

	Total diseased plants.
Ground coprolite	11
Do. do. and bone ash	16
Superphosphate	51
No phosphate	45
Steamed bone flour	16
Coprolite and steamed bone flour	3

I venture to think this is very interesting and may possibly account for the good results noticed after the application of Basic slag to coffee.

At page 35 of my list of "Forest Trees in Southern Mysore" (1888), I stated as follows:—

"When this tree (*Murragad*) dies or is felled, a lot of coffee is generally killed out around the decaying stump. A similar occurrence is noticeable with the Charcoal, Yellegah, Kenjaree, Taree, Marglee and Cul Sedlay."

Professor Marshall Ward has recently published several valuable papers in "Nature" on "Timber and some of its diseases" in which he draws attention to the fact that the fungi *Agaricus melleus* and *Trametes radiciperda* travel from tree to tree by means of the roots in contact and he recommends that a ditch be cut around the affected area so as to prevent the wanderings of the rhizomorphs in the soil.

Deep digging and frequent renovation pitting in Mysore, with the application of lime have also been found to have a beneficial effect.

An American plan of getting rid of stumps is worthy of a trial where circumstances permit. A hole is bored with a large auger in the stump in a diagonal direction and filled with nitrate of potash and a little water and then plugged with clay. The following season the hole is cleaned out and filled with kerosene oil. After a day or two, fire is applied and every root, however deep in the soil is burnt out. Dr. Butler sounds a note of warning about *Grevillea robusta*. We have some of the oldest in the Mysore Mulnad planted nearly 30 years ago. They are still in perfect health, but the danger occurs when they are cut down.

It is a fact that the *Grevillea* is killed out sometimes by Stump Rot, but as far as local experience can be trusted, the disease is communicated to it from the decaying stump of some old forest tree.

In one place recently examined by me there were dead *Grevillea robusta*, *Cedrela microcarpa*, and *Artocarpus integrifolia* trees all near the decayed stump of a *Carruga pinnata*.

It is indeed fortunate that substances are only food for fungi during certain stages of decomposition and after they have become thoroughly disintegrated they form manure or food for the higher orders of plants. The great object therefore appears to be to hasten complete disintegration and in regard to decaying stumps this is best effected by deep disturbance of the soil and the application of lime as indicated by Dr. Butler. Dr. Butler says it would be useful to obtain a list of such trees as are found commonly to start the disease and also one of these trees which are good for shade and exempt from the pest.

As a humble contribution to these lists, I beg to specify some of those which are known in this district.

**Subject to Stump Rot.**

Yellagah	Cinnamomum iners.
Gwodan	Garruga pinnata.
Howligay	Acrocarpus flaxinifolius.
Rarman Adeca	Myristica magnifica.
Raree	Terminalia belerica.
Goorcul	Sponia Wightii.
Mundhupa	Canarium Strictum.
Kul Geragay	Soymida febrifuga.
Beetee	Dalbergia latifolia.
Davegherry	Chickrassia (?)
Murragad	?
Cul Sedlay	?
Marglee	?

**Good Shade Trees for Coffee.**

Gonee	Ficus mysorensis.
Kurry Busree	Do. infectoria.
Cub Busree	Do. Tjakela.
Uttee	Do. glomerata.
Mullay Gerguttee	Do. (P)
Wartee	?
Whotungay	Albizia (P)

Hulsen ... .. Artocarpus integrifolia.  
Gobra Nairul ... .. Bischoffia Javanica.

In conclusion, I have the pleasure to read an extract from a letter which Dr. Butler has very kindly favoured me with from which you will learn that the spotted coffee berries about which so much has been written and imagined are not caused by hail or leaf-disease but are probably the result of some alteration in the nutrition of the embryo.

As the silver skin is not formed until the substance of the bean is partially developed the check caused by the sudden shedding of the leaves of certain undesirable shade trees just about the period when the silver skin is being formed, may possibly be one of the causes of such alteration of nutrition. This, however, is only an opinion which I have ventured to entertain.

I beg to invite inspection of samples of Grevillea and White Cedar wood affected by a stump of Garruga pinnata. Although all the wood of the decayed stump has entirely disappeared the bark of its roots was still present in the soil. I have also prepared some specimens of the fungoid filaments from which the damage results.

I have the honour to propose a cordial vote of thanks to Dr. Butler, the Cryptogamic Botanist to the Government of India, for his great kindness in helping our community with such useful scientific information.

#### Stump Rot on Tea and Coffee.

The history of the ordinary cases of stump rot as I have seen it on one Coffee estate in Coorg and on numerous Tea gardens in Assam and Dehra (there being little doubt from what I have seen that the Tea and Coffee diseases are for all practical purposes identical) is as follows:—

A shade tree is cut down or more commonly "ringed" and the stump left to rot in the ground. Some time afterwards, it may be in a few weeks or perhaps not for eighteen months or more, the tea or coffee bushes next adjacent to the site of the stump begin to wither and die off. Then a circle further out dies, and year by year the circle grows. On exposing the roots, the old stump is seen to have undergone a peculiar rot which results in a condition by which the outer layers become converted into a soft mass of earth and bark in which whitish cobweb-like patches can be seen here and there. This rot, which usually begins at the base of the tree stump, extends out along the main roots to where these adjoin the roots of a tea or coffee bush. These latter take the rot and if they are dug out before quite dead, it will be noticed that a knife can be driven in quite easily for an inch or so into the bark of the "collar," with which earth and white patches are found intermingled just as on the tree stump. Having once attacked the coffee roots the rot can pass from root to root even across a few inches of earth and can apparently extend indefinitely. The cause of the disease is a fungus which has been identified at Kew as *Rosellinia radiciperda* (Masse). Though it is possible that this may commence its destructive action by directly attacking a living coffee root, no such case has yet been proved, so far as I know, and certainly the usual thing is that the fungus requires to start on a dead root of some shade tree until having acquired a certain vigour by living on the dead roots, it can then pass on to attack living ones. What you refer to as "mealy bug" may be instances of direct attack without any intervention of a rotting stump, since from your description it closely resembles the condition produced by *Rosellinia radiciperda* in some cases which I have seen.

The evil appears to be on the increase and instances have been reported from Assam of the stumps left on clearing the jungle in opening out new gardens, taking the rot and killing off much of the tea two or three years after the clearing was effected.

In dealing with the matter the first thing to be borne in mind is that certain trees only serve to originate the rot. In the tea districts these trees are gradually getting known and there is a tendency to avoid them as much as possible. Two which have been found very commonly to start the disease are the silver oak (*Grevillea*) and the Bor (*Ficus elastica*). It would be of great value to obtain a list of such trees for the coffee districts by circularising the planters whose estates are known to be affected. Where the tree is not known specimens of leaves, flowers and fruit, pressed between blotting paper and sent to me, will serve for identification. Unfortunately the *Grevillea* is of value on account of its copious leaf production. Still if, as I suspect, it be found as dangerous in South India as in Assam it will have to be abandoned and I cannot

but think, taking into account the great richness of the Forest flora of India, its replacement by an equally good shade tree will not be a difficult matter. The Dalbergias should be avoided, for even if they do not affect coffee, the Sheisham (*Dalbergia latifolia*, Kanarese *Biti*, Tamil *Iti*) itself suffers from a root fungus very similar to *Rosellinia radiciperda* which kills many trees in Dehar and which I saw destroying trees in a Coorg coffee estate.

I do not think you could fail to have opinions of great value from planters whose estates are badly diseased for some years as to what trees may be recommended as insusceptible to rot, and I am clear that the question of what shade to employ is one of very great importance not alone as regards stump rot, which I repeat is increasing, but also from the influence certain trees exert on the coffee growing under them.

When the disease has appeared the treatment is to run a trench two feet deep and one foot wide around the infected area remembering, since the rot commences some time before the bush shows signs of it above ground, to include one row of healthy bushes within the trench. If this measure be taken immediately the disease is detected a loss of not more than half-a-dozen bushes may be secured. Where large lateral roots from the stump are encountered on running the trench it should be carried further out but small roots of an inch or two in diameter are not likely to start the disease if the trench be early made, and when divided by the trench may safely be left to rot beyond its limits.

The longer the disease be left to progress the greater the danger of the fungus getting established from the centre along the smaller roots of the stump and the greater the need to carry the trench far enough out to include these roots. The trench should be drained, as it appears probable that the fungus can pass across it if allowed to remain full of water.

Once the trench is made and the bushes within it have ceased to bear they should be pulled out and the ground well turned over to a depth of at least two feet, several times, and lime mixed with it. If lime cannot be used (it appears to be harmful to tea and may be so to coffee) a little sulphur or a solution of iron sulphate which is cheap and may be used in 5 per cent. solution (1 oz. to the pint) can be relied on to destroy the fungus. Then after a year the diseased area may safely be replanted.

E. J. BUTLER,

*Cryptogamic Botanist to the Govt. of India.*

A vote of thanks was proposed to Mr. Anderson and Dr. Butler and carried unanimously.

The following Resolution was put to the Meeting and carried unanimously:—"We deplore and indignantly repudiate the insolent insinuations made by Mr. Shapurjee the Chairman of the Native Shares, Stock, Exchange and Bullion Brokers of Bombay, as being wholly unmerited by Tea, Coffee and Indigo planters, and as being a lamentable departure from the admirable traditional characteristics of the Parsee community to which he belongs."

The Ballot papers were opened and the following gentlemen were elected:—Messrs. Harris (*President*), F. Norton (*Honorary Secretary*). COMMITTEE—Messrs. G. Anderson, C.I.E., J. G. H. Crawford, W. L. Crawford, T. Hunt, E. M. Playfair.

The following placed on the table:

Shevaroy Hills Planters' Association Proceedings.

Do. do.

Coorg Planters' Association Proceedings.

Nelliampathy Planters' Association Proceedings.

Wynaad Planters' Association Proceedings.

Central Travancore Planters' Association Proceedings.

After a vote of thanks to the President, who replied the Meeting closed.

#### INDIAN TEA ASSOCIATION (CALCUTTA).

Extract from Abstract of the Proceedings of a Meeting of the General Committee held on 7th April, 1903.

*Correspondence with Indian Tea Association, London.*—Letters dated 6th, 13th, and 20th March, from Mr. Ernest Tye, Secretary. Indian Tea Association, London, were brought up for final consideration and disposal after previous circulation. The principal matters dealt with in these letters were:—

*Insurance against Hail.*—In his letter, dated 30th January, Mr. Tye mentioned that the London Committee were endeavouring to obtain information respecting damage to tea crops by hail in

order to form a basis on which to effect Insurance against this risk. A copy of a circular which had been issued to Proprietors in London was also forwarded for information.

In his letter of 6th March Mr. Tye stated that the returns received in response to the circular had been summarised, and arrangements had been made to include this risk for an additional half per cent. on the current rates of Marine Insurance, the whole premium being subject to a discount of 10 per cent. in the usual way. The Insurance clause was worded as follows:—

"In the event of any crop being damaged by Hail, the Assured's Garden Manager shall forthwith summon two neighbouring planters who shall certify to the area so damaged (in acres) and furnish an estimate of the loss consequent thereon (in lbs.—4 lbs. green leaf being considered the equivalent of 1 lb. made tea), and within three calendar months shall furnish the Insurers with a statement showing the actual outturn from the affected area, also from the areas of similar dimensions on each side (or as near thereto as possible) of the affected area. The Insurers will then be liable for the loss in outturn reasonably attributable to the hail-storm, not exceeding 1 maund per acre of the whole area insured, and will further pay a survey fee (as per scale) to each of the two planters who shall have certified to the damage.

"The Assured omitting or neglecting to give notice to the Insurers by next ensuing mail of any damage occurring through hail shall forfeit all right to claim under this insurance."

With the London Committee's letter of 20th March an amended clause was forwarded stating that Gardens would be allowed to submit their statements of outturn at the end of the season instead of within three calendar months of the occurrence of the damage.

**British Import Duty on Tea.**—In the letter of 20th March reference was made to a statement appearing in the *Westminster Gazette* of 16th March to the effect that twopence per pound of tea during the next financial year was as much as could be hoped for, though it was doubtful if so much could be taken off.

The General Committee were pleased to note that there was a likelihood of some relief being afforded to the Tea Industry. And,

as the Imperial Budget would in all probability be placed before the House of Commons during the present month, the Secretary was instructed to address an urgent reminder to the Government of India, Finance and Commerce Department, soliciting early consideration of an action being taken in regard to the copy of the Memorial to the Chancellor of the Exchequer submitted to them in January last.

It was decided to address an enquiry to the Government of India as to the correctness or otherwise of this information, as, if true, it would mean a serious differentiation against Indian tea.

## MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated April 3rd, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903	1,323,185	949,395	69,825
1901-1902	1,438,239	976,113	66,231

36,350 pkgs. INDIAN }  
25,763 " CEYLON } Total 65,116 packages were offered in public auction  
3,003 " JAVA } this week.

Nearly ten million lbs. less Indian tea arrived in this country from the commencement of the season to the end of March than during the same period last season, while the arrival of Ceylon tea was nearly one million lbs. less. Indications point to a further shortage in the latter growth, and, of course, very little more Indian Tea can come over this season.

The Budget is to be taken on the 23 instant.

INDIAN.—The slightly increased quantity brought forward was readily absorbed by the Trade at improving rates, all descriptions selling well, an advance of about  $\frac{1}{4}$ d per lb. being established on

# "All Sorts and Conditions of Men" USE ST. JACOBS OIL

FOR RHEUMATISM, Gout, Sciatica, Neuralgia, Cramp, Pleurisy, Lumbago, Sore Throat, Bronchitis, Soreness, Stiffness, Bruises, Toothache, Headache, Backache, Feetache, Pains in the Back, Pains in the Shoulders, Pains in the Limbs, and all bodily aches and pains,

**IT ACTS LIKE MAGIC.**

SAFE, SURE, and NEVER FAILING. Price 1/1½ & 2/6.

# CONQUERS PAIN

the lower grades. Only 29,766 packages are advertised for the 6th instant, which will be the last sale before Easter. Exports to U. K. for 2nd half of March 365,000 lbs., against 264,000 lbs. last year; total from 1st April, 1902, 145,469,000 lbs. against 152,515,800 lbs.

Southern India has been well represented in the auctions during the last fortnight or so, 2,601 packages being brought forward this week, and 1,596 last week; these teas are deriving considerable benefit from the recent advance in the market.

Week's av. of tea sold on Garden Account 1903, 30,238 pkgs., av. 8'00d. 1902, ——— pkgs., av. ———d.

Tea sold on Garden Account 1st June to date 1902-3, 1,019,255 pkgs., av. 7'47d. 1901-2, 1,133,184 pkgs., av. 7'74d.

CEYLON.—The sale was rather a heavy one, comprising 25,763 packages, against 17,846. In spite of this the market was strong for all descriptions up to 8d per lb., the lower grades showing a further advance; medium and better teas were somewhat irregular, good Broken Pekoes being a rather weak market. Only 17,941 packages are printed for the 7th instant, the last auction before Easter. Exports to U. K. for March 7,500,000 lbs., against 8,500,000 lbs.; 1st January to end of March 23,250,000 lbs., against 25,750,000 lbs. last year.

Average for week 7'79d, against 7'01d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 253,894 pkgs., av. 7'65d. 1902, 279,570 pkgs., av. 7'16d.

JAVA.—The comparatively large quantity sold with good competition at full prices. The next auction will be held about the 23rd instant.

### CINCHONA.

Of 25 bales Maracaibo 5 sold at 8d to 9d per lb. for good bright flat, being dearer; 19 bales fair bright silvery Calisaya quill sold

at 6½d to 6½d per lb. The N. V. Nederl. Veem. reports the shipments from Java to Europe during March at:—

Year.	Amst. lbs.	Year.	Amst. lbs.
1903 ...	1,050,000	1897 ...	504,000
1902 ...	691,000	1896 ...	557,000
1901 ...	875,000	1895 ...	449,000
1900 ...	650,000	1894 ...	522,000
1899 ...	977,000	1893 ...	626,000
1898 ...	700,000		

### Total Shipments January-March.

Year.	Amst. lbs.	Year.	Amst. lbs.
1903 ...	2,304,000	1897 ...	1,350,000
1902 ...	2,155,000	1896 ...	2,073,000
1901 ...	2,623,000	1895 ...	1,862,000
1900 ...	1,906,000	1894 ...	1,873,000
1899 ...	2,025,800	1893 ...	1,881,000
1898 ...	2,356,000		

### QUININE.

Quinine has been inactive in second hands. For August delivery a few sales are reported at 1s 0½d to 1s 0¾d, and on Wednesday there were sellers at the lower figure.

### CARDAMOMS.

Cardamoms met with a dragging market, and prices were easier inclined, at the following rates:—Ceylon-Mysore: Good bold palish smooth, 3s; bold medium pale, 1s 10d to 2s; fair medium to palish, 1s 5d to 1s 8d; medium pale split, 1s 7d; small and medium pale, 1s 1d to 1s 2d; bold shelly, 1s to 1s 1d; peas, 1ld; brown splits and pickings, 10d to 1s. *Seeds* sold at from 1s 2d to 1s 4d per lb. *Tellicherry*, long brownish three-arched fruit, 1s 5d to 1s 6d; medium ditto, 1s 3d; small and medium, 1s; dark reddish, 10d to 1ld per lb. It is said that India has bought largely of late, but a fair quantity is arriving on the London market just now.

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 8th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*April 28th.—Weather*—Breeze set from the South, changing to West. Heavy showers fell last Saturday, gauging .70 to .75, and at Saklaspur .35. These are considered favourable showers for coffee. *Coffee prospects*—Good for an average crop. *Works*—Pruning and manuring. *Interesting item*—Jemmabundi officers are now going round.

#### PUSHING INDIAN TEA IN INDIA.

On another page we give the report of the Indian Tea Markets Expansion Commission for the first half of the period for which it was formed. This report gives details of work up to 31st March last. It does not strike us as quite so encouraging as earlier reports. There has been expansion, but the rate of progress does not appear sufficiently rapid. With new branches and agencies opening out month after month we might fairly hope to see an ever-increasing ratio of enhanced offtake. The trade is in its infancy, there is a wide field before it, and as the Commission grows stronger and lustier it should increase rather than reduce the rate of progress. We make these remarks with no desire to be pessimistic. Not only is our full sympathy with the Commissioners but we consider that they have done admirable work. Yet, if only to counteract the ultra-optimistic tone of the report under notice, it is as well to note that the success achieved up to the present time has exercised a scarcely perceptible increase in the demand for Indian teas in India. The means adopted for securing the object of the scheme, *viz.*, an increased consumption of Indian tea in India, have been varied, including:—Sale of Dry Leaf in pice

packets, tins, boxes, and chests; sale of Brewed Tea in cup by street hawkers, and at Depôts, Stalls, and on Railway platforms; sale of tea through Branch Postmasters; opening of Tea Shops; demonstrations at Fairs and *Mélas*, where the method of brewing tea has been explained; Travelling Agents; Newspaper advertisement and Pamphlets; prize packet distribution; personal discussion and correspondence; the area covered has been very extensive, tea in some form or other having been put within the reach of over 2,000 villages and towns in India. The number is not very large, if the greater part represents villages. As for the classes reached, we cannot but think that the Commissioners have indulged in clap-trap in placing on record the fact that these “are varied, embracing the Prince, the Clerk, the Student, the Railway traveller, the Theatre-goer, the Policeman, the Collier, the Indigo ryot, the Mill worker, the Jute cultivator, the Dock labourer, the Dweller in the jungle, and the Man in the street.”

The real interest of the report lies in the indications it affords as to the extent to which tea has been already sold by the Commission, and its probabilities as to future development. Summarising the general results obtained, we find them shown as follows:—Development of Official and non-Official sympathy with the Tea Industry; increasing demand for Tea in India; education of the Indian consumer, with resulting lessened demand for rubbish; increased European and Indian trading in Tea in India. It is remarked that the support accorded, viewed in the light of what was promised, is disappointing, but the approaching imposition of a compulsory Tea Cess has probably deterred many would-be supporters from contributing. But the above statement of general results is not so convincing as to stimulate confidence in the methods of the Commission. As a matter of fact, in eighteen months, the Commission disposed of 430,480 lbs. and the cost of working was Rs.80,000. Now, 300,000 lbs. per annum is not a very large quantity, and we must remember that some portion of this probably replaces trade that has been wrested from other hands. A great deal of the demand filled is no doubt new, but not all. Taking it all as new, however, it is not very important, and the most favourable view possible would seem to show that it has cost Rs.80,000 to sell tea of the value of less than Rs.120,000, though only 25 per cent. of this tea had to be paid for. Further Rs.86,000 is still available, so there is a fair prospect of the work being

continued for another eighteen months; and this second period will apply a more reliable test than the first eighteen months.

Our chief dissatisfaction with the present report has its origin in a belief that the glowing view taken in it of results up to date are not justified by the facts recorded. Take the statistics of pice packets as an example. The demand increases as is shown by the following statement:—

	1901-2.	1902-3.
August ...	Nil	1,71,088
September ...	45,901	2,03,580
October ...	82,588	2,03,894
November ...	86,521	2,10,155
December ...	64,327	2,20,107
January ...	1,11,640	2,30,983
February ...	1,35,038	..
March ...	67,298	..
April ...	1,09,761	..
May ...	1,91,660	..
June ...	1,95,743	..
July ...	2,07,589	..

Note how little increase there was between July 1902 and January 1903 as compared with the rapid development in the first seven months of the Commission's work. Omitting the first two months, during which, the organisation of arrangements must have taken up a large share of the Commissioners' time, we divide the remaining sixteen months into blocks of four and show total sales in each block:—

October 1901 to January 1902	... 345,076
February 1902 to May 1902	... 503,757
June 1902 to September 1902	... 778,000
October 1902 to January 1903	... 865,139

The rate of increase has fallen in the case of the last block; even the actual increase of sales is smaller than in any previous instance. As regards Brewed Tea a similar division into blocks shows for the above periods, respectively, 70,525 lbs.; 133,709 lbs.; 175,998 lbs.; and 213,383 lbs.—very similar results to those shown above. The pace has slackened, and it ought not to have done so. The actual increase of sales and even the ratio of increase might well have been expected to grow steadily, and the fact that this has not been the case appears to us to call for explanation, not for the highly-coloured report that is quoted in our U. P. A. S. I. section to-day.

### COLLAPSE OF A COFFEE CORNER.

It is reported from London that on the 4th instant coffee sold on the New York Coffee Exchange at under 2d. per lb., which is certainly the lowest price in the history of the market. The New York *Herald* explains that this means that the famous Lewisohn corner has burst. The late Leonard Lewisohn, banker and copper speculator, in 1901 undertook to create a corner. He was backed by Rockefeller and other Standard Oil magnates, and they 'bulled' coffee, and bought an enormous crop. Surplus coffee, however, is being produced, and Lewisohn's sons are now liquidating, with a loss during a few days of at least a million sterling. A commission, headed by Mr. Percy O'Sullivan, president of the New York Coffee Exchange, is arranging for an active propaganda, for the diffusion of literature in favour of the spread of coffee abroad, and chiefly in the British Empire, where coffee will be pitted against tea. Thus out of evil good may come; but it is to be feared that the withdrawal of the "bull" influence from coffee "futures" will have a temporarily depressing influence on prices.

### THE BOARD OF TRADE RETURNS.

MARCH 1903.

**Cocoa (raw).**—A glut of supply in the United Kingdom during March caused the bonded stock of this article to suddenly leap beyond that of last year.

In the first three months.	1903.	1902.	1901.
Imports ... lbs.	17,867,435	22,434,130	16,280,062

## U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

INDIAN TEA MARKETS EXPANSION  
COMMISSION.

## REPORT OF THE COMMISSIONERS.

The Commission having now completed the first half of the period (ending 31st January, 1903), for which it was formed, a brief general review of the working will, it is thought, prove of more interest than a detailed report.

The means adopted for securing the object of the scheme, *viz.*, an increased consumption of Indian tea in India, have been varied, including:—Sale of dry leaf in pice packets, tins, boxes and chests, sale of brewed tea in cup by street hawkers, and at depôts, stalls, and on railway platforms; sale of tea through Branch Postmasters; opening of tea shops; demonstrations at fairs and *mêlas*, where the method of brewing tea has been explained; Travelling Agents; newspaper advertisement and pamphlets; prize packet distribution; and personal discussion and correspondence.

The area covered has been very extensive, tea in some form or other having been put within the reach of over 2,000 villages and towns in India.

The classes reached are varied, embracing the prince, the clerk, the student, the railway traveller, the theatre-goer, the policeman, the collier, the indigo ryot, the mill worker, the jute cultivator, the dock labourer, the dweller in the jungle; and the man in the street

The results obtained may be summarised as—development of official and non-official sympathy with the tea industry; increasing demand for tea in India; education of the Indian consumer with resulting lessened demand for rubbish; increased European and Indian trading in tea in India.

The support accorded, viewed in the light of what was promised, is disappointing, but the approaching imposition of a Compulsory Tea Cess has probably deterred many would-be supporters from contributing. The cost of working is approximately Rs 80,000 for the eighteen months. The resources still available roughly amount to Rs 86,000

**Pice Packets.**—The demand increases; 2,537,873 packets having been sold from August 1901 to January 1903. The packets are sold in any part of India at one pice each, as in Calcutta.

**Brewed Tea.**—The improvement shown in the last report is maintained, a total of 608,625 cups having been reached.

**Delhi Durbar.**—Advantage was taken of the Durbar at Delhi to bring Indian tea prominently before the thousands of people gathered together on that memorable occasion. Temporary depôts, in charge of two Europeans, were opened in several of the camps and in the city, where brewed and dry teas were

on sale, and a large staff of men also vended brewed tea in the streets. The demonstration was a great success, and was referred to by the correspondent of one of the leading papers, as follows:—

“Others were disporting themselves in roundabouts and merry-go-rounds, more were munching sweetmeats which you will be glad to hear they were washing down with copious draughts of tea brewed from the contents of the Tea Expansion Commission's pice packets. This tea enjoys an extraordinary vogue, and I believe there is more tea being drunk in Delhi at the present moment than in any town in Asia. Lord Curzon's motto, ‘Indian tea for Indians,’ appears to be working out most successfully, and I shall not be surprised if the Durbar results in a great fillip being given to the local consumption of tea. The water is not good in Delhi, and besides the people from the plains crave for a hot beverage. Tea is easily and cheaply procurable, and as it is palatable its popularity is spreading, despite of prejudice. The visitors are sure to take the taste back with them to their homes.”

**Calcutta Coronation Festivities.**—On the occasion of the feeding of the poor on the Calcutta *maidan*, the Commission provided brewed tea, free of charge, and about 85,000 cups were taken, an eloquent testimony to the growing popularity of the beverage.

**Official and non-Official Opinion.**—One thousand five hundred copies of the previous report were printed and the greater number distributed amongst subscribers, the Press and others interested in the movement. The following taken from some of the opinions are encouraging:—

**His Excellency the Viceroy.**—“The Viceroy has read, with pleasure, the report on the working of the Tea Expansion Commission. His Excellency has noticed the satisfactory progress made, and wishes you continued success.”

**The Governor of Madras.**—“Read the report with great interest, and considers the progress made highly satisfactory, and the remarkably regular and rapid increase in the sale of pice packets and cups of brewed tea, augurs well for the future realization of the Viceroy's suggestion that you should endeavour to make tea the staple drink of the Indian artizan.”

**The Lieutenant-Governor of the Punjab.**—“Congratulations on the progress which as shown in the report, your Commission has already made.”

**Under-Secretary to Government of Bengal, Revenue Department.**—“Congratulate the Commissioners on the considerable success already attained, and on the expectation the figures give of large increase of sales.”

**Director-General of Statistics.**—“Note, with satisfaction, the great and encouraging measure of success which attended your vigorous and well-directed operations. Trust the business will continue to prosper in an increasing degree.”

**Secretary, Indian Tea Association, London.**—“Read the report with much interest showing the satisfactory progress that has been made.”

**Secretary, Indian Tea Association, Calcutta.**—“The General Committee note with satisfaction the progress which has been made.”

**Education of Indian Consumer.**—The superior quality of the tea issued by the Commission to that formerly procurable in the bazaars, is slowly but surely educating the Indian public to distinguish between good and bad. Every encouragement is given to independent hawkers and stall-keepers to sell good tea, many of whom have been instructed in the correct method of brewing, and allowed to purchase sound leaf in the smallest quantities to ensure freshness.

**Increased European and Indian Trading in Tea in India.**—Amongst the most successful and far-reaching results of the Commission, is the undoubted stimulus it has given to European

and Indian enterprise in developing the trade in tea within the Empire. On all sides there has been a general awakening to the fact that the trade is worth attention, and that Lord Curzon was not wildly romancing when he described India as "the most splendid market of the world" for Indian tea. The more competition that can be brought into the arena, the sooner will the securing of this "most splendid market" become an accomplished fact.

Messrs. Brooke, Bond & Company, Limited, are now actively competing for the trade in India. Quite recently a Director of the Company interviewed the Commissioners who assured him that they cordially welcomed the addition of his Company to the exploiting power of the Indian market. The well-known Lipton is also pushing Indian tea in India more vigorously than ever, and other European distributing agencies are showing increased activity. Several European-owned Estates are also supplying tea in packets or boxes direct from the garden, and generally a tide of co-operation is setting in, which cannot but be regarded with the greatest satisfaction.

The Commission, however, has not only stimulated European trading in tea, but has aroused the interest of the Indian shopkeeper. This community is beginning to get the idea that it will pay to handle tea. The Commissioners are doing their utmost to foster the trade in this direction, by giving every possible facility to those who make the venture. They are pleased to report that during the past three months a large number have followed the lead given by the Commission and are now vending brewed and leaf tea on their own account.

*Support received to 31st January, 1903.*—Is as follows:—Tea from subscribers 428,888 lbs., valued Rs.1,02,160; cash from the Indian Tea Association, Rs.40,000; cash from subscribers, Rs.32,688. Total, Rs.1,74,849.

Received through the following Agencies:—Indian Tea Association, Rs.40,000; Messrs. Octavius Steel & Co., Rs.21,739; Macneill & Co., Rs.20,222; Andrew Yule & Co., Rs.18,403; Finally, Muir & Co., Rs.14,664; Balmer Lawrie & Co., Rs.10,652; W. S. Cresswell & Co., Rs.9,730; Williamson Magor & Co., Rs.5,601; Doocars Tea Co., Ltd., Rs.5,012; Messrs. Kilburn & Co., Rs.4,096; Barlow & Co., Rs.4,043; Barry & Co., Rs.4,013; Kettlewell Bullen & Co., Rs.2,153; Doom Dooma Tea Co., Ltd., Rs.2,000; Messrs. McLeod & Co., Rs.1,889; Shaw Wallace & Co., Rs.1,675; Duncan Bros & Co., Rs.1,602; George Henderson & Co., Rs.1,348; C. A. Stewart, Esq., Rs.1,291; Messrs. Begg Dunlop & Co., Rs.1,270; Davenport & Co., Rs.1,215; J. Mackillican & Co., Rs.1,158; Sephenjuri Bheel Tea Co., Ltd., Rs.500; Planters' Stores Agency Co., Ltd., Rs.300; B. Palchowdhury, Esq., Rs.152; E. R. Durnford, Esq., Rs.112. Total, Rs.1,74,849.

*Purchase of Tea.*—To 31st January, 1903, 131,664 lbs. of tea were purchased at public auction, at a cost of Rs.42,573-11-11, bids being confined to the produce of supporting gardens, who profited by the increased competition thus secured, as although the quantity actually purchased was not heavy, bids were made for a number of parcels, thus assisting towards enhanced values being obtained for same.

*Accounts.*—Audited statement of Cash Receipts and Disbursements to 31st January, 1903, is submitted herewith:—The total receipts for the eighteen months amount to Rs.1,65,685; the total Disbursements the eighteen months amount to Rs.1,24,671, leaving balance in hand of Rs.41,014.

Audited statement of Tea Stock is also attached as follows:—Received from contributors, 428,888 lbs.; received by purchase, 131,664 lbs.; total 560,552 lbs.; tea, disposed of in eighteen months, 430,480 lbs.; tea in stock on 31st January, 1903, 130,072 lbs.

Cost of working for the eighteen months is approximately Rs.80,000, and the resources still available may be put roughly

at Rs.86,000—thus—cash in hand say Rs.41,000; tea in stock say Rs.30,000; outstandings say Rs.18,000; total Rs.89,000. Less deposits from Agents say Rs.3,000; total Rs.86,000

So that, with care, the resources available will, it is hoped, enable the working to be carried on for the remainder of the period on the present lines, supposing the tea and outstandings realize the amounts placed against them. If, however, the operations are to be extended, further support is required. The Advisory Committee at a Meeting held on 22nd October last, unanimously adopted the following Resolution:—"The Progress Report to end of September 1902 showing an increasing demand amongst Indian consumers, the Advisory Committee strongly urge all interested in the tea industry to give increased support, so that the work of the Commission may be further expanded." Since this Resolution was passed the Tea Cess has come into force, which may have the effect of causing direct subscriptions to this Commission to fall off.

The scheme, however, was started on the promise of support for three years, and even if a portion of the cess funds be eventually voted towards extension of the tea trade in India (one of the objects advanced in favour of the tax) such assistance will not be available much before the 31st July, 1904, when the Commission terminates. The matter is one that the Commissioners leave to the careful consideration of the contributors to the scheme.

The Commissioners cannot conclude this report without tendering their thanks to the members of the Advisory Committee who have assisted them with their advice during the period under review. The work of the Commission is a difficult one to handle, and the results are not only such as appear on the surface. Whether further support be forthcoming or not, subscribers may rest assured of the continued efforts of the Commissioners to forward the object of the scheme, viz., the development of a market in India for Indian tea.

(Signed) ANDREW YULE & Co.,  
Commissioners.

CALCUTTA, April 16.

#### REGULATION OF TEA SUPPLIES.

The Indian Tea Association, Calcutta, has issued the following circular, dated 25th April, 1903:—

I am directed by the General Committee of the Indian Tea Association to publish for the information of Members of the Association, the undernoted Resolution passed at a Meeting of Importers held in London on the 30th March, to consider the market position:—

*Resolved*—"That it is undesirable to hurry the new season's tea Home and this Meeting agrees to recommend Proprietors not to hasten shipments."

#### COFFEE NOTES.

**The U. S. Coffee Market.**—Weaker conditions prevail in coffee, says the *Tea and Coffee Trade Journal*. During the past week the spot option sank to 4.05 bid and 4.10 asked, a new low record. December options have never before been quoted so low—4.80. At the beginning of this week the recession was arrested by the cables announcing scantier Santos interior receipts, 13,000 bags daily, but it is doubtful whether this can prove a support of protracted duration. The Brazil crop movement is consequently less full but the expectation of a 12,000,000 bag crop is none the less diminished.

In actual coffee Brazil markets closed easier but the coffers were not low enough to attract orders from New York. In New York spot invoices closed Rio No. 8,  $\frac{1}{16}$ c.,

No. 7,  $\frac{5}{16}$ c., No. 4, 6c., and Santos No. 4,  $6\frac{1}{4}$ c. The decline in the lower grades has been substantial, and has had its effect on the price of package coffee, the Arbuckle brand which has been reduced  $\frac{1}{2}$ c.

In mild coffee a dull market has prevailed for West India growths. The trade seems to be well supplied and a farther influence is the slumping price of Brazil coffee. Good cuta closed quoted  $8\frac{1}{2}$  to  $8\frac{3}{4}$ c. East India growths are quiet.

\* \* \*

Statistics are often misleading, to say no worse thing, and making this observation is the "Statistical Abstract of the United States," quotations from which in regard to the consumption of beverages in the United States are now travelling widely in the newspapers, with many an editorial reason based on the assumption that they are authentic and authoritative. Would that it were true, says the *Tea and Coffee Trade Journal*, that the *per capita* consumption of coffee in the United States had increased during 1902 from 6.60 to 13.37 pounds, as the "abstract" declares! At that rate, this nation would be increasing its use of coffee at the rate of 1,650,000 bags a year, which would be very satisfactory to coffee-growers as entering substantially to eat up and drink up the surplus of coffee grown. Unfortunately real statistics, authoritatively put forth, tell another tale. Deliveries of coffee in the United States are interpreted as consumption, or as approximating it more nearly than importation, and for the 12 months of 1902, the Coffee Exchange made these 6,488,000 bags or 852,457,000 pounds of coffee. Assuming the population of the United States in 1902 to have been 79,000,000 we realize a *per capita* consumption of coffee in the United States in 1902 of only 10.8 pounds. This is far from the 13.37 pounds, so proudly quoted with approval. And there is worse to come. The abstract makes the *per capita* consumption of coffee in 1901 11.60 pounds, but deliveries of coffee in that year were 720,000 bags or 887,040,000 pounds, and, estimating the nation's population at 78,000,000, we derive a *per capita* consumption in 1901 of 11.36 pounds. Rather than an increase in coffee consumption of 2.77 pounds a decrease has taken place of .56 pound. The bald truth thus stated. In view of the cheaper price of coffee and its impotence to increase its consumption, a surmise that is finding general acceptance is that the poisonous aspersions printed concerning coffee by the cereal coffee humbugs are having their effect in quieting coffee-drinkers, to the advantage of the use of their own absurd concoctions and so of their bank accounts.

\* \* \*

In Brazil, where coffee is the universal drink, it is consumed without milk.

Coffee leaves are used in preference to the coffee bean by many of the natives of Java and Sumatra. The leaves are roasted before they are infused.

Epicurean coffee-planters in Brazil usually drink coffee which has been kept half-a-dozen years in the hull, and it is said that the flavour of this old Brazilian coffee is unsurpassed anywhere in the world.

\* \* \*

Strong coffee is an antidote for cocaine poisoning.

\* \* \*

The great Brazilian coffee industry is a product of but little more than a century. The coffee plant was introduced

from Java into Surinam, and from Surinam into Pará, Brazil. Considering their common origin the coffees of Brazil and Java are entitled to be sold under similar trade names.

When the American Government obtains control of the Panama Canal the coffee industry of the isthmus is likely to experience a boom. The Panama coffee is a rather new variety and the bean makes a strong, heavy liquor, with a rather "grassy" flavour. It is said that it is capable of being improved with careful cultivation.

\* \* \*

**Export Duty on S. Paulo Coffee.**—The Congress of the State of Sao Paulo has passed a Bill imposing, without affecting other duties, a maximum tax of 2 per cent. on exported coffee. The application of the measure is conditional upon its signature by the President. It is to come into force in July.

\* \* \*

The coffee export season is now in full blast in Mexico, the opening occurring about the first week in March. Ships leaving Mexican ports carry as part of their cargoes about 1,350,000 pounds of Mexican coffee, and according to shippers this rush of coffee out of the country, to foreign markets, will keep up for about two months to come, before the entire crop is finally disposed of.

\* \* \*

Advices received from Padang, Sumatra, state, that the next government quarterly coffee auction will be held on June 30, and comprise about 10,000 piculs.

### TEA NOTES.

The National Tea Association of the United States, to the formation of which we have made frequent allusion, says the *Tea and Coffee Trade Journal*, and which that journal has strenuously advocated, is now a recorded fact, and the tea trade is to be congratulated on this most desired consummation of its hopes and fears and wishes. To give it birth was delicate work but it was done, and much is due to the moving spirits that wrought so nicely and effectively. We are sure this United States Association will be the envy of all tea men in other lands, and we shall be surprised if the organization shall not be an inspiration for emulation elsewhere. The Association stands on two broad grounds, the preservation of tea in purity and quality and the increase of its consumption in the United States. Upon this foundation every member of the tea trade can afford to stand, and without the least fear of any invasion into the business methods of the member, for such interference the Association especially declares as foreign to its purposes. Therefore, all those who might differ in other points have in the National Association no grounds for difference. We understand it is considered by some of the members that, if the public were properly instructed in the preparation of tea brewing, the consumption would be vastly increased without going further. This suggestion will meet with no opposition. It is patent on its face. It is a well known fact that in all public hotels and restaurants in the United States it is impossible to procure tea that is properly prepared; it is either drawn so long that its flavour has become bitter and an extensive amount of tannin developed, or else the water has not been properly boiled, and, therefore, the tea not drawn at all.

The consequence is that the beverage which the American family drinks as tea is a concoction resembling catnip or some other weed instead of having the flavour of the rose to which it is entitled. If the result of the Association shall be to increase the importation of tea from its present amount of 100,000,000 lbs. to 200,000,000 lbs., it will be well worth the trouble of organization. This is not an extravagant proposition, the members urge, for it means a consumption of only two pounds *per capita* while England consumes 6 pounds *per capita*, Australia 7 pounds *per capita*, and Canada, just to the north of us, 4 pounds. Our own has diminished to four-fifths of a pound. By a proper propaganda on brewing tea and the preservation of the present tea standard law at least, this most desired expansion of the tea business will be realized, would seem as a self-evident proposition. It is up to the Tea Association to do it, and for the tea trade to assist the Association in the realization of its ambition. What makes for the prosperity and righteousness of one, makes for the prosperity and righteousness of the other.

In some parts of Asia tea is used in the form of a soup, the leaves being boiled with fat or with sugar; cloves and fennel, and swallowed with the liquor.

Tea, of course, has not escaped attention and handling by the "Abstract." It is perhaps worth while, says the *Tea and Coffee Trade Journal*, to place the real statistics on a trustworthy basis also, especially, since a contemporary has recently expatiated much on the foundation under notice. The *per capita* consumption of tea, this same authority says, was 94 pounds in 1902. The truth is that it was even less. Tea in warehouse in the United States on January 1, 1902, was 47,000,000 pounds, the net quantity imported during 1902 was 107,000,000 pounds; the quantity in warehouse January 1, 1903, was 91,000,000, leaving the consumption for the year at 63,000,000 pounds or .8 pounds *per capita* on an estimated population of 79,000,000 pounds. It is almost needless to say that the low figure registers the seeming disuse of tea caused by the duty on tea in process of repeal. In tea, consumption and importation are closely interchangeable, and it is a reasonable prediction that the consumption of tea during 1903, will reach 108,000,000 pounds or 1.34 pounds *per capita*, an increase of more than one-half pound. This is important as contradicting the mischievous report of the "Abstract" that tea-drinking is precipitously sliding out of favour in the United States.

About one hundred and sixty importers, wholesalers and retailers of tea throughout the country have united to form the National Tea Association of the United States. The objects of the Association are declared to be the support of the law of 1897 forbidding the importation of impure, spurious or worthless teas, and the promotion of the consumption of tea in the United States by disseminating information in regard to its quality and the proper methods of its preparation.

**The U. S. Tea Market.**—The tea market is quiet and even dull, says the *Tea and Coffee Trade Journal*, though prices remain unchanged, inclusive of Congous, which have met with such considerable export demand in the past month. It is estimated that the export of the tea has reached the sum of 30,000 packages, which is a good figure, and should it be

corroborated by the export statistics of the government for the month, there ought to have been more of an improvement in the price of the tea in the market. As it is, the price has come under the influence of firmer rates only a little. Opinion is divided as to whether there is to be a decided stiffening in the quotations of the tea.

More activity in the market is expected shortly on the belief that stocks must need replenishing. Apart from the plentiful Congous, there is little tea in first hands, so that there cannot ensue much trading in this rank of traders. There are 100,000,000 pounds of tea in the country at present a supply sufficient for more than one year. How much of it is in the hands of retailers would be interesting to know. As a general proposition, it has been assumed that from one to two packages extra would be carried this year by the retailers and in the aggregate this means a large sum. If this distribution has taken place, it will explain where the great quantity of tea imported has gone. If not, the matter will have no influence on the next market, to which attention is now being directed. The expectation that the markets in the East will be higher may suffer some revision in consequence. Green teas and Japans are especially expected to open higher responsive to the stringent market in these teas still prevailing in America, but unless the American rush in too soon the market should fall waiting for orders, for it may be accepted that the higher prices which these teas have brought will surely call out larger stocks than heretofore offered, and moreover, the competition next year of India and Ceylon green teas, to be increased from 3,000,000 pounds to 14,000,000 pounds, is to be remembered; they certainly will affect the market, for they have established no mean welcome on these shores.

**Export of tea from China.**—Messrs. Siemssen & Co. Market Report: Hongkong, April 9, gives the following figures:—

	lbs.	lbs.
	1902-1903.	1901-1902.
To England ...	16,544,665	19,136,009
„ The Continent ...	6,845,005	6,594,263
„ Russia ...	25,030,813	30,061,051
„ America ...	57,551,728	36,210,314
„ Australia ...	1,138,697	2,036,969
„ South Africa ...	1,016,423	1,741,639
Total ...	108,735,311	95,789,245

**Ceylon Tea in France.**—A. L. H. writes to the *Times* Ceylon:—

There were a good many evidences in Marseilles that Ceylon tea is making its way in this great French seaport. The tea at the hotel was very drinkable, and in some of the cafés and shops there was evidence that it was to be procured. But, once on board the express for Nice and Monte Carlo, there was proof of Mr. Valentine Webster's energy and outlay. In meadows, vineyards, orchards, homesteads, workyards, and house-gardens notice boards, some four feet from the ground, bore the poster "Drink on Quaker Ceylon Tea," varied with "Buvez le Quaker Thé Ceylan"; and on arrival on the Riviera there were signs in the shop windows that the advertising was bearing fruit. On arrival in Paris, in the very street of the hotel at which I am staying, the Ceylon Tea Pavilion catches the eye prominently and the packets of "Quaker" and "Palamcotta" tea are

ere to be purchased, and a good cup of tea to be pro-  
ured. Those homeward and outward-bounders who wish to  
now of a reasonable hotel in a good position in Paris might  
ake a note of the Hotel St. Petersburg, Limited, 53, Rue  
aumartin. All the attendants speak English, and the rate  
er diem is 10s. 6d., which includes sufficient in the shape of  
eals to satisfy most people, and attendance and bed-room—  
harge which compares very favourably with some of the  
otels one stays at in France. The dining, reception, and  
moking-rooms are spacious, and the best part of Paris is all  
ound the Rue Caumartin. Referring again to the Riviera,  
the time is favourable for a trip to Monte Carlo, it may be  
remembered that on arrival at Marseilles this famed resort  
within a rail run costing under £2 return, but it must be  
oted that the return ticket only lasts for three days. The  
Hotel Geneve at Marseilles is reasonable; all heavy luggage  
an be left there, and the proprietor will give a list of hotels  
t Nice to suit all purses. The run to Monte Carlo from Nice  
short, only costs a franc or two, and trains are constantly  
unning.

**Needle-leaf Japan Teas.**—Recently Messrs. Forbes and  
Walker reported on some samples sent by "T. Gossup,"  
f New York. The *Ceylon Observer's* correspondent said  
ere were 30,000,000 lbs. to be ousted in America; but the  
olombo brokers reported that they were of opinion that the  
Needle-leaf" Japans are hand-rolled; and they added:  
this is where our difficulty lies, and it must continue until  
machine can be found to produce the result required." The  
*Indian Planters' Gazette*, after reproducing the above report,  
ppends the following comment:—

A machine which would produce the result required is Lyle's tea  
oller. This machine was in vogue at one time, but being a bag  
achine (i.e., the leaf was placed in bags and rolled) was given up.  
t is now quite out of date, but there are probably a few lying  
nused in some factory godowns. It would certainly produce a  
traight, flattened-out, long-shaped leaf (also smallish, if of China  
it), and would be just the machine required for turning out tea  
imilar to the Japan samples.

The rejections recently made of Foochow Oolong teas by  
he U. S. Tea Board which brought forth bitter complaints  
rom New York merchants has finally come to a climax.  
mporters are vigorously protesting against the exclusion  
f tea made. They are now appealing, having made appli-  
cations to the Secretary of the Treasury, requesting that the  
epartment, in conformity with the provisions of the Act of  
March 2, 1897, issue regulations relative to the re-examination  
f teas before the Board of United States General Appraisers.

January imports of tea in the United States were 9,611,430  
pounds; for seven months ending January, 90,953,228 pounds,  
ainst 59,344,573 pounds the same months in 1902;  
5,388,986 pounds in 1901.

**The American Campaign—is the Money wasted?**—Mr.  
C. Larkin writes to a Colombo contemporary:—

I was reading to-day the very interesting talk the Dimbula  
Planters' Association had with Mr. Fairhurst, and I noticed that  
Mr. Fairhurst expressed himself as always having been of the  
pinion "that the money spent by the 'Thirty Committee' in the  
Eastern States in pushing Black tea had been simply and abso-  
lutely wasted." Strange to say, Messrs. Gow, Wilson & Stanton's  
ircular came to hand immediately afterwards, and I noted that  
he American gain in imports in Ceylon and India tea in 1892, over

the previous year amounted to nine million pounds; that we had  
taken altogether 26,360,206 lbs. in 1892; in 1896 we took only  
9,623,283 lbs., that the increase in 1892 over the previous year was  
actually as large as all the tea we took from Ceylon and India in  
1896. We rather fancy that Mr. Fairhurst will get very few  
planters to agree with him (after looking over the above figures)  
that the money expended in America has been wasted even in the  
exploitation of their Black tea; for there were only two million  
pounds of the figures given that consisted of Green tea, and aside  
from that we all know what a future there is for Green tea. If  
there had been no money spent in America, and if there had been  
no Commissioner representing them in America, not only would  
Canada for instance not be taking practically every pound of her  
Black Tea from Ceylon and India, but the manufacture of Green  
Teas would probably never have been entered upon.

I have had the pleasure of meeting Mr. Fairhurst, and I feel  
certain that when he sees the circular alluded to he will be the first  
to admit that he was quite wrong, and that the American campaign  
has been a very wise and ably conducted one indeed.

In the matter of "Oolongs" this is the most important question  
before the Committee at present. I have been agitating it for  
some years, and having had several samples of Ceylon Oolongs put  
before me, I believe that these can be made in Ceylon with as much  
success as Greens have been. There is a large market in the  
United States for them, and if we believed that Ceylon and India  
would not make an attempt, or would prove unable to make better  
Oolongs than are now produced in Formosa, we would at once put  
up a packet of Formosa.

**Blacks and Greens, Indian v. Ceylon Green.**—The ques-  
tion of relative cost of Black and Green Teas and of Indian  
and Ceylon Teas has been discussed recently. A Ceylon  
merchant remarks:—

It will be noted from the weekly sales of greens held in Colombo  
that the average rates obtained for the teas of various gardens  
average from 33 cents to 39 cents per lb., depending upon the quality  
and elevation of the estate. "G. T.'s" statement in a letter ad-  
dressed to the newspapers dated 25th March (which stated that the  
greens cost 4 cents more to manufacture than blacks) cannot be  
endorsed by any but careless manufacturers in Ceylon. As stated  
by one of Mr. Judge's Indian correspondents, the cost of firewood  
is necessarily slightly in excess of the cost of firewood for black  
teas, as there is a larger percentage of moisture to expel from the  
Green Tea. Many estates, however, turn out quite as large a  
percentage of green as of black tea; so that India has no advan-  
tage over Ceylon in this respect. Where firewood is scarce and  
dear, the extra cost for fuel is a serious item. As regards Indian  
Green Tea fetching higher prices than those of Ceylon manu-  
facture in London, a glance at Messrs. Gow, Wilson & Stanton's  
circulars for February and March, to take a convenient period,  
will show how prices rule. On February 6th no Green Tea averages  
were given. On February 13th a break of Ceylon Young Hyson  
fetched an average of 8¼, while the average obtained for a break  
of 58 packages including Young Hyson, Hyson No. 1, Hyson  
No. 2, Fannings and Dust got an average of 6¾. In the February  
27th circular a break of Indian Greens, including only Hyson  
and Hyson No. 1, got an average of 7½, while a break of Ceylon  
Tea including all grades—Young Hyson, Hyson No. 1, Hyson  
No. 2, and Fannings and Dust also got an average of 7½ not-  
withstanding that it included two more grades than the Indian  
break. In the March 6th circular a Ceylon break including four  
grades is recorded as having obtained a 6½d. average, while an  
Indian consignment only gets 5½d. while the break only included  
two grades. In March 13th's circular a break of Indian Green Tea  
gets an average of 6d. for three grades, while in the March 27th  
circular a break of Ceylon including two grades got an average of  
5½d.

If these prices can be taken as a criterion, Indian Green Tea is  
certainly not getting higher prices than Ceylons.

**Old-Fashioned Profits on Teas.**—A correspondent writes  
to the *Grocer*:—

The great idea with retailers now-a-days is to obtain every article  
in packet form, so as to save the payment of larger salaries than

are due to those who have not learnt, but merely obtained a smattering of the grocery trade.

Some thirty to forty years since the profits on small goods were 40 per cent. to 50 per cent. on returns, and the grocer who blended teas on his own premises to suit his customers could easily obtain from 2d. to 3d. more than his non-blending competitor, though both of them obtained from 40 per cent. to 50 per cent. profit on returns.

Hence it is no surprise to me that failures in the grocery trade are frequent and disastrous, because many young men set up for themselves who have never learnt the difference between putting on 50 per cent. to the cost price and realising 50 per cent. out of the selling price. They and older members seem only to desire a great run of custom, and by keen competition and the hateful policy of the "nimble ninepence," seek to cut out each his neighbour, overlooking the fact that to sell teas from 12½ per cent. to 25 per cent. profit is but to exchange cream for skim milk.

The secret of the tea trade does not lie in giving one's legitimate profits to the general public indiscriminately by listening to the dictation of merchants and manufacturers as to the profits they should be open to sell for, as much of their success depends upon annual returns.

By dictating to the retailer the merchant makes a rod for his own back when he finds that failure results from insufficient profits, especially on tea.

More is expected from shopkeepers than from farmers, and to follow in the footsteps of those who have relinquished the making of butter and cheese to the factory is in the grocery sure to lead to ruin, besides, competition only builds up that which it professes to destroy—viz., monopoly, as the weakest goes to the wall.

\* \* \*

**The Russian Demand for Tea.**—Regarding the Russian demand for Ceylon tea the *Times of Ceylon* while admitting a very serious falling off publishes an article containing the views of a Russian dealer in which it is sought to explain away the circumstance. If the explanation is correct it serves to confirm our contention that dear tea tends to reduce foreign demand and thus brings about a reduction of consumption which again enables home dealers to bring down the price to their own ideas of value. The Russian merchant stated that the appreciation in price of the qualities sought for had deterred Russian buyers. He admitted that the tea-drinkers were the sufferers. At the same time the Russian buyers filled their wants from Calcutta, where for the time they could get what they wanted more cheaply. On this head the *Times of Ceylon* says:—"With regard to the satisfaction expressed in the Calcutta press because of the increase in Indian tea to Russia, there was nothing for Ceylon to be alarmed at, our informant said. On the face of it, it seems unaccountable that Indian tea should have increased, because it costs the same as, or more than, Ceylon; but there is this to take into consideration—when Ceylon common Pekoe took a sudden rise in the market from 5½d. to 6¼d. per lb., Indian tea was not similarly influenced, and Russian merchants gave orders for a more extensive, but temporary, purchase of Indian tea." It is an ill wind that blows nobody good; and we think the Russians as well as ourselves will benefit by their being made acquainted with Indian tea. Having once come here for tea in quantity, they will in all probability continue to indent on Calcutta.—*Indian Planting and Gardening.*

## NOTES.

### The Tea Corporation.

A special cablegram to the *Ceylon Observer* states that in the matter of winding up the Tea Corporation, the liquidator's scheme has been carried.

### Scientific Cultivation.

Plant doctors are coming into demand. In most of the English colonies the official botanical staff is no longer considered to be complete without a specialist in plant diseases. Their researches and reports are invaluable to agriculturists.

### Tea and the Budget.

The London correspondent of the *Times of Ceylon* cabled on 28th ultimo:—The Chancellor of the Exchequer, in the course of his Budget speech, said that his choice in respect of the remission of the two millions sterling was limited to tea or corn. "The former had many attractions; but it cannot be said that it is dear, or that the duty is very excessive on an article that is not strictly a necessary of life." An amendment proposed by Mr. Lough, in favour of a reduction of the tea duty by 2d., was rejected by a majority of 108 votes.

### The United States.

Secretary Wilson, says the *Merchant Review*, wants the United States to grow its own sugar, coffee, and tea and leave nothing for the foreigner to send us in payment for our exports, thus in fact abolishing the foreign commerce of the country and putting us in the position of China before the "foreign devils" broke down the policy of exclusion. Secretary Cortelyou, if his department is to be true to its name, must struggle against all restrictions on commerce, and if he prove as zealous in his endeavours as Mr. Wilson has proved in his, there should be no reason for regret that the new department has been created.

### Indian Tea Exports.

The following figures are published by the Indian Tea Association:—Sailings to Great Britain from Calcutta in March, 1,123,836 lbs.; to Great Britain from 1st April to 31st March (including Chittagong), 145,552,931 lbs.; to Australia and New Zealand in March, 218,860 lbs.; to Australia and New Zealand from 1st April to 31st March, 5,774,407 lbs.; to America in March, 5,671 lbs.; to America from 1st April to 31st March, 8,244,003 lbs.; to other places in March, 338,529 lbs.; to other places from 1st April to 31st March, 14,417,108 lbs.; total sailings from 1st April to 31st March, 173,988,444 lbs.

### A Change of Title.

With this issue, says a New York contemporary, this trade publication assumes the title of the *Tea and Coffee Trade Journal*. "The altered name from *Tea, Coffee and Sugar* is an evolution growing out from our larger and longer intimacy with the staples represented in the old designation and is the concrete expression of our feeling and opinion that coffee and tea businesses sufficiently comprehensive, substantial, and dignified to support a periodical exclusively employing their names. In other words, we have learned that it is more than worth while to give tea and coffee preferential attention in commerce and information, and the special, and indeed the only weekly chronicle of them we now are."

### London Tea Market.

Weekly special telegram dated 28th ultimo from Messrs. Gow, Wilson and Stanton to Colombo reports that the demand is running low-priced teas and that the market for medium liquor Pekoes and Broken Pekoes is weak, while the market for common Pekoes and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6¾d. (the same last week) and the average 7¾d. (also the same as last week). The average for the same period last year was 8½d. Reuters reports that the tone of Ceylon tea is steady, Broken Pekoe rather irregular, slightly easier in some cases, while Pekoe Souchong is very firm. Fair Pekoe Souchong is quoted 6½d. (½d. higher than last week) and the average for

week is 7 $\frac{3}{4}$ d. (same as last week). 26,000 packages of Ceylon tea were offered for sale and 23,000 disposed of; while of the 29,000 packages of Indian tea offered, 24,000 were sold at an average of 8d. (same as last week). Common qualities of Indian tea very firm medium irregular.

#### Ceylon and St. Louis.

The Committee appointed by H. E. the Governor of Ceylon to make preliminary arrangements for the representation of Ceylon products at the St. Louis Exposition are the following:—The Hon. Mr. H. L. Crawford, acting Principal Collector of Customs (Chairman); the Hon. Mr. Stanley Bois, Chairman of the Chamber of Commerce, acting Mercantile M. L. C., and prospective Commissioner to the Exposition; the Hon. Mr. Edward Rosling, Planting M. L. C.; the Hon. Mr. John Ferguson, General European M. L. C.; the Hon. Mr. S. C. Obeyesekere, Low-country Sinhalese M. L. C.; Mr. F. W. Vane, Controller of Government Stores; Mr. J. C. Willis, Director of the Royal Botanic Gardens; Mr. A. C. Kingsford, Chairman of the Planters' Association; and Dr. A. Willey, Director of the Colombo Museum; with Mr. C. Driberg as Secretary. The notice sent to members states that "a sum of money, the amount of which will be determined after the receipt of a report from you as to what it is proposed to do, will be placed on the estimates of next year to defray the necessary expenses."

### GENERAL ARTICLES.

#### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—March 14th, 1903.—Ninety days' rate on London opened on Monday 9th at 12 $\frac{1}{16}$ d., rose to 12 $\frac{3}{8}$ d. on Tuesday, fell to 12d. on Friday and closed this evening very shaky at 11 $\frac{1}{2}$ d.

Encouraged by an unusually plentiful supply of bills for the time of year, on the one hand, and by apparently trustworthy reports of large financial operations, on the other, speculators have, with the assistance of the Bank of the Republic, succeeded in booming the rate within a few days from 11 $\frac{1}{2}$ d. to 12 $\frac{3}{8}$ d.

Just at the time when a little encouragement to planters was so badly wanted and at the eve of the economically, weakest period of the whole year, when exports and the supply of bills are at their lowest ebb, the rate has been most wantonly pushed, by methods that call to mind the very worst features of the Thompson and Petersen periods. With what object we are wholly unable to conceive! Nothing but the absolute certainty of some important operation having been definitely settled, that would oblige the Bank to draw for large sums without cover, could justify such proceedings and, even so, the weight and influence of the Bank ought to be always employed in steadying rates and not in pushing them. As it turns out there is no truth whatever in the reports that have been diligently circulated with regard to the sale of the Sorocabana, realisation of the Port Works, Loans for S. Paulo, etc., all of which are just as much *in embryo* as ever! Such methods would be improper even in a private Bank but in the Bank of the Republic, which is worked with capital supplied by the Nation and ostensibly in the Nation's interests, gambling in exchange merely to make a profit is absolutely indefensible!

No rise or fall of exchange can occur without prejudice to some class or other. So long as variations are the genuine outcome of the economic factors, the damage caused in one way is made up in another and is endurable. But the wanton oscillations that speculation provokes are irreparable. Were the rise to 12 $\frac{3}{8}$ d. genuine even planters would find some compensation in the general fall of prices for the depreciation of his own goods. But as it is, they have been obliged to sell at lower rates and will find no compensation whatsoever!

The function of a National Bank like the Republica is to regulate exchange as far as is in its power by utilizing its immense influence and resources to check speculation and allow natural factors full play.

To supplement the supply of Bills when speculation for the fall becomes too active, and withdraw them when a bull movement is on foot is the only practicable or legitimate method of checking speculation in the power of the Bank, but never to turn speculator itself and thereby encourage speculation in others!

For over a year exchange oscillated between the narrow limits of 11 $\frac{1}{2}$  and 12 $\frac{3}{8}$ d. and the advantages of a steady rate were fully tested. Under these conditions and the stability that ensued, business of all kinds revived, imports and revenue increased, and employers of labour were able to re-adjust wages to prices. Now all is changed again. The old gambling spirit is reviving and, unless checked immediately, will inevitably undermine the nascent confidence that was assuredly asserting itself, and is so valuable a factor of progress everywhere. What the object of this movement really was we are wholly unable to conceive. If to give a lesson to speculation, as is pretended, it has been most successful because the arch speculator apparently has this time been caught in his toils and taught the lesson that not even the Bank can make bricks without straw.

A proof of the injury inflicted, if proof is requisite, is to be found in shrinking coffee prices which fell to c\$600 and the paralysation of coffee business, the value of *embarques* being only £197,000 as against £332,000 the previous week and £324,000 last year. Declared sales too fell off far from 166,000 for the previous week to only 116,000 and were in spite of the threatened duty at Santos considerably under last years.

With such elements of instability at work no forecast of exchange is possible. The Bank may decide at any moment to push rates up again or down. It depends entirely on their own caprice so long as resources hold out, as the foreign banks are not in a position to resist if they wanted.

**Coffee.**—RIO DE JANEIRO, March 14th, 1903.—Joint entries at Rio and Santos during the week ended 13th March fell off a bit, being 21,884 less than the preceding week's and 4,802 less than for the corresponding week's last year, of which they represented 17.5 per cent.

Entries for the crop were on the 13th instant 2,767,872 bags less than last season, of which they represent 78.5 per cent. and at the same rates will reach 12,000,000 bags even without the assistance of early entries.

*Embarques* have been much checked by the rise of exchange, to which buyers abroad did not respond to any extent and were 92,824 bags less than the previous week's last year.

Joint stocks at Rio and Santos increased by 52,343 bags compared with the previous Friday and were 332,985 less than on the corresponding date last year.

The average currency price for Rio 7 declined from 4\$584 to 4\$539 per 10 kilos. whilst New York n. 7 spot price advanced somewhat from 5.634 average for the preceding week to 5.69c.

So far neither the threat of burning 20 per cent. of the coffee nor the rise of exchange to 12 $\frac{3}{8}$ d. seems to have influenced prices abroad to any extent, nor are likely to so long as the rise of exchange is fictitious and there are unlimited supplies of coffee to draw upon in consuming markets.

**SANTOS, March 13th, 1903.**—The heavy fluctuations of exchange from 12 $\frac{7}{8}$  to 12 $\frac{7}{16}$ d. and back to 12 $\frac{3}{8}$ d. practically stopped a free coffee business during the week. Foreign markets did not consider the exchange rise good enough to raise limits much and commissarios do not care to sell at much lower prices and keep their coffee back until exchange settles. In consequence we had a very dull market and the number of running "Commissarios" lots sold is small, declared sales being only 76,000, which figure is rather over than under the mark.

The small volume of business transacted during the last fortnight is naturally changing the position of our market and first hands' stock is increasing. The stock in first and second hands must be now more or less equal.

"The State Congress" at S. Paulo voted the Government's coffee bill but our market has taken very little notice of it so far.

The principal business during the week consisted of specialities and here and there of some old shipments to be made. Fine Bourbons fetched up to 5\$300, Green flinty Peaberry up to 5\$000. Primes fetched from 4\$700 to 4\$900, Superiors 300 réis and Goods

600 réis below. The latter quality being proportionally scarce. Low coffees are neglected. Peaberry with little demand from 4\$600 to 5\$800 for Superiors according to types. Washed are not in demand.

Limits from Europe ruled between 28/9 to 29/6 for Superiors good average  $\frac{1}{3}$  to  $\frac{1}{6}$  below.

The disparity between the orders and our market amounted on some days to nearly 400 réis, but is now about 150 réis less.

Entries (119,000) and especially *Passagens* (104,000) showed a decrease during the last few days both are however, very irregular, but are much less than the previous week. People here are astonished at the exceedingly high Rio entries.

Shipments were poor, amounting to 90,070 only and our stock increased again by about 28,070 bags.

The Pauta remained unchanged.

**S. Paulo.**—A petition has been forwarded to the Legislature of S. Paulo from Bananal asking for relief from the late law prohibiting new plantation of coffee on the ground that it presses unduly on such districts. In Bananal the land is very much poorer than in the western districts and easily exhausted. Thus large areas go out of cultivation every year and unless replaced by fresh planting, *fazendas* must disappear. At one time this district produced a million *arrobas* per annum. Now it only gives 50,000! The law was intended to put a limit to, not to reduce production, and should have stipulated that planters might not *increase* plantations.

The opinion of planters at Campinas, says a correspondent of *O Estado*, is not very favourable to the Government initiative. They complain that the money is too little and that the payment of a tax of 20 per cent. by the planters is too much. What planters want is money and not taxation. Tax officials, if some one must be taxed; they toil not neither do they spin, and can stand it!

**The Coffee Crisis.**—Planters are already complaining that the Government measure does not go far enough and demand payment in money for the coffee eliminated. If, as is generally recognized, supply is so much in excess of the demand, what is the use of lending money to planters to enable them to produce more? It will be interesting to see how the consuming markets will act. At present they are under the double pressure of a violent rise of exchange and the threat of reduction of supply. Will foreign prices accompany the improvement of exchange here, or will currency prices drop in consequence? That is one question; and another is whether the threat of eliminating 20 per cent. of supplies, or even its execution will improve prices. Coming together it is rather hard to distinguish what is attributable to one or the other. It seems to us that with the enormous stocks on hand if prices go up much here consumers will be supplied from abroad, and though prices may be maintained here for a time, little S. Paulo coffee will really be sold, although the whole existing stock of nearly a million bags will probably have been shipped abroad on consignment or account of holders here to avoid payment of the surtax of 20 per cent. With such large quantities offering in markets already repleted, the effect of such an intemperate addition will probably be to provoke a fall and not a rise of prices, at the first at any rate, and until foreign buyers are thoroughly convinced that the measure is genuine. Until then the planters will be mulcted for payment of the surtax to the figure of about 12 per cent. on the aggregate value of the coffee shipped, which would be about the last nail in their coffin and result either in bankruptcy or the renewed issues of paper money.

The alterations introduced by the Committee of the Chamber of Deputies are as follows:

Increase from 200:000\$ to 400:000\$ of the appropriation for subsidies to coasting steamers.

Increase from 10,000 to 25,000 contos of the appropriation for loans to planters, which is to be raised by means of an internal or foreign loan!

The report adopted by the minority differed considerably with the Government's proposal and recommended that (a) a tax of 800 réis should be imposed on all coffee shipped as soon as prices reached 7\$000 per 10 kilos., (b) issue of paper money or *apolices* by the Union to compensate the 20 per cent. surtax paid in kind, (c) reduction of export duty from 11 to 8 per cent. for all coffees shipped by syndicates or co-operative societies, (d) tax of 6 to 20 per cent. on all official salaries for the service of a loan of 25,000:000\$ in aid of planters. Some of the recommendations, of

the minority, such as the issue of paper money, go clearly beyond the attributes of the S. Paulo Legislature and were rightly rejected. The Deputy Sr. Alfredo Guedes stated that he would present a substitute on second reading and in the Senate Dr. Antonio Mercado combated the measure as unconstitutional and undemocratic.

The project of Sr. Alfredo Guedes comprised 16 different articles and is too long for reproduction. Its principal points of divergence with the official proposals are (1) restriction of the process to payment of the surtax in kind, (2) indemnisation of planters for the 20 per cent. eliminated by payment in cash or in bonds to be issued by the Union Government until prices reach 6\$000 per 10 kilos. (or 9\$000 per *arroba*). Should prices reach 7\$000 per 10 kilos., a tax of 800 réis per *arroba* would be created for redemption of the special issue of paper money, (3) reduction of export duties at once to 8 per cent, (4) loaning of the 25,000:000\$ to be issued by the State of S. Paulo exclusively on the security of produce (*penhor agricola*), (5) official salaries to be taxed at rates from 3 per cent. to 20 per cent. and general economy to be practised by Government.

In the lengthy discussion, or rather dialogue, between Sr. Guedes and the leader of the Government party, Dr. Rubiao, Sr. Guedes explained the reasons that led him to present a third project. The alternative payment in kind or money of the 20 per cent. surtax on exports he believed to be impracticable, because shippers would naturally prefer the latter and be careful to mix their grades in such a manner as to produce a type up to the official standard, which would afterwards be separated again abroad. Such a measure could only result in further discredit to S. Paulo coffee. Besides even should it be realized and only higher grades be really exported, an enormous stock would be accumulated at S. Paulo that would inevitably weigh upon the markets and keep prices down. Payment in kind has the objection that it would fall for a year or more exclusively on producers and unless compensated would make their situation worse than ever. The elevation of coffee prices benefits exchange and is not an advantage to S. Paulo alone, but to all Brazil. The money for indemnisation, should therefore, Mr. Guedes maintains, be supplied by an issue of paper money or bonds by the National Government. In support of the authorization to lend money on mortgage of plantations Sr. Pujol stated that four-fifths of the estates were already mortgaged and that those that were not did not want loans for working expenses. Sr. Rubiao, Jr. resisted the proposal to reduce actual export duties on the ground that it would disorganize the whole finances of the State.

The bill has passed the third reading and been sent to the Senate with a number of amendments, the most important of which are as follows:

Art. 1°. Making the stipulations of the law obligatory on the Executive instead of discretionary as on the original project.

Art. 2°. Increases the subsidy of coasting steamers to 400:000\$ per annum.

Art. 3°. Raises the amount to be loaned to planters to 25,000:000\$.

Art. 4°. Authorizes Government to subscribe half the capital of the new Banco de Credito Agricola and utilize part of the 25,000:000\$ for that purpose and to utilize said Bank in the distribution of the money.

## COFFEE IN LONDON.

With a continuance of heavy receipts the terminal market has shown further weakness, says the *Produce Markets' Review* of 4th ultimo, and quotations have given way, closing at the lowest about 1s. under last week. This brings the quotation for the present month to 25s. 9d., a price which is only 9d. above the previous record, but that was when the exchange was only about half its present value. Heavy receipts and falling terminal markets have naturally a weakening effect on the value of actual "spot" coffee and buying is checked. The export demand has particularly shown a falling-off, although it is still very much stronger than at this time last year, and even the fairly good trade that has been done during the last two months does not appear to have filled up the gaps in the stocks in the interior. Moreover, the present low level of medium "washed" coffees is tempting to buyers to anticipate their wants, as these qualities have rarely, if ever, shown better value. The demand from the home trade has also been good, and splendid value can now be obtained both in East India and Costa Rica. By far the greater part of the crop of the latter has now

ssed the hammer, and though the lowest point is looked for nerally in May, considering the amount that has been received is very probable that that point has already been reached.

TEA IN LONDON.

INDIAN TEA.—The market continues firm, says the *Produce Markets' Review* of 4th ultimo, with a further upward movement in prices for the lower grades, and there is a steadily improving demand. As was generally expected, the removals from bond in March fell considerably short of those of the same month in 1902, and the deficit in the uncleared stock of all growths is now about 100,000 lbs. against 13,000,000 lbs. at the end of February; from this it would appear that the position is less strong. Taken as a comparison that is somewhat misleading, as there was an invisible supply, viz., the duty-paid teas held by the trade, which probably amounted to at least 15,000,000 lbs. more than at the present time. The available supply at the end of March last year, therefore, was larger to this extent, as buyers have naturally limited their duty payments to actual requirements, and will continue to do so until Budget statement has been made, which is promised for Thursday, 23 instant. If prices for the lower grades should further advance, and it is by no means certain they will not, or even if they remain at the present level, there will be a strong inducement to growers to pluck heavily in the coming season, but this is not likely to materially affect the market for the next few months, as large shipments will probably not be forthcoming until the end of July or early in August. The figures for Indian tea at the end of the past month compared with the previous year are as follows:—Exports, 8,465,000 lbs. and 8,392,000 lbs.; deliveries were smaller 2,600,000 lbs., the quantities being 11,342,000 lbs. and 13,948,000 lbs., while the stock shows a decrease of 3,169,000 lbs. At the public sales the larger quantity brought forward was well competed for, especially the good medium and lower sorts; the latter practically show a rise of a  $\frac{1}{4}$ d., while the former were readily taken at firm rates. The finer teas met with a steady inquiry without change in values.

CEYLON TEAS.—With small supplies again on offer, the demand is strong for all teas up to 8d. per lb., and, with brisk competition, full to dearer rates were realised. Chief attention was paid to the lower Whole-Leaf kinds, and these in most instances were  $\frac{1}{4}$ d. or lb. dearer than last week, very little having sold under 6 $\frac{3}{4}$ d. Broken Pekoes were slightly irregular, but prices showed little change, and 7 $\frac{1}{2}$ d. is still practically the lowest sale price for these descriptions. At the public sales 25,468 packages were brought forward, of which about 2,300 were withdrawn. The following are the figures for the past month compared with March last year:—The exports were 7,566,000 lbs. against 7,318,000 lbs., the deliveries being 6,492,000 lbs. and 8,000,000 lbs. respectively, while the stock stands at 20,557,000 lbs. as compared with 21,668,000 lbs.

CONGOU TEA.—At the public auctions held on Wednesday only 2 packages were brought forward. A fair business has been done privately, chiefly in the lower descriptions, which are distinctly firmer, while the better grades show no alteration.

OTHER CHINA TEAS.—This market remains steady for all descriptions, and a fair business is reported. Of the 1,136 packages of Green tea printed for Thursday's public auction, only about 100 led to find buyers, and of 2,454 packages of Fancy tea brought forward 1,825 were taken out.

TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, March 26, 1903.

There is nothing of note to report since our last issue regarding the home market, business on the street being quiet with previous quotations ruling firm. The London market reports prices as maintaining fully up quotations. The demand has been of but moderate character, this being attributed to the inclination of buyers to await announcement of budget, meanwhile only satisfying immediate requirements. It is of interest to note that quite a number of the recent sales comprised "last-of-the-season invoices."

MONTREAL, March 26, 1903.

There has been no change in the price of teas on the local market. Japan teas of medium grade run from 17 $\frac{1}{2}$  to 18 $\frac{1}{2}$ c., and 23 to 24c. for finest qualities. Ceylon blacks are worth 12 to 14c. for medium and 22c. for finer. The demand is not large for any sort. China greens are moving moderately well. Pingsuey gun-powders are steadily held at 15c. for common grades and 26 to 28c. for finest.

THE FUTURE OF THE TEA TRADE.

The *Grocer* publishes the following from a correspondent:—

Among those who, being neither sellers nor buyers, are able to watch the course of events from the vantage-ground of neutrality, an opinion has been steadily forming, and has now become a conviction, that a change is taking place in the conditions which have long prevailed, and that it may be destined so to modify the position as to require of necessity a change in the policy and methods of grocers and other retail vendors of tea.

Throughout a long series of years, with rare exceptions (a) the total supply of tea has been in excess of the total requirements, (b) owing to the continuous enlargement of the plantations in Ceylon and India, and (c) to the perfecting of a system under which the ground was made to bear the largest possible number of bushes, and the bush forced to give the greatest possible yield of leaf. The natural result of this was (d) a progressive downward movement in value, each temporary arrest or reversal of the movement being followed by further over-supply and a more sharply-accentuated decline in prices.

A very few figures will suffice to make these points clear.

(a) The total stock in bond in London was 50,000,000 lbs. on June 1, 1885, and 82,000,000 lbs. on June 1, 1902, the difference of 32,000,000 lbs. being surplus unused importation, at the rate of about 2,000,000 lbs. per annum.

(b) Between 1885 and 1900 nearly 250,000 acres of new gardens were made in India, and 280,000 acres in Ceylon.

(c) The average yield per acre in India in 1885 was only 250 lbs., but in 1900 it was 375 lbs. per acre, while in the latter year it rose to nearly 390 lbs. in Ceylon. That was the maximum. Tea-gardens, taken as a whole, have been less productive since then, for reasons to which allusion will presently be made, the total diminution being about 12,000,000 lbs. in 1901, and about 10,000,000 lbs. in 1902.

(d) The average prices of Indian tea sold in the London market have been as follow, viz.:

			s.	d.	
Three seasons—1883-85	...	about	1	1 $\frac{1}{2}$	per lb., in bond.
" " 1886-88	...	"	1	0	" "
Four " 1889-92	...	"	0	10 $\frac{1}{2}$	" "
" " 1893-96	...	"	0	9 $\frac{1}{2}$	" "
Three " 1897-99	...	"	0	8 $\frac{1}{2}$	" "
" " 1900-02	...	"	0	7 $\frac{1}{2}$	" "

And the average prices of Ceylon tea have been as follow, viz.:

			s.	d.	
Three seasons—1883-85	...	about	1	3	per lb., in bond.
" " 1886-88	...	"	1	0 $\frac{1}{2}$	" "
" " 1889-91	...	"	0	10 $\frac{1}{2}$	" "
Five " 1892-96	...	"	0	8 $\frac{1}{2}$	" "
Three " 1897-99	...	"	0	8	" "
" " 1900-02	...	"	0	7 $\frac{1}{4}$	" "

Now, as long as the retail sale of tea remained principally in the hands of grocers who were able to abstain from the disastrous policy of perpetually lowering their prices in order to undersell each other, that was a state of things which suited them tolerably well; but the time came when the attention of others was directed to the chance of making money by cutting into the trade on alto-

gether new lines, by offering tea at prices hitherto unheard of, and by lavish advertisement and persistent pushfulness persuading the public to buy it.

They were well-informed, far-sighted men who did this, for they came into the business foreseeing growth and cheapening of supply looming ahead; and their venture was well-timed, for they began to handle tea when the popular taste for it was beginning to develop.

It is not commonly reported that they are classed among the great philanthropists of our times by the planters in Ceylon and India, or regarded by the East Indian merchants as their benefactors, yet it is almost certain that if consumption had not been rapidly stimulated by such action as theirs, the producers would ere now have been ruined.

What the result has been to those who formerly had almost a monopoly of the retail sale of tea is known to all men. The individual grocer has seen his tea trade passing into the hands of powerful capitalists, and if he has not been content to be absorbed by them he has had to endure the competition of dairymen, drapers, pastrycooks, and everyone else whom the modern system of distributing ready-made blended tea has admitted to the trade without need of possessing the most elementary knowledge of the article in which they deal.

Grocers who knew their business might have withstood even such competition as this, but for the fact that the advertisement of low-priced tea in such a way as to imply that there is no tea worth high prices had vitiated the public taste, and created a craze for mere cheapness, which disabled those who cannot afford to sell at a nominal profit.

This and nothing else is really at the bottom of the grocers' difficulty, *viz.*: that the public have been trained to buy tea because of its cheapness, not because of its worth, and have been left in ignorance of the existence, merit, and economical value of the fine varieties produced in India, China, or Ceylon; and, save for a spasmodic effort here and there, nothing has been done by those most directly concerned to enlighten them.

Now, those observers to whom allusion was made at the head of this article see that a number of causes, of which the cumulative effect will be considerable, are operating in a contrary direction to the general trend of the movements of the past eighteen or twenty years.

In the first place, there has lately been a marked increase in the world's demand for tea as such, aided by the removal of import duties in America and Australia, and by reduction of duty in the German Empire, of which the immediate result has been a large diversion of supplies, which usually come to London, to other countries. Then, our home consumption has at last outstripped the supply, already to be seen by the statistics, but which will be more clearly manifest on July 1.

The effect of this will be accentuated by the free manufacture in Ceylon and India of leaf into green tea that has hitherto been made into black, consequent upon the success of the new process discovered by Messrs. Deane and Judge, by which the sort that American and other foreign buyers like can be easily and cheaply made; and also by the action now being taken by the planters' Associations to reduce the output by a general agreement to pluck less leaf.

Whether they will succeed in this, and whether their present policy of regulating supplies will answer, are questions not yet solved; but it is to be noted that the growers are no longer a number of isolated units, but a compact, organised body, acting in concert in a disciplined way with a definite aim, *viz.*, to raise the value of tea. To do so is a matter of life or death to them, for although it is admitted with reluctance, it is nevertheless a fact that old estates are becoming less productive, either from impoverishment or denudation of soil, or from natural decay, while since 1900 hardly any fresh planting has been done, but, on the contrary, there has been abandonment of plots that cannot be profitably cultivated for lack of means or from shortness of labour.

It is, therefore, wise to look ahead, for, although there may be sufficient tea this year and the next, it is not improbable that from 1905 onwards the supply will diminish for many years until, after lapse of time, fresh ground has been broken and new plantations have been brought into bearing. Prudent retailers should consider what will happen if there be a prolonged period of inadequate supplies. Almost certainly, such an advance in price as to spoil the trade of those who have built up their business solely on the

strength of a low quotation, and to restore their fair share of trade to those who have taken exactly the opposite course and have made a name for themselves as sellers of really good tea at higher rates.

The conclusion is that grocers should endeavour by every means in their power to raise the average price of what they sell, by pressing upon their customers the merit and worth of the finer varieties, by having their own speciality suitable for their locality, as the former generation of grocers used to do, by keeping a larger and more attractive assortment, not by holding fine tea to get stale in their storerooms, but by requiring the dealers to provide them with fresh supplies as required, in the way that blenders supply their customers or their shops with fresh tea week by week. And the wholesale dealers must learn to do with fine tea what the blenders have shown them can be done with other sorts.

The time is opportune for action on these lines, for there are signs that the pushing of cheap tea is a spent force, and that a reaction among consumers in favour of good tea has already set in. It may be that at present it largely runs on choice kinds of China, but it is not confined to that, and it matters not what the description sold is if custom can be gained at quotations which leave the vendor a good profit, and the well-to-do householder, who can afford to pay a proper price, can be weaned from his propensity to pay as little as he can for his tea, while he grudges no expense on his wine, his cigars, and other luxuries.

It is certainly significant that shrewd men of business from the outside, already famous in their own line, have lately taken up the sale of tea at such prices of 3s. and 3s. 6d. per lb. They would not have done so unless they had satisfied themselves there was a demand for it.

And the time is opportune for another reason: the finest Indian teas are now procurable at much lower prices than formerly was the case, affording to the retailer who is successful in pleasing his customers a far handsomer profit than can be obtained on the cheaper kinds.

## TEA CULTIVATION IN LOWER ASSAM.

### RETROSPECTIVE AND PROSPECTIVE.

A special article in the *Englishman* says:—

Looking back over the past year or two I find that tea cultivation in Lower Assam has been practically stationary. The grave condition of the industry, the scarcity of labour, unseasonable weather and low markets have necessarily restricted operations. And this is doubtless a wise law of nature to prevent the total destruction of an industry which at one time seriously threatened to be reduced to the same poor condition as indigo. Individual fancy was won't to run riot in extensions, with the inevitable result foreseen by many. But in vain were the constant notes of warning sounded. Who listens to the creak of the raven when the nightingale is singing?

Even should the brighter prospects which appear to be in store for us be realized, the enforced cessation of making extensions will meanwhile bear good fruit. May one even dare to hope that the lessons of the past in this respect will never be wholly forgotten but that some measure of caution may guide us should further extensions on any considerable scale ever again become advisable?

At present the ever-increasing difficulties of labour importation will prohibit any important extensions in the near future, and this is undoubtedly a blessing in disguise in that sense. As a natural result tea seed is a drug on the market. Seed gardens are practically so much waste land, and the revenues of estates where the sale of seed was an important item in former years, have suffered in consequence.

Planters are very wisely engaged in striving to improve the quality of the plant now under cultivation, in fact for some years past this matter has received much attention, and various experiments have been submitted in different localities with different forms of nutriment. It is now a well-admitted, authentic fact, among Assam planters that principles applied to one garden will not necessarily be equally satisfactory in another. We have been a long time arriving at this elemental axiom of agriculture but we are really there at last! This was another warning long sounded by the thinking few, and equally long disregarded by the ignorant many. But the time has now arrived when the

-planters of Assam, like the agriculturists of England must her steady the economic conditions of the soil in a scientific rit, and cultivate their gardens upon those principles, or ousted from the arena. It is true we have not yet arrived a course at an agricultural college being a necessary training for every young assistant, but matters are tending in at direction. In the early days of tea, and until within very few years indeed, all gardens were conducted upon similar es regardless of the difference in climate, soil, and labour disposal. Planters from the furthest limits of Kamrup strict were sent to big factories in Dibrugarh to learn the system tea manufacture employed there: Dibrugarh managers were nsferred to isolated gardens in Darrang, with generally disastrous results and wholesale loss of local labour, upon which Lower arrang and Kamrup gardens largely depend. If planters themselves were generally too ignorant to realize how improbable it is that a system acting well under certain conditions would do so ually well under others quite different, how much less likely that lcutta agents, superintending the affairs of tea gardens in all rts of climates and surroundings, from the narrow environment four office walls could be expected to understand the difference? The company craze has long ago penetrated to Assam, and ereas only a few years ago resident-proprietors were a fairly mmon feature of the province, these are now practically non-existent, having merged their interests in companies. The resident-oprietors of former days long since retired, and in many cases liged to take up the hoe once more and return to the scene of eir youth in some more or less subordinate capacity, may be ten heard to rue the day when the hope of larger profits induced em to part with the smaller competency. For the good paying rden has more often than not been absorbed into a worthless lot, ough as a sop to uneasy shareholders, perhaps.

The selling season of 1902 produce ended more favourably than e opening of the market promised, and taking it all round planters ve every reason to be thankful for the results. A better standard prices has been reached than has for long prevailed, and this is nificantly a satisfactory state of affairs, and moreover somewhat xpected. True, denizens of Mincing Lane early gave promises r brighter prospects in the immediate future, but planters have had many disappointments that they were afraid to take too sanguine view this time.

Now we are informed in certain quarters that tea in general is in r another good time, if planters will only "go cannily." Provided at there is no appreciable increase in outturn—and this is im-robable in the immediate future—there seems to be no reason hy the market should not continue steady or even rise further. arkets beyond the United Kingdom are on the increase, and ere is no reason for undue pressure upon the London sale rooms.

The industry too, after years of vain endeavour, has succeeded at last obtaining a fair meed of public attention. The Home ealers have for some time given prominent space to questions onnected with tea. The Home Government, no less than the ndian Government, seems to have at length realized with what an mportant industry it has to deal, and that legislation in this onnection is no trivial matter.

The primary necessity of improved methods of communication is ully admitted. In this connection the thanks of all India are reatly due to the Viceroy, whose forward policy in this direction s well known, and during whose reign so much has already been arried out. The improvements now commenced in Assam will, t is hoped, steadily increase. The urgent need of feeder tramways cannot be too strongly urged upon the local Government. Not ea-planters only, but the whole of the trading population of the rovince calls for combination in this respect. With proper com-unications established the latent resources of the province will evelop, and from being one of the most backward, Assam ay yet become a prominent feature in the economic policy f India, nor should the fact be lost sight of, that to tea-planters only, and the early pioneers whose personal energy laid he foundation stone of the present gigantic industry, is all the prosperity of the province, past, present, and future, entirely due. But for them Assam would still be but a howling waste of jungle, ith a sparsely-scattered indigenous population, poverty-stricken, nd fever-racked. And the many thousands of souls from the ongested districts of Bengal and other parts, imported yearly for garden labour, and whose capitation fees form no small source of evenue to the Government, would, but for the tea-planting com-

munity either die of starvation in their own districts, or prove an additional burden to India's rulers. The obligations which the Government of India is under to the tea-planting community of Assam is one which cannot be too emphatically impressed upon public notice. There is always a tendency among young Government officers to regard the appointment as that of a ruler *per se*. He should be taught to realize that his very existence in Assam is due to the presence of the planter whom he too frequently regards as the inhabitant of another world, inferior to his own notwithstanding the equality of social claims where these are indisputable. Government officers in Assam as elsewhere, are appointed and exist for the benefit of the public, which in this province is practically the planter, his labour force, and the many hundreds who the industry directly, or indirectly, draws towards itself.

At the present time rain is greatly needed. The continued drought is beginning to be very serious, and shortness of water at the season is apt to carry sickness and many evils in its train. The high winds, which for so many months have been a prominent and unpleasant feature, still continue. Earthquakes are occasionally felt; faint tremors, with a shake now and then, but nothing considerbble since last December.

## THE HISTORY OF COFFEE.

The coffee tree originated in Abyssinia, and derives its name from the city of Kaffa. It was brought thence to Yemen, or Arabia Felix, where it was known at the beginning of the 14th century. Although this is the known origin of coffee, there is no doubt the plant likewise existed in various tropical regions, as Persia and Western Africa.

According to Arnold, the first official in history who used coffee, was a cadi of Medina called Abd-el Kader.

Dufour has reckoned that the amount of coffee shipped from Mocha to Suez, and by caravans to Damascus and Aleppo, must have been 16,000 bags of 300 lbs. each. At that time, in 1573, Rauwolfio brought to Europe some coffee trees, which Alpino studied and described in 1591.

The history of the plant, which was to acquire such a great influence in the world, is not very old, but there is every reason to believe the ancient Egyptians and Abyssinians made use of coffee as nourishment.

It was in Persia that coffee commenced to have its present use as an excitant of the digestive and nervous functions. It was there, for the first time, the bean was roasted and employed in an infusion. The secret was soon divulged in Turkey and Arabia.

Edwards introduced coffee in England in 1650, and the first impression it produced on the public was not good. A few months later there were in London as many public places in which coffee was served as in Constantinople itself.

During the reign of Charles II. coffee suffered persecutions and difficulties.

In 1675 an order was issued to close more than 3,000 houses in which coffee was served as a beverage.

Ten years after the English had adopted the use of coffee it began to be established in France, where it was to be consumed later in such large quantities and was carefully prepared. However, Leonard Rauwolfio had already mentioned the coffee tree in 1573, in a work well known in France. Prospero Alpino, a celebrated physician of Padua, and a great botanist, published in Venice in 1591, a book in which he describes a tree he had seen in Egypt and which he called bon, ban, or boun. This work was reprinted in 1640 in Padua, with observations and notes which Veslingio, another celebrated Italian physician, had added to this treatise. In 1624, Bacon of Veralum, in his *Sylva Sylvarum*, had mentioned coffee as a beverage in general use in the Orient, and Meisner, in 1621, wrote a treatise about this precious berry.

In Italy coffee began to be used as a beverage in 1645, and since 1644, a Venetian, called Pietro della Valle, had brought coffee to Marseilles.

In 1660, several merchants of Marseilles, who had lived a long time in the East and had become accustomed to coffee, sent to Egypt for some bales of this article.

From Marseilles the use of coffee was introduced in Lyons, in the Province, and in the neighbouring Provinces. It was in Marseilles where, for the first time, a coffee house was opened in France.

During the reign of Louis XIII. a decoction of coffee was sold at the Petit Chalet, which was called "cohoet" or "cahoet." But this beverage did not win the public favour for a long time in France. In 1662 there were no public coffee houses in Paris, and coffee did not begin to be generally used until the middle of the 18th century.

Soliman Aga, Ambassador of the Porte to Louis XIV. in 1669, was the first to introduce in Paris the use of coffee. He induced some persons to taste it, and they continued using it after he had left. At first coffee was sold in Paris up to 40 crowns per lb., but this exorbitant price did not continue long.

At the beginning of the 18th century Arabia supplied to Europe all the coffee that was consumed. Weary of paying a tribute for this precious berry, the Europeans tried to possess the tree which produced it.

Nicholas Witsen, of Amsterdam, was the first, who, in 1690, transported from Mocha to Batavia, some say, a few fresh berries, and some affirm the tree itself. This first trial was successful.

The Government of Batavia sent in that year a coffee tree for the greenhouses of Amsterdam. Resson, a lieutenant-general of artillery, who was devoted to botanical pursuits, brought to France the first coffee tree; it came from Holland and was presented to Louis XIV. in 1712, at Marly, whence it was sent to the Jardin des Plantes, produced flowers and bore fruit, but died soon after. At that time Brancas, burgomaster of Amsterdam in 1714, sent another coffee tree as a present to Louis XIV.

From this tree grown in the Jardin des Plantes of Paris, are derived all the coffee trees which are cultivated at present in America, according to Rossignon; but some assert that Brazilian coffee descends from a coffee bush originally brought from Goa, in 1760, by Joao Alberto Castello Branco, planted in the city of Rio de Janeiro, capital of Brazil, in the garden of the convent of the nuns of St. Tieresa.

In 1716 a seed-bed of coffee trees, grown from seeds from the Jardin des Plantes, was given to Ysambert, a physician, in order that he should take it to the French colonies, but Ysambert died soon after his arrival there, and this first trial was unsuccessful.

According to Rossignon, in 1723 Chirac, a physician, gave to De Clieux, a Norman gentleman, captain of infantry and naval lieutenant, a coffee tree to be planted in Martinique. The sea voyage was long and perilous, and water became scarce and was distributed in small rations. De Clieux, who understood the importance of propagating this tree in the American colonies, and who wished to preserve for this country a new source of wealth, divided his water ration with the precious shrub confided to his care, and had the pleasure to see it reach Martinique, although weak, not in a hopeless condition. His care redoubled. He planted it in the most favourable spot in his garden, where it could develop. He protected it by surrounding it with thorns, and had it watched day and night. The first year he had the pleasure of gathering 2 lbs. of seeds.

He gave some of these seeds to De la Guarnigue-Survillier, colonel of the Martinique militia, and to other inhabitants of the island, who planted them.

Coffee plantations were prosperous in Martinique and crops abundant, when, on November 7, 1727, a terrible earthquake, which lasted several days and shook the mountains, destroyed all the cocoa trees.

This terrible event was propitious to coffee cultivation in Martinique. The assiduity and perseverance of the settlers were such that the island produced by itself more coffee than was required for the consumption of the whole of France.

From Martinique some coffee trees were sent to Santo Domingo, Guadeloupe and other neighbouring islands. Some authors claim, however, that coffee has been transported to Santo Domingo since 1715.

The cultivation of coffee spread rapidly in the Island of Guadeloupe, but it has been neglected for that of the sugar-cane.

The Dutch carried on this cultivation with success in 1718 in Surinam, Dutch Guiana.

In 1717 or 1718 the French East India Company, established in Paris, sent to the Island of Bourbon (now Island of Réunion), by a sea captain of St. Malo, named Dufougeret-Arenier, some coffee trees from Mocha. They were delivered to Desforges-Boucher, the king's lieutenant in that island.

There remained only one tree of that collection in 1720, but it produced so much in that year, at least 15,000 seeds were sown.

All the coffee trees existing at present in the island come from those nursery trees and produce the coffee known in the market as Bourbon coffee.

The inhabitants of Bourbon, as some writers claim, having seen in 1715, in a French ship just returned from Mocha, some branches of common coffee full of leaves and berries, noticed at once that they had in their mountains trees perfectly similar. They brought some branches, which, on being compared, were found to be exact, both in regard to the leaf and to the fruit but the bean from the island was found to be longer, smaller and greener than that of Arabia. This, no doubt, decided some naturalists to classify this coffee as a special kind in comparison with Arabian coffee.

In the Spanish West Indies coffee was introduced first in the Island of Santo Domingo, passing to Porto Rico, and then to Cuba, in 1760. Here it was grown at first in some plantations, and only after the immigration of the French settlers from Santo Domingo were the first coffee plantations established in the eastern portion of the island. Soon after it extended to the Western portion, which, in 1800, had 80 coffee plantations. As the cultivation of coffee demands less capital than that of sugar, and as the lack of competition, after Santo Domingo was ruined, had increased the price and produced considerable profit, this work being easier than that of sugar and at the same time more profitable, the majority of the farmers hastened to plant coffee. This abundance gave origin to the decrease in the price of coffee—especially when that of Java and Brazil, of better quality, were sold cheaper—and an agricultural crisis was the outcome. Then the Cubans proceeded to destroy their coffee plantations and devoted their efforts to the cultivation of sugar.

Coffee may have been introduced in Mexico in the 18th century, for, according to the data published about "Domestic and Foreign Commerce of Mexico," by M. Lerdo de Tejada, among the products exported from Vera Cruz in 1802, 1803, and 1805, coffee figures respectively with 272,493 and 336 quintals. (Julio Rossignon.)

## POPULAR DRINKS.

Newspaper summaries of the "Statistical Abstract" tables showing the consumption of tea, coffee, wines, and liquors, are likely to give the public a mistaken impression. We have seen one such summary from which the reader could only infer that there is a much greater increase of the American consumption of malt liquors than of the domestic consumption of tea and coffee. Most people, too, would assume, from a glance at the summary in question, that the consumers of the two grocery staples are in a minority as compared with the drinkers of wines and liquors. This would happen because the Government tables are not reduced to gallons in all cases, only the intoxicants being measured by the gallon.

Below is an excerpt from a series of tables in "Statistical Abstract," showing the *per capita* consumption of tea and coffee in pounds and of intoxicants in gallons:

### "PER CAPITA" CONSUMPTION.

		Tea.	Coffee.	Wines.	Spirits.	Malt Liquors.
Year.		Pounds.	Pounds.	Gals.	Gals.	Gals.
1871	...	1.14	7.91	0.40	1.62	6.10
1881	...	1.54	8.25	0.47	1.38	8.65
1891	...	1.29	8.00	0.45	1.43	15.31
1901	...	1.14	10.60	0.37	1.33	16.20
1902	...	0.94	13.37	0.63	1.36	17.49

If we add the tea and coffee *per capita*s together we get a total of only 14.31 pounds, apparently a meagre showing compared with the liberal consumption of malt liquors, 17.49 gallons, and when compared with the total wine and liquor consumption, 19.48 gallons, it becomes of even less importance.

Let us, however, turn the tea and coffee into gallons, after deducting 15 per cent. in weight from the coffee for the loss sustained in the roasting process. Here is the result for two years:

### "PER CAPITA" CONSUMPTION.

		Tea.	Coffee.	Wines & Liquors.
Year.		Gals.	Gals.	Gals.
1901	...	6.84	18.98	17.90
1902	...	5.64	22.74	19.48

In 1901 there was a consumption of wines and liquors aggregating 17.90 gallons and of tea and coffee aggregating 25.82 gallons.

In 1902 the consumption had increased to 19.48 gallons for the intoxicants and 28.38 gallons for the non-intoxicants. The true figures are probably even more favourable for the temperance cause, as the tea *per capita* was unduly reduced by causes connected with the repeal of the duty, the actual consumption of tea in 1892 having probably approached high-water mark.

The consumption of tea in fact just about keeps pace with the natural increase of population, while coffee, in every way a much more popular drink, finds its use so stimulated by low prices that its *per capita* jumps ahead by leaps and bounds.

The consumption of cocoa and chocolate as a beverage is probably not far from a gallon *per capita*. In ten years the *per capita* consumption of all kinds of cocoa and chocolate has increased from about  $\frac{1}{3}$  lb. to  $\frac{2}{3}$  lb.

It may be of interest to our readers, in this connection, to know how the *per capita* consumption of sugar in this country compares with the totals for the other breakfast necessities. In 1902 the sugar *per capita* was 72.8 lbs., and this was the highest point ever reached. In 1901 the *per capita* rate was 68.7 lbs. and in 1892 it was 63.8 lbs. In 1882 the *per capita* consumption of sugar was 48.4 lbs.

Coffee has been gaining in public favour at a great rate, but its gain is not as steady as that of sugar. The coffee *per capita* sometimes slips behind a previous year, and tea often acts in that manner, but not so sugar, which as a barometer of American prosperity and commercial power is as accurate as it has proved in the case of Great Britain.—*Merchants' Review*.

## A TRIP TO THE ANNAMALAIS.

A GREAT FUTURE AS A COFFEE COUNTRY.

Mr. D Edwards, well-known in Colombo commercial circles and in Ceylon generally, has just returned from an interesting ten days' visit to the Annamalais. In conversation with an *Observer* representative to-day, Mr. Edwards gave some interesting information especially regarding the journey to the Annamalais which he suggested might be noted.

FOR THE BENEFIT OF PROBABLE PROSPECTORS.

"Leaving Colombo by the ss. *Africa* on 9th April," he said, "and Tuticorin by rail next morning I reached Podanur on the 11th at 7 A.M. On the 12th I travelled by *tonga* to Pollachi, 25 miles, slept the night at the travellers' bungalow and "tonga-ed" on to the foot of the Ghaut the following day, a further 13 miles. Now for the climb! 16 miles by short cuts to my destination, the biggest piece of real hard work I have ever done. I should mention there is

A CART ROAD ALL THE WAY TO THE ANNAMALAIS.

but the heavy rains last November played havoc with the culverts on the face of the Ghaut, and wheel traffic has not yet been resumed. At the present moment, however, some hundreds of coolies are employed on the work, and it is expected, that in two months some carts will be going through the whole way. The Annamalais greatly resemble Haputale in lay of land, soil climate, etc., and I shall be surprised if this district is not better known before long. The climate is perfection.

THE RAINFALL AVERAGES ABOUT 138 INCHES.

This may be considered heavy for coffee, but it is not so in this district, where the soil is very porous with deep loam. There is not the slightest indication of wash. The dry months are December to April—just what coffee requires. Even at present low prices, coffee at four years old is leaving a fair margin of profit. The crop now setting is very fine indeed and stripping will again be necessary to save the trees from over-bearing. Coolies are plentiful and the average of

THE CHECK-ROLL IS ABOUT 28 CENTS, AGAINST OUR 34.

I made a point of seeing cooly rice and thought very highly of the samples shown me. It was native milled, clean and wholesome food. On my return journey I covered 54 miles across the plains from the Annamalais to Podanur, riding, walking and "tonga-ing" which is my record for the tropics."

While at the Annamalais Mr. Edwards stayed at Parlei estate, of which Mr. Marsh is manager, with two European assistants, Messrs. Congreve and Vincent. About 19,000 acres of land are opened up and about 3,000 acres are planted with coffee, cardamoms, cinchona, and tea, while some rubber is being tried. The cardamom crop, Mr. Edwards thought, phenomenally good. On

one estate, Valpari, there were 900 acres of cardamoms and 300 of coffee.

TEA IS STILL IN ITS INITIAL STAGES.

Monaco estate, with 200 acres and a finely-equipped factory, and Lord Stanmore estate with 125 acres under cultivation, being the ones growing it. Regarding labour, Mr. Edwards noticed a general air of prosperity in the cooly districts which he certainly thinks

NOT CONDUCTIVE TO IMMIGRATION

at present, especially as Government is now carrying on extensive irrigation works. Large and extensive tracts of land and fields are being irrigated, and the people are industriously cultivating paddy in the fields, and tobacco and chillies on dry land.

Mr. Edwards, although for about 30 years resident in the East, had never previously visited India and is loud in his praises of his visit which he thoroughly enjoyed. Mr. Edwards leaves for Home by the *China* in a fortnight's time.—*Ceylon Observer*, March 22.

## CAFFEINE IN COFFEE.

It has long been known that coffee berries usually contain something like one per cent. of caffeine, the substance to which coffee owes its stimulating properties. Recently M. Bertrand of the Pasteur Institute has analysed nine kinds of coffee with interesting results, which are referred to in the *Agricultural News*, Barbados. The beans of one species (*Coffea humblotiana*) contained no caffeine, and in another species (*C. mauritiana*) only 0.07 per cent. was present. These two varieties are thus for all practical purposes free from the stimulating alkaloid. In Arabian coffee (*C. arabica*), obtained from various sources, the caffeine present varied from 0.83 to 1.60 per cent. Liberian coffee (*C. liberica*) yielded between 1.06 and 1.45 per cent. The new African coffee (*C. stenophylla*) appears very rich in caffeine, 1.52 and 1.70 per cent. being the results of two analyses recorded. *Coffea canephora* gave the highest caffeine content, 1.97 per cent. The paper is printed in *L'Agriculture pratique des pays chauds*, Year II., pp. 211—13. —*Journal of the Society of Arts*.

## THE LABOUR QUESTION.

PRELIMINARY REPORT OF THE CEYLON LABOUR COMMISSIONERS.

Rookwood, Hewaheta, April 22.

SIR,—I enclose for publication the preliminary report of our Labour Commissioners, Messrs. Turner and Hill. Additional information will be available at the Planters' Association Committee and General Meetings, on the 1st and 2nd proximo.

The Commissioners recommend that we should station an agent in South India for recruiting purposes, and that he should be sent early in May, if possible. I shall be glad if estates who are willing to support a recruiting agency will send in their names to Mr. Philip, stating also the number of coolies required. A registration fee of 10 cents per cultivated acre per annum would probably meet the expenses of the agency, and in addition the coolies would cost from Rs.15 to Rs.20 per head, according to the distance they would have to travel in India and Ceylon. It should be to the advantage of all estates to maintain such an agency, as estates now well supplied with labour are equally interested in the establishment, if possible, of a new form of recruiting. If the cost of bringing over the coolies is borne by the estate, a saving in head money should be effected, and as this amounts on an average to over Rs.12 per annum, the cost of recruiting would, in eighteen months, be recovered. I wish to ascertain at an early date, what support would be given to a recruiting agency; but promises now made will not be considered binding until a more detailed scheme can be submitted.—I am, Sir, yours faithfully,

A. C. KINGSFORD,

Chairman, Planters' Association of Ceylon.

(The report referred to.)

In accordance with the Resolution passed at the General Meeting of the Planters' Association held at Kandy on February 17th, 1903, your Commissioners have visited Southern India and beg to submit the following preliminary report.

Your Commissioners left Ceylon on the 16th of March, and proceeded straight to Madras to present their credentials. They

found that G. O. 244 (*vide* Appendix) had been sent out to all Collectors and District Officers in the Madras Presidency, and, having got all the information they could from the officials in Madras they left for Chingleput, and proceeded through North Arcot, South Arcot, Tanjore, Trichinopoly, Madura, Tinnevely, Coimbatore, and Kistna.

The Indian officials gave them all the information at their disposal and helped them in every way and they personally have to thank them for their kind hospitality throughout the trip.

Your Commissioners having travelled through the Presidency for six weeks have come to the following conclusions: That the scarcity of labour is due to the following causes:

1. The 9,000 crops of all grain during 1902 and 1903 and the increased acreage under ground nut in the Trichinopoly, South Arcot, Tanjore and other districts—a ground nut has been imported from Mauritius which is said to give three crops a year and thus affords employment practically throughout the year.

2. The want of organisation with regard to recruiting.

3. The greater inducements held out to labourers to emigrate elsewhere. Your Commissioners were asked to report on the whole question of labour and actual recruiting did not come within their province unless it could be effected without interfering with the more important part of their mission. They found it impossible to recruit unless they devoted practically their whole time to it as recruiting necessitates either staying in one central place while sub-agents are out in the villages possibly for a month or being at the beck and call of a telegram from a sub-agent which might take one 200 miles in order to verify a statement as to number of coolies and amount required for advances. Your Commissioners came across two cases where coolies had been borrowed "for this occasion only" and when it came to putting them into the train, it was found that they were employed in a neighbouring mill or some other work.

The district of Coimbatore should be a good ground but the poorer the people the more conservative they are and they prefer to earn a living wage of 2 annas, at home, rather than exile and 5 or 6 annas a day.

The Telugu districts north of Madras, are also favourable for emigration, if the difficulty of the language can be overcome, and the extra expense of trainage allowed for.

Your Commissioners beg to offer the following suggestions which they think are necessary with a view to establishing the immigration of labour to Ceylon on a sound basis.

1. That a reliable Agent should be appointed whose duty it would be to have a thorough knowledge of every taluk in the Presidency, and his first work should be in the Telugu districts in order to work up a connection with Ceylon from that part of the country.

2. That a labour bureau should be started by the P. A. in Kandy, whose duty would be to collect and publish all available information as to crops, weather, and health of each taluk (division) of each district in the Madras Presidency.

3. That a strong sub-Committee with legal help, should study the New Madras Labour Act. The Straits Settlement Labour laws, and the Emigration Act of India, to see whether any similar ordinance in Ceylon would benefit the Planting Community or failing any new ordinance, what inducements should be offered to immigrants in order to make Ceylon more favourable in the cooly's eyes than other countries.

Your Commissioners would only add that action should be taken at once, as may appear to be the opening month for coolies generally to think of emigrating, and your rivals are already in the field.

Your Commissioners have collected a lot of figures and interesting matter, which they will lay before the Committee on their return to Ceylon, all bearing on the conclusions and suggestions mentioned in this report.

Your Commissioners visited Tataparai (Tuticorin), Pamban, Ammapatam, and Tondi, the four ports from which all the immigrants to Ceylon book; and think that until the railway from Negapatam to Pamban or wherever the Indian Government decide to link up is finished, it would be very bad policy to close the ports of Ammapatam and Tondi as they consider the country inland most favourable for coolies, if properly worked.

(Signed) EDGAR TURNER.

( " ) JOHN HILL.

Madura, S. India, April 17th 1903.

## DISTRICT ASSOCIATIONS.

### THE SOUTH MYSORE PLANTERS' ASSOCIATION.

#### THE ANNUAL GENERAL MEETING.

We extract the following from the Minutes of the Proceedings of the Thirty-ninth Annual General Meeting of the South Mysore Planters' Association held at the Munzerabad Club, Saklaspur, on the 30th ultimo:—

PRESENT:—Messrs. Anderson, C.I.E., Harris (*President*), E. M. Playfair, H. M. Playfair, J. H. Robinson, Russell, Taylor, Scholfield, Pittock, Butcher, C. Lake, W. L. Crawford, J. G. H. Crawford, Dennis, de Salis, Captain Foster, T. Hunt, T. Anderson, F. Norton (*Honorary Secretary*), and P. W. Wetherall (*Honorary Member*).

#### THE PRESIDENT'S ADDRESS.

The President then addressed the Meeting and in the course of his speech said:—

GENTLEMEN,—The past year has been an eventful one. The majority of us can congratulate ourselves on picking record crops, and though prices have struck a very low level, all estates I trust will on the year's working finish upon the right side and many show good profits. The passing of the Madras Planters' Labour Bill by the Legislative Council of Fort. St. George is an event of great moment to our community, and is the consummation of many years of struggle. The Hon'ble Mr. Acworth had a difficult task to perform, as the opinion of District Associations differed considerably, and as some of them were strongly opposed in Council. With the assistance of Sir George Arbuthnot, however, he succeeded in carrying many points of importance, and in no way spared himself in his endeavour to shape the Bill into workable form. There has been a tendency to regard the Bill from an individual standpoint forgetful of the varied conditions of labour in S. India. Doubtless anyone could suggest improvements, but taking a broad view, it recognises that what we have ever aimed at is not so much punishment for breach, as enforcement of, contracts; and also that it provides for reciprocity as regards execution of warrants, I cannot but think that we shall find it an instrument better suited to our requirements than Act XIII. The Mysore Government has assured us that it will not introduce it without first conferring with us. We must therefore decide—

(i) whether we will pronounce in favour of it;

(ii) what modifications we shall suggest.

The Hon'ble Mr. Acworth has pointed out most clearly that though Local Governments will be allowed to make alterations to suit local circumstances, if anything opposed to the principles of the Bill were inserted, or if Act XIII were allowed to run concurrently with it, the Government of India would certainly disallow reciprocity regarding processes. We must therefore decide between the old Bill and the new. Opponents of the new Bill will say let us wait till this state of things is reached, and then ask for it, but there is this to be said that by accepting it when labour troubles are few we should be able to test it dispassionately, discover its defects, endeavour to get them remedied, and thus be in a better position to meet the pinch whenever it may come. The constant attendances in Kutcherri will doubtless be vexatious and tedious, but this as far as the planter is concerned has been met by it not having been made obligatory for an agreement between a planter and a maistry to be signed before a magistrate. No doubt the Bill is unsuitable to local labour, and though the proviso added to section 7 is an improvement it does not go far enough for us. I think, however, it should be possible without running counter to the views of the Government of India, to get our Local Governments to introduce certain clauses which would enable us to deal satisfactorily with this class of cooly and obviate his being subject to unnecessary vexations which he might be under the Bill as it stands. What I may call the inquisitorial sections 12–15 are probably anticipated with the least satisfaction. Under Section 41, however, rules may be made to regulate accommodation, sanitary arrangements, etc. and it should be our endeavour to induce our Local Government to frame such as will be in accordance with existing customs. It will not, I fear, be possible at this Meeting to discuss the Bill in detail, but I trust we shall come to a definite conclusion regarding the main issue as to whether we should ask for its introduction or

not. This done, I would suggest, should we decide in favour of it, the appointment of a small Committee to draw up a memo. of such modifications as may be desirable for submission to Government.

*Coffee Cess.*—You will have noticed that the Standing Committee have, owing in a great measure to lack of support, temporarily counselled the abandonment of this matter, not however without hope that it may be resuscitated at the Annual Meeting. Several firms of standing have expressed willingness to undertake the sale of our low-grade coffees, and what is now required is unanimity among ourselves. Many have expressed willingness to support the cess if a workable scheme be formulated, but if success is to attend our efforts we must go further, and if I may presume to offer counsel it is this—

- (i) decide definitely whether a cess is desirable or not;
- (ii) and, if in favour of it, what the rate should be;
- (iii) appoint a representative Managing Committee and give it *carte blanche* to deal with the funds as it may deem best.

I believe it only requires a sufficient balance in the Bank to set the matter going, but if we continue to refuse support till a cut and dried scheme is laid before us we shall never get any further.

*Delegate to Brazil.*—The Government of India has offered to subscribe Rs.5,000, provided we can raise the rest of the amount required, and it is for us to say to-day what this Association and what each of us individually are prepared to do in the matter.

*Plague.*—This terrible disease has unfortunately been very prevalent in what I may call the *maidan* portions of the Coffee Districts, and has, to some extent, penetrated into the Mulnaad. The greatest possible credit is due to the officials in the Hassan District for the manner in which they have combated it, and especially to our sub-divisional officer, Mr. Wetherall, who, by constant watchfulness and by wise and prompt measures, has kept Saklaspur entirely immune from it and prevented it from devastating Belur.

*Interview with Mr. Madhava Rao.*—Accounts of this have been circulated, and it only remains to record our thanks to Government for the sympathy it displayed and for sanctioning the Anjur Bridge which Mr. Madhava Rao announced at the interview. In conclusion, I beg to place my resignation in your hands, while thanking you for the support accorded me during the past year.

#### THE HONORARY SECRETARY'S REPORT.

The Honorary Secretary read his report as follows:—

GENTLEMEN,—Having kept you well informed by means of circular letters on all topics that have been of general interest to you throughout the year, I have left myself but little to report on, and so will be as concise as possible. I have to congratulate you on having picked big crops—in some instances record ones—and though prices have not so far been high, they have not been so poor as one time we feared they would be. I think the most marked feature has been the adverse brokers' reports on the quality and appearance of the first arrivals of East Indian coffee, but these are simply the result of damage caused by heavy rain occurring during the early picking. I recommend that you send to Dr. Butler, Cryptogamic Botanist to Government of India, enquiries on all points on which scientific assistance is required, and whose paper on "Stump Rot" and its Treatment I lay on the table. Prospects I believe point to fair crops for the coming year. Our members, I regret to say, have fallen from 33 last year to 28 this year. Among our losses, we have to deplore the sadly premature death of Mr. Elder, of Sumshay Estate. Plague has been a source of anxiety to all of us, but I am glad to say that I have not heard of a single case on any coffee estate in our district.

The new Labour Law has been prominently before us during the past few months, and has been finally passed by the Madras Legislative Council. There can be no doubt that the Bill so passed is a very great improvement on the Bill as it was first printed. This has been largely due to the conciliatory attitude of the Madras Government, no less than to the marked ability of the Planting Member, to whom I think the cordial thanks of this Association are due, for the successful and tactful manner in which he helped to bring a by no means enviable task to a satisfactory conclusion. Before the new Act is introduced into Mysore, I feel assured that we shall have an opportunity of suggesting modifications and representing our views before the Government of Mysore. Our thanks are due to H. H. the Maharajah for having deputed Mr. Madhava Rao to confer with the representatives of the S. M. P. A. and N. M. P. A. on questions affecting our industry, but as the outcome of that conference is still under the considera-

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacobs Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN  
RELIEVER.

*It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.*

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

tion of the Government of Mysore, I cannot enlarge on the subject, but we may rest assured that our suggestions will receive the most earnest attention, and a remedy applied where possible. No more courteous or sympathetic official could have been selected to confer with us.

As regards weights and measures you will be glad to hear that the Government will shortly frame rules to regulate them.

The thanks of this Association are due to Mr. W. L. Crawford, for his able and interesting, and I venture to say convincing, report on the Leeming system. The Anjur Bridge has been sanctioned and will soon be put in hand and finished.

The Postal arrangements of this district have shown an improvement lately, and members will only have themselves to blame if they allow them to lapse into the state from which they have lately emerged.

This Association has to be congratulated on the election of our President as Chairman of the U. P. A. S. I.

The Coffee Cess is still in abeyance, and I have circulated the latest information on the subject, but the knowledge that Brazil is exporting coffee to India, and underselling us in what ought to be our own markets, should stir us all to action.

The Delegate to Brazil has not yet made a start, and we shall no doubt be called upon to subscribe and supplement the grant of Rs.5,000 from the Government of India. The Shevaroy Hills Association has already set us a good example.

The accounts are placed on the table and show a cash balance of Rs.129-8-3. I would draw the attention of members to the fact that Rs.315 are still due on the subscriptions for 1902-03.

I beg to place my resignation in your hands.

#### MR. GRAHAM ANDERSON'S SPEECH.

Mr. Graham Anderson in the course of a long speech then said:—

I desire to refrain from saying anything which would in the remotest degree lead anyone to believe that after all the trouble which has been so unsparingly bestowed on the new Labour Ordinance we did not know our own minds during the 30 years denunciation and campaign against Act XIII of 1859 which latterly had become so encrusted with judge-made law as to frustrate the very objects for which it was originally extended to the planting districts of Southern India. The Planters' Enquiry Commission exactly explained the position, when, after the most careful investigation, it announced its matured opinion that it was eminently desirable that some equitable arrangement should be made.

However undesirable a complicated Labour Ordinance may appear to us to be, we have no alternative but to accept it if advances are to be given to maistries and coolies in British territory, and we must continue to remember that even Mysore maistries and coolies who may defraud us are quite safe if they once cross the frontier line. Surrounded as this Province is by the territories of the paramount power, and owing to the facilities of railway communication, the liability to loss and constant annoyance is an ever-increasing evil which we have to contend against.

When considering the order of the Government of Madras, dated 28th November, 1893, I had the honour to point out that in Mysore the plantations are generally dotted over an immense area which is cultivated with other crops with numerous villages, the inhabitants of which have their own industries to attend to, and it would be impossible to have an Ordinance which would only affect persons residing on estates and in no way influencing the conduct of those just outside their boundaries. In some places in Southern Mysore there are large bodies of local labourers who, living in the vicinity of the plantations, attend work occasionally or regularly, but return to their own homes either daily or weekly. It would be obviously absolutely impossible to bring such people under any complex system of arrangements. We have absolutely nothing to do with their houses, their water-supply, or sanitary arrangements. They are perfectly free to arrange for their own comfort and welfare as they please, but we do everything possible to help them when ill or in difficulties as they are so useful to us in helping to maintain our industry. Many thousands have thus been emancipated from agrestic slavery, have received advances to enable them to marry and settle down and become small peasant cultivators who give a portion of their time to us on our plantations.

We all owe a deep debt of gratitude to the Hon'ble Mr. Acworth and Sir George Arbuthnot for their powerful advocacy on behalf of Southern India planters generally and for their untiring exertions to do everything that was possible to insure protection

alike for the labourer and the employer. I also venture to believe that I am only expressing the sentiments of all my brother-planters in Southern Mysore when I say we most fully appreciate the care and attention which the Government of Madras has generously bestowed on the preparation of the new Act, which, although it requires certain modifications to suit the special requirements of the Mysore planting districts, is a great improvement on anything of the sort that has ever been framed.

The *Madras Mail* has rendered conspicuous service to both the planter and the cooly, and we will ever gratefully remember how cordially both the Government of Madras and the leading journals of the Presidency and Bangalore have endeavoured to place the planting industry on a better footing in regard to its labour arrangements. We cannot, of course, be expected to express any definite opinion on the provisions of the New Act until it has been most carefully studied by the combined Mysore Planters' Associations in conference with the Durbar so as to arrange for those modifications which will be essentially necessary to make it suitable for application to the planting districts of this Province.

#### RESOLUTIONS PASSED.

Mr. T. Hunt alone was not in favour of the Bill at present. As more local labour was being employed, he considered that Act XIII was best for us; and that we should wait and see how the new Bill works before asking for its introduction into Mysore.

Mr. Harris proposed the following Resolution:—"That this Association while recognising that the Bill as finally passed by the Legislative Council of Fort St. George in a great measure meets the requirements of the planting community, it is aware that certain modifications are desirable to meet the peculiar circumstances of labour in this Province, and it takes this opportunity of thanking the Durbar for its gracious offer to confer with us regarding such modifications, by the introduction of which the Bill is capable of being made acceptable to us."

Seconded by Mr. Taylor and carried. Mr. Hunt alone objecting.

Proposed by Mr. Hunt—"That Messrs. Anderson, Harris, Playfair, W. L. Crawford, and Norton be appointed to draw up a memo. of such modifications as may be deemed desirable."

Seconded by Mr. Robinson and carried unanimously.

Proposed by Mr. J. G. Crawford—"That this Association desires to offer its cordial thanks to the Hon'ble Mr. Acworth for the able manner in which he assisted the passage of the Bill through Council, and for the successful way in which he represented our interests throughout the deliberations."

Seconded by Mr. E. M. Playfair and carried unanimously.

#### THE REDUCTION OF WAGES.

Mr. Robinson proposed that one rate of wages should be paid throughout the district by members of the Association for, as it at present stood, any member could pay what he chose. The system of groups of estates agreeing to pay the same rates had been a failure, therefore he proposed one rate for the district.

Seconded by Mr. Pittock. Lost: 15 against, 4 for.

#### THE COFFEE CESS.

Proposed by Mr. E. M. Playfair—"That those members who are not able at present to give a definite reply be requested to consult their Proprietors and Agents with a view to giving the required information in time to instruct the Delegate to the next U. P. A. S. I. Meeting."

Seconded by Mr. G. Anderson and carried unanimously.

#### THE DELEGATE TO BRAZIL.

Mr. J. G. H. Crawford proposed—"That this Association subscribe Rs.100 to the Fund and circulate a subscription list with a minimum of Rs.5."

Seconded by Captain Foster. Carried: 17 for and 2 against.

Roads, Railways, and Communications.—Mr. W. L. Crawford hoped that the question of the railways would be kept before Government, and if the main railway from Arsikerri to Mangalore could not be undertaken, the Durbar be requested to consider the advisability of constructing a loop to connect Arsikerri, Hassan-Saklasapur, Mudigere, Chickmagalur and Kadur.

Mr. E. M. Playfair expressed gratification that the Anjur Bridge had been sanctioned and pressed for its speedy completion, he was also pleased that the Arehully-Chickanhully had been finished, but till the Bridge across the Hesaragutta is constructed communication during the rain will continue to be suspended; and that the Honorary Secretary be directed to urge the early sanctioning of this undertaking, and draw attention to the bad state of the

and blood purifier is Seigel's Syrup, made of  
fruits, roots and herbs. It cures constipation and  
dyspepsia, regulates the bowels, cleanses the liver,  
tones the digestive system, braces the nerves and imparts  
the vigour and vitality of health to every organ of the body.

 **SEIGEL'S  
SYRUP**

"For seven years,"  
writes Mr. F. J. Pauley,  
of Arthur Street, Croydon,  
N.S.W., "my stomach was unable to tolerate food of any des-  
cription, and the little which I forced myself to eat occasioned  
me dreadful pains in the chest, bilious attacks and fits of  
vomiting. Now I can digest with ease the toughest  
steak that comes out of a butcher's shop." It was  
Mother Seigel's Syrup wrought the change.

**FOR OLD & YOUNG.**

Arehully-Saklasapur Road and that the Belur-Gonibede Road requires re-metalling.

Mr. G. Anderson read an interesting letter signed by the leading merchants and land-owners of the district, asking him to gain the support of this Association to their urgent request for the extension of the Railway system. Letter and reply recorded.

#### U. P. A. BUSINESS.

As the Bangalore Races are to be held unusually early this year, it was resolved that this Association consider that the Annual Meeting should not take place till the first week in August.

Proposed by Mr. Robinson—"That Mr. J. G. H. Crawford should represent this Association at the next U. P. A. Annual Meeting."  
Seconded by Mr. Taylor and carried unanimously.

#### STUMP ROT AND DISEASED BEANS.

Mr. G. Anderson then read a memo. on Stump Rot and Diseased Beans, after which Dr. Butler's letter on Stump Rot and its Treatment was read.

A vote of thanks was proposed to Mr. Anderson and Dr. Butler and carried unanimously.

#### A RESOLUTION OF INDIGNATION.

The following Resolution was put to the Meeting and carried unanimously:—"We deplore and indignantly repudiate the insolent insinuations made by Mr. Shapurjee, the Chairman of the Native Shares, Stock, Exchange and Bullion Brokers of Bombay, as being wholly unmerited by Tea, Coffee, and Indigo planters, and as being a lamentable departure from the admirable traditional characteristics of the Parsee community to which he belongs."

#### THE NEW COMMITTEE.

The Ballot papers were opened and the following gentlemen were elected:—Messrs. Harris (*President*), F. Norton (*Honorary Secretary*). Committee Messrs. G. Anderson, C.I.E., J. G. H. Crawford, W. L. Crawford, T. Hunt, and E. M. Playfair.

### MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated April 9th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903 ... ..	1,352,951	967,336	69,825
1901-1902 ... ..	1,464,888	1,002,665	69,775
29,766 pkgs. INDIAN 17,941 " CEYLON ... " JAVA	Total 47,707 packages were offered in public auction this week.		

It is probably owing to the proximity of the Easter holidays that buyers are confining their purchases generally to such teas as they are in immediate need of, particularly grades under about 8d. per lb., while neglecting to some extent the better kinds, doubtless in anticipation of any difficulty which they might experience in profitably disposing of them before the holidays.

The nearness of the Budget will also probably tend to throw the immediate demand more upon the lower grades of tea.

*Quantity of Indian and Ceylon Tea re-exported from U. K. from 1st January to 31st March.*

The closing auction of Indian tea was held on Monday and of Ceylon tea on Tuesday, and probably the next sale of Indian tea will take place on the 20th, Ceylon on the 21st, and Java on the 23rd instant.

INDIAN.—Buying was strong for all descriptions up to about 8d. per lb., these kinds meeting with good general competition; other grades were somewhat neglected, prices of better liquoring teas showing slight irregularity. 78 closing invoices have been sold, against 95 same date last year. The following averages are worthy of note:—"Amal T Est. Lattakoojan," 1/1; "Makum T Co." and "Amal T Est. Kalej," 1/0½; "Amal T Est. Dooteriah," 1/-.

Week's av. of tea sold on Garden Account 1903, 26,630 pkgs., av. 7-93d. 1902, 24,291 pkgs., av. 6-96d.

Tea sold on Garden Account 1st June to date 1902-3, 1,045,885 pkgs., av. 7-48d. 1901-2, 1,157,475 pkgs., av. 7-72d.

CEYLON.—The auction was considerably lighter than that of last week, 17,941 being brought forward, against 25,763. The prevailing features were those referred to above, teas up to about 7½d per lb. meeting with strong bidding, but higher grades were less enquired for and sold with slight irregularity. Quality, on the whole, continues about the same as is usual at this time of the year, being hardly equal to what it was some few weeks back.

Average for week 7-78d, against 7-01d in 1902.

Ceylon tea sold on Garden Account 1st January to date 269,568 pkgs., av. 7-66d. 1902, 303,936 pkgs., av. 7-12d.

JAVA was not represented in the auctions.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1/4½. Colombo 1/4½.

## QUININE.

The manufacturers reduced their prices ½d per oz. on Monday, and now quote 1s 1½d per oz. for German sulphate in bulk. Howards' price for sulphate is unchanged, and Whiffen's has been reduced by ½d P. & G. (French) is now 1s 1d in bulk. The prices of quinine salts have also been revised. In second hands the market has been flat and prices easier, but the tone was rather better at the close, spot selling in a small way at 1s per oz.

Judging from the Board of Trade returns, March, 1903, showed considerably more activity in quinine and quinine-salts than was the case in March, 1902, both the imports and exports showing an increase. The figures (representing ounces) are as follows:—

		IMPORTS.			
		1902.	1903.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, MAY 9, 1903.

[No. 19.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 15th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*Weather*—Wind set from the West. Rain has been threatening all this week, but seems to have passed away. *Blossom*—Fair. Prospects moderate. *Works*—Pruning, manuring. *Plant disease*—Borer seems very mild this year. *Health*—Good. *Labour*—Abundant. *Interesting item*—Village dances, marriages and feasts engage attention on all sides.

#### Coorg.

*POLLI BETTA, 6th May.*—*Weather*—Rain every evening since Sunday. Pity it did not come earlier. *Crop*—There has been a fair blossom in most cases, and crops ought to be average ones. *Labour*—Plentiful for the time of year. *General health*—Fair. *Plant disease*—Borer is showing up, but not to any alarming extent.

#### Kotagiri.

*7th May.*—*Weather*—Cloudy, but very close, with light local showers. 50 and 30 cents rain on 1st and 4th instant. Only  $5\frac{1}{4}$  inches rain from 1st January to 30th April, or 10 inches below average. *Work*—The 1st weeding of the new season is commencing and manuring is being taken well in hand. The trees are recovering very well indeed from the dried up appearance after the heavy crop. *Health*—Very good, considering the hot season. *Labour*—Ample, for the little work on hand. *Interesting item*—The Annual General Meeting of the Nilgiri Planters' Association is to be held to-morrow.

### TEA IN THE UNITED STATES.

IN our last issue we made reference to the official announcement of the formation of the National Tea Association of the United States. The main object of this Association is to bring about an increase in the use of tea in the United States. From this we might judge that it proposes to do in the States very similar work to that undertaken in this country by the Indian Tea Markets Expansion Commission. As a matter of fact, however, it is evident that the Association and the Commissions are intended to run on entirely different lines. When members of the tea trade were invited to join the American Association an explanation was given them to the effect that the Association would be composed of the leading importers and wholesale grocers of all the large cities of the Union. For many years, it was pointed out, nothing had been done to promote the consumption of tea. Prior to 1897 the unrestricted importation of trashy, adulterated and spurious tea for nearly half a century operated to reduce the consumption rapidly and relegate the article on secondary position. In 1897 the Tea Adulteration Law was passed, and worthless tea excluded. Then came the Spanish War and the War-tax on tea. There came also during the last few years a fall in the price of coffee. With this selling at 6 cents per lb. there was only room for what was termed in the circular referred to "a pitiful consumption" of one and one-half pounds of tea in 1890, which subsequently fell below one pound *per capita*. It was proposed that the Association should set about cheapening the cost of distribution of tea. A reduction of rail freights was to be sought. Again, an effort was to be made to teach people how to infuse tea properly. It was remarked that it is impossible to obtain a cup of tea properly drawn and fit to drink *en route* from Maine to San Francisco, yet few commercial travellers attempt to promulgate the information that would increase a perfect beverage.

Another defect was pointed out, in that although the striking fact stands out that tea costs the consumer only  $\frac{1}{2}$ d. for seven cups when retailed at  $17\frac{1}{2}$ d. per lb. while all other beverages cost from five to ten times as much, yet no effort had been made to advertise this important consideration. "Therefore," it was remarked in the invitation under notice, "while England is consuming six pounds *per capita* per annum, we gaze idly upon the miserable consumption of one pound *per capita* in our own country, and witness whole

States in the South avoiding tea altogether. A trade which should show an importation of at least three hundred million pounds per annum, has been shrinking into a compass of eighty millions. And all because of the lack of a little enterprise and organization." The removal of the duty was commented upon. Stress was laid upon the fact that in the existence of the tea inspection law the States possessed a decided advantage over all other tea-drinking countries by being able to guarantee to the consumer absolute purity. The establishment of an Association was proposed with a special view to "the preservation of tea as a leading article of merchandise;" and the belief was expressed that the consumption of tea could be raised from 1 lb. *per capita* to 4 or 5 lbs. *per capita* by intelligent and consolidated effort.

All this makes it clear that the American Association will aim at doing the same work as that undertaken by the Indian Tea Markets Expansion Commission, but also at much more. Invitations to join were sent to the four sections of the country, to make the Association all embracing, and included were shippers who reside in China, Japan and India, with branches in the United States; those in the regular line of strict tea importing; wholesale grocers, ranging from \$100,000 to \$1,000,000 capital; and the large retail companies, numbering one hundred stores or more, who rank as wholesalers. Only one invitation was sent out, and without further solicitation the response occurred of 160 leading houses. A further invitation was to be extended to those who had not yet received the first. The Association does not contemplate any interference in the business methods of its members; its aim will be solely along the broad lines indicated. A strong, representative directorate has been appointed, and the future development of the work of the Association will, no doubt, be watched with great interest. It is an Association with which the Indian Tea Association should be in close touch, and it seems probable that the Tea Markets Expansion Commission might benefit greatly by carefully watching the methods and the progress of the National Tea Association of the United States.

#### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

#### INDIAN TEA CESS COMMITTEE.

The voting for the seven representatives allotted to the Indian Tea Association on the Administrative Committee, to be formed under the Tea Cess Act, resulted in the election of the following:—

Mr. Ashton, of Shaw, Wallace & Co.;  
Mr. Bateson, of Gillanders, Arbuthnot & Co.;  
Mr. Begg, of Begg, Dunlop & Co.;  
Mr. Brown, of Finlay, Muir & Co.;  
Mr. Currie, of MacNeil & Co.;  
Mr. Smith, of Williamson, Magor & Co.;  
Mr. Tocher, of Duncan Bros. & Co.

The names have been submitted to the Government of India for formal approval.

\* \* \*

The Committee of the Bengal Chamber of Commerce have submitted to the Government of India the names of the follow-

ing gentlemen as the representatives of the Chamber on the Tea Cess Committee:—

Mr. E. Cable, President of the Chamber;  
Mr. Reginald Murray, Chief Manager, Commercial Bank of India, Ltd.;  
Mr. J. M. G. Proffit, of Messrs. Turner, Morrison & Co.

These nominations have been made in accordance with the provisions of Section (4) (2) (a) of the Indian Tea Cess Act of 1903.

\* \* \*

The U. P. A. S. I. has recommended the Hon. Mr. G. L. Acworth for nomination.

#### COFFEE NOTES.

**Coffee in the United States.**—The *Tea and Coffee Trade Journal* of 7th ultimo reports:—

Deliveries during March	...	...	...	3,126,608
				624,292
Total stock in U. S., April 1	...	...	..	2,502,406
Against April 1, 1902	..	...	...	2,432,421

These are days of lowering values in coffee options and new lowest records are daily occurrences. On Monday, April 6, on low and falling markets in Havre and Hamburg and very bearish sentiments on the Exchange in New York, April and May options were at 3.85 with sales at 3.85. June suffered a decline of 15 points and was 3.90, a new record. Other months did not fall to that extent. Prices are adjusting themselves to the very unfavourable plenty of the world's coffee crops. Speculators appear to be very tired of their holdings, and by letting go, are permitting natural economic laws to effect their operations in the market.

Coffee recorded a new lowest record in the option market Friday, April 3, when 3.95 bid and 4.00 asked were the prices that ruled for April. There were some sales at 4.00. Excepting for the drop to 4.05 one week before, the hitherto lowest level was 4.10c. reached in January last and in September 1899. While a drop to 4c. was somewhat expected as an event on the carpet soon to happen, a fall below that mark was not so generally entertained. The most philosophic in the trade are now unwilling to venture any definite opinion on the depth coffee prices may fall.

There were not wanting evidences either that should have encouraged a stand at 4.10 at least, for the world's visible supply was shown to have shrunk 136,649 bags during March, or to 12,380,627 bags. But this was a million bags more than was the visible supply one year ago, and what with the abnormally full movement of Brazil coffee for this time of year, the larger shipments of mild coffees and the seemingly great crop to come during the twelve months beginning July next, speculative holders of coffee announced themselves as tired and liquidated. So, then, the new lowest prices of coffee were attended with some active selling and buying, in the latter being included many shorts.

The deliveries of coffee during March were abnormally large, especially in Europe. The cause was in the main due to heavy shipments of mild coffees. The withdrawals, of course, were from the seaports, and all in all indicate that the interior places are stocking up, apparently attracted by the low prices of coffee. In the United States the deliveries were 624,292 bags, of which 115,164 bags were other than Brazilian. The total for February was 621,716 bags, and this was regarded as heavy enough deliveries.

The total deliveries for the nine months so far are 5,160,748 bags against 5,142,777 bags last year for the same period.

#### THE ARRIVALS.

The arrivals of coffee in the United States were 802,394 bags, a very heavy quantity. Of this total 197,187 bags were mild coffee, the heaviest in a year, but equally heavy were the Brazil arrivals, which were 605,207 bags against arrivals in February of 605,207 bags; the totals for February were only 445,779 bags.

The stocks of coffee in the eight principal ports of Europe on April 1 were 7,395,721 bags against 7,451,662 bags March 1, which is a shrinkage, to be sure, but the stocks are much in excess over those in warehouse April 1, 1902, when they were 6,083,482 bags against 3,813,183 bags April 1, 1901.

#### SHRINKAGE OF AFLLOATS.

During the month there was a shrinkage of coffee afloat for Europe of 218,000 bags; afloats to the United States decreased only 91,800 bags.

The Havre stocks on April 1 were 3,441,000 bags against 3,449,000 bags on March 1; stocks at the Netherlands were 1,068,000 bags, but 1,100,000 bags March 1, and at Hamburg 1,498,000 bags against 1,558,000 bags March 1. In the United States stocks had grown from 2,324,304 bags on March 1 to 2,502,406 bags April 1. Included is the increase of mild coffees from 219,077 bags to 301,100 bags. It is estimated that mild coffees contributed 500,000 bags in March to the supply in Europe and America.

The deliveries in Europe were 849,851 bags against 698,798 bags in February and 697,285 bags in March 1902. The total deliveries in Europe for the last 9 months were 6,921,166 bags against 6,521,933 bags for the same period one year ago. The arrivals were 793,910 bags against 803,587 bags in February and 798,098 bags in March 1902. The arrivals for the last nine months were 8,008,070 bags against 8,551,056 bags during the corresponding period in 1902.

Some in the coffee trade think that should a prohibition of low grade coffee from Brazil be effectively enforced an increase in the supply of Nos. 5 and 6 coffees will follow and probably a decrease in the making of No. 2 coffee.

\* \* \*

**Lewisohns Deny Retirement.**—Many rumours are current in New York because of the low price of coffee that Lewisohn Bros. have disposed of all their large holdings of coffee, but the firm has denied any retirement. They express confidence in a higher market some time, and point to the fact that coffee improves with age and so they can afford to hold on. But at any rate the market is not being supported by them, it is noticed.

\* \* \*

Santos interior receipts continue so heavy day by day that many in the market are having their visions of a 12,000,000 bag 1903 coffee crop enlarged to a 18,000,000 bag crop

**The U. S. Coffee Market.**—The situation in the coffee market makes interesting and even sensational reading, says the *Tea and Coffee Trade Journal* of 7th ultimo. The option market is almost daily making new lowest records and at the time this review was written was most irregular, with prices for May option so low as 3.85 with considerable sales at that. This is a fall of 25 points from the very low prices of one week ago and there is no saying how far the bottom will drop. June was 3.90! The statistical situation shows an ever augmenting large crop, with no relief whatever in sight, and speculators, European it is said, being weary have liquidated with the result that prices have fallen to new records. Havre and Hamburg offer the same tale.

It may be said that the trade in general receives with no very dissatisfied sentiment the adjustment of coffee prices to crop conditions. Apparently the demand for coffee is not a little large, as the unexpected decrease in the world's visible supply shows. It has not, however, operated to stiffen the market.

Actual coffee has not suffered much reduction in price so far by the fall of values on the Exchange. If this sensational sagging tendency continues, there is no question it must have its effect on prices there corresponding in a measure to the lowering levels on the Exchange. As it is they are weaker than one week ago.

In Brazil the offerings are still above parity at New York, and so there is no encouragement to effect trading with that depôt. An offer quoted was Rio No. 7 equalling 5½c. c. and f. here. Prices for spot for the week closed 5c. for Rio No. 8, 5½c. for Rio No. 7, 5½c. for Rio No. 4, and 6c. for Santos No. 4. Jobbing has been very quiet.

Quiet conditions prevail in Milds, and it is difficult to move stocks, especially the commoner sorts. Good Cucuta is 8¾c., unchanged from last week. East Indian coffees are as quiet in movement.

Total stock in United States April 1, 2,502,406 bags against 2,432,421 bags April 1, 1902. Brazil stock in the United States April 4, in store and afloat, 2,681,531 bags against 2,354,725 bags at the same time last year. Other than Brazilian, 301,100 bags, against 329,645 bags last year.

Brazil coffee in New York April 4, 2,100,176. Stock in New York in other coffees April 1, 221,050, in San Francisco, 72,229 bags and in New Orleans, 7,818 bags. Visible supply in the world of all coffees, April 1, 12,380,627 bags.

\* \* \*

The fall of April and May coffee options to 3.85 marks a new lowest record in the coffee mart and must make the growers of coffee look very sick, says the *Tea and Coffee Trade Journal* of 7th ultimo. They stand some chance of being visited by even more disheartening market prices, for good judges of the rise and fall of prices confess themselves unable to see where the bottom will fall to or rest at. Speculators in options seem to have wearied of their holding and have liquidated. Their withdrawals of support naturally weakened the market, and at last the coast is clear for an adjustment of the market according to the law of supply and demand, which would impose conditions establishing the lowest market prices against the largest coffee crops. Then there is the crop or crops to come—now being almost plucked. Evidently things are going to be very interesting in the coffee market for a few days or weeks and will bear watching. If it shall happen that the natural nadir for coffee prices shall be reached it will be more than fortunate, for it will operate to

place the coffee business on a solid basis, where all traders may have confidence in their trading, and in business confidence is about the main thing.

\* \* \*

Meantime the Sao Paulo congress has had its session, and the cables report that while it has been decided not to prohibit the export of coffee twenty per cent. in quantity, a determination is to enact a law virtually shortening the coffee crop of the world by imposing a heavy duty on the lower grades of coffee so as to discourage the export of those grades. The merit of such legislation is doubtful. It must be confessed, however, that it might prove the most expeditious remedy that the Brazilians could devise to improve the market for their coffee. The lower grades are those invariably in most demand and therefore largest in quantity. Besides there is another consideration. In view of some of the coffee trash that has been imported into the United States, it has even seemed advisable to enact a law in imitation of that which the tea trade has been favoured with forbidding the importation of low grades of tea. The market for tea was almost ruined in the United States by low and spurious grades, and it is not inconceivable that coffee might be dislodged from its envious monopoly of the beverage loving public by disgusting it with the low grade coffee thrust upon it by this and that inducement. The passing of the coffee trade of the United States would be the very worst calamity that could befall the Brazilian growers—even worse than super-abundant crops—and if their present calamity shall have in it so good a thing as the elimination of the use of triage and other coffee approximating that poor stuff, why, there is some good blow in the present ill wind. But, of course, all such good would be vitiated, if the Brazilians should enter upon the purpose declared not long ago to use this same prohibited coffee to educate the non-coffee using world into a liking for coffee. That is entirely absurd, and the wonder is that the idea should have been entertained at all by men of common sense, among which we are sure the Spanish or Portuguese speaking public would like to be classed, but we are not sure always with success.

\* \* \*

**Stenophylla Coffee.**—The coffee known as the Highland coffee of Sierra Leone, was introduced to the West Indies about six years ago, through the instrumentality of the Royal Gardens, Kew. It is quite distinct from either Arabian or Liberian coffee, and is admirably suited for cultivation from a sea-level up to an elevation of about 800 feet. The botanical name (*Coffea stenophylla*), that is “narrow-leaved coffee,” is a good name, as by this character and its small, dark purple berries, it is readily distinguished from all other coffee. “Stenophylla” coffee has nowhere been more successful than under Mr. Hart’s care at the Royal Botanic Gardens at Trinidad. It has grown there into tall, handsome bushes, 10 to 12 feet high, loaded with berries. It is singular that it has shown a marked tendency to be cross-fertilized by Liberian coffee, so that in the second or third generation its original characters have almost entirely disappeared. If this coffee is desired to be kept distinct, it must therefore be cultivated away from other coffee plants.—*Barbados Agricultural News*.

\* \* \*

**Coffee at Peridenya Gardens.**—The Report for 1901 says:—In the grafting experiments with coffee, I have been

principally concerned in determining the ease with which one kind can be grafted on to another. We have tried Arabian, Liberian, *Stenophylla*, and hybrid coffees with one another, sometimes having the stock an established tree, at often times in bamboo pots. The best results have been obtained with Arabian stock and Liberian scion, and with these reversed.

\* \* \*

Cablegrams received in America from Santos reported that the receipts of coffee, according to general expectations, will decrease rapidly.

\* \* \*

Trade in mild coffee is demoralized, says the *American Grocer*, and as the time passes on the demand for fancy grades is steadily decreasing. The chief reason assigned to this state of affairs is that jobbers and roasters prefer to push cheap coffees and thereby enhance the profits of the grocer.

\* \* \*

With overwhelming supply and predictions of a heavy yield for 1903-04, there is, says the *American Grocer*, no encouragement for believers in higher prices. Low grades continue to command a premium because they are relatively scarce. Mild sorts steady, with demand moderate.

\* \* \*

**Free Moving of Central American Coffee.**—In their circular customary at this time Henry Nordlinger & Co., New York, point to the free movement of Central American coffees. Stocks, they say, may be expected to accumulate in the next three months, and lower prices should follow.

\* \* \*

**Somaliland Coffee.**—In his report for 1901-02 the Ag. British Consul General states that coffee is exported almost entirely from Zaila; a small quantity finds an outlet at Bulhar. The total value of exports during the year was Rs.8,44,386 which shows a considerable decrease.

\* \* \*

The *Central African Times* has received from Messrs. H. J. Gardiner & Co., London, a report of the 1902 coffee crop of British Central Africa, in which they regret a decrease in the crop of 1902 as compared with that of 1901. The report continues—“The berry again was very small in size, and the crop shows a greatly falling-off in both quality and appearance, especially in some of the well-known marks. Several parcels from new gardens, however, brought top prices, having both colour and size. There was very little bold and fine coloured coffee. Taking the crop as a whole, the quality has been much inferior to any of the previous crop. The market has been flat throughout, owing to the slackness of demand, increasing stocks in consuming centres, and cheapness of Brazilian coffee. It is difficult at present to forecast values for the coming season, but the prospects point to another large Brazil crop, probably larger than the present one, and good average crops are expected from all producing countries with the exception of Guatemala.”

\* \* \*

#### Is Coffee Harmful?

“Is it harmful?” people ask.  
Do “mikes” in the liquor bask?  
Should it have the doctor’s ban?  
Is abstention our best plan?  
Yes, it’s harmful, that is sure,  
Whether tampered with or pure—

Harmful to the ills that make  
 All thin-blooded mortals quake;  
 Harmful to the imps that grip  
 Nerves in tongs that seldom slip;  
 Harmful to the heavy fits  
 Which at times benumb the wits;  
 Harmful to the trade in gin  
 And most things that lead to sin;  
 Harmful to the coffin men  
 And the quacks most persons ken;  
 Harmful to the health crank's fads  
 Which so often scoop our "scads."  
 Yes, it's harmful to much folly,  
 But it's good to drink, by golly!—*Merchants' Review.*

\* \* \*

State Dairy and Food Commissioner Ankeney has caused the suits against the Arbuckle Coffee Co., brought by his predecessor in the courts at Dayton, Ohio, to be dismissed. The principal reason for his action is that their prosecution would involve new analyses, the testimony of former chemists of the department not being available at this time. The question in the cases is whether the glaze over the coffee used in the brand known as "Ariosa" is an adulteration within the meaning of the Ohio statutes. Ankeney, it is said, may renew the suits, and their dismissal does not mean that he regards the alleged deception as legitimate.

\* \* \*

**To Manufacture Liquid Coffee.**—Application has been made in Atlanta, Ga., for a charter for the Schofield Coffee Co., with a capital stock of 30,000. The petitioners are C. J. Kamper, T. J. Kelly, Charles A. Wickersham, Martin Amorous, R. H. Brown, Robert Sharpe, E. H. Frazier, H. T. Rodman and W. L. Campbell, of Atlanta, and L. C. Cole and E. H. Schofield, of Toledo. The business of the company is especially the manufacture of liquid coffee by the Schofield method.

### TEA NOTES.

**\$250,000, Fund Suggested.**—The members of the new Association will need to show a greater interest than is expressed in a willingness to pay a higher annual due than five dollars to improve trade conditions. A fund of at least \$250,000 should be raised, and spent in advertising tea and how to brew it, under the direction of the best obtainable expert, for tea is the cheapest available beverage, especially British-grown tea; but the American people do not know how to brew it properly, and hence its use does not increase as fast as it should.—*American Grocer.*

\* \* \*

As the Association is devoted to the promotion, and in no sense to the restraint of trade, it has an especial claim to public respect and confidence.—*N. Y. Journal of Commerce.*

\* \* \*

**The Coming Japan Crop.**—The Japan tea crop is expected to be late this Spring. So say cable dispatches.

\* \* \*

Java teas are steadily growing in favour in Germany. Their quality has shown improvement and they are cheap.

\* \* \*

**What Advertising has done for Ceylon Teas.**—The total area of tea gardens in India is 530,000 acres, and proprietors and others representing 416,000 acres have now declared themselves in favour of the impost, which, under the Bill, is fixed at a quarter of a pie per pound. A strong argument in favour of the export duty, says the New Orleans *Picayune*, is that a similar plan has proved very beneficial to the Ceylon tea industry. In 1903, in order to provide funds for a suitable show of Ceylon tea at the Chicago Exhibition, a cess of 10 cents on every 100 pounds exported was levied, at the

request of the planters, and it proved so satisfactory that in the following year it was resolved to continue the plan and to raise the rate to 20 cents, in order to extend the efforts to other markets. The system is still in force in Ceylon, and the rate has again been raised to 30 cents. In 1896 foreign markets took 12½ per cent. of the Indian crop, as compared with 21½ per cent. of the Ceylon crop; in 1900 17 per cent. of the former, as against 33 per cent. of the latter; and in 1901 18 per cent. of the India crop, as against 40 per cent. of the Ceylon crop. We may point out that, apart from percentages, which may be misleading, the exports of Indian tea in 1902 to markets outside the United Kingdom, according to statistics published the other day, amounted to 41,500,000 pounds, in round figures, as against about 64,250,000 of Ceylon tea. The extraordinary increase in the demand for Ceylon teas in markets other than the United Kingdom is attributed mainly to the money spent out of the Ceylon tea cess in introducing the tea to foreign markets.

\* \* \*

Further large quantities of Congou teas have been sold for export to London, says the *American Grocer*. There was talk among brokers that several large English firms have standing bids here, which, however, are 3c. per pound below sellers' views here. At the bid prices, the above English firms, it is said, are ready to clean up all supplies of Congou teas in this market.

\* \* \*

New crop Japan was expected to arrive in the States in the early part of May. Formosa and Congou would arrive about the same time, while new crop Ping Suey will not come in until June.

\* \* \*

Messrs. Smith, Baker & Co., of Yokohama, report that Canadian takings of Japan tea for the coming season show a shrinkage of 2,000,000 lbs. This may be attributed to the growing taste for British-grown greens.

\* \* \*

**The U. S. Tea Market.**—More activity has been met in tea market, says the *Tea and Coffee Trade Journal* of 7th ultimo, but not sufficient to effect any change in market quotations. These continue under quiet conditions modified by the barren supply and the constant inquiry, especially for green teas. Sales are reported for export of Congous, as has been the rule for some weeks, and a transaction of 2,500 packages Formosa has been announced. On the continued export demand for Congous the tea is firmer on the old basis of prices. Congous are certainly in an interesting situation and the trade, especially the holders so uncomfortably supplied, are breathlessly awaiting a marked advance. They even look for a rise when the markets open this Summer expecting England to be a factor in the bidding this year, thus working for increased inquiry; may be also the low prices hitherto prevailing shall operate to provide a restricted crop.

It is interesting to record that Japans are stronger in tone in Canada on the rumour that most of the new crop will be taken by United States houses.

A London advice says that owing to the policy of the importers in accepting easy rates for China growths, a good business has again been done in fair grades up to 5d. per lb. The market is broadening out, and orders are coming in from all quarters of the trade for small lots, owing to the value now offering in Monings and Panyongs from 4½d. to 5d. The

quality is good, and present prices are under rates ruling this time last year, when Indian and Ceylon leaf was nearly 1d. per lb. lower than now. Luckily supply has been plentiful, and quite 20,000 half-chests of the lower classes have been taken by the trade within the last six weeks without any material rise in value. Stocks, however, are now getting low, and if demand continues rates are bound to go up. Exporters having been taking small parcels of medium to fine Monings and Panyongs at under importers' cost, and we shall be in a very healthy position when the new season's arrive next July, as the stock of the better grades will be exhausted. Oolongs under 11d. per lb. are difficult to find, and are wanted for America. All scented and fancy kinds are quiet and unchanged in value. Green tea sales passed flatly. Good liquoring teas, however, are wanted, and rule firm. In Indian tea there is increased activity in the demand, lower grades tending dearer. There is none too much tea to go round, and the larger buyers find themselves unable to keep out of the market. Competition therefore has been keen for common leafy grades. Medium grades, which lately have been more or less neglected and have formed a good proportion of the withdrawals, continue of heavy sale at barely the former currency. There was a much smaller supply of good and fine teas, but less desire to buy was apparent. Dusts are sought after at hardening rates. In Ceylon tea there was an active demand for common leaf teas, which advanced a  $\frac{1}{4}$ d. per lb. Pekoes attracted great attention and medium Pekoes were likewise in request at hardening rates, common broken, along with fannings and dusts, were all on the up line.

\* \* \*

**Tea Facts in America.** By THOMAS A. PHELAN, *President of the National Tea Association of the United States.*—Before 1897 there was practically no protective legislation for tea in the United States, and the nation was a tea dumping ground for the refuse brands unsaleable elsewhere in the world. Throughout the South, where the majority of the buyers and handlers were not experts, whole sections and states practically gave up the use of tea because of its inferior quality, for they did not know where to turn for a remedy. Many herbs, some of them harmless, but having no relation whatever to the tea-plant, were shipped by the million pounds and sold as tea. By some chemical process they were colored so that to the eye they were identical with the genuine article. Many of them were not injurious to health, but they had no more right to be sold as tea than would, for instance, a paper imitation of a beefsteak painted red. They were green painted weeds, and the country was flooded with them for so long that even now American consumption of tea is still as low as a pound *per capita* per annum while in Canada it is four pounds, in England six, and in Australia seven. In Australia, you see, they try to out-English the English.

#### WHAT WIVES DON'T KNOW ABOUT TEA.

Most women think they know everything about tea, or at least enough, but, as a matter of fact, I don't believe there is any other single article that appears on American tables about which the consumers know so little. So far as the average housewife is concerned, she simply knows that she likes this brand or that, black tea or green, and in the matter of making she is doubtless as ignorant.

Now, the fact is, that of the so-called black tea alone there are at least five hundred varieties, with as many flavours as are known to the most luxurious flower garden.

The greens and Japans might each be subdivided into a like number.

One of the black teas, the so-called English breakfast, a name unknown incidentally in either China or England, is really the Congou, of which alone there are at least two hundred different flavours and grades.

Other varieties of "black" tea are the Oolongs from Foochow and the island of Formosa and the Ceylons and Indias. All these are sold as "black tea," but there is as much difference in taste between an Oolong and a Congou as between coffee and chocolate, or whiskey and claret. The Congou, Ceylon, and India are fermented in their preparation or allowed to "stew in their own juice," so to speak, which gives them a heavy, malty flavour. The Oolong is prepared like green tea, without fermentation, and is fired almost immediately after picking, giving it a bright, toasty character, which results in a light-colored infusion. They are equally good, despite their differences.

#### FAVOURITE TEA OF NEW YORK AND BOSTON.

As a rule the English, Irish and their descendants drink the Congous, while the older residents of America, and especially of New York and Boston, prefer the Oolongs.

The variations in soil and temperature under which the different teas are grown produce the radically different flavours so dear to the true tea-lover and so inexplicable to the uninitiated. The North China Congous, for instance, are subdivided into fifty districts, the leaves from each having a flavour differing as distinctly from the others as does the Bartlett pear from the Seckel, and of each variety there are half-a-dozen or more different grades. The Spring, early, and late Summer and the Autumn gatherings all have different flavours, which the expert can distinguish blindfolded. In all there are about 1,200 different grades and specimens of tea, and it would take more than a lifetime to become so expert as to be proficient in passing upon them all.

The complexity of the tea business is thus made apparent and understood, and is sufficient answer and commentary to the average housewife or other consumer of tea in dispensing so lightly their orders for an article they regard as simple as the A. B. C. Perhaps one woman in a hundred knows how to make tea as it should be made. Properly prepared, it can be chemically demonstrated that tea has no more injurious effect upon the nerves than has cocoa or even water. Cocoa, indeed, unless properly prepared by the manufacturer, contains an amount of cocaine which decidedly impairs digestion if taken for any length of time.

#### RIGHT TEA BREWING.

Tea, to be a pure tonic and wholly harmless, should be made with water which has not only "come to a boil," but has boiled hard for at least five minutes. The leaves then should be steeped for about five minutes, by no means more than seven. Previous to that time the tonic property only is developed; after seven minutes the tannin becomes operative and the decoction more injurious with the increase of time. You can imagine the state of affairs in restaurants and such places where the tea is made in the morning, to last all day, or even a very few hours. The English have hit upon the ideal time for drinking tea, at breakfast and between luncheon and dinner. Taken then it is the best sort of a tonic.

A standard of merit in tea is under present legislation set by a board of experts appointed by the Secretary of the Treasury. This board deposits in the custom houses of New York, San Francisco, Chicago, etc, samples conforming to these standards of all teas imported. Duplicate samples are supplied to all importers and dealers, and they are required to submit samples of all their goods, swearing that such samples "represent the true quality of each and every part of their invoice."

#### DAYS OF MERCHANT PRINCES.

Such legislation was not necessary in the days when the tea importers were the merchant princes of New York. But for the last half century there has been a steadily increasing depression in the tea trade, directly traceable to the widespread deterioration of the commercial article. Out of sixty-five old houses in New York in 1865 only five or six were in existence in 1890.

Since the law of 1897 went into effect only tea that is tea has been admitted into the United States. Inferior grades, of course, are allowed, just as we do 25-cent silk as well as that which cost \$25 a yard, but though poor it is all genuine tea. The retail price to-day is no higher than it was back in the '70's and '80's, when the country was flooded with adulterations. The individual consumer pays the same money, only now he gets his money's worth.—*Tea and Coffee Trade Journal*.

\* \* \*

The National Tea Association is made up of the best houses in the business, including the large wholesale grocers of this city, but it has its work cut out for it in the instruction department, for all's tea that comes into many a grocer's caddies, not to mention the popular delusions on this subject. It is desirable that the public shall be taught what tea really is—good tea—and how to procure it and steep it. The large German section of the population will perhaps have to be assimilated before tea gets such a chance as coffee has. Your true German family drinks coffee at at least two meals and also between meals, some of the women consuming as much as ten or a dozen cups a day. What show has tea under such conditions? Well, for one thing it is cheaper than coffee, and as regards the strong, full-bodied flavour of the coffee ordinarily drunk, the same can be imitated quite successfully by the use of skilful blends of India and China leaf or Ceylon and China leaf. To attempt to make converts to tea among excessive drinkers of coffee, and do it with delicate Japan leaf, is to attempt something that is almost impossible.—*Merchants' Review*.

\* \* \*

A valued London correspondent whose effective writings in these columns have recently attracted attention, writes to us with reference to the rise in prices and the fear that the duty will not be reduced as follows:—

"This is becoming an awkward matter for those who have only a large retail sale of the *lowest priced* tea, as their profit has practically disappeared, while to those who have built up a business in *good qualities* at higher prices it is very acceptable.

"There is very keen rivalry between the 'new men,' the vendors of cheap tea, and the old-fashioned dealers and grocers who have tried to maintain and foster a more remunerative sort of business. The latter have gone to the wall during the last twenty years by degrees, owing to the continuous decline in the market value of tea consequent

upon its increased supply, but they have held on tenaciously, and it looks as if trade might in some degree return to them. That will be a good day for producers.

"It is not improbable that before long you may hear of a different policy being adopted; of retail prices being raised; and of a general awakening to the fact that it pays better to sell good and fine tea than common at cats-meat prices. But the low rates quoted by the new men led to the immense consumption of recent years, and if retail prices should be substantially advanced less tea will be used."

If the result of the stress in the trade resulting on the present statistical position should be a general rehabilitation of a taste for good teas instead of a hankering for cheapness, it will prove a good stroke for the industry in general. When bed rocks prices are abolished, perhaps the British people will try and see that they got their money's worth in quality. They can hardly grumble at the quality of tea that they purchase for a shilling a pound including duty. If prices are raised they will doubtless consider they have a right to be more critical. Our correspondent has more to say and his remarks on the American situation give a foretaste of developments friendly to Indian tea:—

"Advices are to hand of large removals inland from the American Warehouses. This is a matter to be most carefully watched. There is something going on in the American tea trade betokening a change of taste, and it may lead to tea being used as a beverage instead of an occasional luxury. In any case, increased consumption should follow the cheapening of supply to the extent of 5d. per pound."—*Indian Planting and Gardening*.

\* \* \*

**Ceylon Tea Memoranda for 1902.**—Messrs. Wilson Smithett's annual review of the home tea trade records a rise of .05d. in the general average, but this is still .40d. less than in 1901. The highest averages for the year, taking them in the order of the estates' output, to the home markets, are as follows: Talawakelle, 427,500 lbs., 10½d.; Portmore, 279,000 lbs., 10d.; Henfold, 233,000 lbs., 10½d.; Mount Vernon, 185,000 lbs., 10d.; Ferham, 129,500 lbs., 10½d.; Goatfell, 124,500 lbs., 1s. 0½d.; Diyanillakelle, 94,500 lbs., 10½d.; Sutton, 87,500 lbs., 10½d.; and Nutbourne, 68,500 lbs., 10½d.

\* \* \*

**Ceylon's Import Duty.**—"Archer" writes in the *Ceylon Observer*:—"The Ceylon Chamber of Commerce are again moving against the abolition of the import duty. The more's the pity. There are many reasons why the duty should be abolished. The pure Ceylon tea cry is pretty well worn out now. Blending has become general everywhere. In Ceylon we are prevented from blending because of this prohibitive duty. Colombo is from her geographical position naturally adapted to become a great tea-distributing centre, and serving America, Australia, and Russia as she is, it will—I fancy—become absolutely necessary for her to do away with the duty before very long. Of course, when Pure Ceylon tea was wanted it would still be easy to supply it. The growth of Colombo and the expansion of its trade, I believe, is being seriously retarded by this prejudice against the abolition of the import duty; even Travancore teas cannot be sold in Colombo, except in bond, until it is removed while it is, I believe, a dead certainty that the duty would not be removed very long before large blending establishments would be

started. It would be far more convenient to have teas blended here than in London. There is a growing demand for these blended packet teas. In South Africa, for instance, there is very little tea sold except in packet. There is a large field there for Ceylon to capture as soon as the duty is abolished!"

"Archer" hits the bull's eye!

\* \* \*

**Ceylon Tea Shipments.**—The decrease in tea shipments continues. April shows a reduction on last year of 484,987 lbs., on a total of 8½ millions exported. For the four months just ended the decrease amounts to 6,388,788, the only increase being in February, when 316,878 lbs. more were sent than in the corresponding month of 1902. The Chamber of Commerce estimate of export for May is 8,500,000 to 9,000,000 lbs.

### NOTES.

**Otto of Rose.** The exports from Bulgaria were valued at 3,708,000f. for 1900, at 2,141,000f. for 1901, and at 2,609,000f. for 1902.

**Java Cinchona Bark.** The shipments from Java during the first half of April were 631,000 Amsterdam lbs., as against 470,000 Amsterdam lbs. at the same time last year.

**Indian Tea Shipments.** According to the figures of the Calcutta Customs, the exports of tea to the United Kingdom for April were 243,265 lbs. against 641,296 lbs. in 1902.

**Colombo Tea Sales.** At the public sale of tea at Colombo on 28th ultimo 16,418 packages = 1,310,053 lbs. were offered, of which 12,312 packages = 977,156 lbs. were sold.

**The Indian Tea Association.** During the absence of Mr. W. Parsons on six months' leave, Mr. H. M. Haywood will act for him as Secretary of the Bengal Chamber of Commerce and as Secretary of the Indian Tea Association.

**French Duty on Pepper.** An intimation has been received from His Britannic Majesty's Embassy at Paris, that, by a law passed on the 29th March, 1903, the French Government has increased the maximum and minimum customs duty on pepper imported into France, from 400 francs and 208 francs to 450 francs and 312 francs per 100 kilograms, respectively.

**India's Entomologist.** Mr. Maxwell Lefroy, the Entomologist appointed by the Agricultural Department of the Government of India, arrived in Calcutta last week. Mr. Lefroy's experience has been largely gained in the West Indies, and, though the insect pests which trouble agriculturists in India differ considerably from those in that quarter of the globe, Mr. Lefroy's training in a tropical country will prove most useful to him.

**The London Tea Market.** Cabling to Colombo on 30th ultimo Messrs. Gow, Wilson & Stanton reported that buyers were operating very cautiously, price of

Pekoe Souchong was unchanged but average ½d. down, at 7½d. Reuter said the tone of Ceylon tea was steady but also gave the average as above, ½d. down. Of Ceylons 24,000 packages were sold out of 27,000 offered; Indian offerings amounted to 26,000 packages, sales to 31,000. Average of Indians 7½d. (½d. down).

### Cocoa at Peridenya Gardens.

The Report for 1901 says:—We have been successful in grafting one variety on to another in about 30 per cent. of the experiments. In layering and reproduction from cuttings much labour has been spent. The only successful cuttings have been made in soil which is very sandy, practically free from all leaf mould, and supplied with running water at irregular intervals. In one set of cuttings only those situated along the course of a running stream, and therefore subject to occasional miniature floods, were successful. This is an important point to note. The cuttings were taken at all ages, but only the woody ones about as thick as a man's finger were of any use. Young twigs with young and mature leaves were tried in pots of sand covered with glass bell jars, but gave no successful results.

### Not Grocers.

Mr. John Wanamaker runs a high-class restaurant in Philadelphia, called the Dairy. On the menu appears the following: "We are not in the grocery business, and do not expect to be. The people who refer our Dairy often ask what kind of coffee and what kind of tea we use, and whether they can buy cakes similar to those we serve. We cannot be outdone in courtesy, and having this daily experience, every morning we pack a few cartons of one pound each of the same coffee that we serve. The packages are of three kinds—whole coffee, the granulated, and the pulverized, to have them ready for those who want them. The teas that we are serving are of four different kinds, known only to ourselves, and in certain instances are especially selected and prepared for us. These are packed in half and one-pound foil-lined packets, that we may quickly respond to the wishes of our patrons. This is not a matter of business, as we really prefer that you should find at your grocery stores everything they sell; but we do this simply as a cheerful courtesy."

### GENERAL ARTICLES.

#### COFFEE IN LONDON.

There was some small reduction in stock on the 1st instant both in Europe and the total of the world's supply, but hardly sufficient to have any effect upon prices, says the *Produce Markets' Review* of April 11, 1903. The latter was reduced by only 5,180 tons, but with a total of 728,850 tons, such an amount is hardly appreciable. A greater factor has been the report that the Bill as to the destruction of 20 per cent. of the Brazilian crop had been passed, but there are, we think, many difficulties in the way of carrying out such a law. The terminal market, however, promptly responded to the rumour, and the fact that the previous lowest record had been touched here, and even passed in both Havre and New York, brought many speculators into the market, and quotations rapidly advanced 1s. from the lowest point, though closing not at the best. At the auctions a liberal supply has been offered, but, with a good demand, prices are often dearer, the second size of Costa Rica being fully 1s. higher, making the bold size still relatively much the cheaper. Only a few really fine parcels of Mysore have been offered, and for these very full prices were paid, but the lower grades continue to sell with difficulty. The public sales will not recommence until next Thursday.

## TEA IN LONDON.

**INDIAN TEA.**—As there will be no more public sales until the 20th instant there was, says the *Produce Markets Review* of 11th ultimo, a good demand at the auctions on Monday, and a fair proportion of the 29,800 packages were disposed of. The principal competition continues for the grades from 7½d. downwards, the lower teas being firm to dearer; and, should there be any reduction in the duty, a decidedly upward movement in values is most probable. Providing there should be no change in the customs charges the position is such that the market will remain very strong, as the supply, which has not been the case for many seasons past, is likely to be well within the limits of the consumption. The public sales comprised 29,800 packages consisting of a fair assortment of most kinds. The lower sorts were the most keenly bid for and brought prices quite equal to last week's rates, and in some cases advances were established. For teas ranging over 7½d. the market showed irregularity, and weakness prevailed for the less desirable sorts, but for the more useful lots there was no quotable change in values.

**CEYLON TEAS.**—The quantity brought forward at the auctions on Tuesday showed a considerable falling-off, but, notwithstanding this, a quieter tone prevailed generally. Although no alteration in prices can be quoted in the lower descriptions, Whole Leaf Teas from 7d. downwards remaining firm, the better kinds occasionally sold in favour of buyers. Medium Broken Pekoes also at times showed weakness, but this would be accounted for by the inferior quality which, with a few exceptions, was noticeable in these kinds. Finest descriptions likewise met a rather irregular enquiry, and in some cases lower rates had to be accepted. At the public sales 17,940 packages were brought forward, of which about 2,700 were withdrawn. No further auctions will be held until the 21st instant.

**CONGOU TEA.**—There have been no public auctions of China Tea, either Congou, Scented or Green, and consequently the market has been inactive, no business of any importance being reported privately. There has been some enquiry for Red Leaf descriptions, and prices are somewhat firmer; other kinds remain unaltered.

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Extremes during the week ending March 20th, were 11½d.—12¾d. or 90 d/s Bank paper and 11¾d.—12¾d. for private.

The average Bank 90 d/s counter drawing rate for the week comes out at 11¼d. the corresponding sight rate being 11¾d. against 11¾d. the average sight rate of the *Camara Syndical*.

**March 21st, 1903.**—Ninety days' Bank rate on London opened on Monday, 16th, at 11¼d., fell to 11½d. on Tuesday, rose again to 12¾d. on Thursday and closed this evening steady at 11¾d.

Although much less than previous to the rise of exchange coffee shipments revived somewhat and their value was £83,000 over the previous week's, it was still £107,000 under that of the corresponding week's last year. During the early part of the week bills were offering freely at Pará, and as the Banco da Republica appeared to be out of market, rate revived a bit, but relapsed towards the end of the week in spite of the efforts of the bulls to revive the Sorocabana and other *histories*. No doubt rubber entries were rather later than usual this year, but as will be seen by the table we published in our last issue, we are rapidly approaching the period when, if it is not already the case, the balance of payments must be against us. Imports during the last quarter of 1902 and beginning of 1903, for which payment is now due, ruled about £2,000,000 a month which, with £400,000 for Government and £100,000 for Companies and Provincial Governments' requirements, gives £2,500,000 per month to be paid for without counting private remittances of any kind. In April exports supplied only £2,911,000 in 1901 and £2,641,000 in 1902: in May they gave £2,618,000 and £2,811,000 respectively, and in June when the supply of bills fell below the demand for imports and fixed payments they gave only £2,227,000 and £2,131,000 respectively. There seems every probability of those conditions being repeated in 1903, so that, even without taking into consideration at all the demand for private remittances, the balance of payments when supplemented by extraordinary resources or by speculation will, during the next three months be

against the country. Besides, the speculative selling for April and May does not appear to have been liquidated and will weigh on the market for some time to come.

**Coffee.**—Rio, 21st March, 1903.—Joint entries at Rio and Santos during the week ended 20th instant were 7,199 bags less than for the preceding week, but only 1,057 bags less than for the corresponding week last year, of which they represented 95.2 per cent.

Up to 20th instant entries for the current crop were 2,768,924 bags less than last year's, of which they represented 78.7 per cent.

Coffee shipped (*embarques*) were larger again, being 48,808 bags more than the previous week's but 50,706 less than last year's.

Stocks consequently increased and on the 20th instant were 104,383 larger than on the previous Friday and only 255 096 less than on the corresponding date last year.

Shipments at this port were very heavy being more than double the corresponding week's last year, whilst at Santos they were less than half—a curious commentary on the coffee bill now in discussion at S. Paulo.

Declared sales were also larger being 16,000 in excess of the previous week's but 32,000 under last year.

Prices fell here from the average of 4\$539 per 10 kilos. for No. 7 to 4\$516 and at New York from 5.60 c/ to 5.61 c. as against 5.68 c/ for the corresponding week last year.

**SANTOS, 20th March, 1903.**—During the whole week our coffee market has been as uninteresting as possible. Consuming centres have practically kept out of the market and as there is really no short interest here, because exporters for some time back considered it to dangerous to sell ahead, business has been very dull and limited. Commissarios are only giving way very slowly indeed and exporters have to pay for their Superiors 4\$400 to 4\$000, being 200 réis margin on Europe. The continued heavy receipts (about 110,000 bags here and more yet in Rio) and *passagens* (about 114,000) also contribute to prevent a better feeling in the market and everybody is complaining.

The business transacted does not differ much from that of the previous week. Specialities are maintaining their prices but other qualities are 100 réis to 200 réis lower. Declared sales amount to 74,000 bags. Europe paid for Superiors from 28s. to 29s and for Good Average 1s. 3d. to 1s. 6d. less. Shipments were small and our stock increased by 41,000 bags and now amounts to 1,002,074.

The Pauta went down 10 réis, being 430 réis.

The quantity of coffee offered is proportionally small, but with the first animation that may come large quantities will be sent into the market. The exchange fluctuations from 11 ¼d. to 12¾d. temporarily influenced the market badly.

**The Coffee Crisis.**—The letter of Sr. Candido Lacerda to *O Estado de S. Paulo* is the most sensible contribution yet published on this thorny subject. Mr. Lacerda says out-right that what is wanted is to reduce the cost of production and the only way of doing it is to cut down 20 to 30 per cent. of the trees, as we recommended ourselves. The advantages that such a proceeding would ensure, he enumerates as follows: (a) a large area being thus freed for plantation of cereals by the colonists, without the necessity of new clearing or planting more coffee, (b) reduction of the cultivated area would result in an immediate excess of supply of labour over demand and bring prices down, equalizing them all over the State; (c) the fall of wages would facilitate the introduction of the share system between owners and labourers.

In 1901 there were 266,000 hands working on the different *fazendas*. To reduce wages to half by increasing their number it would, Mr. Lacerda says, be requisite to import 80 to 100 thousand hands. As that is impossible, it is better to cut down 20 to 30 per cent. of the trees. In 1901 there were 525,000,000 trees over and 135,000,000 under four years.

Ten years ago Sr. Orozimbo Amaral proposed to tax new planting at the rate of 1\$000 per tree. It was laughed at the time, but experience shows he was right and that all we can do now is to cut down again some of the trees we have planted in excess.

In the Senate (S. Paulo) the bill has been much more severely criticised than in the lower chamber, but as it appears to have become a party matter it will, with some modifications, probably be passed. Senator Paulo Egydio moved that a representation should be made to the Federal Congress on the necessity of adopting measures of a general nature that would comprehend all three coffee States and not S. Paulo only, including indemnization

of planters for any special taxed levied on coffee whether in money or in kind. The proposal was referred to Committee. Sr. Ezequiel Ramos, supported by other Senators, complained that the bill did not satisfy planters nor interpret the intentions of the Planters' Congress. What they recommended was elimination with indemnization, a very different thing to elimination pure and simple, which will make the planter's position worse than ever. In addition to the 11 per cent. already paid in export duties and 1 per cent. Municipal tax, comes this proposal of 20 per cent. so that the planters will be mulcted of 32 per cent. of his produce in taxes alone. Besides, he pays about 30 per cent. to railways for freight, a transit tax of about 2 per cent. to commissarios 3 per cent., in all 67 per cent. of the gross value of his coffee for taxes, freights and commissions, and will only have 33 per cent. to cover expenses of production! Such a tax will be the last nail driven into the planter's coffin and is, says Sr. Ramos, sure to provoke resistance. Sr. Ramos enquired: if the destruction of 50 per cent. of the yield in S. Paulo by the late frost (in August) has failed to affect prices, what can be expected of the elimination of only 20 per cent.? Other planters protested that the estimate of 50 per cent. for damage by the frost was too high, but, however it may be, prices could scarcely be affected much until the damage is effectively confirmed. If when the new crop begins to arrive it will be seen that entries are really so much smaller, prices would respond quickly enough without any necessity of elimination, and the fact that planters themselves are in its favour seems the best proof that such rumours are exaggerated. Sr. Ramos asserted that in the Riberao district, to take an example, there were 1,000,000 trees of two years and 1,000,000 of four years. The same occurs all over the state, new plantation being very considerable everywhere. In spite of the crisis and low prices, on a single plantation 600,000 new trees were planted in 1902, so that even if 20 per cent. are eliminated now it will be but a drop in the ocean compared with the increase that must be counted on from young trees coming yearly into production.

When we went to Press the Coffee Bill was still being discussed in the Senate at S. Paulo a large number of amendments having been proposed. It is, however, probable that in one form or another it will become law.

**Para.**—The rubber crop from the acre is expected to reach 1,700 tons this year.

**Planting Condition in February.**—The *Boletim da Agricultura* for February publishes the following reports of the inspectors:—

**2nd District (Campinas).**—Good weather in February and trees with good aspect, the fruit being well developed but ripening somewhat irregularly.

**4th District (S. Carlos do Pinhal).**—An early crop and picking will begin in April but the crop will be small, large quantities of the berries having fallen from the trees specially at Jahu, Pedras, S. Carlos, and Jaboticabal.

**5th District (Sorocaba).**—In spite of the hot weather there is nothing startling to report. The berries are developing in a regular manner and are already well grown and beginning to ripen.

From the other districts nothing of interest is reported.

## PRODUCE AND PLANTING.

As we briefly announced last week the Chancellor of the Exchequer has disclaimed any sympathy with the free breakfast table idea, and it may therefore be presumed that he is against free tea. This is a most convenient political doctrine for a Chancellor of the Exchequer to hold. The tea duty is an easy form of adding to the national Exchequer, and to feel that he is out of sympathy even with the idea of its exemption from duty must be comforting to Mr. Ritchie.

Apart from the improvement it is making in international relationship and the unalloyed pleasure which it is giving to two countries, the King's visit to Paris is going to prove a good thing for trade. It is giving a fillip to the sale of English manufactures, and may indirectly increase the demand for tea, which is now regarded in France as a product as dear to the British as the more solid joys of roast beef.

That well-managed and prosperous concern, the Standard Tea Company of Ceylon, is in the happy position of being able to pay

a dividend of 15 per cent. for the eighth year in succession. The tea crop for the year amounted to 1,183,972 lbs., against 1,105,996 lbs. for 1901, from 2,188 acres, considered in full bearing, out of a total of 3,466 acres. There are also 296 acres in partial bearing and some 25 acres in addition planted with tea.

Prices of coffee fell last week to nearly the lowest level on record for Brazilian, the only previous occasion within recent years when a lower limit has been reached being in September, 1899, when good average Santos was sold at 24s. 9d. per cwt. For several seasons past production has far exceeded consumption, but it is during the past three years that supplies have so enormously increased, the Rio and Santos crops alone last season producing 15,522,000 bags; while already this season receipts amount to 10,700,000 bags, and it is probable that about another 15 per cent. of the crop remains to be delivered before July 1 next. The world's visible supply during last month underwent a reduction of 5,180 tons, but still reaches the formidable total of 728,850 tons, which compares with 113,000 tons at the end of June, 1901, when the crop only reached 5,308,000 bags. It is very patent, therefore, that the trade is suffering from over-production, and unless supplies by some means can be reduced, there is little hope of a substantial recovery. Brazil is entirely responsible, production in other countries, indeed, except Java, having during recent years tended to diminish, and therefore it is to be hoped that the efforts now being made by the Brazilian Government to reduce supplies by the proposal to destroy the commoner qualities will prove successful.

We notice that the "Salada" Tea Company are advertising in some of the American papers their "Ceylon and India tea" as "preferable to coffee because it has no liver-disturbing qualities." The "Salada" Company clearly understands the art of advertising.

The Colombo correspondent of the *Times*, in a communication dated March 19, says, referring to the financial good fortune which has marked Sir West Ridgeway's administration, says:—"No previous Governor has had such a run of financial prosperity. The total of the general revenue for 1902 was Rs. 27,166,865, or about 700,000 rupees in advance of the estimate and of the revenue for 1901, though a little below the collection for 1900. The figures for the total trade are not yet published; but we have all the staple exports, and know that of black tea 146,194,397 lbs. were shipped last year, besides 2,796,844 lbs. of green tea. The great tea-growing industry is gradually recovering from the depression of the past two years, and a new branch in 'green tea manufacture,' specially for the benefit of consumers in the United States and Canada, is growing to some importance. The reduction of the Imperial duty by the War-tax of 2d. would give an impetus to consumption in the United Kingdom, and there can be no doubt of the abnormal percentage of a sixpenny duty on the average value of the product taxed. Coffee and Cinchona bark have sunk into insignificance in our exports; but 'cocoa' (cacao or the chocolate plant) and cardamoms (spice) figure largely with 60,455 cwt. of the former and 615,822 lbs. of the latter. Cinnamon, the immemorial spice of Ceylon, keeps up bravely, besides some 'wild cinnamon,' no doubt used as a condiment for artificial food for cattle, etc. The products of the 'coconut' palm—in oil, desiccated coconut, copra (the unbruised kernel), pomæ (the cake after crushing out the oil), coir fibre and coconuts amount to a large proportion of our exports, and the figures for 1902 are well up to the average; indeed, the shipments, 512,498 cwt., were the largest on record; and that is true also of the 'desiccated' product, of which 16,227,565 lbs. were shipped last year. Of plumbago—our only mineral of commercial importance—the export, 495,501 cwt., was the largest in any one year save 1899, when, owing to a great 'war' demand (in manufactures) and high price, the shipments ran up to 616,385 cwt."

On the subject of ramie or rhea, Mr. D. Edwards-Radclyffe writes:—"Could you not draw the attention of your readers to the possibilities of 'ramie,' or 'rhea'?" Our Empire is vast, and there are millions of acres awaiting cultivation, but in these days of competition the difficulty is to find a paying crop. Now 'ramie,' or 'rhea,' 'urtica,' or 'boehmeria,' grows in almost any zone, of course with different results, as it produces from one to four crops per annum according to locality. It would be a paying crop on

waste land, useful for no other purpose. The cultivation is easy, and when once planted it will thrive for about eighteen years, requiring but little attention beyond hoeing, mulching, etc. The demand for this fibre (which is the strongest and longest of all fibres) is increasing by leaps and bounds. Hitherto the Chinese alone have been alive to its merits, and they have cultivated it largely for home consumption, but little finds its way out of the country, and then only at prohibitive prices. At present it fetches as much as £35, and even £40 has been paid this Spring. When once a plantation is firmly established, it could be cropped for £3 10s. per ton, I am informed, in a country where three to four crops can be obtained yearly. Think of the vast possibilities of profit this opens up! The one great drawback hitherto has been the irregular supplies. It makes the most beautiful and durable fabrics. For sail-cloths, fishing lines, nets, ropes, etc., is invaluable. Its uses are legion, but as the supply is depending on one country, it is comparatively unknown. If our planters would put their hands to the plough and cultivate ramie, a vast industry, as great as cotton, would spring into existence. The first planters will make fortunes, and large profits will prevail for years, as it will take several decades to cope with the demand, and even then a steady trade is to be relied on. America is quite alive to the possibilities, and the U. S. A. Chamber of Agriculture is encouraging its growth. Why do our Colonial Governments not foster it? India, Assam, Straits Settlements, Australia, Queensland, Tasmania, New Zealand, Borneo, West Indies, Guiana, Natal, South, East, and West Africa could all grow "ramie" profitably. Another great advantage is that it can be so easily manipulated that all these and other colonies could establish industries to work up the splendid fibre on the spot, so not only would the former benefit, but he would find a market at home, and not depend alone on English markets. There is no reason why manufacturers could not and should not start in almost every colony of the Empire. With this vista of a profitable industry in view, our Colonial Governments, chambers of agriculture and commerce, planters, farmers, and manufacturers would do well to inquire further into the possibilities of ramie, rhea, or China grass. Anyone desirous of knowing more as to cultivation, seed, and manufacture have but to send me a few stamps of the colony, as compensation for postage, and I will send them particulars and information how to procure seed and machinery, etc., as I am desirous of encouraging the trade, in what I designate the textile of the future, in every possible way. The demand at the moment for dress goods (Bradford), incandescent gas mantels, saddlery, boot threads, and similar goods is enormous, and far beyond the limited supplies. The Shamrock, Bona, Dragon, and many of the leading yachts have sails of ramie. I trust you will draw the attention of your readers to the above, and that it may be the means of starting a profitable industry in many of our colonies."—*H. & C. Mail.*

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, April 2, 1903.

The condition of the home market in tea remains featureless, there being little disposition on the part of wholesalers to operate. Trade on the streets is consequently slow. It is interesting to note that the world's consumption of British-grown tea last year exceeded the production by over 12,000,000 lbs. A great contrast to the previous position of heavy over-production. The figures show the total consumption to have steadily increased year by year, while the maximum year of production was 1900. The production since that date has been on the decline.

MONTREAL, April 2, 1903.

There is a fair demand locally, though trade has fallen off somewhat during the past week, most of the orders for shipment after the opening of navigation having been received. All teas are still firm and no change in prices is reported. Japans are still high and firm, and even a stronger tone is given the market by the rumour that most of the new crop will be taken by United States houses. Japans are still quoted at 17½ to 18½c. for mediums, though one importer is quoting as low as 16½c. on a certain grade. Ceylon blacks have been moving fairly well. Gunpowders are scarce and high in price, but a very little is on the market. A

quantity of Imperial gunpowders is offered at 14c., said to be of good liquor and fair leaf. Indian teas have been going slightly better during the week, and prices are firm. The following table is given, showing the total shipments of tea from the two shipping ports in Japan, Yokohama, and Hiogo, to February 28, 1903:

New York steam or sail and railroad ...	Total pounds exported		
	1903.	1902.	1901.
New York via Suez Canal ...	4,563,858	7,127,616	7,420,282
San Francisco ...	8,827,769	5,900,497	5,499,544
Chicago and west ...	3,868,612	3,386,755	4,475,908
Canada ...	17,545,930	12,830,270	13,621,326
Europe, etc. ...	4,363,884	6,480,964	6,308,795
	248,575	...	79,410
Total ...	39,418,628	35,726,102	37,405,265

### TEA PESTS.

The following extracts from a report of proceedings of a Meeting of the Dimbula Planters' Association held on April 28 will probably interest many of our readers:—

#### THE SHOT-HOLE BORER.

The HONORARY SECRETARY—read a letter and correspondence enclosed therein issued by the Parent Association on this subject.

The CHAIRMAN:—I expect you have all had this correspondence in your possession. It has already been published in the papers. If any gentlemen have had any experience of the shot-hole borer, they might express an opinion on the matter.

Mr. BOSANQUET:—I am rather in favour of keeping the disease out of our district. I think Mr. Green's suggestion is that there should be Government interference—some regulation framed. The districts in which the disease is worst are Gampola and Pussellawa, and they are strongly against Government interference. They have got it badly there and we have not. I think this district should favour legislation of this kind.

The CHAIRMAN:—Would you propose a Resolution to that effect?

Mr. BOSANQUET:—I would propose that the district be in favour of legislation as necessary . . . .

The CHAIRMAN:—It is proposed by Mr. Bosanquet "that the district is in favour of any legislation that may preserve it from an attack of shot-hole borer which is, at present, unknown in the district."

The CHAIRMAN—suggested that Mr. Bosanquet should alter his Resolution to read "presumed to be unknown" for it might be known although people had not spoken of it.

Mr. BOSANQUET—concurred and the alteration was effected.

Lieut.-Col. FARQUHARSON—thought they would be very glad to have the assistance of Government; but the interference of Government would lead to no end of difficulties. If once they gave them the right to come on their estates, they would never get them off again.

The CHAIRMAN:—Will you propose an amendment to this, Mr. Farquharson?

Lieut.-Col. FARQUHARSON:—Yes.

Mr. WELLDON:—You might say we would be willing to co-operate with Government.

The CHAIRMAN—read Mr. Green's proposal.

Mr. J. A. MAITLAND:—I have much pleasure in seconding the amendment . . . .

The CHAIRMAN:—Mr. Farquharson's motion is as follows:—"That this Association is willing to co-operate and use Government's assistance, but are strongly against Government interference . . . .

Lieut.-Col. FARQUHARSON:—Supposing shot-hole borer to be found in a patch of tea near Government jungle from where it probably came, do you think Government is going to fell and burn all that jungle? I am sure they are not, and, if not, there is no use in having such legislation. In all probability it comes from that jungle and it will continue to come for ever from it. As regards Mr. Bosanquet's precedent of rinderpest, animals and the shot-hole borer are two very different things. One disease is carried about in the atmosphere and the other flits about from branch to branch. I am sure anybody taking ordinary care and cutting tea down and burning it on the spot, when discovered to be affected by the disease, would keep our estates clear. . . .

The CHAIRMAN—then put Lieut.-Col. Farquharson's amendment to the Meeting when 14 voted for it and 1 against,—Mr. Bosanquet. The amendment was accordingly declared carried.

#### THE TEA TORTRIX.

Mr. WELLDON said:—It seems to me when we touch the subject of the diseases of tea we touch a very important subject indeed. I believe, that in Upper Maskeliya at present the tea tortrix on one estate has reduced the crop to the extent of from 70 to 80 lbs. per acre. If that had been taken in hand when it was commencing it might have been stopped; but now it has spread so badly that it is practically damaging the whole of the upper part of the district. It occurred to me this morning that it would be a good thing to have in this district a kind of sub-Committee to collect information from the district on the subject of diseases prevailing, so that as soon as the disease appeared in any one part of the district, the rest of the district might be made aware that there was such a disease; and so that each individual planter might be able to look out for it, because if you get tea tortrix on your estate you will generally find it in a small patch and if you attack that small patch at once you can stop it, but when once it is spread all over the district it becomes very difficult to deal with it. Therefore, I think, we might have a sub-Committee of observation so that as soon as one part of the district is attacked, the whole district may be informed and also to collect information as to whether any disease had been noticed on estates. We would then be in a position to combat the disease if it did appear in our district. My Resolution is:—"That a sub-Committee to collect information concerning the diseases prevailing in the district be appointed." I would suggest the following gentlemen, if they are willing to act:—Mr. Bosanquet, Mr. Jackson, Mr. Whiting, Mr. Bowle-Evans, and Mr. Dunbar. I would act as Secretary and would send out a letter to estates asking for their co-operation and these gentlemen on the Committee would act along with me. It is an important thing that we should be aware of it as soon as the disease comes into the district in order that we may attack it when it is quite in its infancy. (Hear, here.)

The CHAIRMAN—I think, gentlemen, we must all highly approve of Mr. Welldon's resolution and see the great importance of it. If we do not take steps in the early stages of the disease to secure its eradication we will only get deeper and deeper in the mire every day. Mr. Welldon's suggestion is simple, but it should prove effective and I put it to the Meeting, trusting you will all support it. (Hear, hear.)

The Resolution was unanimously carried.

#### TEA PROSPECTS FOR 1903.

##### SCARCITY OF LABOUR WILL PREVENT OVER-PRODUCTION.

(From a Sylhet correspondent of the *Financial Times*.)

The tea season which has just passed will always be remembered as the worst on record in almost every respect. Prices were bad, and the season closed abruptly with a short output. Even if prices go up considerably higher than their present level, it is too late, it is to be feared, to put the average price obtained for teas of the 1902 growth on a level with even that of 1901, although no doubt the rise will be sufficient to stave off a loss in a number of instances. So far the reports of public companies are very poor reading compared with those of the previous year, and everything indicates that, in spite of extra economies, profits have dwindled, as a lower average price for the produce had to be accepted. Taking a general average from the accounts published, this reduction is almost half-an-anna per lb.; at any rate, considerably over a quarter-of-an-anna, or equal, roughly, to two rupees per cultivated acre, by no means an inconsiderable amount in these hard times, and one which takes a good deal of economy to replace. The statistical position is, however, considerably improved, and warrants the hope of better times to come on more grounds than one. The manufacture of green tea, for one thing, is on the increase, tending to relieve the London market of a considerable quantity of the black leaf; but, perhaps, the most consoling feature to the majority is that recruiting of labour, since the new Act was passed, has become a dead letter. Restrictions and other impediments proved too much for the coolie recruiting agencies, better known as licensed depôts, and nearly all who

could realise anything for their businesses sold out, with the result that coolies are not obtainable at any price; in fact, are not to be had. Sir Henry Cotton, even in his wildest moments, never expected the "debacle" that has taken place since the passing of the now famous Coolie Act No. 6, 1901, and until this Act is repealed, and another more in sympathy with the times is passed, there is little chance of improvement in recruiting, and, if left to pursue its course as now, it will take a quarter of a century to effect a revolution. This means prosperity to the more favoured gardens, adversity to a great number not so situated, a complete stoppage of extensions, and last, but not least, a general rise in prices. In the Assam Valley the scarcity of labour is being severely felt, and in Sylhet and Cachar the same remark applies. The Dooars is perhaps more affected than the other districts, and in this locality no Act prevails, and doubtless Sir Henry Cotton will point to this as a proof that the scarcity of labour is due to the question of wages. There is unquestionably a grain of truth in this, but not more than the proverbial grain; the stoppage of recruiting is due solely to the unsympathetic attitude of Government officers, and to no other cause. The attitude of all magistrates and subdivisional officers before the passing of this obnoxious Act was one of veiled hostility, but since it became law their attitude has become distinctly hostile, and the present Lieutenant-Governor-elect of Bengal is more or less responsible for this when Chief Commissioner of the Central Provinces. It remains to be seen what will be the result of his administration in a tea district like the Dooars; when he becomes a trap of Bengal it is possible that it may have a soothing tendency, and that the present stringent restrictions will, in a measure, be removed, in which case the Assam Province will equally benefit with the Dooars. "It is an ill-wind that blows nobody any good," and the tea industry will now have breathing time given it to open out new markets and establish itself in other countries before over-production recurs.

One large, if not the largest, tea agency house during the recruiting season has, in spite of strenuous efforts, supervised by a European staff, been unable to recruit more than 800 coolies to meet a demand for 4,000. This will give your readers some idea of the situation, which is daily being accentuated. The year 1903, under the circumstances, is not likely to show an all-round bumper crop, although there may be exceptions in the case of individual gardens. Those companies, however, which have their houses in order may regard the future with confidence.

#### THE ST. LOUIS EXPOSITION.

##### MR. W. H. FIGG'S REPORT ON HIS VISIT TO ST. LOUIS.

In pursuance of a request from Mr. Kingsford, Chairman of the Planters' Association, I consented to visit St. Louis and investigate conditions, and if satisfied with them to make preliminary arrangements for the Colony's representation.

INTRODUCTIONS.—After accepting the mission I cabled to Ceylon asking for Letters of Introduction from the Ceylon Government to assist me with the authorities in America. I have to thank His Excellency the Governor for his great kindness in sending me personally written letters to H. M. Ambassador at Washington, (Sir Michael Herbert) and to the Commissioners of the St. Louis Exhibition. After presenting my letter at the Embassy at Washington, I proceeded at once to St. Louis and lost no time in meeting the heads of the various departments.

INSTRUCTIONS.—From the perusal of my instructions received through Mr. Kingsford it will be seen the following were the points dealt with:

(A) The question of the erection of a building to contain all Ceylon's exhibits, or whether Ceylon's products should be displayed in their various departments in the main buildings.

(B) In the event of a separate building being necessary: (1) the site, (2) the style of architecture, (3) the probable cost.

(C) The conditions under which Ceylon Tea could be sold in the cup and in packets.

(D) The appointment of a representative in St. Louis, to act pending the arrival of the Commissioner.

EXHIBITS.—Immediately after meeting the Secretary, Mr. Stevens, I was introduced to Mr. F. J. V. Skiff, the Chairman of the Committee of Exhibits, who invited me to meet his Committee, who

were then sitting. This Committee, consisting, as it does, of the Directors of the various Departments, into which the Exhibition is divided, is virtually the Executive. It was, therefore, of great assistance to me to meet at the outset of my investigations these gentlemen. At the invitation of the Chairman, I briefly addressed the meeting, setting forth the object of my visit. After some general discussion I found there was a very strong feeling against Ceylon's exhibits competing, unless the products were displayed in their various classes in the main buildings. It was clear to me that although this condition was not made absolutely a *sine qua non* it was to the interests of the Colony to fall in with the views of the Committee, particularly as three-fourths of the Ceylon exhibits would come under the head of Agriculture. The balance would be divided between Forestry and Mines and Metallurgy. Taking the above into consideration I came to the conclusion that Ceylon ought to show in the main buildings and have a Court and garden of its own in a good position.

**AGRICULTURE.**—This important building is an enormous structure covering 1,600 by 500 feet and is said to be the largest in the world. I have provisionally secured a space of 2,400 square feet marked on the accompanying blue print and append copy of letter from Mr. F. W. Taylor, the Chief of this Department, which gives all necessary particulars. We are particularly indebted to Mr. Taylor for the friendly consideration and assistance he tendered us and I gladly accepted his very courteous offer. I commend to the attention of the Committee his suggestion in regard to the forwarding of suitable plants for decoration of the house and grounds, and hope that the Director of the Botanical Gardens will see his way to exhibit, on behalf of the Colony, and also to assist with a collection of suitable plants.

**FORESTRY.**—Next in importance to Ceylon, after Agriculture, is the Department of Forestry, I have provisionally secured space, 50 x 60 feet, in a suitable position to be fixed hereafter on completion of plans now being prepared by the Director of Works. Dr. Tarleton H. Bean, the Acting Chief of the Department of Forestry, is most anxious for Ceylon to make an exhibit similar to the one made at Paris. His letter covers all the ground necessary and is appended together with a circular referred to therein.

**MINES AND METALLURGY.**—In this Department I felt a little doubtful in arranging for space, but Mr. Holmes, the Chief of the Department, is very desirous that we should send exhibits. I enclose a letter received from him, and as plumbago is such an important article of export to the United States, his suggestions are worthy of careful consideration. Should it be decided to make a display in this department, I recommend that early steps be taken and such space as will be necessary applied for without delay.

**SITE FOR BUILDING.**—After going over the ground carefully I decided that the space marked on the accompanying plan was the best for our purpose: (1) Because it appears to be in the opinion of those best able to judge—a point where most of the visitors to the Exhibition are likely to pass. (2) Because the gardens laid out by the Director of Horticulture will abut on our allotment and greatly enhance its attractiveness. Here I may mention that Mr. Taylor, the Director of Agriculture, has kindly consented to undertake the laying out of our grounds, continuously with those of the Horticultural Department, using palms and other tropical plants. (3) The position is conveniently close to the Agricultural and Forestry Main Buildings, thus facilitating supervision by our Commissioner.

**SPACE FOR BUILDING.**—The space at our disposal is 125 \* x 250 feet, closely approximating the original application from Ceylon for 4,000 square feet. I enclose letter from Mr. Isaac Taylor, Director of Works, with site marked on the plan. I informed Mr. Taylor that the building would probably follow a Kandyan style of architecture and that plans and specifications would be submitted to him for approval. It is important that there should be no delay in moving in this matter and plans should be sent to our agent. I would recommend a light, airy building, as the climate of St. Louis during Summer is very hot.

**COST OF BUILDING.**—I had an interview with the Chief Architect of the Exhibition who very kindly went into the matter with me, and so far as he could make a rough estimate on the data I could give, thought that we might figure on 7½ to 8 cents American per cubic foot. As I consider it certain that the general products will be exhibited in the main buildings, the size and design of the Ceylon structure can be regulated accordingly, care being taken to

provide room for the kitchen, scullery, and private offices for the Commissioner. In view of the climate of St. Louis, ample wide verandah space should be provided. On receipt of plans and specifications, our agent will call for tenders and submit same before closing contract. Arrangements should be made to permit of cabling consent to proceed.

**CONCESSIONS.**—The permission to sell tea in the cup and in packets is one of the most important and difficult matters I had to deal with. Although I impressed upon the authorities that in obtaining their sanction we had no idea of making profit from the sale of these articles, yet the rights of the Restaurateurs, for which they had paid between \$1,500,000 to \$2,000,000, had to be protected. The Director of this Department, at the commencement of our negotiations, laid it down as a condition that 25 per cent. of the takings must be paid to the Exhibition. This I could not agree to, but finally arranged to obtain full privilege for the sale of tea from our building in cup and packets and right to issue and display suitable advertising matter on terms set forth in the accompanying letters from Mr. Norris B. Gregg, Director of Concessions and Admissions and Mr. J. V. F. Skiff, Director of Exhibits.

**ACTING AGENT.**—In terms of Mr. Kingsford's request to appoint a representative to act for us, pending the arrival of our Commissioner, I have, with the sanction of Mr. Stevens, appointed Mr. Russell Stanhope, the Secretary to the Committee on Foreign Relations, on a remuneration to be decided by our Commissioner. I enclose letter from Mr. Stanhope accepting the appointment and from Mr. Stevens conveying his sanction. I have deposited \$300, receipt enclosed, with Mr. Stanhope, to meet sundry expenses, and have instructed him to communicate with you direct as occasion may require. A most important matter is the execution of the contract between the Ceylon authorities and those of the Exhibition. Mr. Stanhope is having this drawn up in terms of the correspondence accompanying this Report.

**GENERAL.**—In conversation with those who have had experience over here in former Exhibitions. I feel it right to tell you that it is decidedly advisable that native servants should be sent over from Ceylon to serve the tea in the Ceylon grounds. Mr. Larkin, of Toronto, is most anxious to obtain some tea plants for Exhibition purposes and I have promised to write asking you to take steps to get some germinated tea seed packed in Wardian cases and sent to him as soon as possible. He is in a position to take full care of them when they arrive in Toronto, if we can only get them there alive. As regards small packets of tea for distribution free in the Exhibition, Mr. Larkin strongly recommends that these packets should be made of lead and not tin. The reason for this is to let people have as nearly as possible a facsimile of the packet which they would buy hereafter in the various stores of the United States of America. My visit to St. Louis has impressed me with the magnitude of the undertaking. It would make this report too lengthy to enter into details here, but I have requested Mr. Stanhope to send you full information from time to time, more especially as to the progress made with the buildings and the probability of the Exhibition being opened on time.

## THE S. I. TEA EXPLOITATION FUND.

### THE SALE OF TEA.

The South India Tea Exploitation Fund, which has been organised by the Travancore tea-planters, is doing excellent work in the way of creating a taste for tea and popularising its consumption among the masses of this Presidency. An interesting and practical scheme has been set on foot, principally at the initiative of Mr. H. M. Knight, of the Kanan Devan Planters' Association, to push the sale of tea in the Presidency so as to bring it within the reach of the poorer classes of the community.

The scheme is based on the lines laid down by the Indian Tea Markets Expansion Commission of Calcutta, which is managed for the Indian Tea Association by Messrs. Andrew Yule & Co. The object was to introduce the consumption of tea among the native population of India by the sale of both packet and brewed teas, and to achieve this end a certain number of planters contributed quantities of tea to be utilised by the South Indian Tea Exploitation Fund. In January last, Messrs. Parry & Co., as the Agents of the Fund, started the sale of brewed tea in the principal towns of Southern India. They made arrangements for the establishment

\* Supposed to be a mistake for 150 feet.

of stalls in various towns where tea is brewed and taken round by hawkers for sale in the streets. The scheme has been working in Madras and the mofussil for the last four months with considerable success. In this city brewed tea is being taken round to the Government offices and the principal mercantile firms from stalls which have been established in all the principal thoroughfares. The sale is managed entirely by Brahmins, under the supervision of Messrs. Parry & Co. Brewed tea is sold in cups at the popular price of 3 pies per cup, which ought to make it available even to the poorest of the population. The sales have been steadily increasing month by month since January and promise to show a remarkable development in the near future. Through the energy and enterprise of Messrs. Parry & Co. packet tea and brewed tea are available at extremely moderate prices in all the important towns of the Presidency, from Cocanda to Tuticorn.

Messrs. Parry & Co. have taken the initiative in this matter, and they hope that, now that they have demonstrated the success of the scheme, the sale of tea will be taken up by petty dealers all over the Presidency, and the sale of tea and a liking for the beverage extended far and wide among those who have not hitherto been accustomed to drink it.—*Madras Mail*.

### TEA IN CALCUTTA.

In the course of two or three weeks, says the *Statesman*, we shall see the opening of another tea season, as the first public auction is expected to take place on the 22nd instant, and it, perhaps, would not be considered out of place if the prospects of the 1903 crop were now reviewed, both from the standpoint of probable output and the likely course of prices on this market and in London. It will be well within the recollection of all those interested that the close to last season in the producing districts was admittedly the earliest and most abrupt that has been known for some years past. The reason of the sudden termination to plucking operations was chiefly attributable to continued cold and wet weather which prevailed practically throughout the greater portion of the growing season. On the other hand gardens are at present experiencing climatic conditions of a contrary description to those which existed at the close of last year, the weather in nearly all the districts now being described as hot and dry, and a serious check on the flushing of the bushes is naturally the result at this time of the year. The drought—for that is the real position—must be giving the Managers considerable cause for anxiety, as many weeks have now gone by in most districts without any heavy showers of rain having fallen, and even when the change in the weather does come about, it will be some time before the bushes can recover from the effects of the continued absence of the moisture they so badly require at this stage of the season. There is no pretence in the above remarks to hint at an abnormally short crop for 1903, but one thing is certain that we shall not have a “bumper” outturn, and the difficulties of a short labour supply and the abandonment of partially productive areas in consequence, are two very important factors, which go a considerable way to support the opinion that 1903 will produce a crop of tea within the limits of the demand from the world's markets. Reports to hand indicate that manufacture is proceeding on a small scale only, and the feeling seems to be that the offerings at the opening sale will also be limited, looking to the late opening of the season and the fact that the producers have decided not to hurry down the first few invoices.

With regard to the probable course of prices this season, at present the position points to a market opening in favour of the seller, and it may be truly said that the outlook from the grower's point of view has not been so bright for some time past. The London market continues fairly steady, particularly for the common kinds; and, bearing in mind the rapid depletion of stocks at the terminal, it is a difficult matter to account for the justification of the cabled report of the London market as published by a contemporary two days ago, and to which, as usual, when their advices of the actual position are somewhat wide of the mark, special prominence was given. Seeing that tea will come down slowly, and in small quantities, during the next two and three months, it does not appear likely that we shall see any falling away in the London values, and prices should remain firm until about August or September when the delayed shipments from the gardens and the increased “off-take” on this market for new outlets

will begin to affect the arrivals in London; we should then see an improvement.

There is every indication that our local buyers will be kept busy this season, and it is encouraging to hear that the demand from Russia is expected to develop still further. The proposal to establish a direct line of steamers from here to Odessa will, if carried out, tend to facilitate considerably the smooth working of business with our Russian friends. It is also apparent that in addition to supplying new markets, buyers will be called upon to operate for old outlets through new channels, and it is to be hoped that sellers will recognise the rapidly increasing buying power of the local market and look to the interests of themselves (and, in passing, their shareholders also) and the tea industry at large, by offering, at local auctions, suitable teas for this market which have hitherto passed “starved Calcutta” and merely gone to swell the “glut” in London. The fact of no alteration having been made one way or the other in the Home duty does not appear to have affected the position in the least, and it would seem as if everyone concerned have been more or less prepared for what the Budget disclosed ten days ago.

The news from outmarkets is encouraging, and later we should see a fair inquiry from America, Australia, Canada, and the North-West; business with Persia, owing to the new tariff, is at present dislocated, but with such a heavy increase in the duty no other result could have been expected. There is one feature behind the Persian trade which should dispel any idea that it is a lost market, *viz.*, that tea in the land of the Shah is more than a national beverage, and the consumption of it has such a hold on the populace that the demand from Persia must surely right itself once the trade has become accustomed to the higher import duty.

Viewing the position generally and without being unduly optimistic, it may be said that a prosperous tea season during 1903 for both sellers and buyers appears to be in every way probable.

### PEPPER VINE DISEASE IN THE WYNAAD.

MR. BARBER'S REPORT.

The following is the interim Report to the Wynaad Planters' Association of Mr C. A. Barber, the Government Botanist, on his investigations into the pepper vine disease in the Wynaad:—

I purpose to send you a few lines thus early, for I do not know when you will get anything like a full report on my recent visit among the pepper plantations, nor can I promise that, after my more careful examination of the vines under the microscope, I shall be able to put my finger on the spot, and definitely tell you what disease the pepper vines are suffering from in the Wynaad.

“I visited the following places:—Neddikarna, Moopenaád (briefly), Nedimballi and Poothacoolie, Cotternaad (briefly), Anda Tode, Moovatie. The bulk of my work was done at Anda Tode and Nedimballi, where vines were carefully dissected out for a couple of days in each place. Since leaving Moovatie, I had the opportunity of visiting about a dozen gardens on my way to Calicut so as to get a glimpse of the mode of cultivation in the plains.

I have come to the conclusion that whatever the trouble be, it is situated in the mound of earth surrounding the root stock. The two factors which seem to point in this direction are—(1) that the canker, which sets in in all diseased plants is situated in the mound of earth surrounding the root stock, and (2) that in diseased plants there is an almost total absence of the fine net work of surface-feeding roots which I have always observed in healthy plants. My statement that the canker seems to originate at the collar is based upon the fact that, however completely that part of the plant may have gone, it is possible within a reasonable period after death to trace the cankerous spots both upwards and downwards into what appears to be perfectly healthy tissues. I take it also from my examination that there are two systems of roots in the pepper vine—one deep rooting and one superficial. The first eight plants which I dug up were diseased, and in these there were hardly any surface roots. I was thus led to the false (as I believe) idea that the pepper vine is a deeper feeder than generally supposed. By the kindness of Mr. Winterbotham, I was able, however, to dig up a fine healthy plant. Then I at once saw that the great mass of roots was superficial and indeed largely confined to the heap of

earth which seems to be always piled up around the base of the standard. If these two points are held in view, it will be seen that it is of the utmost importance to examine into the question as to whether the current heaping up of earth round the standard is a proper operation. I may say at once that I saw nothing in the low-country cultivation which would justify it.

Briefly, I do not think it is done in an altogether reasonable manner. Let the question be asked of practical planters, "Given that the pepper vine is a surface feeder and that the bulk of its feeding roots are developed near the main root stock, ought not the mound of earth to be made suitable to delicate-feeding rootlets?" I have frequently found this mound of earth so hard that it was with difficulty penetrated with a knife. I think it ought to be kept in a friable condition, and also that it should be protected as much as possible from the direct heating and desiccating influence of the sun during the hot weather, as well as the heavy drip of the monsoon. I would, therefore, suggest, for immediate experiment, the scattering of lime over the surface of the mound, as has been done in certain cases at Anda Tode, and its protection from sun and "wash" by a mulch of some sort. As to the forking up of the mound, I leave it to the experience of practical planters. But I would most strongly insist on the great danger to delicate rootlets of any disturbance of the cake-like crust which I have so often met with. When it is made friable there may be advantage in a little forking, but I am not at all sure that this would be necessary.

I do not feel at liberty to make any definite statement concerning the cause of the disease at present. That will come better after I have had the opportunity of making a microscopic examination of the large series of specimens collected in spirit. But I would point out that in my short inspection of the plantations in the plains I have come across a definite and serious disease of the rootlets of the collar. I would, therefore, strongly urge that the idea of obtaining fresh "seed" from this source be abandoned until a clean bill of health may be given. Meantime would it be too much to ask that all who are interested in this matter should, when convenient, make a cursory examination of the rootlets of the mound? They will then be able to justify or criticise my opinion that here are the chief feeders of the plant, and also they will be able to determine whether the disease of the plains is of common occurrence in the hills. The diseased rootlets in the plains show very distinct nodules or swellings in their course. They are frequently twisted or swollen at their ends, and, on being cut open, show little round dots in both transverse and longitudinal sections. The uncovering of patch of mound roots in friable soil should not be injurious and if the disease is present, it should be visible all over the mound, but in hard crust, the individual rootlets will, with difficulty, be seen and smashed to pieces.

I would also suggest that for the present fresh cuttings should not be taken from the mound, but from the tops of healthy vines, if these are found to strike as well.

I cannot close this interim report without thanking the Wynaad planters one and all for the extremely kind way in which they have received me and the readiness with which they have fallen in with my suggestions. The subject has turned out to be more complicated than I had hoped, and I shall make it one of my first duties to try and complete the work now commenced.

## DISTRICT ASSOCIATIONS.

### CENTRAL TRAVANCORE.

The Quarterly General Meeting was held at Pambanar Bungalow on Saturday, 18th April, 1903. **PRESENT:**—Mr. F. M. Parker (*Chairman*), Hon'ble Mr. G. L. Acworth, Messrs. B. Laurie, H. M. Knight, R. H. Goldie, D. McArthur, R. S. Imray, F. Bisset, Hon'ble V. B. Wilbraham, and E. Latter (*Honorary Secretary*) and as *Visitors*: Capt. N. B. G. Strong (Assistant British Resident), Messrs. J. S. Sealy (Superintendent, Cardamom Hills), O. H. Bensley (Superintendent of Police), A. J. Ferguson (Assistant Superintendent of Police).

Notice calling Meeting and Minutes of last Meeting were taken as read.

The Chairman welcomed the visitors and regretted that Mr. G. T. Mackenzie, British Resident, was unable to be present.

#### CORRESPONDENCE.

**Land Tax.**—Read letter from Dewan, dated 10th instant, stating that arrangements will be made for collection of Land tax due on Coffee and Tea estates in Peermade and Periyar tracts by the Assistant to Superintendent of Cardamom Hills in Peermade and to relieve Tahsildars of this duty.—*Resolved*, that Dewan be thanked for granting our request.

**Labour Law.**—Read U. P. A. S. I. letters on the subject.

Proposed by Mr. H. M. Knight and seconded by Mr. Latter—

"That this Association desires to tender a cordial vote of thanks to Hon'ble Mr. G. L. Acworth for the able and successful manner in which he has represented our interests and assisted in the passing of the Labour Bill through Council."—Carried *nem. con.*

**Tea Cess Committee.**—Read U. P. A. S. I. letter asking to nominate a member—and Honorary Secretary's reply nominating Hon'ble Mr. G. L. Acworth.

**Delegate to Brazil.**—Read U. P. A. S. I. letters on subject and suggestion for subscription list being opened.—*Resolved*, that no action be taken in the matter—as this Association is so little interested in Coffee.

**U. P. A. S. I. Annual Meeting, 1903.**—The date suggested, 3rd August, will suit this Association.

**Honorary Members.**—Proposed by Mr. Parker, seconded by Mr. Acworth—

"That Mr. G. T. Mackenzie, British Resident, Capt. N. B. G. Strong, Assistant British Resident, and Mr. J. S. Sealy, Superintendent of Cardamom Hills, be invited to be Honorary Members of the Association."—Carried *nem. con.*

**Cattle Trespass.**—Proposed by Mr. Parker and seconded by Mr. Laurie—

"Owing to the damage caused by the straying of cattle on Tea Estates, that H. H. Government be asked to legislate to remedy the evil."—Carried *nem. con.*

**Land Tax.**—Mr. Knight asked permission to withdraw the Resolution standing in his name and it was resolved, "that the Chairman and Mr. Knight be deputed to wait on the British Resident with a view to consult him on the subject."

**Medical.**—The following recommendations of the Select Committee were adopted:—

"That the special allowance now paid to the Government Medical Officer be withdrawn and a properly qualified Medical Officer be appointed at our expense to have charge of the grant-in-aid dispensaries."

"That dispensaries be at Bonami, Pambanar, and Arnakal."

"That the approval of the Durbar physician be asked."

**Tea Exploitation in S. India.**—Mr. Knight reported progress made by Messrs. Parry & Co. and who hoped to obtain assistance from the Tea Cess Committee.

With a vote of thanks to the Chairman the Meeting ended.

Papers laid on the table—

Planting Opinion.

Indian Planting and Gardening.

Travancore Government Gazette.

I. T. A. Circulars.

U. P. A. S. I. Circulars.

Proceedings of District Associations.

E. LATTER,  
*Honorary Secretary.*

### INDIAN TEA ASSOCIATION (CALCUTTA).

The following is an abstract of the proceedings of a Meeting of the General Committee held on the 21st ultimo. There were present: Messrs. H. C. Begg (*Chairman*): T. McMorran (*Vice-Chairman*): H. S. Ashton, Lockhart Smith, R. R. Toynbee, T. Traill, and W. Warrington.

Letters dated 27th March and 3rd April, from the Secretary, Indian Tea Association, London, were brought up for final consideration and disposal after previous circulation. One of the subjects dealt with in the letter of 3rd April was:

## THE MARKET POSITION.

At a Meeting of importers held on the 30th March for the purpose of considering the regulation of the sales for the two weeks ending 11th and 25th April, respectively, the following Resolution had been proposed and carried:—"That it is undesirable to hurry the new season's tea home, and this Meeting agrees to recommend proprietors not to hasten shipments."

It was decided to publish and circulate copies of this Resolution for the information of members of the Association.

## STATISTICS OF AREA UNDER TEA CULTIVATION.

Considered memorandum from the Surma Valley sub-Committee with reference to a Resolution which had been passed at a Meeting of the General Committee of the Branch held at Silchar on 23rd February, 1903, to the effect that it was desirable that information should be furnished annually as to the acreage opened out or abandoned by the different companies and gardens in India and Ceylon.

The Surma Valley sub-Committee suggested that the Government of India might be asked if they could see their way to furnish yearly similar statistics for the whole of India as the Assam Administration publish in respect of the districts under their charge, showing separately the additions to, and deductions from, area under tea cultivation instead of the net result only.

It was decided, after a short discussion, and in view of the interest to the industry attaching to the information, to communicate with the Director-General of Statistics and with the Ceylon Planters' Association on the subject, and to ask whether the returns could be furnished.

## SCIENTIFIC OFFICER'S FUND.

Recorded, letter No. 621-26-2, dated 14th April, 1903, from the Secretary to the Government of India, Department of Revenue and

Agriculture, stating that the Association's application asking for an annual grant of Rs.10,000 for three years in connection with the conduct of scientific investigations and researches into the cultivation and manufacture of tea, was under the consideration of the Government of India.

Read letter dated 15th April from the Honorary Secretary, Dooars Planters' Association, stating that the Association was willing to continue to support the Scientific Officer's Fund after the expiry of the term originally agreed upon, and was also prepared to increase the subscription from Rs.1,000 to Rs.1,250 per annum.

The letter was to be acknowledged with thanks.

After a short discussion, regarding the continuance of Mr. Mann's engagement on the expiry of the three years originally provided for, it was decided that his services should be retained. The question of extending the scope of his operations as proposed by him in May, 1902, would, however, depend upon the decision of the Government of India in regard to the financial assistance which had been asked for.

## MARKET REPORT.

[We regret that our usual Market Reports have not reached us, with the sole exception of the following para.]

## QUININE.

This article remains very quiet, and no business is being done; prices for B. and S., and/or Brunswick are therefore nominal at 11½d. for spot, and at 1s. per oz. sellers for August delivery. The manufacturers reduced recently their official price to 1s. 1½d. per oz.

**"All Sorts and Conditions of Men"**

USE

**ST. JACOBS OIL**

**F**OR RHEUMATISM, Gout, Sciatica, Neuralgia, Cramp, Pleurisy, Lumbago, Sore Throat, Bronchitis, Soreness, Stiffness, Bruises, Toothache, Headache, Backache, Feetache, Pains in the Back, Pains in the Shoulders, Pains in the Limbs, and all bodily aches and pains,

**IT ACTS LIKE MAGIC.**

SAFE, SURE, and NEVER FAILING. Price 1/1½ & 2/6.

**CONQUERS PAIN**

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, MAY 16, 1903.

[No. 20.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 22nd instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*Weather*—A few local showers. *Wind*—steady from the West. *Temperature*—cooler. *Works*—Pruning and manuring, a little borer showing up, but it should not be a bad year. *Coffee*—looking fine and healthy. *Crop prospects*—Blossom has set well, what there is of it. *Health*—Good. *Labour*—Abundant. *Interesting item*—A great fair and general pilgrimage at Kenchamma—Hosakote.

#### Coorg.

*POLLI BETTA, May 13th.*—*Weather*—No rain since Sunday night last. Very heavy rain last week. Over two inches in parts last Saturday with high wind. *Crops*—Another sprinkling of blossom has come out now. It is a pity that all the rain received subsequently did not fall on the 30th of March. Crops would have been better if it had. Owing to the small quantity that fell then, and not being followed up till long afterwards, a lot of buds got scorched. The trees are making fine growth. Some borer is showing up. The only work in hand is applying manure.

### TEA IN ASSAM.

#### AN HISTORICAL SKETCH REPRINTED.

THE latest official report from Assam contains a mass of information that is well worthy of record. Tea-planters in South India will readily admit that the future of their industry depends very largely upon that of tea in Northern India and Ceylon. Anything that concerns either of these tea-producing centres is therefore, of special interest to planters in the South. Perhaps what may be called the ancient

history of Assam tea is not of such great interest as are present conditions and future prospects; but even from the first named there is something to be learnt. Here we will start with a reference to this as laid down in the official Administration Report, 1901-02. In this document we find it stated, not merely that the most important commercial staple of Assam is tea but also that the plant is indigenous to the province, being found wild in the forests south of the Dihing, in the Naga Hills to the south of Sibsagar, and in Manipur, North Cachar, and the Lushai Hills. The following paragraphs, extracted from a memorandum written by the late Sir JOHN EDGAR in 1873, give in a brief and convenient form a sketch of the growth and progress of the tea industry in this province from its commencement down to that year. There have been lively disputes as to the first discoverer of tea in Assam, and the date of its discovery. It is probable that a Mr. C. A. BRUCE, who commanded a division of gunboats in Upper Assam during the first Burmese war, brought down some plants and seed of the indigenous plant in 1826, and he actually received a medal from the English Society of Arts. But his claim to have been the first discoverer of tea was disputed by a Captain CARLTON, who asserted that the existence of tea in Assam had been first established by himself in 1832. In 1834, a Committee was appointed to inquire into and report on the possibility of introducing the cultivation of tea into India. In 1835, the first attempt was made by Government to establish an experiment station in Lakhimpur, but it failed, and the plants were afterwards removed to Jaipur, in the Sibsagar district, and a garden established, which was sold to the Assam Company in 1840. This Company, which was formed about 1839, was the first, and is still very much the greatest, concern for the cultivation of tea in Bengal. It was not, however, very prosperous during its early years, and in 1846-47 its shares are said to have been almost unsaleable. Its prospects began to improve about 1852, and in 1859 it was reported officially to have a cultivated area of about 3,967 acres, and an estimated outturn of over 760,000 pounds of tea. Meantime, tea cultivation had been commenced in many other districts. In 1850, a garden was started by Colonel HANNAY near Dibrugarh, and in 1853, when Mr. Mills of the Sudder Court visited Assam, he found three private gardens in Sibsagar and six in Lakhimpur. In 1854 the first gardens were started in Darrang and Kamrup. In 1855, indigenous

tea was found in Cachar and the first garden was commenced in the cold season of that year. In the following year 1856 tea was discovered in Sylhet, but no attempt at cultivating it was made for some time after.

It may be said generally that the foundations of the present tea industry in Assam were laid between 1856 and 1859. In the latter year the labour difficulty began to be seriously felt in Assam and Cachar; but, although Colonel JENKINS, Commissioner of Assam, recorded a serious warning, no one else seemed able to foresee the formidable dangers into which the too rapid progress of the industry would bring it. Later still, in 1862-63, officials as well as planters seem to have indulged in visions of fabulous prosperity, which only deepened the gloom of the miserable time that was so soon to come on them. The Land Revenue Administration Report for that year contains extracts from reports from Assam, Cachar, Sylhet, and Darjeeling, written in the most hopeful spirit; indeed the two former are written in an exalted tone that contrasts curiously with the usual sobriety of official reports. But even at the time of publication of these reports suspicions had begun to arise about the soundness of this condition of affairs, which was apparently so brilliant. An Act for the regulation of the transport of native labourers emigrating to Assam and Cachar, passed in 1863, was expected to remedy many hideous evils which were discovered to exist in the importation of labourers required to supplement the scanty local supply. But it soon came to light that the condition of these labourers on many gardens in both districts was most deplorable, while the mortality among them was appalling. The evil first fruits of the reckless way in which waste lands have been dealt with, in the belief that Government was fostering tea cultivation thereby, were gathered in the shape of increasing hostility to Government and its officials, caused by difficulties about surveys, boundaries, title-deeds, and the like, which all had arisen out of the mistaken policy of giving vast tracts of land to any one choosing to ask for them, without inquiry and without precaution of any kind. In 1865, an Act was passed for the regulation of the relations of employers and imported labourers after the arrival of the latter in the districts of Assam, Sylhet, and Cachar. Though at first at least it did little to improve the condition of the labourers, Sir JOHN EDGAR was convinced that it had not the slightest connection with the temporary collapse of the tea industry, which took place in the following year. The cause of the crash of 1866 was, he says, the utterly unsound foundation on which the fabric of the tea industry had been based, and not directly the Government's action, as at the time it was the fashion of even usually well-informed persons to assert. At the same time, we should never lose sight of the fact that the industry might never have got into the ruinous state of inflation that it was in previous to 1866, had it not been for the unwise attempts of Government to foster it at the outset by sacrificing the most necessary safeguards in dealing with land. The depression of the industry consequent on the collapse of so many concerns in 1866 was, of course, intensified by the ignorance of the general body of proprietors of tea-shares who, as was remarked by me in a paper written in 1867, showed as much fall in their hurry to get out of tea as they had a few years before in their eagerness to undertake the speculation.

This depreciation of tea property continued during the years 1866, 1867, and 1868, but about 1869 things began

to look brighter. It was seen that people that had worked steadily for years with a view to make gardens that would yield a profit had been rewarded, while much of the property of the collapsed companies had turned out well under careful management. In fact, it was again found out that tea would pay, and ever since it has been steadily progressing in popular estimation, and, as a general rule, in profit to those engaged in it. There cannot be the slightest doubt that the industry is in an infinitely better and safer position now than it was ten years ago. The existing gardens are, as a general rule, well filled with plants, highly cultivated, and carefully managed. The amount of tea produced per acre, although falling far short of the sanguine expectation of the first days of tea-planting, is satisfactory in all the more important districts, while the prices obtained this season show that the average quality must be very good. There is every reason to hope that the labour difficulty is disappearing in Cachar, and, in spite of the complaints of Assam, there are evident signs of improvement in that province.

### COFFEE NOTES.

The fall of the price of coffee to a new level has drawn the attention of the newspaper Press to the consumption of the berry, the retail price, etc., and we again see many allusions to the manner in which the Brazil berry masquerades as Java. Grocers and consumers can reassure themselves, however, says the *Merchants' Review*, for there is certainly no harm done when the coffee they buy as Java gives the same cup tests as the real Java. Not long ago a certain trade paper charged that the jobbers in its own town sold Brazil coffee as Java, but complained that when suspected samples were sent to it for analysis the experts could not pronounce judgment because the samples had been roasted. Further comment is unnecessary, but it is as well to remind critics of the coffee trade that Java would be selling at about one dollar a pound if only the genuine article were sold by grocers.

\* \* \*

An English grocer increased his sales of coffee four-fold by roasting the coffee himself and using an attractive counter mill. The display was public and his customers were thus induced to give his freshly roasted and ground coffee a trial. He was very careful in the processes and especially so in the selection of his blend, which was good Costa Rica one part, Jamaica one part, and one part East India to every 5 lbs.

\* \* \*

Official figures by the United States Government make the coffee importations during the last eight months ending February 28th, 584,346,647 pounds or 4,426,000 bags against importations during the same period in 1902 of 768,550,026 pounds or 5,821,000 bags.

\* \* \*

**The U. S. Coffee Market.**—The low prices have induced some trading in coffee but traders are disposed to transact business only with a growl that the market should be so lacking in tone. They do want advancing prices but their wishes do not materialize. The option markets experienced a slight reaction from the low prices noted one week ago. The recovery was chiefly caused by the reports from Brazil that an export duty was to be levied by Sao Paulo which would eventually prohibit the export of low-grade coffee and thus affect the crop shipped to the extent of twenty per cent.

There were also other rumours of similar drastic action on the part of the Brazilians. The market however gave only little credence to the reports and soon reacted to the low position. It is beyond doubt true that the Brazilians expected a sharp advance and with that dispose of their present supplies at a good figure. The spot market for invoices does not show the depth to which the market in futures has fallen. Reports are current that the Lewisohns have sold very large quantities of their supplies and to this is credited in the main the break in the prices of option coffees to their lowest record. In actual coffee a new lowest record has still to be achieved. Good coffees still bring a good price. The quotation during the week closed on the basis of Rio No. 7  $5\frac{1}{4}$  to  $5\frac{1}{2}$ c.

In Milds there is a slow market but prices are well maintained for all West India growths. Stocks are growing but holders are not disposed to concede anything in the prices. Good Cucuta is quoted at  $8\frac{3}{4}$ c. East India growths are quiet. —*Tea and Coffee Trade Journal*, April 14.

\* \* \*

**Herman Sielcken on Coffee.** THE BEAR SIDE OF THE SITUATION.—Mr. Herman Sielcken, of the firm of W. H. Crossman & Bro., submitted last week an interview answering certain rumours afloat regarding the large fortune made by that firm from the bearish trend of the coffee market. In part Mr. Sielcken said:

"The publication about fortunes made on the bear side or of bear raids and matters of that nature is untrue in very detail. As far as I am personally concerned or my firm is concerned we have been doing the largest import business in coffee of late years; we neither take chances on the bull side nor the bear side, and we are buying and selling the coffee as nearly even as it is possible for any large dealers to do.

"The decline in coffee is not the result of speculation. On the contrary, the speculation has been on the other side of the house. For six or seven years the coffee world at large has been bullish, and all the heavy capitalists of this country, as well as Europe, in and out of the coffee trade who have become interested in coffee have operated on the long side of the market. These interests in the consuming countries have been so large and the desire for higher prices so great that the Brazilians have been invited to send sensational bull news whether true or untrue. In other words, the dealers here and in Europe wanted to be deceived and the Brazilians gave them false crop news year after year to such an extent as is hardly creditable to believe. Crops of 10,000,000 bags have been estimated at 6,000,000. A crop of 15,500,000 was represented as 10,000,000, and the present crop, which was represented as being a half-crop and very nearly destroyed by drouth, turns out the second largest crop on record. The two crops of 1901-02 and 1902-03 amount to about 27,500,000 bags, while the five crops from 1891 to 1896 amounted to only 30,000,000 bags all told.

"So the low prices are the consequence of supplies, and are in spite of the strong bull speculation. There is no 4c. coffee. If it were, according to my judgment, of good commercial quality, I would consider it cheap under all circumstances. The 4c. coffee of the contract means 6 to  $6\frac{1}{2}$ c. commercial quality, as the quality tendered is 2 to  $2\frac{1}{2}$ c. higher in grade than No. 7, and instead of being worth 2 to  $2\frac{1}{2}$ c. higher to the consumer it is not worth more than 1c. more than No. 7.

"The coffee trade, as well as the outsiders, have repeatedly been caught by the apparent low price of coffee and by all sorts of artificial measures to help the market. As every coffee merchant the world over knows, the Brazilians do not sell 4c. coffee; they average over 6c. in both Rio and Santos. Such a delusion on their part has been paid for so dearly that they will make up their minds that if Brazil continues to produce at this price the fact of their doing so contradicts in itself the theory that the price is low enough to decrease production. It should be proved by this time to the satisfaction of everybody engaged in the business that artificial means either by misrepresentation from the country of production or by speculation does not cure the evil.

"I have pointed out as far back as September, 1899, when prices were about on a par with the present, that nothing but a very low level can curtail the production of coffee, and evidently this level has not been reached so far. I am pointing out facts, as the low prices in 1899 have brought about larger crops than ever before, and the only solution of the question that I can see is a radical decrease in the production through low prices, which can only be reached by consuming markets using up the supplies on hand and not encouraging Brazilians to continue raising big crops by helping them with speculative ventures, such as has been the case the past four years." —*Tea and Coffee Trade Journal*, April 14.

\* \* \*

**Brazil Prohibitive Export Duty on Low-Grade Coffee Denied.**—The New York *Herald* on April 11th last printed the following cable dispatch from Rio Janeiro explaining and in the main refuting the dispatches heretofore reported stating that Sao Paulo intended levying prohibitive export duties on low-grade coffees:

"No one here believes that a duty will be levied on the exportation of coffee. I have been assured that the Government will oppose any such drastic measure to relieve the market, if it should be presented by any one interested in the present deplorable condition. Only Congress can establish duties on the exportation of products from Brazil. The planters and merchants in attendance at the Coffee Congress have adopted several methods for the solution of the present crisis, caused by the excess of production and the falling prices in European markets, and it is hoped that these will result successfully.

\* \* \*

**A View on the Low Prices of Coffee 21 Years Ago.**—One of the principal importers of coffee, says the New York *Commercial Advertiser*, talking about the price of that staple and the general coffee trade situation, said that the price of coffee known as No. 7, and which all roasters use, is no lower now than it was twenty-one years ago and that the present price of options was not a record price either.

"In September of 1899," he continued, "we had spot months a 4·10 for quite a while. Twenty-one years ago futures were  $5\frac{1}{4}$ . Considering that the difference between No. 7 and No. 3 was then 110 points and to-day it is 200 points, options were as cheap in 1882 as they are to-day. But the stocks on hand and the crops are three times as large now as they were then."

\* \* \*

It will be recalled that several months ago we printed the information from Rio Janeiro that the idea was generally entertained in Brazil that something would happen in the coffee trade in April, whereby there would occur a marked

rise in the price of coffee, especially in New York. We acknowledged some density of mind in being unable to understand how this should be brought about except by some stratagem, which probably would not catch its fish, and ever since we have been waiting for results. The cat has now been let out of the bag, and we have seen with our eyes and heard with our ears how that at last the law has been passed by the Sao Paulo legislature to curtail the export of coffee in that province by the imposition of a duty on low-grade coffee that should make its export not worth while. One-fifth of the crop from that state would in this manner be eliminated from the coffee market of the world; July 1 was the day the law is to become effective, the rumour said. Observe the word rumour, for as yet, concerning this law, the commercial world wants authentic information. The expectation seemingly was that the coffee market would at once respond in a quick rise in prices, and for one day there was a rise of a few points. But presently, after a short duration of time had demonstrated that there were too many "ifs" in the way of an effective enforcement of the law, the market returned to its lowest conditions, and we have no doubt the Brazilians have been much surprised at an unappreciated and unresponsive world. But they may as well begin to learn now that although the consuming coffee world may be deceived part of the time and pretty much all of it in that part of the time, it is not going to be deceived all the time in part or in whole, and that kind of time has now arrived. All of the Brazilians must now learn that it is time to stop fooling themselves by fooling others. In the long run one reaps as one sows, and the Brazilians are now reaping their tares. The expunging of the low-grade coffee, as we pointed out last week, would be a good thing, but although the state of Sao Paulo may thus sacrifice its coffee (grown and picked, mind you!) it is not to be assumed that the other states in Brazil will not continue to export low-grade coffee, and probably in larger quantities on the inducement of higher prices. Hence we fail to see the ultimate good the restriction of export would bring about. Nor, again of avail would be the restrictive agreement that may be reached by an international congress of growers, since it may be set down as a certainty that the large consuming countries, especially the United States, will not enter into such a compact. There is one immediate and unfailing remedy, and that is supplied by the law of supply and demand, and the sooner the Brazilians accept its severe but really kind ministrations the sooner will pass away their so-called "coffee crisis."—*Tea and Coffee Trade Journal*.

\* \* \*

The arrivals of mild coffee in the United States for the month of March were heavy, and aggregated 239,750 bags, of which 42,563 bags were in transit for Europe. This makes the net arrivals 197,187 bags, showing an increase of 6,461 bags from those of the corresponding period last year.

\* \* \*

Henry Nordlinger & Co., in a circular-letter, says: "With a world's consumption of 15½ million bags of coffee, of which about 4 million bags are supplied by other countries than Brazil, the production or exportable quantity of the latter country would have to be brought below the 11½ million mark to become of benefit to values. It is the surplus of production which makes the price for the crop."

Mr. Arnold Schramm, in talking about the mild grade coffee market, said that high-grade coffees command a premium owing to the scarcity of the supply. Bogota is wanted, and good roasting Maracaibo sorts, particularly Cucutas, which sell readily at 8½ to 9 cents, Trujillo at 6 to 6½ cents, met with a ready sale. The fair and medium grades of Maracaibo are not wanted.

\* \* \*

News from Brazil notes that the picking of the new crop is progressing with rapidity, and it is not at all improbable that receipts of the new crop will arrive early in May, in which case a more demoralized market will be experienced.

\* \* \*

Messrs. Winter & Smillie, of New York, purchased the entire offerings of coffee at the regular quarterly Government auction held at Padang, Sumatra, on March 30. The sale included 3,700 piculs of Padang interior at an average price of 42.57 guilders, Dutch currency, per picul; 500 piculs Ankola at 59.45 guilders; 400 piculs Painan at 34 guilders, and 500 piculs Ayer Bangies at 46.50 guilders; also 700 piculs Mandbeling at 69.75 guilders. They also purchased the Pamanoecken crop of 1,200 pounds on private terms. A picul is equal to 130 pounds, and a Dutch guilder is equal to about 40 cents American currency.

\* \* \*

Cable advices received from Nauman, Gepp & Co., Santos, stated that the Bill has passed to destroy 20 per cent. of the coffee crop and an option extra duty 300 réis on low qualities; to be enforced July 1. As a result of the cable received from Santos regarding the destruction of 20 per cent. of the Santos crop, there was active covering in New York by shorts on the exchange and prices advanced sharply.

\* \* \*

The general belief in New York is that the next Brazil coffee crop will be a record-breaker and amount to 15,000,000 to 20,000,000 bags. As a result of this enormous supply in view, bullish features, even at present low record prices, are slim.

\* \* \*

Herman Sielken, of the firm of W. H. Crossman & Bro., in expressing his views in reference to the destruction of 20 per cent. of the low-grade Santos coffee crop in Brazil, said that this is an admission that the Brazilians deem it impossible to curtail the production in a legitimate way in order to bring the supply and demand in closer proximity. This will no doubt lead to demoralization among large operators and holders of coffee the world over. No positive results are likely, and it is an assured fact that the next crop will be a record breaker.

\* \* \*

**The Coffee Glut.**—Coffee touched the lowest prize-level on record this month, but the decline is not particularly significant. There was nothing else to expect under the circumstances, with thousands and thousands of bags in excess of consumptive requirements and production increasing in Brazil.

The movement of Central American coffee to market is freest at about this time of year, and doubtless the knowledge of this fact has had its due influence upon the general coffee market. It is probable that these grades will sell for lower prices shortly.

From Monday's low record of 3.85c. per lb. for the May option there was a moderate reaction in consequence of the receipt of a cable from Brazil stating that a law has been enacted for the destruction of 20 per cent. of the coffee crop, to be enforced from July 1st next.

This news shows that the Brazilians realize the desperate state of affairs in the coffee trade, but it is not calculated to help matters at present. On the contrary, it may scare large holders and cause serious demoralization among operators, who will probably argue that the crop outlook must be very bearish when the Brazilian Government is thinking of resorting to such a desperate measure.

There are better ways of using that 20 per cent. of production than by burning or otherwise destroying it. If distributed free or at a nominal price in countries not largely addicted to coffee the yearly consumption of the berry should profit and the demand and supply soon be adjusted more equably.

This would also obviate the necessity of holding the coffee congress which Brazil has proposed to the coffee-producing nations for the purpose of taking measures for a general restriction of production.—*Merchants' Review*.

### TEA NOTES.

**U. S. Tea Exports.**—Subjoined is the report of the New York Customs House on the export of tea at the port for the month of March. There were reports of large exports of Congou teas. It was even said that the total reached 46,000 packages. As will be seen, the actual exports were very much less. They were as follows:—

EXPORTS.				Pounds.
Germany	...	...	...	682
Netherlands	...	...	...	24,750
England	...	...	...	245,814
British West Indies	...	...	...	233
Cuba	...	...	...	104
Brazil	...	...	...	60
Total				271,643

**Rejection of Foochow Oolongs in the U. S.**—The Tea Board of the United States General Appraisers has ordered a reopening of the controversy over the rejection of about 300,000 pounds of Foochow Oolong teas by the New York Tea Examiners several weeks ago. Objection was made that the sustaining of the decision by the Appraisers was unfair and illegal in that only two appraisers had passed upon the final decision, whereas the law stipulates that such a board must be composed of three appraisers. The reopening is made to meet the objections advanced.

The Board called upon the National Tea Association for advice in the matter and it replied that the rule requiring the presence of three appraisers at an appeal hearing should be strictly followed and that where a decision is made based on the presence of less than three appraisers a rehearing be ordered. Objection is made however that if the identity of experts called in should be exposed, the best would decline to officiate fearing intimidation; objection was also made by the Association that firms interested should name the experts to pass upon the teas; the board should call any expert it chooses.

**The U. S. Standard Tea Act.**—The United States Circuit Court at New York on 13th ultimo handed down a decision finding for the defendants in the suit testing the constitutional validity of the so-called Standard Tea Act. It was conceded on both sides that certain teas of seemingly good drinking quality, but below the standard, had been rejected and expelled from the country. The question was on the constitutionality of the proceeding and as the Supreme Court must finally pass on this question a *per forma* decision was handed down by the Court for the defendant. Appeal was taken.

Tea imported into the United States in February, 1903, was 5,831,410 pounds, says the "Treasury Bureau of Statistics." The total for the eight months ending March 1, was 96,784,638 pounds.

**The U. S. Tea Market.**—While there is some activity in tea trading, it is not of sufficient volume to have any marked effect on the range of prices, which remain unchanged from those heretofore reported. Although demand and inquiry continues rather limited, holders have small supplies in such teas as are most sought after, Country Greens, Pingsueys and Japans, and consequently will only listen to an offer that approximates the high values heretofore conceded by buyers. The exports of Congous are still reported but the prices of this tea have not altered except in so far that a hardening tendency on the old basis of prices is noted. On account of the holidays of the week past business has been marked with less attention than noted for some time. The thoughts of the market are already being turned to the oncoming Eastern markets, which are expected to open higher, even over the advance of last year, and in this advance Congous also hope to be included. That is an opinion of Congou holders here and is of course subject to bias.

The report of the tea examiner of the Port of New York for the week past is:—

VARIETY.		PASSED.	
		Pkgs.	Pounds.
India and Ceylon	...	2,738	198,018
Congou	...	47	3,048
Total		2,785	228,066

There were no rejections.—*Tea and Coffee Trade Journal*, April 14.

The Japanese treat tea much as we treat coffee. They grind the leaves in a portable mill, reducing them to a fine powder, which is then mixed with hot water to about the consistency of Turkish coffee or a fine pulp. The Chinese and Japanese methods of infusing or drawing tea prevent the tannic acid or astringent principle from forming part of the beverage, but extract all of the more volatile and stimulating properties of the leaves. Tea should never be boiled.

Tea is the drink of drinks to the real connoisseur, the tea-lover who is most competent to judge of merits of the world's beverages. Nothing can take its place, and it soothes, refreshes, and strengthens. Good tea, properly made and drunk in moderation, never does harm. Strange that coffee is attacked by owners of coffee surrogates while tea's virtues are taken for granted.

A correspondent of the Chicago (Ill.) *Record-Herald* states that, in a model factory in Berlin, tea in pint bottles is served to the men at noon for 1c. This is to keep them from drinking beer, for the managers think that they do better work without beer for lunch. The tea has become very popular, and 1,500 out of 2,000 employees now use it instead of beer with their midday meal. The tea is prepared in a tiled kitchen, being brewed in a great kettle heated by steam. Each bottle is corked like a beer bottle.

The National Tea Association, we hear, says the *Tea and Coffee Trade Journal* is increasing its long roll of members

day by day. What is better still, these names, we understand, have come in without solicitation, and thus is additional testimony adduced that the new Association is meeting with the consent and favour of nearly all of the tea trade interests of America. Later on a second invitation will be extended to join the Association, and then the roll of membership should read as the unanimous voice of the tea trade. There will be a few who will stay out to excuse Artemus Ward's dissertation on "pure cussedness," and then there are some who see more profit in the deterioration of the tea trade by the sale of disreputable teas, and hence are unwilling to join the ranks of the National Tea Association, existing for the enhancement of the prosperity of the tea trade along the lines of purity in quality of tea and business dealing. And further, the Association interests all lines of the tea trade.

**The Weather in Sylhet.**—The *Englishman's* Sylhet special correspondent, on 3rd May, says there was a change in the weather yesterday. Slight rain has fallen but not nearly enough to allay all the anxiety. The rain was ushered in by a nor'-wester. Fortunately there was no hail.

**Tea Soils of Cachar and Sylhet.**—*Tea Soils of Cachar and Sylhet* is the title of a brochure now in the Press, written by Mr. H. H. Mann, Scientific Officer of the Indian Tea Association. It will be issued during the month and no doubt will arouse as much interest as the one on *Tea Soils of Assam*.

**Improved Tea Prospects.**—The *Englishman* says that the share market is generally, though not always, a safe guide to the prosperity of an industry. A general rise is noticeable in the shares of tea companies and this, coupled with the fact that prices realised for tea in London are higher than the past three years, points to a better time before long, for the suffering planter and others interested in tea, than they have experienced in recent years. Reports from the districts state that the drought occasions much anxiety but the recuperative power of the bush is proverbial and there are good grounds for the present optimistic outlook.

**The Tea Experiments in Texas.**—Mr. Wilson, Secretary of Agriculture, has left Washington for an extended tour of the South for the purpose of investigating the work that is being done by the department at a number of experimental farms. "I will visit Texas," the Secretary is quoted as saying, "to investigate the results that are being obtained from tea experiments. I am convinced that the soil in some parts of Texas is just suited for the growing of the finest tea produced in the world."

So the National Tea Association is to boom tea, is it? We hope to live to see the day, but are not sanguine. The only booming that tea is likely to get is from jobbing and retail grocers who have private blends to push.—*Merchants' Review*.

**The Evangel of Tea.**—It should be the pleasure as it is the duty of the National Tea Association to promptly enlighten grocers and consumers as to tea—how to blend it, how to buy it, and how to keep and steep it. While at that

task it would be as well for the Association to harp upon the superior economy of the tea habit. One blast upon that bugle horn were worth a thousand men! All advertisements of tea should tell how many cups can be made from a pound of leaf. Actual practice in the kitchen should govern these estimates, for it is foolish to figure on only one drawing for each unit of the leaf when in actual practice the public makes a couple of drawings. As to the strength of each drawing—the quantity of water—the estimates should also vary. But, with a big B, the consumer should always be warned that boiling the tea is always to be avoided because it brings out the tannin.—*Merchants' Review*.

**The Rivalry of China and Java.**—A correspondent writes to a Colombo contemporary:—"While once again lowcountry and cheap teas generally are in great request in the Colombo market and are fetching much above intrinsic value compared with price for high-grown, what will become of fine plucking and green-tea making? We shall see. But meantime there is authentic news of large quantities of China teas from New York and of Java teas from Holland, being imported to London to make up for the absence of common Indian and Ceylon teas. Surely there is in this something to make us planters (in the lowcountry)."

P. C. Larkin, of the "Salada" Tea Co., who left recently on a trip to England, sent the following wireless message to the *Canadian Grocer*:—

Lieut.-Col. MacLEAN,

*The Canadian Grocer*, Toronto.

Report on "Salada" by Marconi: "It's the finest tea the world produces."

P. C. LARKIN.

[SS. *Kaiser Wilhelm der Grosse*, off Fire Island, via Marconi.]

**Tea in Chicago.**—Reporting on trade in 1902 the British Consul states that the imports of tea to the United States show an increase of over 40,000,000 lbs. over 1901, when the imports were very low, and 12,000,000 lbs. over 1900, which year is taken as a basis of comparisons. Japanese tea shows an increase of a little over 1,000,000 lbs.; China, 6,000,000 lbs.; the United Kingdom, 3,000,000 lbs.; and East Indies, 2,500,000 lbs. In 1900 the United Kingdom and East Indies together were credited with 5½ per cent. of all tea importation, while in 1902 this has increased to over 10 per cent. This is much more satisfactory return than had been expected, and at last it seems that there is a prospect of Indian teas getting the recognition in this market that their quality warrants.

To Chicago the direct importation of tea have fallen off and are the lowest for the five years of which there are records to hand, while the imports from the United Kingdom have advanced and are the highest. For the first time tea merchants speak hopefully of the outlook but tea merchants and growers are warned not to rush in stocks on speculation, as the increase must be gradual, and any attempt to force sales or to leave large stocks on the bonded warehouse will result in a fall of prices and heavy losses to speculators.

**The Coming Indian Crop.**—According to the *I. P. G.*, "the consensus of opinion is that the tea crop this year will be by no means an abnormal one. Even under the most favourable circumstances later on in the season, we think it

very improbable that the past season's figures will be greatly exceeded, if exceeded at all. Our statistical position is very strong, and present circumstances appear to be all in our favour in certain respects."

**Indian Tea Prospects.**—The following telegram, with reference to the tea crop of the various districts, was despatched early this month by the Indian Tea Association at Calcutta to the Association in London:—

**ASSAM.**—The outturn last month was about normal, and prospects throughout the districts are favourable generally. There have been storms with hail, but no material damage done.

**CACHAR.**—The prospects throughout the districts are favourable generally. There has been severe heat, and rain is much wanted generally.

**SYLHET.**—The prospects throughout the districts are unfavourable generally. Rain is wanted.

**DOOARS AND TERAI.**—The outturn last month was poor, and prospects throughout the districts are unfavourable generally. There has been severe heat, and rain is much wanted generally.

**DARJEELING.**—The outturn last month was poor, and prospects throughout the districts are unfavourable generally. Severe drought prevails generally.

Mr. Arthur H. Green, writing from Germiston, Transvaal, on the 9th ultimo to the *Times of Ceylon* says:—

I address you on a subject that affects Ceylon tea in South Africa, and must ask you to submit copy to the English Press in Colombo. During the month that has just passed, a Conference has been held at Bloemfontein, under the presidency of the High Commissioner, Viscount Milner, whereat delegates from Cape Colony, Natal, Orange River Colony, Transvaal, and Rhodesia, met to discuss mutual affairs, and they resolved on certain changes in the Customs Tariff, though they are not to be made public till 1st July this year. I learn that it is intended to make the duty on tea on a par with the Natal and Cape duties, that is, 6d. a lb.—whereas at present 20 per cent. has to be added to invoice price: and in this value is to be included all packing which is being sold with the articles, and on that value  $7\frac{1}{2}$  per cent., together with a special duty of 5s. on the 100 lbs. is charged. As it is: packing, duty, and charges, on my last invoice came to 5'380d. per lb. of tea, and on the previous shipment 5'366d.; this is quite enough for the tea to have to carry. If we take 42 cents of the rupee as cost, at an average rate of exchange it works out at 6'9'2d. per lb. Is it fair to an English Crown Colony to tax that tea 6d. a lb. as duty? This is to protect Natal-grown stuff. One of the largest Natal tea and sugar growers is now leader of the Natal Opposition, and the parties are pretty even in numbers. This gentleman was, I believe, one of the members of the Conference, and here you have the key to the position. As a part result of this Conference, last week's *Gazette* repealed the duty on produce grown in British South Africa, except in as far as spirits were concerned; while all along the produce of Natal has been carried over its railways at a specially reduced rate. If the Chamber of Commerce, the Planters' Association, and the "Thirty Committee" pull together on this point as they should, there is time for a strong remonstrance to be lodged with the High Commissioner before such duty is imposed.

Once imposed, Sir, you will have far less prospect of being heard to effect.

As far as the tea trade here is concerned, I may state that large quantities of groceries, including tea, are being sold by auction on account of the Field Force Canteens, and also the Army Supply Department. So far the "Field Force," since the war, have sold, according to figures given by the Colonial Secretary the other day, goods to the value of £88,000—and £78,000 worth still remains to be sold—on an average goods being 30 to 50 per cent. below what they can be landed at in the Transvaal.

A correspondent of the *Statesman* writes:—

As we are now on the eve of another season's opening may I bring to the notice of some of your readers how very desirable, yea even necessary, it is for those interested in the industry to bear in mind the severe crisis we have gone through and not to forget the causes that led up to it. The principal cause to which the severe

fall in prices was attributed was excessive production and there is no doubt it was a very important factor but it was not the sole cause. Almost equally important factors were unwarrantably coarse plucking in 1900 and the general want of firmness and cohesion shown by producers as against the very opposite by buyers, who, up to September 1902, combined so systematically as to produce nothing short of a panic on the London market. From that point however producers, looking into the stronger statistical position established through small crops in 1901 and 1902, took up a very strong attitude which they have been able to maintain in spite of strenuous efforts on the part of Blenders to hold off the public sale markets by making private purchases, dividing stocks and inducing country dealers to work from hand to mouth so that at the moment they are quite bare of stock and will have to purchase freely within the next 3 months to replenish. I mention these facts to show how strong the position is and I now come to the point I wish to call particular attention to. We all know how assiduous Blenders are in protecting their own interests and why should producers not be equally careful, but are they? Here we have a very strong position—stronger than it has been since 1894 and yet I have it on the best authority that one or two Agents or proprietors have allowed themselves to be induced to sell whole garden crops to Blenders at a slight advance on last season's average prices. To say that this is a suicidal policy is to use a very mild term; it is absolutely throwing away the position and giving Blenders a lever which they know too well how to use to their own advantage and the detriment of the industry. I would appeal to Agents and shareholders to oppose this innovation by every means in their power. It is done with the object of preventing a legitimate rise in prices with a view to frustrating the benefit that must necessarily come to an industry where the demand exceeds the supply and to take away from the Calcutta market teas that go to the foreign markets that have come to the rescue of industry and make the Calcutta market independent of the combination amongst the principal London Blenders. If it is allowed to go on it gives these Blenders a pull that no combination of producers can meet and I would most strongly urge upon all producers to decline any such proposals more especially for teas which have usually been sold on the Calcutta market. To keep Calcutta well supplied with suitable teas for outside markets should be the object and aim of producers, for it is these very outside markets that have worked their salvation and will in future pay their dividends, for when the London Blenders find that they are unable to purchase large lines of tea by private sale they will be forced to come into the market to buy and we shall then hear the last of their combination. The point is a critical one and full of vital importance. Producers have nothing to fear from over-production. The area of new extensions that have come into full bearing lately are more than counterbalanced by the abondonment of old tea and the serious falling off in yield in old gardens. Moreover the shortness of labour will prevent any abnormal crops being produced for some years to come, even allowing that other conditions are favourable. So far as the immediate future is concerned the drought and hail have settled the question of 1903 crop which cannot be large even under favourable circumstances. The Blenders will ignore all these facts until they appear in actual figures of export, but, if we take the present position of the gardens into consideration, the short labour forces, the excessive drought, damage by hail and a displacement of a minimum of 5 million pounds with green tea, it is not difficult to foresee the strength of the position when the actual crop is ascertained in November next. Tea has not been in such a position for many years and it remains with producers to weigh the whole situation calmly. If they will go the right way to work there is no reason to doubt a return to prosperity in the industry such as has seldom been experienced.

**The Tea Trade.**—Messrs. George Payne & Co. (Limited) write to the *Grocer*:—The interesting article on "The Future of the Tea Trade," which you printed on page 1108 of your last week's issue, should be useful alike to tea-growers, dealers, blenders, and grocers. We cordially endorse your correspondent's advice to grocers to persist with the better teas. Indeed, as your own advertisement columns during the last few years so amply prove, we have always advised grocers to push fine and really good teas at prices profitable to themselves, and to leave the sale of the lowest possible blends at the lowest possible prices to others less far-seeing.

We were convinced that the unscrupulous advocacy of poor teas at petty margins of profit per pound would inevitably lead sooner or later to that disgust of the consuming public and consequently difficult position, which, as your correspondent rightly says, is now overtaking numbers of short-sighted grocers, many-shopped retailers, and some blenders. In season and out of season, we have consistently urged the better grades of tea, and have never allowed our fine blends to bear the loss necessarily consequent on selling low blends below cost price.

We differ, however, from your correspondent in some of his deductions. For instance, our exceptional experience has proved to us that the expert blender is more useful to the grocer in his finer teas than with his cheapest canisters, inasmuch as it is imperative that the retailers' highest-priced teas should be of stand-out quality and of recent importation.

To obtain the absolutely necessary uniformity of each blend, month after month, it is, of course, requisite that the blender shall have a large number of originals in stock for each blend, since it is impracticable to obtain any two growths precisely identically in every respect. Certainly, until a grocer's output of tea is exceptionally large, it is wise for him to buy periodically every fortnight. And, as the expert blender holds large stocks, and devotes his whole time and attention to tasting and selecting stand-out teas of distinctive character, he is naturally in the best position for supplying the right tea at the right price.

The grocer, as a rule, has neither the time nor the inclination, even if he have the judgment, to liquor original teas offered him by his wholesale house, and he is too often influenced by the traveller's persuasive powers and by the mere appearance and aroma of the dry leaf. He does not discover that the appearance of the tea is only its best credential until he begins to blend and sell his purchase. A grocer who buys ready-blended teas limits his risk of an unsatisfactory tea to a very small quantity, and thus saves himself the serious anxiety and loss of finding himself encumbered with a large bulk of his own blending, which may have unfortunately proved unsaleable at even cost price.

Any of your readers interested in this matter, of really vital importance to the grocer and tea-dealer, can easily test it, and prove for themselves that the really expert blender, who makes a lifetime's study of stand-out quality, can do better for them than they can do for themselves in tea.

### NOTES.

#### The London Clearing House.

A general Meeting of the Ceylon Association has adopted the Report of the sub-Committee appointed to consider the re-organisation of the Clearing House.

#### Cinchona-growing.

It is true, the *Ceylon Observer* remarks, that cinchona will not grow in tea-fields as it did amongst coffee in days of old. The roots of the tea-plant are more numerous and wider spreading; but cinchona still grows well in Ceylon amongst young tea, and still better in forest clearings by itself, provided plants from fresh seed (Java or Indian) are used.

#### The London Tea Market.

According to an *Englishman's* cable-gram, Messrs. Ewart and McCaughey's Report, dated London, the 11th instant, says that there were lighter auctions, last week only 29,936 packages being offered. The auction opened with spirited bidding; common kinds were steady and there was decidedly more doing in medium to fine Assam Pekoes, Broken Pekoes meeting with especial attention.

#### Tea and Coffee in the U. S.

The peculiar manner in which tea stays in the background while coffee leaps to the fore, is, says the *Merchants' Review*, partly explained by the strong infusion of German blood in the

population of the Union. The Germans are pre-eminently a nation of coffee-drinkers, as distinguished from tea-drinking peoples, and perhaps the grocers of the country will have to wait until another generation has grown up before seeing tea take the position in popular regard which it is one of the objects of the National Tea Association to effect.

#### Export of Tea from China.

gives these figures:—

		Messrs. Siemssen & Co.'s Market Report : dated Hongkong, April 24.	
		lbs. 1902-3.	lbs. 1901-2.

#### Ceylon Rubber in London.

Messrs. Louis and Peat give, under date 17th ultimo, the following particulars of Ceylon-grown Pará Rubber sold at Public Sale here to-day may interest your readers. The market is good and the lots were well competed for:—

Mark.	Packages.	Description.	Price $\text{P}$ lb.
Tudugalla	3 cases	Fine clean biscuits	4s. 2½d.
Culloden	6 do.	Fine thin pale biscuits	4s. 3d.
Do.	3 do.	Fine clean scrap	3s. 6½d.
Do.	1 do.	Good small loose ball	3s. 4½d.
Arapolakande	4 do.	Fine clean thin biscuits	4s. 3d.
Do.	1 do.	Good clean scrap	3s. 4½d.
Doranakande	1 do.	Fine biscuits	4s. 2½d.
Fine Pará firm at 3s. 10½d. per lb.			

#### Madras Planters' Labour Bill.

The Madras Planters' Labour Bill has received the assent of the Governor-General in Council, but the question of its introduction has not yet been considered. The Government of Madras are not anxious to push its introduction, in view of the objections raised to it by many planters. The Bill provides for the introduction of its provisions into particular areas, and the question has not yet been settled whether the Government will wait for local authorities to report that the introduction of the Bill is desirable in their area, or whether Collectors will be asked to report on the desirability or otherwise of the Bill being introduced into the planting areas in their Districts.

#### London Tea Market.

Weekly special telegram dated 7th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that competition is general and well distributed and that the market for medium liquoring Pekoes and Broken Pekoes is steady, while the market for common Pekoes and Broken Pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souchong is 6¾d. (the same as last week) and the average 7¾d. (½d. more than last week). The average for the same period last year was 6½d. Reuter reports that the tone of Ceylon tea is steady, and Broken Pekoe and Pekoe Souchong are also steady. Fair Pekoe Souchong is quoted at 6½d. (same as last week) and the average for the week is 7¾d. (½d. above last week). 23,000 packages of Ceylon tea were offered for sale and 20,000 disposed of; while of the 40,000 packages of Indian tea offered, 30,000 were sold at an average of 7½d. (same as last week).

## GENERAL ARTICLES.

## COFFEE IN LONDON.

Since the re-opening of the market on Thursday there has, says the *Produce Markets' Review* of April 18, 1903, been a moderately good demand, and prices have been maintained quite at the level ruling before the holidays. A large proportion of the Costa Rica offered has been foreign cleaned, but is not of the finest quality; in fact, the bulk of it was only fit for export. With a prospect, however, of a better supply of this description, the extreme prices that were paid early in the season for the few lots that then came to hand have not been maintained, and rates have been more on the level of fine qualities of London cleaned parcels. East India does not show any improvement in quality, and it is only a few lots that can be taken for the home trade. In the terminal market prices have shown some weakness, closing at about 6d. lower than before the holidays.

## TEA IN LONDON.

INDIAN TEA.—In consequence of the market having been closed for the greater part of the week, transactions have been on a limited scale, says the *Produce Markets' Review* of 18th ultimo. The quantity catalogued for public sale on Monday next is but moderate, comprising 28,000 packages, and from the high limit already submitted there is every indication of a very firm market, particularly for the lower grades. The clearances, although comparatively small, are fully up to anticipations, considering the near approach of the Budget, but the duty-paid stock held by the retailers is in an exceptionally limited compass. That there will be a rush to remove tea from bond after the 23rd instant is practically certain, which should not be overlooked by those anxious to obtain delivery as promptly as possible. To insure this, it will be necessary that clearing instructions should be forwarded at once, as where stocks are depleted to the lowest practicable limit, delay in delivery may cause considerable inconvenience. Should there be any change in the Customs charge, a certain period will probably be allowed to quit teas bearing the 6d. duty, but this will only partially relieve the congestion which is sure to occur at the warehouses.

CEYLON TEAS.—This market has not yet opened, no sales having been held since the holidays. The next auctions will take place on Tuesday, the 21st instant, when about 26,000 packages will be offered, and higher prices are anticipated.

CHINA TEA.—There is a steady enquiry for the lower sorts, and, although no public sales have been held during the week, a considerable business has been transacted privately in common Black Leaf Teas. The Green and Fancy markets have remained practically closed, with only a limited business to report.

## PRODUCE AND PLANTING.

The Chancellor of the Exchequer has not disappointed those who did not expect a reduction in the tea duty. His recent speech on the subject of a free breakfast table, to which he is opposed, did not point to a reduction in the duty. Tea has always been held in affectionate regard by those who organise the taxes. A writer in the *Westminster Gazette* reminds us how promptly that cheering herb was pounced upon by the Treasury for fiscal purposes. Not until the latest Cromwellian days did "Tee or Tay" become at all widely known even in the wealthier quarters of England; but in the very year of the Restoration, when money was sorely wanted by the Exchequer, Parliament, in passing an Act for "A Grant of certain Impositions upon Beer, Ale, and other Liquors for the Increase of His Majesty's Revenue during his Life," ordained that 8d. should be levied "for every Gallon of Chocolate, Sherbet, and Tea, made and sold, to be paid by the Maker thereof," coffee escaping with half this sum. When, indeed, the rates were revised in 1671 coffee was given a further advantage by the impost being reduced to 2d. a gallon, while chocolate, sherbet, and tea, its competing beverages, were still taxed at four times that amount. But gradually it appears to have dawned upon the Treasury that the method of taxing these drinks by the gallon, without specifying

the strength of the liquor, was a false one; and, accordingly, when William of Orange came to the throne, there was adopted an "Act for the charging and collecting of the Duties upon Coffee, Tea, and Chocolate at the Custom House, the sum of £5 12s. being levied upon every hundredweight of coffee "imported into England, Wales, or the Town of Berwick-upon-Tweed," £8 8s. upon each similar quantity of cacao nuts, and 5s. upon every pound of tea! And, though the rates have varied and much lessened, successive Chancellors of the Exchequer have never let tea alone since.

The long-threatened movement amongst Japanese tea-growers and merchants for exploiting Japanese tea in markets where it is now comparatively unknown has, we believe, taken definite shape. The Government has already spent 70,000 yen for some years on furthering the objects of those interested in Japanese tea, and it is now expected to subsidise the movement for pushing the sale still further. The fear that British-grown tea will make serious inroads on the market for Japanese tea in the United States and Canada is really at the bottom of the movement, which is not likely to make itself felt in Europe, where tea from Japan is but little known.

*Apropos* of the fact that a leading light of the grocery trade has been recalling the changes which have occurred in the trade in the last half a century, it is interesting to remember the alteration that twenty-five years has brought about in the tea trade. The small supply of Indian tea which found its way into Mincing Lane in the early days of the industry was only known to the initiated, and anyone who wished to buy it from the ordinary retailer of tea would have probably been told that it was not intended for consumption without an admixture of China. Those interested in the industry who remember the difficulty there was even a quarter of a century since in procuring Indian tea at the grocer's shop should feel some indebtedness to the pioneers of the Indian tea industry and the then newly-formed Indian Tea Districts Association in London, whose Secretary, Mr. Ernest Tye, still happily fills the same position in the reorganised Association, for the efforts made to increase the consumption of Indian tea with the public. These efforts were not seconded with much enthusiasm by the retailer of those days, the traditions of the China tea trade being then strong upon him. It was not until Ceylon came into the field a few years later and the energy and enterprise of the growers there were combined with those of India in the attack on China that victory was assured, and grocers began to realise that the public preferred British-grown teas, not perhaps, as was fondly imagined at the time, because they were British-grown, but because of their purity and the excellent value offered for money. In this connection the services of the inventors of tea machinery should be more fully recognised. The fact that Indian and Ceylon teas were made by a cleanly process, and not manipulated by the hand, materially helped in the work of popularising them.—*H. & O. Mail.*

## ADULTERATED AND EMASCULATED PEPPER.

It is a singular thing, says the *Produce Markets' Review*, that pepper should always be so favoured a vehicle for adulteration, for the spice is after all a very cheap commodity when perfectly pure, and it is not in very large demand. It is obvious, therefore, that the profit of adulteration in pepper must be very large or the frauds would not be so continuous. We reprint below from the *Grocer* a report in which the old enemy "poivrete" (alias ground olive stones) has again come to light, where the profit, even on comparatively small grindings, must be gigantic. It is somewhat singular that this old adulterant should again be used, now that, owing to the researches of Dr. Campbell Brown, its detection is easy. It is heartily to be wished that the gentleman in question and the public analysts generally (and particularly in Liverpool—a hot-bed of spice adulteration, sophistication and fraud) had a stronger and juster law behind them. It is the grinders and wholesale vendors of adulterated spice who ought to be punished, and not the retailers, who cannot detect the adulteration, though they might perhaps be more careful of whom they buy.

Another matter is attracting a good deal of attention in the trade, and ought to be carefully looked into by the analysts. It is,

what we have called the emasculation of pepper by bleaching and other chemical processes. The object of these is the reverse of fraudulent, for it is to lighten the colour of pepper at a considerable cost. In effect, however, the result of these processes is so to weaken the pepper, that it is inherently worse than if it had been adulterated by the older adulterants *poivrette* and ground rice.

Why should it be considered desirable that ground white pepper should be deprived of its natural colour, and be given some other tinge? Pepper is bought to be eaten, and not to be looked at. The novel idea is to bleach it with chloride of lime, the agreeable substance used for deodorising drains, and with other preparations, in which the poisonous element, chlorine, plays a part. We are far from saying that the pepper so treated is in any way poisonous, for it is not so in the smallest degree; though the smell of chlorine is not generally considered an addition or condiment at a feast. But we do say that much of this bleached pepper is so emasculated, or deprived of its essential pepperiness, as to be comparatively worthless. The more scrupulous spice grinders, after trying experiments, came to the conclusion that these bleached peppers should not be sold as pepper, as they had been deprived of their essential quality, and the result was a fraud on the public, though the reverse of an intentional one. Two things require to be done in this matter. The first and most important is that the grocers should give up the senseless test of colour and that they should buy on intrinsic merit. The next is that the public analysts should take up the question and after due notice prosecute in the cases of emasculated pepper. It is, after all, in its results quite as bad as the exhausted ginger, the sale of which is treated, though far too seldom, as a legal offence calling for punishment.

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, April 9, 1903

The home tea market has remained without feature since our last issue. On the street activity has been a little more marked, and prices remain unchanged. The London market still continues without any great progress, the trade done is merely for immediate requirements, buyers evidently still holding back in view of budget, which is expected to be issued at an early date after Easter. The prices reached, however, were at fully up figures, and in the case of some common grades a slight advance was realized. The New York market reports the sale there of 2,000 packages of tea for shipment to the London market at the highest price reached this year.

MONTREAL, April 8, 1903.

The demand is somewhat improved this week, and shipments have been going forward briskly. Ceylon and Indian blacks are quoted about 1c higher. Souchongs, Pekoe Souchongs, and Pekoes have been in good demand. The inquiry from retailers seems to be mainly for cheap Ceylons and Indians, say about 13c.; but such teas are scarce, and the jobbers find it difficult to obtain anything under 14c. in these teas. Japans still sell in limited quantities at 17½ to 18c. for good medium, and as high as 24c. for higher grades. In other teas there has been no change; business, though quiet, is improving.

### TO MEET THE FOREIGN COMMISSIONERS.

When ss. *Kaiser Wilhelm der Grosse* sailed yesterday morning for Europe she bore, among other distinguished passengers, Mr. P. C. Larkin, of P. C. Larkin & Co., the head of the Salada Tea Company. Mr. Larkin, who was accompanied by his wife and daughter, goes to England at the invitation of the Government Commissioners from Ceylon and India, who are now in London considering the tea question. Mr. Larkin is an acknowledged authority on this subject, and for that reason his advice has been sought. Another matter that also will be discussed with Mr. Larkin by the officials of the British Government is the size, nature, and details of the exhibition of Ceylon and India teas to be made at the forthcoming St. Louis Exposition.

Subsequently Mr. Larkin will make a six weeks' tour of the Continent with his family, in which business will play a part, as well as pleasure, as he intends devoting some time to a study of the Ceylon and India tea situation in France and Italy, where these teas have been making good headway ever since the Paris Exposition, which was practically their first introduction in the countries named.

It is impossible to doubt concerning the brilliant future of Ceylons and Indias after conversing with Mr. Larkin. He is an enthusiast, truly, but an extremely practical one. Mr. Larkin looks for a Ceylon and India importation this year of nearly 20,000,000 pounds. As he truly says, if this colossal amount be taken into the American market it will play an important part in reducing the consumption of Chinas and Japans. Importers holding too large stocks of the latter may therefore meet with disaster, Mr. Larkin believes, and if his past success as a tea prophet be any criterion, his predictions are likely to come true.—*American Grocer*.

### MARCH COFFEE MOVEMENT IN THE U. S.

The deliveries during March show improvement and were above the monthly average for the previous year, when the total deliveries in the United States and Europe reached 15,516,663 bags. The world's visible supply, April 1, shows a small decrease from March 1, but a gain for the year ending April 1, 1903, of 1,132,724 bags.

The total visible supply of the world on April 1 was 12,380,627 bags, against 12,517,266 bags March 1, 1903, and 11,247,903 bags April 1, 1902. Highest visible. 13,233,284 bags, November 1, 1902. On April 1, 1901, it was 7,412,277 bags, showing an increase in three years of 4,968,350 bags.

The receipts at Rio for the first nine months of the trade year 1902-03 were 3,333,000 bags; at Santos, 7,162,000 bags; at both ports, 10,495,000 bags, against 13,104,000 bags in 1901-02; 9,338,000 bags in 1900-1901. During three previous semi-annual crop years the receipts for this period averaged 87.3 per cent. of the total crop. On this basis the total receipts for the year should be nearly 13,000,000 bags.

The following statement shows the March movement in detail:

Stocks, March 1, 1903—	Bags.	Bags.
United States ...	2,324,304	
Europe ...	7,451,662—	9,775,966
Receipts during March—		
United States ...	802,394	
Europe ...	793,910—	1,596,304
Total supply, April 1, 1903	...	11,372,270
Less stocks, April 1, 1903—		
United States ...	2,502,406	
Europe ...	7,395,721—	9,898,127
Deliveries, March, 1903—		
United States ...	624,292	
Europe ...	849,851—	1,474,143
Deliveries, March, 1902	...	1,218,737
Increase as compared with March, 1902	...	255,406
Deliveries, July, 1902	...	1,211,088
Deliveries, August, 1902	...	1,302,949
Deliveries, September, 1902	...	1,396,975
Deliveries, October, 1902	...	1,545,611
Deliveries, November, 1902	...	1,240,213
Deliveries, December, 1902	...	1,183,298
Deliveries, January, 1903	...	1,407,123
Deliveries, February, 1903	...	1,320,514
Deliveries, March, 1903	...	1,474,143

Total deliveries, nine months, 1902-03	...	12,081,914
Total deliveries, nine months, 1902	...	11,664,710
Total deliveries, nine months, 1901	...	10,596,995
Total deliveries, year ending June 30, 1902	...	15,516,663
Total deliveries, year ending June 30, 1901	...	14,329,925
Average deliveries monthly, year 1902-03	...	1,293,055
Average deliveries, nine months, 1902-03	...	1,342,435

The March sales of options were 556,000 bags. The lowest price for No. 7 Rio was 4.10 cents for March, April, and May; the highest, 5.35 cents for January.

Of the total deliveries in the United States, 509,128 bags were Brazil and 115,164 bags of all other sorts. Over 81½ per cent. of the total deliveries were of Brazil sorts and 18½ per cent. of all

other kinds. This shows a gain of  $5\frac{1}{2}$  per cent. in the deliveries of mild coffee as compared with February. The receipts were 197,187 bags out of total receipts of 802,394, or  $24\frac{1}{2}$  per cent. The receipts at New York are still behind last year's record by 118,762 bags.

The over-production of coffee has tempted the Government to formulate laws to cut down production by destroying 20 per cent. of the coffee. As commercial law is always stronger than legislative law, there is little probability of such measures per Mr. Hermann Sielcken, of the firm of W. H., proving the remedy desired. Referring to the matter Crossman & Bro. said:

"The law discussed in Brazil destroying 20 per cent. of the low grades or paying an extra export duty on triage is an admission that the Brazilians consider it impossible to curtail the production in a legitimate way to bring supply and demand nearer together, and no doubt such admission will have a demoralizing effect upon the large holders of coffee the world over. It is very unlikely that any positive result can be accomplished and that it is simply an agitation in a weak market to make unsophisticated minds believe in a smaller outturn of the crop, while it is, in fact, a positive assurance that the next crop is another record breaker."

According to Emanuel Gonzales, Chief of the Bureau of Statistics of Costa Rica, Brazil is now issuing invitations to the governments of coffee-producing countries to meet there this year to sign treaties whereby coffee production shall be curtailed.

Mr. Gonzales looks for good results from such a Congress, and says:

"We now propose to reduce the production to meet the demands for reasonable consumption, and while the governments will curtail the supply, it does not mean that the planters will lose, for in addition to the standard of prices that will be adopted the governments will charge an export duty that will make up the deficiency, if any, that may be caused by a reduced production; while the surplus product will be burned by government officers, thus eliminating the surplus now in the warehouses and maintaining the prices fixed by the congress.—*American Grocer*."

## TEA CULTIVATION IN THE TRANS-CAUCASUS.

### ITS PRESENT AND FUTURE.

Data as to the present opinions as to the future of the tea cultivation of the Caucasus vary considerably. H. B. M. Consul at Batoum in November, 1901, reported at length and unfavourably as to the importance or the future of tea growing there, stating that the "periodically published optimistic views have been much exaggerated, and, if anything, are misleading as to the state of affairs." "From the foregoing it is clear that tea planting in the Caucasus may at some remote period become sufficiently advantageous to warrant its being generally adopted, but for the present the industry has not assumed any commercial significance, and it is, therefore, not likely to play an important part in competing with Chinese, Indian and Ceylon tea, not only in the markets of the world, but even at the Russian and Central Asian tea trade centres." A year later, in November, 1902, his report is much more favourable and his conclusions altogether different, as the following copy shows:—

(See Agricultural Report of H. M. Consul at Batoum, November, 1902 ("Agriculture in the Trans-Caucasus for the year 1902"), publishers Eyre Spottiswoode, E. Harding Street, Fleet Street, E.C., price 1d. Also for previous year, price 1d.)

The same report thus concludes: "Under the conditions set forth above, the theory that tea growing in this country would not be generally adopted on account of the unfavourable climatic conditions and other difficulties which have to be encountered, including the high rate of wages paid for labour, or that the tea industry and trade for the Caucasus could not possibly expand to a stage which would render it, even at the remote date, of commercial importance, is apparently an exploded idea. The results obtained during this season show that quite the contrary is likely to be the case, and that there is every reason to believe that the cultivation and manufacture of tea promises to be one of the most prosperous and profitable agricultural pursuits in the Trans-Caucasus." (See published reports of Mr. Consul Stevens of Batoum of December, 1901, and November, 1902, Nos. 2729 and 2918 respectively, on the agriculture of the Trans-Caucasus.)

I quote the Consul's opinion first, as he is resident on the spot and has therefore the best opportunities of judging.

The United States Consul at St. Petersburg in a recent report states: "The experiments in tea culture in the Caucasus during recent years have proved eminently successful, and the Minister of Agricultural and Imperial Domains is now taking steps to establish the industry on sound working basis. The climate and other conditions are all in favour of the new enterprise."

**FIRST EFFORTS IN TEA PLANTING.**—The first efforts in tea planting in the Trans-Caucasus were made in the forties by Prince Vorontzoff. He was followed by various others, among them by Mr. Solovatzoff in 1885, and then Mr. Constantine S. Popoff took it up. The Imperial Domains Department started in 1895. These two are now the only planters on any large scale.

**MR. POPOFF'S PLANTATIONS.**—Mr. Popoff's estates are situated near Batoum, viz., at Chavka, Salibauri, and Kapreshum, which have since received Russian names, Otradnoe, Prevolnoe, and Zavietnoe respectively. The area under cultivation on the three estates is 312 acres. Mr. Popoff himself, replying in a lengthy article of several columns in the St. Petersburg Vedomosti of October 22, 1901, to a depreciation of his work by a correspondent of the said paper, states that after visiting China, India and Ceylon, and spending years theoretically and practically studying the question of tea culture, he began with three different plots, differing from each other in important particulars, in the neighbourhood of Batoum. He ordered tea seeds and plants from China, and still continues ordering seeds. He imported Chinese hands, not coolies, accustomed to tea planting, etc. The machinery, etc., was ordered from England. In reply to the accusation that tea planting in the Caucasus is a failure and that it is quite discredited, he gives the following data with respect to the position of his work:

Privolnoe estate (or Salibauri). Plants from imported Chinese seed: Planted in 1893 11,181, 1896 5,023, 1897 18,655, 1898 20,313, 1899 210,455.—Total 266,627.

Zavietnoe estate (or Kapreshum). Plants from imported Chinese seed: Planted in 1893 7,228, 1897 8,319, 1898 56,600, 1899 59,052.—Total 131,199.

Plants from imported Assam seed: Planted in 1897 2,464, Himalaya 1898 78, Ceylon 1898 4,102.—Total 6,644.

Otradnoe estate (or Chavka): Plants from imported Chinese seed: Planted in 1898 19,302, 1897 35,144, 1898 34,018.—Total 88,464.

In this estate experiments have also been made in sowing from seed collected from his own estates: Planted in 1898 345, 1900 284.—Total 629.

Beside which, plants imported in 1893 from Chinese provinces: Mankong 401, Ninchau 447, Yan-loutung 409.—Total 1,257.

Also imported plants from: Japan 67, Ceylon 40, Java 7, Himalaya 16, Assam 22.—Total 155.

In 1894 he tried cultivating cuttings from plants imported from China. The experiment succeeded and he has: At Privolnoe 2,509 cuttings, Zavietnoe 1,350, Otradnoe 2,120.—Total 5,979.

Independent of the above, he obtained sowings from Chinese seed in 1899: At Zavietnoe 452,377, Otradnoe 327,492, Privolnoe 1,067,028.—Total 1,846,897.—1,846,897.

Also planted out in nurseries: In 1900 at Privolnoe and Otradnoe 3,092,492, 1901 1,668,115.—Total 6,807,504.

Yield of his tea factory: Bohea tea: by Chinese method:—In 1895 20 funts, 1896 37 funts, (funt— $14\frac{1}{2}$  oz.) 1897 1,200 funts.

By hand and machine method:—In 1898 2,900 funts, 1899 3,610 funts, 1900 846 funts.

By machine only in 1901—to September 15, 9,072 funts. Tablet Tea:—In 1898 10,000 funts.

His tea, he adds, has been on sale since 1895 under the name "First Russian tea of Constantine Popoff." His Majesty's Consul at Batoum, in his report of 1901, says there are four qualities of tea on the Popoff estates, the first sold at Rs.1.60 per funt (about 3s. 8d. per lb.), the second at Rs.1.20 per funt (about 2s. 10d. per lb.), the third at Re.1 per funt (about 2s. 4d. per lb.), and the fourth (dust) is made into tabloids and sold for the use of soldiers at 20 copecks per funt (about 6d. per lb.).

**IMPERIAL DOMAINS ESTATES.**—The Imperial Domains had, in 1898, 102 acres under cultivation, in 1900 the area under cultivation was 405 acres, and in 1901 the same. The estate is at Chavka, some few miles from Batoum. In 1900 the crop was gathered from 102 acres and amounted to 5,444 lbs. In 1901 the crop gathered from the same number of acres was 21,600 lbs. The quality is principally Kangra Valley. The tea is classified into three qualities. In 1900 first and second were sold at Rs.1.50 (3s.  $2\frac{1}{2}$ d.) per lb. and third at Rs.1.20 (2s.  $6\frac{1}{2}$ d.) per lb. For the

1901 crop a bid was made by a Moscow firm at the all-round rate of Re.1 (2s. 1½d.) per lb. for the whole crop, but was declined. (See Report of H. B. M. Consul at Batoum, November, 1901.) According to a letter report of the same, November, 1902, the area under cultivation on the Imperial Domains estate amounts now to 500—600 acres. To some extent the Imperial Domains' estate at Chakva is in the nature of an experimental plot for trying Japanese and Chinese plants, including tea. Mr. Klengen, the agronomer of the Imperial Domains and initiator of the Domains' Caucasian tea plantations, states the Department had in view other plants as well, as tea alone would be impossible, only a given percentage of the mountainous region being favourable to tea growing. The Imperial Domains, for the further exploitation of the tea industry in the Caucasus, will let small plots to the peasant classes. As most suitable sites, beside the Batoum coast district from the Turkish frontier to the northern limits of the Batoum province, the Ozurgetski and perhaps the Zugdidski districts are mentioned for the further expansion of plantations. Possibly, too, the Sukhum district may offer suitable opportunities. Supposing the available area to be only 25,000 dessiatines (67,500 acres), and the average crop per dessiatine (2·7 acres) 20 pounds (720 lbs.), the yield of Caucasian tea might reach 500,000 pounds, 1,800,000 lbs. valued at 15 to 20 million roubles. The total tea yield of all the Caucasian plantations in 1901 was only 13½ tons, say 39,250 lbs.

CLIMATE.—H. M. Consul at Batoum says that "the climate of Batoum and its environs is all that can be desired for the successful culture of tea." The U. S. Consul at St. Petersburg reports that the climate is in favour of the new enterprise. Mr. Popoff alludes to "places like Batoum where rains are so often almost tropical in their continuation and force" and to the necessity, therefore, of terraces.—*Times of Ceylon*.

## TEA.

Mr. C. R. BANKS,

With B. Fischer & Co., New York, writes to the *American Grocer* :—

There is nothing that appears on our everyday table that is more worthy of interest to, or should receive greater attention of the average storekeeper than tea. This commodity has so many varied flavours, and the requirements of the consumer are so exact, that the dealer must indeed use careful judgment that the individual taste of each customer may be fully gratified. This done, his business grows.

In our own Eastern States we prefer Formosa, Oolong, Congou, Ceylon, Assam, and Mixed tea, because the water here better develops the flavour of these than the green grades; whereas, the greens are more popular for a similar reason in our Southern, and Japan in our Western and Northwestern States. The popular name of English Breakfast was given it by an American, and is what is known in China as Congou or Black tea. It is grown in the vicinity of Shanghai and Hankow, the best grades coming from the latter place, and when fine in quality furnishes a delicious beverage, which, like all others, can only be secured by its being properly prepared with fresh boiling water. Formosa Oolong varies in quality according to its cultivation, the higher grades being picked in seasons best suited to meet certain requirements, together with the perfect art in its firing. Inferior grades are frequently mixed with a small portion of earlier tea and what is known as Coast or late crop tea for style only, or Foochow Oolong, and colored to please the eye, thereby deceiving the merchant who buys his tea on his judgment through sense of sight alone, or is led astray by the slight flavour derived by blowing on the tea in the hand, which is soon exhausted because the stock does not merit true quality at the foundation.

Green teas, being cured without fermentation, are fired immediately after picking, and produce a bright toasty character, and, if meritorious, light color infusion. Formerly they were admitted to our market on style only, but the exactness of the law, which is upheld by our tea inspector, prevents a continuance of deceiving the people on the handsome style leaf as in the past. The value of cup quality and the variation in the price is beyond the scope of the writer's comment.

Ceylon and India teas are of growing interest. The native government has beyond question done more for the elevation of this industry than that of any other country, and they are receiving the benefits by the greatly increasing demand in England and the States for the same. It seems that the grower and the merchant from the above-named countries have most ably gained the advantage of the trade, and the blending of their teas has grown, and justly unexcelled, and produces a more healthy beverage than the manufactured cereals which are used as coffee substitute, because of their stimulating qualities.

The largest shipment of any kind of tea to this country comes from Japan. The art in selecting and curing Japan tea has become a science with the native students of that progressive country, to produce as they do in the drawing of their teas an infusion of bright amber which is pleasing to the eye, and possessing as it does wonderful strength, although judged by some as without body because of the lightness of liquor. The lower grades in the past being highly colored, pleased the eye of the unfortunate, and many a poor consumer's condemnation of tea was gained by this swindling method. This great industry has been elevated.

The most important act for the protection of the tea business, together with the consumer, was passed by an act of Congress in 1897, which has been ably upheld and protected by the chief tea inspector at the port of New York, who has associate inspectors in various Western ports of entry. All rejections are finally decided by a board of arbitration. As differences in opinion are varied in the tea trade, the merchants whose losses are occasioned by the rejection (because it is necessary to ship to a foreign country within six months) invariably feels as though his particular lot should be an exception to the law, and said parties have brought suit, and have now an appeal before the Supreme Court for the purpose of admitting teas, classified as trashy and unworthy, as being equal to the standard. As errors are unlimited in the tea trade it is almost impossible to adjust the matter as correctly as is the intention of the law, but all are united on the fact that at present it is invariably acknowledged that the consumer can purchase poor teas only in the section of the country where stock is held for a long time and exhausted, or the unscrupulous merchant is the cause of manipulation and recoloring of teas, such as may have been damaged after having passed from the Government protection.

For many years English merchants have sold us a large quantity of tea. The conditions this season have changed, as alert and fortunate owners here have sold to the London traders four million pounds, and the indications are we will sell them as much more, and to advantage.

The writer endeavours, after a careful study, to furnish statistics of the present stock, together with possible conditions of the supply which can only be increased by the production of the coming year's crop, as follows:

The present condition of the market for Formosas is decidedly strong. Supply limited. Grades which barely pass inspection are weak, and in the opinion of the writer they should be in price to correspond with their grade. All green teas with merit are scarce and strong. Choice Congous, scarce and firm. Low grades, steady and plenty, but are being taken liberally by the London market.

Japans, choice grades scarce; all grades firm. Ceylons and Indias, having advanced are held firm.

## DISTRICT ASSOCIATIONS.

## INDIAN TEA ASSOCIATION (CALCUTTA).

Extract from abstract of the proceedings of a Meeting of the General Committee held on 5th May, 1903.

PRESENT:—Mr. H. C. Begg (*Chairman*), Mr. T. McMorran (*Vice-Chairman*), and Messrs. Lockhart Smith, R. R. Toynbee, T. Traill, and W. Warrington.

**The Tea Cess Committee.**—Recorded:—Report of the Scrutineers appointed to ascertain the result of the voting for representatives of the Association on the Tea Cess Committee. The following gentlemen were declared to be elected, *viz.*:—

Mr. H. S. Ashton	...	Messrs. Shaw, Wallace & Co.
" H. Bateson	...	" Gillanders, Arbuthnot & Co.
" H. C. Begg	...	" Begg, Dunlop & Co.
" W. Brown	...	" Finlay, Muir & Co.
" Dan. Currie	...	" Macneill & Co.
" Lockhart Smith	...	" Williamson, Magor & Co.
" A. Tocher	...	" Duncan Brothers & Co.

The result of the election had been communicated to the Government of India.

**Statistics of area under tea cultivation.**—Read letter No. 844, dated 2nd May, from the Director-General of Statistics, in reply to the Committee's request that statistics might be included in the annual statement of the production of tea in India, showing the extent of new additions to the tea area and abandonments of old tea lands in each of the tea-growing districts of India.

The Director-General considered it would not be possible to procure additional statistics at the present time, without greatly delaying the issue of the annual statement, even if the information were readily obtainable. It was hoped, however, to introduce the change suggested, in the statistics for 1903.

The letter was to be acknowledged with thanks, and a copy forwarded to the Surma Valley sub-Committee for information.

**Weighment of tea at Calicut.**—Read letter dated 27th April from Mr. N. Stewart Brown, Manager, Nilgiri Tea and Cinchona Co., Ltd., stating that the Customs authorities at Calicut were weighing 10 per cent. of all teas before shipment for the purposes of the collection of the Tea Cess. It was pointed out, and rightly, that the tea could not be replaced in the chests without damage to the lead, and, in some instances, to the tea itself.

In paying the cess in Calcutta, shippers were only asked to produce the Garden Invoice, and the Committee were of opinion that this should be sufficient for other ports. It was decided to obtain an official statement of the practice followed by the Customs authorities in Bengal regarding the collection of the cess and to forward it to the Southern Indian Planters' Association for the necessary action.

## CEYLON PLANTERS' ASSOCIATION.

## THE COMMITTEE.

From Minutes of proceedings of a Meeting of the Committee of the Planters' Association of Ceylon, held at Kandy, on Friday, the 1st May, 1903, we take the following:—

CHAIRMAN—Mr. A. C. Kingsford.

## CARDAMOM COMMITTEE.

Read the following further Report by the Cardamom Committee:—

(*Cardamon Cess Committee Report.*)

The amount promised is Rs.2,034 and Rs.1,635.50 has been paid. Mr. Spence leaves for Australia on Monday with samples.

Mr. Renton has consented to act free, and samples are to be sent to him at once.

Samples are also being sent to a firm in Bombay and it is also decided to invite Colombo Merchants, Native and European doing business in India, China, and Japan to accept samples and try and open up a trade in those countries. It is also proposed to

approach the British Consuls in China and Japan with a view to ascertaining what the trade is, and the names of the firms dealing in this product, and also where the present supply comes from.

*Resolved*:—"That the thanks of the Committee be conveyed to His Excellency the Governor for the interests evinced in the matter."

## TEA PEST—SPREAD OF "SHOT-HOLE BORER."

Read letters from the Honorary Secretary, Balangoda Association, stating that the pest appears to be unknown in Balangoda District; from the Honorary Secretary, Kunkles, Kelabokka, and Panwila Association, sending the following Resolution:—"That it be suggested to the P. A. that steps be taken for the production and distribution of a diagram and short description of the pest, it being so little in evidence in this district. Also that this Association are not at present in favour of legislation; from the Honorary Secretary, Ambegamuwa Association, transmitting the following Resolution:—"That this Association agrees with the Government Entomologist's suggestion that some simple legislation should be adopted on the lines that he lays down; from the Honorary Secretary, Kalutara Association, forwarding the following Resolution:—"That this Association strongly urges preventive legislation against the 'shot-hole borer,' though at present the pest is only slightly in presence in the Kalutara District"; from the Honorary Secretary, Pussellawa Association, annexing for information the following Resolution:—"That whilst moving of all voluntary precautions taken against the spread of pests, this Association is not in favour of Government being asked to introduce compulsory measures." *Resolved*:—"That consideration be decided pending the receipt of further replies; (ii) that the Committee of the Planters' Association of Ceylon would warn purchasers of the danger of buying plants from infected districts."

## BRITISH IMPORT DUTY ON TEA.

Submitted telegram intimating that the British Import Duty on Tea was unchanged.

## OSAKA EXHIBITION, JAPAN.

Read correspondence with Mr. G. W. Woodhouse in which he stated that he regretted as he has not succeeded in obtaining leave he would not be able to assist the Planters' Association in the manner, indicated at the Osaka Exhibition, Japan.

Submitted correspondence with Messrs. Chas. . . . . on, James Westland, and Wm. Sinclair, regarding the proposed samples of cacao and cardamoms.

Read cablegram despatched to the Ceylon Association in London on 8th April, 1903, "Association Meeting 2nd May, Chairman proposes, Rosling seconds 'Increased cess eight months, reducing afterwards to twenty cents.'"

The Chairman explained the present position in this matter.

## LABOUR AGENCY.—CEYLON COMMISSIONERS TO INDIA.

Read the following

## REPORT OF THE SUB-COMMITTEE.

The sub-Committee is of opinion that the present channels for immigration are not sufficiently developed, in that very few superintendents are adequately acquainted with the districts in Southern India from which they draw their labour, and the conditions under which such labour is readily available. A more intimate knowledge in this respect would allow superintendents to make use of information obtainable from the Government reports. Your sub-Committee recommends that a Register be kept on every estate of the district taluk and post town from which each cooly comes.

That a map of the cooly districts be kept in every estate office, and that a schedule showing the wages paid to coolies, kangannies and head kangannies in Ceylon be printed and circulated amongst the headmen throughout the various cooly districts.

Your sub-Committee would recommend that a reliable agent be appointed whose duty would be to have a thorough knowledge of every taluk in the Presidency, and would suggest that Government be asked to increase the scope of the immigration Agent duties to include this work.

Your sub-Committee suggests that a Special Committee be appointed to receive and disseminate the information obtained from time to time from such agent. Though the sub-Committee is of opinion that a general recruiting agency entailing cash payments or bonus to recruiting agents or middlemen is undesirable when dealing with existing districts from which our present

labour supply is drawn, they are, however, in favour of Companies and group of estates individually employing an agent to assist kanganies to recruit labour on present lines; it should also be possible to recruit labour from the Telugu-speaking country and new districts on possibly other lines.

More detailed information of the work of the Commissioners to India regarding the district visited will be issued to subscribers who kindly supported the mission.

*Resolved*:—"That the report be and the same hereby is adopted; (ii) that a hearty vote of thanks be passed to the Commissioners for their report already published."

Submitted correspondence with Mr. Jas. R. Martin in reference to the employ of his coolies on the Northern Railway. *Resolved*:—"That a copy of the correspondence be forwarded to Government."

#### GENERAL MEETING.

A general Meeting of the Ceylon Planters' Association was held at Kandy, on 2nd instant, Mr. A. C. Kingsford presided.

#### THE CHAIRMAN'S SPEECH.

The CHAIRMAN: Our last general Meeting, gentlemen, was held so recently, that I have very little to report, barring matters relating to the subjects on the agenda to-day. It is with great disappointment we have noted that there is no decrease in

#### THE TEA DUTY.

In introducing the Budget last year the Chancellor of the Exchequer alluded to the bitter cry of fellow-subjects in Ceylon and India—the tea-planters; and on account of the, more or less, opposition there was at the time to the heavy way in which tea was being taxed, no extra duty was put on tea. We had hoped this year to see some reduction, but, no doubt, the voice of the income tax-payer at home is far more listened to by the Chancellor of the Exchequer than the voices of distant fellow-subjects. Hitherto, since the increase was put on the duty, the consumer has not felt very much the increase, owing to the very large supplies of tea in hand, and the consequent reduction in the fall of prices. With the higher prices which now seem to be before us, the consumer will, no doubt, feel the extra 2d. on the lb., and he will, no doubt, make his voice heard; and his voice will, no doubt, be more heard by the Chancellor of the Exchequer than the voice of his distant fellow-subjects in Ceylon and India. The only way in which I think the reduction of the tea duty can possibly assist us is in the gradual possible increase of consumption. Another matter, gentlemen, which has advanced a stage, is our representation at the

#### ST. LOUIS EXPOSITION.

The Hon'ble Mr. Figg's report has come to hand, and it more or less emphasises what I expressed at the last Meeting of this Association, that the site secured for Ceylon is a most favourable one. His Excellency the Governor has appointed a Committee to go into the question of the representation of Ceylon, and we hope, at a very early date, the Commissioner will be appointed. I think, gentlemen, we can rely upon Government support to the extent that was afforded us at the time of the Paris Exhibition, for which I feel sure you will agree with me that we are very much indebted to His Excellency the Governor. The first business, gentlemen, on the agenda to-day, is a Resolution proposing an increase of

#### THE CESS.

Before asking your permission to withdraw that Resolution, I wish briefly to state the causes that led up to asking for that increase. In September last, when the Thirty Committee met to go into the ways and means for this year, it was strongly felt by that Committee that possibly 12,000,000 lbs. of green tea might be made this year, but our funds were limited. We did not consider it advisable to withdraw entirely from the American or Continental campaign at a time when we hoped to largely increase our green tea, and it would have been most absurd to withdraw what little support we had been giving to push our tea. We could only see our way to promise a bonus on the limited amount of 7,000,000 lbs. We, therefore, considered it necessary to ask the producer as to whether he was willing to increase the cess. We felt compelled to do so, for in a question like this—where the producers were asked to put their hands in their pockets, and where there was a large amount of Ceylon interest represented in London—we felt it was useless appealing for that increase without getting the consent of a considerable majority in London. For that purpose, first of all, we addressed a letter to

#### THE LONDON ASSOCIATION;

and the result of that appeal, gentlemen, you possibly know. The Ceylon Association in London considered it was inadvisable to increase the cess, but thought it a better step to guarantee a bonus of 4 cts. a lb. on 12,000,000 lbs. and make it a first charge on the Thirty Committee's income. Well, gentlemen, that policy did not seem to be acceptable to the Thirty Committee. In the first place it seemed to us that it would entail considerable delay in paying bonuses and that would, no doubt, keep people from making tea. We did not think it advisable to stop people making the tea; and we also did not wish to bar the payment of bonuses incurred this year. We, therefore, asked the Ceylon Association to reconsider the matter. We did not say the suggestion was impossible. We merely said that it was inadvisable. The result of that second appeal, gentlemen, was a very large increase in the number of supporters. At the same time we felt that, unless we had a considerable majority, it would be impossible to go ahead. On the day of the last Meeting of the Thirty Committee, held early in March, a special telegram from London appeared in the *Times of Ceylon* in which it was stated that, of the cess replies that had been received, the majority was slightly against the increase. That, therefore being the position, gentlemen, we considered it advisable to ask our Planting Member, Mr. Rosling, to see

#### HIS EXCELLENCY THE GOVERNOR

and ask His Excellency if he could see it in any way possible to give the Thirty Committee a loan, or advance it money. During the interval that elapsed between the date of the Thirty Committee meeting and Mr. Rosling's interview with His Excellency, a further telegram came up from London which put the matter in a different light. It stated that 59 were in favour of the increase, 56 were against, and some 9 were supporting Mr. Rutherford's suggestion that we should make green tea and, if possible, raise the money or borrow it on next year's income. Mr. Rosling saw His Excellency the Governor and His Excellency, noting the altered position, thought it desirable to go in for an increase of the cess, but as regarded the further question of a loan, declined, at that time, to discuss it. It was, therefore, on this account that I gave notice of the Resolution which should have come up before us to-day. I gave

#### LONG AND AMPLE NOTICE

so that people from London might advise their representatives in Ceylon. Quite recently, in the early part of this week, His Excellency sent for Mr. Rosling and said that he considered it now possible and more advisable to advance the money than to legislate at this late date of the Legislative Council session; and, with the possibility before us of getting the money from His Excellency, I therefore gave notice that I would to-day ask your permission, and Mr. Rosling, my seconder's permission, to withdraw the Resolution. Mr. Rosling possibly may support what I have said as regards his interview with His Excellency the Governor. With his permission, and your permission, I ask leave to withdraw the Resolution. (Applause).

#### MR. ROSLING'S SPEECH.

#### FURTHER BONUS FOR 5,000,000 LBS. OF GREEN TEA.

The Hon'ble Mr. E. ROSLING: Mr. Chairman and gentlemen, I can add very little to what has already fallen from the Chairman. The time that I saw His Excellency was some two months ago. As your Chairman has pointed out we had to give long notice in order to enable London proprietors to express their opinion on the cess question—and these two months have now elapsed; and it being so much nearer the end of the Session of the Legislative Council—I understand that there will be no more Meetings of the Legislative Council after the next Meeting—for that reason His Excellency was very averse to have what would otherwise be unnecessary Meetings, and suggested that a loan of Rs.150,000 might meet the case. It was only since we have been here that I received a letter in which it was distinctly stated that the amount would be a loan. The matter had to go before the Executive Council, and so, at the time of the Chairman's telegram to the papers, and my letter, we only knew that His Excellency was prepared to approve of the loan, with the consent of the Executive Council. We know now distinctly from a letter, which has already stated I have just received, that that approval has been secured. (Applause.) His Excellency the Governor is prepared to approve of the advance by Government to the Thirty Committee of the proposed Rs.150,000.

on the understanding that Government recoups itself from future collections under the Cess Ordinance. So you see that it is not proposed to make this Rs.150,000 a first charge on next year's income, but to spread it over the whole of next year or, if possible, the whole of the term during which the new Ordinance, the Cess Ordinance, is in existence, viz., to June 1905. But these are details which are not yet settled and, after all, are not very material. The fact, however, remains that we have now Rs.150,000 more with which we can support the green tea industry. This morning, in the Thirty Committee, it was practically agreed, subject to this vote or loan being made, that further support of 5,000,000 lbs. of green tea at 3 cents per lb. should be given. We were particularly anxious to be able to make this statement to-day in order to allow all green tea makers, who have contracts running to the end of June, to be in a position, if necessary, to make further contracts to the end of the year; and that, if the 5,000,000 lbs. should not be made to the end of the year, the vote should lapse. It will then be for the consideration of the Thirty Committee whether a further loan will be taken at that date. I do not think there is anything more I can add to explain the position. (Applause.)

#### CONTRADICTION OF A MIS-STATEMENT.

The CHAIRMAN: Gentlemen, before dismissing this question, there is one statement which I wish to contradict and that is a statement which has been made that the opposition to the cess, at the time of the last increase, at home and out here in Ceylon, had been withdrawn owing to a promise made that the cess should be increased to 30 cts. for a period of three years only. When the increase for the cess was agitated for and was supported in London no mention of any time period was made. It was only at the last moment, at the last stage of the agitation, that the Resolution came up before the Chamber of Commerce and that clause was put in fixing a time period of three years. I maintain it was the duty of the Thirty Committee, with or without that clause of time period, if they saw it was advantageous to the producer to increase the cess, to go to the producer and say: "Will you give us the money; we can show you clearly what can be done with it." (Applause.) With your permission, gentlemen, I now ask to be allowed to withdraw my Resolution. Those in favour of the Resolution being withdrawn hold up their hands.

The Resolution was declared withdrawn.

#### SOME QUESTIONS ABOUT THE LOAN.

Mr. C. E. BONNER: I wish to ask if the green tea industry, as it now stands, represents 10 per cent. of the present outturn?

The CHAIRMAN: Something like that, I think.

Mr. BONNER: Something like 10 per cent. Is the same proportion of assistance that is given to the black tea given, or is more given, to the green tea industry?

The CHAIRMAN: The only reason, Mr. Bonner, why we have been helping green tea all through is because we have been always bolstering up the black tea.

Mr. BONNER: I am quite with you in that.

The CHAIRMAN showed Mr. Bonner what had been actually paid to green tea producers that year.

Mr. BONNER: This represents more than 50 per cent. of the actual cess.

The CHAIRMAN: That is so. From this year's actual income, on the original scheme, we have spent considerably more than 30 per cent. Most of that has been spent in America for pushing green tea.

Mr. BONNER: Quite so; but what I wish to know is, if we get this loan from Government, how are we going to repay it? I think it only fair to ask the question, because people would wish to know, if this loan is given us, how Government is going to recoup itself. At the present moment we are in a position to pay on 7,000,000 lbs. at 4 cts., but if green tea should rise next year to 20,000,000 lbs., which may be the case, how are we going to provide the money even at 3 cts.?

The CHAIRMAN: We are only borrowing a definite sum of Rs.150,000.

Mr. BONNER: Quite so, but we must at the same time—if I am in order, Mr. Chairman—say that we must also look to the interests of the black teas.

The CHAIRMAN: So we are; we are encouraging black tea.

Mr. BONNER: How is the loan going to be paid?

The CHAIRMAN: Mr. Rosling has already explained that it is to be paid by payments extending over the year or the whole of the term during which the Cess Ordinance is in existence.

Mr. BONNER: How is it going to be taken up by Government?

The CHAIRMAN: The Government collects the cess, and, assuming that they have decided to collect one-third every month in a collection of Rs.30,000, they will pay us Rs.20,000 and keep back Rs.10,000. We have got to repay the Rs.150,000 which, possibly, may be spread over ten monthly payments of Rs.15,000 per month, or spread over fifteen months at Rs.10,000 a month.

The Hon'ble Mr. E. Rosling remarked that he thought Mr. Bonner was rather under the impression that they were to give increased assistance to green tea, exceeding their bonus next year. They had only ear-marked Rs.150,000 out of next year's income by borrowing it from Government this year.

Mr. BONNER: I only asked the question, Sir, for my information.

The CHAIRMAN: Yes. It might be spread over the year, or over a longer period; it is not quite certain.

Mr. BONNER: Exactly. It is not certain. There is doubt as to whether the reduction to 3 cents per lb. will cover the loan.

#### THE "THIRTY COMMITTEE."

#### SATURDAY'S MEETING.

Extract from Minutes of a Meeting of the Thirty Committee, held at Kandy, on Saturday, 2nd May.

PROPOSED INCREASE OF THE TEA CESS.—Read letters from Messrs. George Steuart & Co. Read letter from the Secretary, Ceylon Association in London, acknowledging receipt of cablegram of 16th March:—"Prompt payment (of) Green Tea Bonus will cease 20th March. Payment must be then made up to 7,000,000 voted as funds available," adding that this message reached him in time to lay it before the Tea and Produce Committee on the afternoon of 16th March. By instructions from that Committee Mr. Leake wired: later on same day:—"115 Cess replies—59 for—46 against—10 prefer Rutherford Scheme," advising later that one more reply against had since been received. Submitted letters received from the Secretary, Ceylon Association, on the subject.

The CHAIRMAN explained the present position. *Resolved*:—"That application be made to His Excellency to advance Rs.150,000 for the payment of bonus on green tea and that the Chairman, Hon'ble Mr. E. Rosling, and the Hon'ble Mr. Stanley Bois be authorised to make such arrangements as may seem fit to them for the repayment of the advance "if His Excellency is agreeable to grant it; (ii) that on the exhaustion of the present 4 cents bonus (probably in August) bonus of 3 cents per lb. be paid on all tea "certified by 31st December, 1903, up to a further five million lbs."

#### UNCLAIMED TREASURES.

There is no lack of treasures in the world; the trouble is that they are all claimed: or if indeed there be any unclaimed (and surely there must be some such), they are so difficult to find that for the rank and file of mankind they might as well be among the claimed treasures, or not exist at all. That was a delightful compliment which Charles Reade paid to old maids when he called them unclaimed treasures. Because a thing is unclaimed or rejected by no means implies its worthlessness. A goodly proportion of the masterpieces of literature have been rejected by publishers, Thackeray's incomparable *Vanity Fair* among the number. The only positive proof of anything being a treasure is its having stood the time test. For thousands of years gold has everywhere been regarded as valuable, and people never seemed less inclined to go back on that opinion than they do to-day. For thirty-four years Mother Seigel's Curative Syrup has been the most popular medicine. Not a year passes without a large extension of its sales, nor a day without voluntary testimony as to its power for good. It is a treasure, but by no means an unclaimed one. On the contrary, it is claimed as the family medicine in six hundred thousand (600,000) British homes. There is no matter for wonder in these figures, great as they are when the benefit which it confers is more often than not fully as great as that described in the following legally sworn declaration:—

"I, John Boddy Mintoft, of Nunnington, in the county of Yorkshire, do solemnly and sincerely declare as follows:—

"That in spite of skilled medical aid I was for many years a martyr to indigestion and a strangely disordered stomach, and that had it not been for Mother Seigel's Curative Syrup I doubt whether I should be alive to-day. For a year or two before I broke down, I never knew what it was to have a day's good health. I was always ailing. The least exertion tired me, and I felt drowsy, despondent, and miserable. Ordinarily, I had a very good appetite, but just then my food began to disagree with me, and I felt uncomfortable after it. There was a fulness and distension of the stomach that seemed to affect the heart. My breath was very short. Finally, a pain settled in the chest and under the left shoulder. I ought to have attended to it at once; but unfortunately neglected to do so, consequently the disease developed. I had always an unpleasant taste in the mouth, and my tongue was dry and parched. My appetite, hitherto good, was now very poor, and after forcing myself to eat I often had violent pains in the stomach, and used to break out into a cold perspiration, feeling so chilled that I shivered from head to foot. My condition becoming so serious, I consulted a doctor; but in spite of all he did for me I grew worse, and at the end of six weeks was advised to go into a hospital at York. There I was treated with great kindness, but I think my case must have puzzled the doctors for, after detaining me eleven weeks, they sent me away uncured. Then began the most painful period of my illness. When I got home my mother was shocked at my appearance. She has since said that she believed I had come home to die. I was troubled with obstinate constipation, my sleep was broken, and when I lay awake it seemed as if the bed were sinking under me. Night sweats robbed me of the little strength I had left, and I was soon so weak that I could scarcely walk across the room. To go upstairs, I had to crawl on my hands and knees, and it was only with the greatest difficulty that I got down to the sofa again next day. Thus I was for three years a confirmed invalid. Meanwhile, I had seen a specialist whose treatment seemed to do me good at first; but in the end I found myself as bad as ever. Almost in despair, and as a last resource, I tried Mother Seigel's Curative Syrup. Ah, if only I had tried it before! I began to mend as soon as I had taken half of the first bottle. My appetite improved, slightly it is true, but what I ate agreed with me. The night sweats ceased, and gradually strength returned, so that by the aid of a walking stick I could get about. My convalescence was a long one, but by persevering with the Syrup, all the bad symptoms left me, and I was able to resume my work again. My present employment is a very arduous one, compelling me to expose myself to all kinds of weather; still, I feel none the worse for it. Believing that it may benefit some other sufferer, I regard it as my duty to make these facts known. And I make this solemn declaration conscientiously believing the same to be true. By virtue of the Statutory Declaration Act of 1835 (William IV. c. 62). Declared at Malton, in the county of Yorkshire, the 6th of May, 1902, by John Boddy Mintoft, before Arthur L. C. Russell, a Commissioner for Oaths."

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated April 24th, 1903, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903 ...	1,381,978	993,684	72,329
1901-1902 ...	1,530,720	1,054,709	73,478

29,027 pkgs. INDIAN } Total 57,879 packages were offered in public auction  
26,348 „ CEYLON } this week.  
2,504 „ JAVA }

At the resumption of auctions after the Easter recess there appeared to be some hesitation in the bidding, probably owing to the nearness of the Budget, and the consequent uncertainty of the position. Buyers have evidently been protecting themselves against any reduction in the duty by clearing as little tea as possible, duty from 1st to the 22nd instant having been paid upon only 8,579,632 lbs., against 18,755,045 lbs. last year.

INDIAN CESS.—The *Gazette of India*, of the 21st March, states that the Indian Tea Cess Act, 1903, has received the assent of the Governor-General. It provides that from 1st April a duty of quarter of a pie per lb. shall be levied on the export of Indian tea, the proceeds of such duty to be applied towards "promoting the sale and increasing the consumption in India and elsewhere of teas produced in India."

ST. LOUIS EXHIBITION.—The forthcoming St. Louis Exhibition will probably afford an opportunity for still further increasing the sale of Indian and Ceylon tea in the United States of America.

The Budget has just been declared. The tea duty remains at 6d.

Distribution of Tea Exports from Ceylon from 1st January to end of March.

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacobs Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

INDIAN.—Sales were again comparatively light, and passed with good competition for all teas up to 7½d, which were occasionally a fraction dearer, but for other grades demand was somewhat inactive. Catalogues are now containing a large number of final invoices. The following averages are worthy of note:—"Dheodaam" and "Pabbojan," both of the Pabbojan T Co., realized 1½d and 1½d per lb., respectively.

Week's av. of tea sold on Garden Account 1903, 26,383 pkgs., av. 7·85d. 1902, 29,441 pkgs., av. 6·59d.

Tea sold on Garden Account 1st June to date 1902-3, 1,072,268 pkgs., av. 7·49d. 1901-2, 1,214,555 pkgs., av. 7·69d

CEYLON.—The quantity brought forward was rather large, owing to an accumulation having occurred during the holidays. Demand, however, was strong for all low-priced teas, which sold at rather dearer rates, but medium grades were less easy to dispose of, and consequently showed a somewhat irregular market; really choice teas were well competed for. Exports to U. K. for first half of April are 5,000,000 lbs., against 4,700,000 lbs. same time last year.

Average for week 7·70d, against 6·61d. in 1902.

Ceylon tea sold on Garden Account 1st January to date, 292,924 pkgs., av. 7·66d. 1902, 350,986 pkgs., av. 7·07d.

JAVA.—The Javas sold with good competition at full valuations, hardly any tea being withdrawn from sale, and many parcels up to about 7d showing nearly a farthing advance.

### CINCHONA.

At the London auctions on Tuesday the moderate supply of 2,922 packages was offered, and, as will be seen from the subjoined table, the greater part was disposed of. There was a fairly good demand, but some of the parcels, principally East Indian, were held for higher prices. The total amount of quinine in the bark was about 250,000 oz., of which about three-quarters sold. The average unit obtained was 1½d, as compared with 1½d at the sale in March, and the prices paid for sound bark were as follows: Ceylon: Succirubra chips and shavings, 2½d to 5d; officinalis, original stem chips and shavings, 4½d; renewed ditto, 3½d; and root, 5½d. African: Fair red broken quill, 5½d per lb.; bright, part silvery quill, were taken out at 7d. South American: Bolivian cultivated Calisaya quill, 6½d to 8½d; quillings and chips, 6½d to 7½d; soft Colombian, U. U.'s, 2d to 3½d; and Z.O.'s, 2½d, subject, the bulk being held at a limit at 3½d to 4d; 163 bales of Cuprea were taken out. East

Indian: Crown, original stem cheps, 3½d to 4½d; good to fine, 5½d to 7d; branch, 3½d to 6½d; root, 5½d to 6½d; renewed ditto, 3½d to 5½d; and fine, 6½d to 8d. per lb.; Succirubra, fine stem chips and shavings, 5½d; medium, 3½d to 4d; and poor, 2d to 2½d; branch, 1½d; and root, 2½d per lb.

The following table shows the quantity of bark offered and sold:—

	Packages Offered.	Packages Sold.
East Indian cinchona ...	1,302	973
Soft Colombian cinchona ...	583	317
Calisaya cinchona ...	447	286
Ceylon cinchona ...	249	102
Cuprea cinchona ...	163	...
Java cinchona ...	93	...
African Cinchona ...	85	85
	2,922	1,763

The following represent the approximate quantities of bark purchased by the principal buyers:—

	lbs.
American factories ...	170,000
Brunswick factory ...	71,300
Mannheim and Amsterdam factories ...	51,700
Frankfort and Stuttgart factories..	62,500
Imperial factory ...	16,200
Paris factory ...	750
Druggists, brokers, etc. ...	19,300

Total quantity sold	391,750
Bought in or withdrawn	140,000
	531,750

### QUININE.

Towards the close of last week some forced sales of about 50,000 oz. were made at slightly under market value, but subsequently the market became steadier, a good business being done at 11½d, spot, and August at 11½d for the usual German brands of sulphate. This week the market has been lifeless, a few small sales having been made at 11½d, with buyers on Wednesday at 11½d, but to-day the market is firmer again at 11½d. For new German ls has been paid in small lots.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, MAY 23, 1903.

[No. 21.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 29th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

**Munzerabad.** *Weather*—The monsoon has sent its advance warning in the shape of thunderstorms, they have however been very local. *Wind*—steady from the West. *Temperature*—much cooler. *Works*—Many estates have finished manuring and pruning and are waiting to commence weeding. Borer is being taken out, it is luckily small in quantity. *Plant diseases*—A number of last year's supplies have failed, but coffee is very healthy. *Health*—Much fever about. *Labour*—A moderate supply.

**Kotagiri.** *21st May.*—*Weather*—There have been constant showers during the past 14 days, 8 rainy days aggregating 4.20 inches. This has brought out little sprinklings of blossom, but nothing to speak of, and it looks as if there is still more to come. *Works*—Manuring in full swing, and a little planting is going on. *Labour*—a little short as locals are sowing their grain fields. *Health*—Very fair. *Tea*—The rain was very welcome after the long drought, and bushes are beginning to flush well again. *Interesting item*—The Annual General Meeting of the Nilgiri Planters' Association has been adjourned to the 8th proximo, as only three members turned up on the 8th instant. This want of interest is most deplorable.

### THE CEYLON DUTY ON TEA.

THE Colonial Secretary, Ceylon, has placed at the disposal of the Press a letter addressed to His Excellency the Governor by Messrs. HARRISON & CROSFIELD, London, urging the abolition of the import duty levied on tea intended for re-exportation. We need scarcely say that this is a subject of great interest to tea-planters in Southern India, and

although representations made to the Ceylon Government through the Government of India have borne no fruit, we are glad to see that the matter has not been allowed to drop. As a body, the Ceylon planters may be said to be committed to a policy hostile to the view of South Indian planters as well as of the firm referred to above. They assert that abolition of the import duty on Tea in Ceylon would tend to stimulate "blends," whereas their declared aim has been to push sales of "Pure Ceylon" tea. They fail to see that blending is certain to be practised, if not in Ceylon then elsewhere; that the purest of Ceylon tea ultimately finds its way, in many cases, into blends; and that there is no good reason why Ceylon, while continuing to ship "Pure Ceylon," should not also ship teas that are avowedly blended. What Messrs. HARRISON & CROSFIELD says is, that some time ago they corresponded with the Ceylon Government upon the above subject through their Colombo Firm, Messrs. CROSFIELD, LAMPARD & Co., and the question was referred by Government to the "Thirty Committee" of the Planters' Association, who, after some consideration, voted against the removal of the present impost. Messrs. HARRISON & CROSFIELD were subsequently informed that, had they permitted the Chairman of the "Thirty Committee" to mention their Firm's name in connection with the resolution to abolish the duty on *all* tea landed in Ceylon for re-exportation, the result would have been different. The reason they had for withholding their name was that their primary object in getting the Duty abolished on tea landed in Colombo for export only, was to enable them to establish a Brick Tea Factory in the island, in order to compete with those in Russian hands in China for the Russian overland trade in this article, which is a very large business. Had their name and the reason of their advocating the abolition of the duty been given publicity to, their Russian opponents would have been placed in possession of more information than at that time was considered expedient.

The above firm's main contention is, that the Duty imposed upon tea landed in the island for export only, is operating against the commercial interests and prosperity of the island, keeping away a large amount of trade from Colombo, which its geographical position would otherwise ensure; and it is upon this ground that they ask the matter should be dealt with. The Import Duty was no doubt placed upon tea

landed in Ceylon, under the impression that to allow tea from other countries of production free entry would prove detrimental to the interests of the Planting Community. It appears to Messrs. HARRISON & CROSFIELD that the only possible harm that could result from the abolition of the present duty to the Ceylon producer, would be if that duty was rescinded upon tea landed for purposes of home consumption in the island; but if only abolished in the case of tea landed in the island for re-exportation, they are persuaded that the result would prove beneficial, instead of detrimental, to the Ceylon planter. The restrictive duty now in force merely removes the operation of blending from Ceylon to London and other ports. And did the same Customs Regulations exist in Colombo, as in London, where facilities for Blending in Bond are freely given and a return of the constituent parts of the blend is the only Customs requisition, the Ceylon Industry would be efficiently protected against the export of Blends as pure Ceylon tea, the packages being compelled to carry a correct description of the contents. And while the interests of planters would thus remain safely guarded on one hand, a further extension of the business of the Merchant Community in Colombo would certainly follow upon the suggested change. If all countries had adopted the same policy as that which exists in Ceylon with regard to the Import Duty chargeable alike on Tea for consumption in the island, and *also for re-exportation*, the progress made in the consumption of Ceylon Tea would have been indefinitely retarded. This is very plain speaking, and it is followed up by the equally notable statement that "the history of the gradual progress of Indian and Ceylon teas in the markets of the world has been that of gradual conversion, commencing with an admixture of a small percentage of Indian and Ceylon-grown teas with those of China, slowly increasing the proportion of the former growths until the taste for the stronger tea had become firmly established, and the point reached when China teas could be discarded entirely." This being so, it appears evident that the suggested change in the Duty at present imposed upon tea landed in Ceylon for re-exportation could not but facilitate the distribution and consumption of that article. In regard to Brick Tea the case is even stronger. The above firm remarks:—"In Russia, Brick Tea is admitted under a much lower tariff than for tea in bulk, thus rendering the outside manufacture of the Bricks an imperative necessity of the trade in that description of tea. To manufacture Brick Tea in Ceylon and to capture a share of the 40 million pounds of tea imported into Russia every year in this form for the benefit of the Tea Industry of the island, it is absolutely essential that the present Import Duty on other descriptions of tea should be rescinded in so far as it applies to tea for re-exportation."

In this letter the Ceylon Chamber of Commerce failed "to discover any fresh arguments in favour of the abolition, at the present juncture, of the Ceylon Import Duty on Tea." The phrase "at the present juncture" will be read as denoting a doubt as to the permanence of Ceylon's present policy. As for there being no fresh arguments, none is needed. Messrs. HARRISON & CROSFIELD have merely stated well known facts in a very forcible way. The Chamber added in its letter to the Colonial Secretary:—"In arriving at the above decision my Committee are anxious that they should not appear to Government to be influenced by any particular bias or prejudice in favour of the present Duty. Without

intention the Ceylon Government has in the past provided a powerful safeguard to the producer of 'pure Ceylon tea,' and the producer and the merchant alike have expended large sums upon the advertisement of this speciality. In the opinion of my Committee the abolition of the duty would involve a danger to 'pure Ceylon tea' which, it is impossible to estimate, whilst on the other hand they do not consider that a sufficiently strong case has been made out by the advocates of such a policy." The London firm's retort to this is that were Government to prohibit the export of Ceylon Tea in bulk, and permit it only to leave the island in 1-lb. lead packets with a Government seal of guarantee, a really practical form of forcing on the world pure Ceylon tea would be in force, but with most disastrous results to the prosperity of the planting industry. As it is, Ceylon tea is exported in bulk, and, immediately it is put on any one of the large markets of the world, it is subjected to the competition of other growths, and is bought upon its merits as tea, and not because of its country of origin. "In our opinion," they say, "it is only on the ground of merit that Ceylon Tea has any chance of retaining its present hold upon the markets of the world, and there is no chance of this being jeopardised if due care is taken in its manufacture. It would be impossible to say with certainty how much pure Ceylon tea is sold to consumers, but it certainly would not exceed 15 per cent. of the total export. It is generally admitted in the trade that the value of Ceylon Tea is for blending purposes, and that it is not suitable as a self-drinking tea." What more can be said? All that is necessary is that teas blended in Ceylon should be shipped then in packages clearly marked to indicate that the contents are not "Pure Ceylon" but a blend. Yet we can scarcely hope that the Ceylon Chamber of Commerce will be convinced against its will even by such convincing arguments as have been quoted above.

#### COFFEE NOTES.

**Coffee in Mexico.**—Mexico's exports of coffee in the fiscal year 1901-02 were valued at 852,405 lbs. The coffee crops in Southern Chiapas suffered considerably from the eruption of the Santa Maria volcano in Guatemala.

\* \* \*

**High Dietetic Value of Coffee.**—In 1789 Benjamin Mosely, M.D., physician to the royal family of England, wrote and published a treatise on coffee, in which he says: "The extraordinary influence that coffee, judiciously prepared, imparts to the stomach, from its tonic and invigorating qualities, is strongly emphasized by the immediate effect produced on taking it, when the stomach is overloaded with food, or nauseated with surfeity or debilitated by intemperance. To constitutionally weak stomachs it affords a pleasing sensation; it accelerates the process of digestion, corrects crudities, and removes the cholic and flatulencies. Besides its effect in keeping up the harmony of the gastric powers, it diffuses a genial warmth that cherishes the animal spirits, and takes away the littleness and languor which so greatly embitter the hours of nervous people after any duration to excess, fatigue or irregularity."

\* \* \*

Total stock in United States April 1, 2,502,406 bags against 2,432,421 bags April 1, 1902. Brazil stock in the United States April 18, in store and afloat, 2,580,167 bags

against 2,337,596 bags at the same time last year. Other than Brazilian, 311,580 bags against 312,821 bags last year.

Brazil coffee in New York April 18, 2,161,778. Stock in New York in other coffees April 13, 226,326, in San Francisco, 76,844 bags and in New Orleans, 8,502 bags. Visible supply in the world of all coffees, April 1, 12,380,627 bags.

\* \* \*

The head of a Brazilian coffee house, usually very accurate in his predictions, informs Havre that the next Rio coffee crop will be 5,500,000 bags and the Santos 10,000,000 bags, a total Brazil crop of 17,000,000 bags. The German Consul at Rio estimates the Rio crop at 5,500,000 bags and the Santos crop at 8,000,000 to 9,000,000 bags. Ornstein & Co., Rio, estimate the growing Rio crop at 5,000,000 to 5,500,000 bags and the growing Santos crop at 9,000,000 to 10,000,000 bags.

The value of the coffee exports of Costa Rica in 1902 was \$3,179,818.47 in U. S. gold, \$24,051.20. The gain in coffee over the year 1901 was \$350,000. The export of coffee was distributed as follows: To the United States, 15 per cent.; to England, 75 per cent.; to other countries, 10 per cent.

\* \* \*

**The U. S. Coffee Market.**—Coffee reached its lowest point last week when April sold for 3.80, says the *Tea and Coffee Trade Journal* of 21st ultimo. Since then it has improved somewhat on evidences chiefly of a decided diminution of the interior receipts at Santos, and some bullish buying. Despite the low prices liquidation has been heavy. This was not always on the Coffee Exchange, and was principally by holders of May contracts. The buyers took them to take advantage of the wide premium existing for the distant deliveries. The next crop, it is getting to be generally accepted, will come in early, almost presently in fact, and many believe that it will demonstrate itself to be at least as voluminous as the 1902 crop.

Actual coffee is, of course, not so low as the speculative, and continues on the basis of 5½c. for Rio No. 7, invoice. All the same the jobbers are much harassed by their customers, who hear in the newspapers of 3c. and 4c. coffee and wonder why they do not come in for a share in the fall of prices. The matter is not easily explained away. In Brazil, despite the low prices, coffee is steady and, as a rule, above parity in New York. One lower offer was Rio No. 7 5c. c. and f. Prices for spot invoices at the close were 5c. for Rio No. 8, 5½c. for Rio No. 7, 5½c. for Rio No. 4, and 6c. for Santos No. 4. Business generally has been light.

In Milds business is light in volume. A merchant visiting Venezuela reports that Maracaibos and Bogotas, while plentiful enough, will not be forthcoming in large quantities owing to the fact that they may be shipped only in canoes. There is fairly good demand for Bogota and unwashed Cucuta. Good Cucutas are 8½ to 9c. East Indias are quiet.

\* \* \*

**Court Decision on U. S. Coffee Contracts.**—The ordinary form of coffee contracts has met, says the *Tea and Coffee Trade Journal*, with a clear and decisive definition from the New York Court of Appeals. It is announced through a decision in the litigation between Bayne & Davidson and Hard & Rand to recover damages alleged to have been incurred by Hard & Rand's failure to deliver on demand certain coffee claimed by the plaintiffs under contract. The decision rendered in the case for the first time fixes the time when and the circumstances under which the title to coffee passes

between parties; it also defines the rights of successive buyers of coffee.

Hard & Rand, August 10, 1901, sold to J. P. Jones & Co. 1,000 bag of Santos coffee to arrive and on September 28 of that year, Jones & Co. sold this same coffee to Bayne & Davidson. The coffee arrived October 7, 1901, but before it was delivered Jones & Co. assigned, October 25, and on Bayne & Davidson demanding their coffee it was refused on the ground that the coffee not having been paid for by Jones & Co. it was not in their possession but in Hard & Rand's. Bayne & Davidson then demanded the coffee of Hard & Rand, tendering the purchase price, but Hard & Rand refused to deliver the coffee, asserting that Jones & Co. owed them about \$900, which if Bayne & Davidson paid they might have the coffee. This Bayne & Davidson refused to do, and litigation ensued. Regarding the decision Mr. Bayne is quoted.

"The decision, in effect, holds that when the coffee is in existence and capable of being identified and set apart, the title to the coffee passes to the buyer and the right to the purchase money passes to the seller, notwithstanding the seller has the right to actual possession of the coffee until fully paid for.

"In this particular case the Court held that the title to the property passed from Hard & Rand to Jones & Co. on October 7, and from Jones & Co. to Bayne & Davidson on the same day. The latter thus acquired a title prior to the failure, whereas the right of Hard & Rand to a set-off or counter claim grew out of the failure. The Court also sustained the contention of Bayne & Davidson on another ground, to wit, that the contract between Hard & Rand and Jones & Co. specifically stated that it was not contingent upon any other and was to be settled between the buyer and seller without reference as to gradings or otherwise to any other contracts"

\* \* \*

#### Coffee.

Small brown berry, what magic lies,  
What mood merry or grave and wise,  
In thy fragrant brew which kills  
Black dog Care and cures all ills?  
Famous drink, what boots thy name,  
While wide grows thy well-earned fame?  
Java—Mocha—whatsoever  
Experts call thee, we don't care.  
Small brown berry, that once was green,  
Pulped like cherry and now stript clean;  
When thy vapors rich ascend,  
All one's trials and troubles end.  
Aromatic, rich and pure,  
Thy continued reign is sure;  
Health you give and strength of mind,  
Product like thee none can find.  
Small brown berry, long may you reign!  
Like old sherry, in every vein,  
Doth thy cordial spirit flow;  
Sorcerer thou, as wise men know.  
Slander has not touched thee close,  
Not e'en "Postal Cereal's" dose;  
There is none can take thy place,  
None can put thee in disgrace —GEORGE G. SMALL.

#### TEA NOTES.

**Colombo Tea Sale.**—At the public sale of tea at Colombo on the 13th, 13,274 packages = 1,053,385 lbs. were offered, of which 10,539 packages = 831,067 lbs. were sold.

\* \* \*

**The Formosa Market.**—Rumour has it that the Tamsui market has been opened on a basis of 15c. c. and f. New York for Standard Formosa. These are probably Souchong teas and would make "good cargo" worth about 16½ to 17c.

\* \* \*

**The U. S. Tea Market.**—Dullness is general in tea but at steady prices, which continue in the main unchanged, says the *Tea and Coffee Trade Journal* of 21st ultimo. Formosas are reported in some quarters as easier. Many would like

this to be a general and well established fact, having in view the market in the East about to open. Indeed, this has opened, according to rumour, and at an advance of 3 cents compared with the opening prices of April 26, 1902. The open had not however been reported up to Monday to a leading Formosa house of New York. It was possible and even probable for certain grades of the tea. Congous continue firm on the old basis. Further reports are heard of inquiry for large quantities of the tea for London export, but it is becoming apparent that while there is much smoke there is little fire. The March exports were reported as approximating 45,000 packages, whereas official custom house figures make them only 4,000 packages. The failure of the tea to rise in price substantiated the suspicion that the sales were exaggerated and events have proved them so. Greens and Pingsueys are firm, as also are Ceylons and Indias. Japans are dull. All Oolongs are dull also.

\* \* \*

London advices say that in Chinas a good business has been doing privately in one or two quarters in Monings up to 5d., with some Panyongs up to 5½d. Several parcels of fair grade Monings have been taken for export from 4¾d. to 5¼d. Good to medium Ningchows and Keemuns are being asked for by the export houses between 5½d. and 8d., but the supply is now very limited, and small orders were executed in the better grades from 9d. to 11d. Common to fair Paklings brought 4¾d. to 5½d., and are cheap, in fact, all Foochow teas are cheap. In Indian tea, common leaf sorts at and under 7½d. were firm, but all other grades were less in demand, and prices exhibited irregularity. In Ceylon tea there was a good demand for teas up to 7d. per lb., but above this quotation most grades were rather cheaper, with very little support from buyers generally. Broken Pekoes found a disappointing market, especially medium sorts from 8d. to 10d. Quality was poor, the few parcels with improved liquor commanding attention. Colombo-bought teas were in larger supply than recently, but in many instances failed to reach limits.

\* \* \*

**Tea in Russia.**—It is ancient history that the Tea Industry in the Caucasus is expected by those engaged in it to develop considerably, and that the Siberian Railway will help that development. In recent Consular reports to the Foreign Office this view is taken. Attention is called to the fact that while Russia is, undoubtedly, the largest consumer in Europe so far as the quantity of the liquid tea drunk is concerned, the amount of tea consumed owing to the different method of mixing is but 0.93 lb. per head per annum, whereas in the United Kingdom it is over 6 lbs. (taking the data of 1900). It is far more expensive than in the United Kingdom, 4s. per lb. of 14½ oz. being the price for the average tea, but owing to the weaker infusion habitually prepared it is made to go much further.

The supply from China has diminished by 36,207,322 lbs. since 1899, partly accounted for by the import of Ceylon teas, which, according to a report of the Russian Vice-Consul at Colombo, rose from 3,000,000 lbs. in 1895 to 23,000,000 lbs. in 1901. Ceylon tea is used in Russia mainly for blending purposes, Russian taste not yet appreciating its particular flavour as a drink by itself. About 50 per cent. now comes through Russian firms established in the island. Its special qualities and comparative cheapness have now established a firm hold on the Russian market.

Chinese teas hitherto reached Russia either direct by sea, mostly in the Volunteer Fleet steamers from Hankow to Odessa, or overland *via* Siberia. The Siberian routes were:—

1. By water to Tientsin, thence overland *via* Kalgan and Kiakta to Irkutsk. This, the ancient caravan route, will probably succumb to the altered transport conditions.

2. By sea to Vladivostok, and thence—

(a) By the Ussurian Railway to Khabarovsk, thence up the Amour and Shilka to Sretensk and so on to Irkutsk.

(b) To the station of Iman, on the Ussuri line, thence by the River Ussuri to the Amour and Shilka.

3. By sea to Nikolaievsk, on the Amour, and thence by the Amour and Shilka.

The incidence of duties has hitherto played an important part in the distribution of tea within the empire. An increase of three roubles per pood of the duty on tea conveyed *via* Siberia has been decreed with a view to equalising the cost of delivery by sea and by land. It seems to be expected that the Ussuri and Amour routes will now lose their tea cargoes, as, indeed, the main part of their traffic. The chronic detentions caused by the shallowness of the Amour were a perpetual hindrance to regularity of delivery. The Manchurian Railway authorities and the Government are evidently doing their best to attract this valuable freight to the direct land way. The Consul says it seems possible that the indirect trade in tea to Russia *via* the United Kingdom will be considerably curtailed by the operation of the Siberian Railway.

According to a report to the Foreign Office by Mr. Consul Stevens the cultivation of the tea-plant in the southern Trans-Caucasus, and principally in the vicinity of Batoum, is making great strides. It is only some nine years since the first attempts in the culture of tea were made on the coast of the Black Sea by a Russian gentleman, and his undertaking was then looked upon most sceptically by the majority of the agricultural people in the district. Since then it has, however, become evident that tea can be cultivated to advantage, and several other persons in the district also began to grow tea on their estates, among them the managers of the Imperial Domains, who now have 500 to 600 acres under tea.

There are two tea factories in the district. One of them is owned by Messrs. Popoff, who manipulate exclusively tea grown on their estates. The factory belonging to the Imperial Domains, besides drying and preparing its own tea, also takes over, at a small cost for the same purpose, the tea grown by most of the owners of the land in the neighbourhood of its estates, and returns them the tea after it has been prepared for use. Last year the tea crop surpassed all expectations, one dessiatine (2.7 acres) having, on an average, yielded 20 poods, or 800 Russian pounds (720 lbs. avoirdupois weight), which, at the rate of 11 per pood, the all-round wholesale price at which it was sold, brought in 800r per dessiatine; or, as near as possible, £30 per acre.

Owing to the satisfactory results obtained during the period under review, the Ministry of Agriculture is about to adopt a series of measures in order to encourage and foster the cultivation of tea by the small peasant classes, and books containing instructions and explanations with regard to the industry are being widely circulated among the farmers of the locality in which the tea is grown.

Under the conditions set forth above, those who take an interest in the development are sanguine apparently that the theory that tea-growing in Russia would not be generally adopted on account of the unfavourable climatic conditions and other difficulties which have to be encountered, including the high rate of wage paid for labour, or that the Tea industry and trade of the Caucasus could not possibly expand to a stage which would render it, even at a remote date, of commercial importance, is apparently an exploded idea. It is argued that the results obtained during this season show that quite the contrary is likely to be the case, and that there is every reason to believe that the cultivation and manufacture of tea promises to be one of the most prosperous and profitable agricultural pursuits in the Trans-Caucasus.

\* \* \*

Mr. Harold H. Mann, the Scientific Officer of the Tea Association, left Calcutta on Sunday for Assam, where he will prosecute further enquiries into the problems connected with the manufacture of tea. The experiments with regard to the ferment which excited considerable interest, we understand are likely to be carried much further, and as important results as those which have followed enquiry into questions relating to the cultivation of the tea-plant, may be confidently anticipated.

\* \* \*

People who doubt the necessity for careful handling of tea should study works on the tea industry. These tell how in China when the first picking of the finest teas begins the pickers and packers are debarred from eating strong tasting food that might affect the breath, and are compelled to bathe several times a day and wear gloves while touching the tea.

\* \* \*

#### Tea.

Whether Jap or pure Chinese  
Thou our choice art, fragrant tea;  
Whether India or Ceylon,  
Thee we set our hopes upon.  
Search the wide world none shall find  
Herb more cordial, true and kind;  
Sages like thee, saints agree,  
You're the limit, peerless tea!  
Banish high-ball, beer and wine;  
Tea leaves give the drink divine;  
Banish juice of corn and rye,  
Neither can with good tea vie;  
Banish cider, banish rum,  
Let no absinthe near us come;  
We're contented, troubles flee,  
When we have thee, peerless tea!  
Cure thee fealty, pack thee well,  
Keep thee from all wares that smell,  
Blend thee with a master hand,  
Then thy brew shall beat the band.  
Whether India or Ceylon,  
Better drink sun ne'er shone on;  
Whether Jap or pure Chinese,  
We adore thee, peerless tea.

#### NOTES.

##### Java Quinine.

At the auction of Java quinine held at Batavia on April 29, 5,003 kilos. were offered, of which 47 kilos. sold at an average of 20fl. per kilo. (about equal to 7½c. Amsterdam unit). against 20fl. paid at the previous tender. The next tender to be held at Batavia will take place on May 27.

##### Manuring of Pará Rubber.

Experiments made in the Straits Settlements in manuring young plants of Pará Rubber in pots, with various kinds of manures, including lime, cowdung, burnt earth, poudrette, etc., gave evidence in favour of burnt earth and cowdung; lime and poudrette seemed not to benefit the plants at all.

##### Java Cinchona.

The exports from Java during April were 1,065,000 Amsterdam lbs., against 990,000 and 791,000 Amsterdam lbs. in 1902 and 1901 respectively. Total for the three months is 3,347,000, against 3,134,000 last year. At the drug-auctions, 48 serons of Loxa quill sold at 10d. to 10½d. per lb., and 1 seron of fair Huanoco quill at 8½d.

##### Gutta Percha in the Straits Settlements.

Gutta Percha trees growing in the Waterfall Garden valley, from which a good crop of seeds was obtained in 1901, produced not a single fruit last year though one tree flowered freely. Imported saplings both from Borneo and Sumatra are decided failures, and until seeds are obtainable the cost of forming large plantations is too great to justify the undertaking.

##### The First Coffee-house.

The first coffee-house in London was started in 1652 by a Greek named Pasqua, who was the servant of a Mr. Edwards, a Turkey merchant, and who thoroughly understood the roasting and making of coffee, till then unknown in England. This house was situated in George-yard, Lombard-street. It is a noteworthy fact that in 1675 Charles II. issued a proclamation to shut up the coffee-houses, but in a few days it was suspended. They were charged with being seminaries of sedition.

##### Where Coffee and Shoes meet.

C. Shenkberg & Co., wholesale grocers, Sioux City, Iowa, have instructed their attorneys to petition for an injunction against a retail shoe store which as an attraction recently has been selling a brand of coffee prepared by the wholesale firm at 5 cents a pound, whereas the regular retail price is 20 cents a pound. The wholesale firm refused to sell the shoe dealers the coffee, and they then procured it from retailers. Shenkberg & Co. seek to have the retail concern enjoined from selling it at less than the standard price.

##### Mr. P. C. Larkin.

Mr. P. C. Larkin, of P. C. Larkin & Co., the head of the Salada Tea Company, is now in London, at the invitation of the Government Commissioners from Ceylon and India, who are now considering the tea question. Another matter which will be discussed is the size, nature and details of the Ceylon and Indian teas to be made at the forthcoming St. Louis Exposition. Mr. Larkin will afterwards make a tour of the Continent, combining business with pleasure. Mr. Larkin looks for a Ceylon and Indian importation of some 20,000,000 lbs. into the American market this year, and if this amount is taken, it will play an important part in reducing the consumption of Chinas and Japans. But we must not begin to count our chickens before the eggs are hatched.

**Intelligence v. Pests.**

The *Ceylon Observer* commends the following from an American journal to the attention of cacao planters, each of whom ought to do his duty in fighting any fungus or canker, for his own as well as the general benefit, without compelling legislation:—"When the cultivation of oranges for profit in Southern California began, the orchardists were met in the outset by the ravages of scales which threatened to destroy their young orchards. No known means of combating the pest was available, but such means were soon discovered and the powers of the legislature were invoked to compel all orchardists to unite in destroying the pests. The same is true in the islands. Difficulties will be encountered at first, but the intelligent farmers will win in the end."

**Journal d'Agriculture  
Tropicale.**

*Aperçu du contenu du n° 22 (30 avril 1903):* Multiplication des lianes à caoutchouc.—Fibres de bananiers.—Dessicated cocoanut (Machines, 2 fig.).—Le pêcheur au Sénégal.—Articles et notes agricoles intéressant le thé, le maté, le caoutchouc d'Hevea, la ramie, le beurre de coco, la canne à sucre, le riz, l'ananas, le cacao, le café, le coton, l'arachide, etc.—Études commerciales et statistiques concernant le caoutchouc, le café, l'indigo, le tabac.—Contributions inédites de MM. A. Pedroso, Ch. du Val, P. Cibot, A. Couturier, F. Main, Hecht frères (Paris), Ch. Rivière (Alger), G. Le Testu (Dahomey), van der Ploeg (Java), T. Barracough, John Gordon & Co. (Londres), E. Maine (Sénégal), Ch. Judge, J. Karpelès (Calcutta), Tabel (Sumatra), C. Pedroso (Cuba), P. des Grottes (Nossi-Bé).—Bibliographie.

**The St. Louis Exhibition.**

His Excellency the Governor of Ceylon has been pleased to appoint the Hon. Mr. Stanley Bois to be the Ceylon Commissioner at the World's Fair to be held at St. Louis in 1904. Mr. Bois will have two Assistants, one nominated by the Thirty Committee in consultation with the Chamber of Commerce, and the other a Ceylonese gentleman to be selected by His Excellency the Governor. It is also proposed, if an official status can be obtained for them, to appoint "Official Visitors," who will lecture on Ceylon and be ready to afford information regarding the Island and its products. The expenses of these gentlemen will be paid from Exhibition funds. £15,000 is the sum which the St. Louis Committee has recommended should be granted for Ceylon representation at St. Louis. Both at Chicago and Paris the expenditure found necessary was about the same amount.

**London Tea Market.**

Weekly special telegram dated 14th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for good liquoring Pekoes are in improving demand, while the market for common Pekoes and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6¾d. (the same as last week) and the average 7¾d. (same as last week). The average for the same period last year was 6½d. Reuter reports that the tone of Ceylon tea is firm, and Broken Pekoes for all fine teas firm. Pekoe and Pekoe Souchong is also steady. Fair Pekoe Souchong is quoted at 6½d. (same as last week) and the average for the week is 7¾d. (same as last week). 21,000 packages of Ceylon tea were offered for sale and 19,000 disposed of; while of the 30,000 packages of Indian tea offered, 24,000

were sold at an average of 7¾d. (½d. less than last week). Medium to fine qualities very firm.

**Apropos of the Budget.**

It appears to be definitely decided that the British Import Duty on Tea shall not be reduced at present, and planters will no doubt vail with all the patience they can muster for better tidings. Details of Customs Receipts are interesting in this connection. Although the duty on tea realised £5,985,000, the increase, which represents 3,400 tons, cannot be considered as a satisfactory compensation for the decrease which was exhibited a year earlier. The past quarter was an extremely sluggish one, and recently dealers have endeavoured to work on what stocks they had left, so that the year just passed has had little more than three-quarters of a year's tea duty. Coffee, the consumption of which was stationary for some years, appears to have advanced a little in popularity of late. The war gave it a fillip, for our exports of roasted coffee to South Africa were as much as 300 tons. No doubt some of the soldiers carried the taste for that article home with them.

**GENERAL ARTICLES.****COFFEE IN LONDON.**

Though the Brazilian receipts at the early part of the week were lighter, there was, says the *Produce Markets' Review* of 25th ultimo, an increase afterwards, and the terminal market has, in consequence, slightly given way, quotations being again within 6d. of the lowest record. At the moment, notwithstanding the talk about the destruction of a certain percentage of low Coffee in Santos, there are very few in this market who can see any hope of higher prices, excepting from a natural reduction in the production, owing to an unremunerative price. It is a question whether that point has not now been reached. While this is the position with regard to Brazilian coffees, it does not apply equally to other growths, and there is a distinct feeling gaining ground that the lowest point has been touched for mild descriptions. The whole of the Costa Rica crop is said to have been shipped, and yet the stock here is by no means excessive owing to the heavy deliveries that have taken place. East India has also fallen to a point that is attractive to the large Continental buyers, and a good business has been done.

**TEA IN LONDON.**

INDIAN.—At the resumption of the public sales on Monday, there was, says the *Produce Markets' Review* of 25th ultimo, a good general demand, especially for the lower descriptions, which were freely bid for. The tendency of prices for the latter was again in the upward direction, and higher rates were in most cases obtained, while the idea generally prevails that a further advance is probable. This will much depend on the demand, now that the Budget gives no reduction in the duty. The available supplies are naturally smaller than last year, but the rise in values may affect the consumption. Up to the present there is no appreciable change in the quantity consumed, but whether the discontinuance of the present lowest retail price will have any material effect in reducing the demand remains to be seen. At any rate, the present is an opportunity for the retailer to endeavour to establish in public favour a taste for the better class teas, of which they should not be slow to take advantage. At the public sales 29,000 packages were catalogued, of which 5,770 were withdrawn. Steady to firm prices were paid, and a fairly good proportion that failed to pass the hammer was afterwards disposed of by private contract. The quantity in type for the next sale shows an increase compared with this week, about 36,000 packages being catalogued, and there is every prospect of an active demand and a firm market.

CEYLON.—Good supplies were brought forward at the auctions on Tuesday, and with a continued strong demand, firm to dearer prices prevailed for most descriptions. Whole Leaf teas from 7½d.

downwards received the most attention, and in many cases sold at slightly advanced rates, very little being obtainable under 6½d. Medium Broken from about 8d. to 9½d. continue cheap, and compare very favourable with Whole Leaf kinds at the same prices, although the quality of the latest arrivals has not been so good. Fannings and Dusts continue in small supply, and the better kinds realise extreme rates. At the public sales 23,600 packages were brought forward, of which about 3,700 were withdrawn.

CONGOU.—At the public auctions held on Wednesday 474 packages were offered, of which 289 were withdrawn. Business generally has been quiet, although prices remain firm for all descriptions. There has again been a better enquiry for low-priced "Reds," which have, so far, not advanced in proportion to other kinds. Low-priced Blacks are also wanted at the recent advance, and this class of tea is now being freely used for blending purposes.

OTHER CHINA.—In the absence of public sales the Green Tea market remains quiet, with only a limited business to report. Good medium and common Capers are becoming very scarce, and a somewhat better tone prevails. Formosa Oolongs and Scented Orange Pekoes remain unchanged.

## PRODUCE AND PLANTING.

The maintenance of the tea duty at 6d., burdensome as it is to growers, cannot have surprised any but the over-sanguine. The reduction of 4d. in the income-tax is in the nature of a sop to the voter, and will go a long way towards removing the uneasiness which has prevailed of late amongst the middle-class supporters of the Government at the absence of any definite prospect of retrenchment in national expenditure. Mr. Ritchie, in his Budget speech, said very little about tea, and it is evident that planters need not look to him for sympathy in their desire to be relieved from the present high duty, nor is the plea of the working-class consumer more cogent in his eyes. And truly the outlook for reduced taxation is a poor one. Mr. Ritchie was left with a surplus of over £10,000,000. The fourpenny reduction of the income-tax represents £8,000,000 of this, leaving only £2,000,000 for the reduction of indirect taxes. The fact remains that the national expenditure has reached £143,954,000 in time of peace. It may be assumed that it will continue to increase, and where is the money to come from? "The chief deficiencies," said Mr. Ritchie, comparing realised with estimated receipts, "had been in sugar and tea . . . With regard to excise, neither beer nor spirits were quite up to the mark. Beer stood still; spirits advanced, but not quite so much as they had hoped." If tea and sugar show deficiencies, and beer stands still, tea growers have but a very poor chance of seeing the tea duty reduced.

Mr. Ritchie's brief reference to tea and sugar was not, one would have thought, calculated to excite the imagination. But it seems to have been too much for the feelings of a correspondent of the *Daily Graphic*, who has been granted space in that journal in order that he may criticise Mr. Ritchie's remark that tea and sugar are "harmless and beneficial." Not so, says this correspondent in effect, and he proceeds to point out that in Ireland the increasing consumption of these two articles of produce have brought about deplorable results, filling the lunatic asylums, and conducing to the general decadence of the nation. Although he signs himself "F.S.S.," the writer of this remarkable epistle makes no attempt to endorse his opinion by statistics, and beyond his assertion and a quotation from a letter written by John Wesley, there is nothing to support his injurious statement. The *Daily Graphic* inserts this effusion, under the bold head line "The Tea and Coffee Duties," as though the letter contained words of profound wisdom calculated to check the rash progress of the public towards demoralisation and decay.

In reply to inquiries from shareholders in Indian tea companies and other home readers it may be noted that the tea cess measure has now become law in India, taking effect from the first of this month. By this Act a duty at the rate of one-quarter of a pie (1-48th of a penny) per pound is levied upon all tea produced in India and exported thence. At the close of each month the Collector of Customs pays the proceeds of the duty to the tea cess Committee. This Committee consists of twenty members, three of

whom are elected by the Bengal Chamber of Commerce, one by the Madras Chamber of Commerce, seven by the Indian Tea Association, and nine on the recommendation of such respective bodies or authorities interested in the production of tea in India as the Governor-General in Council may appoint in this behalf. The proceeds of the cess are to be applied by the Committee to such measures as they consider advisable for promoting the sale and increasing the consumption of tea produced in India. The cess is to remain in force for five years from the time of its coming into operation.

There are over 148,000,000dols. spent every year in the United States for coffee—nearly 2dols. per head for every man, woman, and child—and praise is lavished on coffee as the most stimulating and satisfactory of drinks. But yet the American consumer is not happy, and we learn that the need of the hour is some form of liquid coffee. Most of the coffee extracts are failures, but recently in New York, we are told, "A man of long experience in the study and practical demonstration of coffee has announced that the liquid coffee problem can be mastered. His claim is that coffee can be prepared so that one pound will give all the effects that can be gained in the old way from ten pounds of roasted beans. According to this same party coffee can be prepared so that it will keep in heat or cold, in an open or closed vessel, and so that it will not lose any of its properties by age. The coffee trade will await his further movements in this direction with interest.

The purchase in India of Indian tea for Russian ports is said to be increasing. During the cold weather agents of Russian firms regularly visit India to buy tea, very largely, it is confidently asserted by an Indian authority, for Central Asia. It is pointed out that during February last of some 711,000 lbs. shipped from Calcutta to ports other than those in the United Kingdom, 186,00 lbs. were for Trebizond and 177,000 lbs. for Odessa. These two ports, therefore, took more than half of the total extra-British consignments of the month. It is said to be quite certain that this trade will expand, and Indian tea be largely put into Northern Persia, Bokhara, and the Khanates generally, as the Transcaspian Railway carries goods at very cheap rates.

At Wednesday's meeting of the San Paulo Railway Company, Mr. Megaw (the Chairman) held out the expectation of a coffee crop of about 8,000,000 bags for the coming season, or about the same as for the past one, and, with a steady exchange, he believed they would be able to maintain their twelve per cent. dividend. The price of coffee is lower than ever, and Mr. Megaw mentioned that an excellent quality could be imported and sold, ready roasted, for 6d. per pound, though probably consumers would be asked to pay 1s. 6d. for it. Somebody must be making a fine profit. A suggestion was made that the Brazilian Government should spend a little money in endeavouring to increase the consumption of coffee in the United Kingdom, which is only about ¾ lb. per head, against 16½ lbs. in Holland, but it is probable that such an increase would be brought about even more effectually by a lowering of the at present exorbitant retail price of the commodity.—*H. & C. Mail.*

## CEYLON AND CHINA TEA IN AUSTRALIA.

The Foo Chow Chamber of Commerce has recently issued some highly interesting figures illustrating the decline in the trade in tea between that port and Australasia. India and Ceylon have been keen competitors in this market and public taste has been met by their shipments to the exclusion of China sorts. There can be no doubt this result is largely due to the fact that for a number of years the quality of China tea has been steadily declining. The rage for cheap tea was met by total disregard of proper picking condition, and an enormous depreciation in the quality of the leaf was the result. Thirty years since good China tea sold in Melbourne at 3s. to 3s. 6d. per lb., but the consumer now wants to be supplied at from 10d. to 15d. per lb. These prices will not permit growers to select their pickings, and old and young leaf are sent to the drying kilns without discrimination. The percentage of tannin in the Indian and Ceylon leaf is larger than that grown in the Foo Chow district, hence in water they carry a darker colour, which probably suggests strength to the ordinary consumer and this

partly accounts for their favour with the public. A microscopic quantity of really fine China tea now finds its way to Australia but the shipments are, as a rule, limited to sorts suitable for cheap blends. The figures relating to shipments from Foo Chow to Australia for four seasons are appended:—

Season.	lbs.
1899-1900	6,094,660
1900-1901	6,511,722
1901-1902	2,169,218
1902-1903	1,138,697

The new season will open in Foo Chow on or about the end of May. So far some fair orders have been sent forward and a recovery from the low point touched last season will doubtless be noticeable in imports. But much depends on the movements in Ceylon and India. If prices continue to harden upwards in those centres more demand from this quarter will be experienced for China teas, but no extensive recovery can be anticipated.—*Melbourne Age*, April 28.

### SIKKIM CINCHONA ESTATE.

Even the most severe critic of British rule in India must admit that the sick and suffering are better cared for to-day than at any other period in the history of India. The well-equipped hospitals and dispensaries scattered up and down the land ministering daily to thousands of patients offer a striking answer to those who assert that indifference to the well being of the people of India is the attitude of the Government.

Other evidence, however, is not wanting, and an *Englishman* representative was privileged to visit recently the Government Cinchona Estate near Darjeeling. Few visitors to Calcutta's favourite sanitarium realise that travelling over the hills a few miles would bring them to the spot where about half the quinine used in India is produced.

*The Situation of the Estate.*—The nearest point on the railway is Sonada, and a pleasant ride through the forest at first climbing upwards to a height close on 7,500 feet then falling to a level of nearly 4,000 feet brings you to Mungpoo. At this season of the year when only occasional showers descend to freshen the atmosphere the country side does not perhaps look its best, but to the jaded dweller on the plains, the varied shades of green supplied by pines and palms, tea bushes and ferns is a distinctly refreshing sight.

The road winds up and down, revealing fresh beauty at every turn, mountains towering one above the other, the farthest peaks lost in the clouds. The Cinchona Estate is situated in British Sikkim, and though no doubt the site was selected because it was at the best altitude, and the soil and general conditions were best suited for growing a tree not particularly hardy. Yet the natural beauty of the district must have appealed to those who made the selection.

The snug little white bungalows built for the officials in charge of the estate, which dot the landscape look out on an expanse of country of the most charming character. The valley of the Teesta with well-wooded slopes on either side, presents a scene such as many an artist must have longed to put on canvas as the last bid for fame.

*The History of the Estate.*—It is about forty years ago since the Government began as an experiment the cultivation of cinchona, and at Ootacamund and Mungpoo extensive plantations have been laid out. The difficulties of clearing the land, organising labour, selecting the most suitable varieties must have been formidable. With means of communication practically non-existent, roads had to be made, and year after year as roaring torrents wend their way to the river below, they still have to be remade. The Estate forms a part of the territory ceded to the British Government by the Raja of Sikkim in 1835, and is surrounded by thousands of acres controlled by the Forest Department. The development of the Estate has gone on steadily, and to-day some 1,500 acres are under cinchona cultivation.

*The Factory.*—The growing of the tree, from the bark of which the life-giving quinine is produced, was not all that the Government made up its mind to do. To make India supply its own needs as far as possible is a praiseworthy intention, and the perseverance, patience, and ingenuity which must have been exer-

cised to render India independent of outside sources for its quinine, supply offers an object lesson to many in other industries.

When the factory was started, only the manufacture of cinchona febrifuge was undertaken, but in course of time quinine manufacturing on a fairly large scale was taken up. Water power is ingeniously used to drive the plant and the grinding machinery which converts pieces of bark into a fine dust of the consistency of flour is capable of grinding up a good deal more bark than is at present available.

The bark itself is stored in substantial looking sheds, partitions dividing the root, the stem and the branch bark, as each contains the quinine and other alkaloids in varying proportions.

Stocks of firewood not for household consumption, but as fuel for steam producing for the chemical works excites some comment and elicits the response that if cinchona is grown for the bark, the timber is also useful.

The process of quinine making is an interesting one to observe, its manufacture is a closely guarded trade secret, and but for the persevering efforts of retired officials carried on for many years its manufacture in India would never have been possible.

The fine bark dust, brown and dirty in appearance, goes through a number of churnings and boilings, before it is run off into little white bowls allowed to crystallise and is seen in white powder form.

Even the making of the tin boxes for packing the white powder which is so often literally worth its weight in gold is done on the premises.

The packing into pice packets, which are to be had at every Post Office in India, is reserved for the prisoners in the Alipur jail.

Returning from the factory, the nurseries are passed when you can see cinchona just peeping out of the soil like mustard and cress. Then row above row of plants much larger and stronger yet sheltered from rain and hail by well thatched sheds some two or three feet high.

The cultivation is, of course, carried on, quite on scientific lines, the variety of cinchona giving most quinine is not quite as hardy a plant as others of its kind.

Work goes on the whole year round, soil is being prepared for new plantations, trees that have arrived at maturity which is about 12 years are being pulled up and stripped from root to the topmost branch of every inch of bark.

A visitor to the plantation is said to have expressed surprise that the quinine tabloids he has been accustomed to buy did not grow on the trees in little pods, but if such a sight is not to be seen, there is sufficient to excite feelings, wonder and surprise that here amid the mountains such an example of enterprise is to be found.

One leaves the spot with the impression that here out of sight far from the madding crowd work is going on, which no other Government in the world is engaged in, and that started purely for philanthropic reasons, it is creditable to those who in days gone by made the plans, and those who are to-day carrying on the work, that the quinine produced practically pays the cost of working.—*Englishman*.

### RUBBER GROWING IN THE STRAITS.

#### EXPERIMENTS AT THE SINGAPORE ECONOMIC GARDENS.

The *Straits Times* has a long leading article on this subject, with a sketch showing the old and new systems of "milking" rubber trees. Some extracts from the article are worth giving:—

#### DEMONSTRATIONS.

During the past few weeks, a number of high Government officials, planters from the Native States, and other persons interested in the development of the Peninsula, have been making a regular morning *rendezvous* of the Economical Gardens at Cluny Road. The cause of this has been the remarkably interesting demonstrations of the result of experiments lasting many months, in the matter of extracting the latex, or sap from the Pará rubber trees that have been planted there for experimental purpose. In view of the fact that, within the next few years, Pará rubber is expected to rank next to tin as the staple product of the Straits, anything affecting its cultivation or harvesting becomes a matter of prime public importance. Therefore it has been that the usually

deserted groves of rubber trees in the section of the Gardens opposite Cluny, have been enjoying such extensive and distinguished patronage of late. The main item of interest about the demonstrations rests in the fact that Mr. A. D. Machado, who has carried out the experiments, and now cheerfully demonstrates the results thereof every morning, has found it possible to "milk" a tree every second day for six months in every year without in the least hurting it or impairing its growth, and at the same time he can secure the greatest possible amount of the valuable *latex* from which the rubber is subsequently formed.

In describing the new method of tapping, it is stated that the old deep gashes used to seriously injure the tree, and sometimes kill it. In response to enquiries Mr. Machado furnished the following data:—

#### TAPPING.

Tapping operations were begun on the 4th March, but it was not till the 20th March that 100 trees were regularly tapped with 4 incisions to each tree. Each incision is  $1\frac{1}{2}$  inches long by  $\frac{1}{8}$ th of an inch wide. Four incisions would mean in length 6 inches of a cut to each tree, barely more than a scratch, one may say. One noticeable feature is that some trees yield much more copiously than others, and this may be due to the position of the trees as regards shade, soil, and moisture. Irrespective, however, of these important factors, there can be no doubt that some trees are physically more productive than others, for much the same reason that one man is stronger than another, and so on. The 100 trees operated upon occupy a triangle 176 feet *plus* 220 feet *plus* 250 ft., or barely more than  $\frac{1}{4}$  acre, from which it will be observed that they are much too close—a condition by no means favourable for the production of *latex*. Still, results go to show that the present output, as obtained by means of small cuts, is all that can be desired. The flow of *latex* is more copious on the morning of a day following a heavy shower of rain than on a dry day; in fact, in very dry weather it would be almost advisable to cease tapping altogether. The way the *latex* is extracted and prepared is simple in the extreme. As soon as a cut is made, either with a small axe or a chisel, a tin cup, enlarged at the apex and tapering towards the bottom—called in the Amazons a *tijellina*—is inserted beneath the wound, and into it the *latex* flows. At six o'clock tapping begins, and by 6-30 A.M. tapping is over. At 7 A.M. the cups are gathered in, the *latex* passed through a sieve to ensure cleanliness, a little acetic acid is poured in to hasten coagulation, and the *latex* is then poured into enamelled soup plates and in about half-an-hour's time coagulation is complete.

#### DRYING THE RUBBER.

The *latex*, which at this point resembles stiff blancmange, is then put into a press, and whatever water remains is pressed out. It is then placed over a kitchen fire (wood fire) to dry, after which, if the sheets are thin, it assumes a dark yellow colour and is transparent. Drying in the sun will not do, as this causes the rubber to turn sticky. Taking the average for the last 12 tappings, the average daily output of pressed rubber has been 87 oz. or lbs. 5.44. There will be a loss in weight of 40 per cent. when the rubber is thoroughly dry after smoking, leaving say 3 lbs. of dry rubber for each day's tapping. At the present rate of tapping, these trees will stand tapping for 90 days, tapping them preferably every alternate day, or say 6 months in all. This means 3 lbs. a day for 90 days. 270 lbs. at 4s. a pound, the price at which the rubber is valued in London, and the result is a return of £54 per 100 trees per annum.

#### STUPENDOUS PROFITS.

As half this figure the profit still remains stupendous. Self-coagulated rubber is said to be better in quality than rubber prepared with acetic acid, but the time taken for rubber to coagulate by itself is from 16 to 20 hours, whereas, with acetic acid, from the time the incisions are made to the time the rubber is pressed and ready to be smoked, occupies just two hours, a matter of some importance where time is of some object. The system of tapping now carried on—oblique incisions—is the one in vogue in the Amazons. The "herring-bone" system has been described by M. Bonnechaux, a gentleman who for some years was a rubber collector in the Amazons, as little short of barbarous, and that it speaks volumes for the vitality of these trees in that they have survived the ordeals thereby entailed. In the Amazons these trees would have succumbed to the torture. That it is harmful is proved by the fact that one of the 100 trees now being operated upon had a herring-bone incision made on it, and is now producing

next to no milk. It is well to reiterate the fact that the trees now being tapped are planted much too near each other, and are growing under excessively unfavourable conditions generally. In spite of this, they yield an average of 3 lbs. per tree per annum. The average circumference of the trees is 2 feet 10 inches, the largest being 5 feet 1 inch, and the smallest 1 foot 3 inches.

The rubber produced in the gardens by Mr. Machado is worth 1 dol. gold, or over 2-30 dols. local currency per pound, which is more than 5,500 dols., Mex. per English ton. With these prospects to consider, it will be recognised that the now rapidly-increasing rubber trade is a matter of vast consequence to the Colony, and the thanks of many are due to Mr. Machado, as well to Mr. Ridley, the Director of the Gardens, by whose orders Mr. Machado inaugurated the operations and experiments which have resulted so successfully.

### THE BUDGET AND TEA.

Great disappointment is felt in the trade at the maintenance of the duty at the rate of 6d. per pound, for, from what was said at various times by Sir Michael Hicks-Beach, it was generally hoped that Tea would be the first commodity to be relieved from the burden of war taxation. It is well known that the increased tax was almost entirely, though involuntarily, borne for some time by our Indian and Ceylon planters, because their production, at the time of the imposition, was in excess of the demand. The producers very naturally shifted the weight of the tax from their shoulders by reducing their output, and the extra 2d. has been placed on the home trade, who have been bearing it impatiently for some time past, in the vain hope of a reduction in the duty. It will now obviously be the turn of the public, for traders do not carry on business from philanthropic motives, but for purposes of gain. The present position is that only quite common Indian and Ceylon tea can be bought at 7d. per pound in bond, or 1s. 1d. duty paid, and with the cost of distribution, blending and packing, this means something like a first cost of 1s. 2½d. per pound by the time the tea reaches the public. Naturally the retailer, too, expects his profit, and to sell at the generally current and popular price of 1s. 4d., he must be contented with 1½d. per pound—a return on the retail price of under 11 per cent., and as things are now, this is considered altogether insufficient. It is to be recollected also that, at this price, only very common Indian and Ceylon tea can be sold giving little satisfaction either to the distributor or to the public. This raises anew the old question of why there should be such a rage for cheapness in tea, and such a neglect of quality in an article of taste and fancy. In our opinion, the current or popular price for tea, should no longer be 1s. 4d. but be raised to 1s. 6d., and an effort should be made once more to induce the public to take to finer qualities as well, at, say 1s. 8d., 2s., and 2s. 6d. per lb. A pound of tea goes so far that it is really a small matter in household consumption, even at the highest price. *Punch* said some time back, that if you go out to dinner your host boasts of how much he gives for his claret, while his wife in the drawing room points out the low price she gives for her tea—but this state of things is capable of amendment, if the retailers will take their trade seriously and point out the advantages of quality. In any case, while the production of Indian and Ceylon tea is less than the demand, as is undoubtedly the case at the moment, it is quite clear that the average retail price must be considerably raised, unless enormous loss is to fall upon the home trade, which is notoriously unprosperous. There is only one other very old remedy which could alter this position, but from time immemorial it has been the custom for grocers to sell sugar at little or no profit, or at a loss, and the habit seems ineradicable, although the whole of the circumstances have absolutely altered of late years. So firm is the hold of this tradition that the worst "cutters" at the present time are the interlopers in the trade, who are supposed to have the newest views. Roughly speaking, 12 pounds of sugar are sold to one pound of tea, and a loss of a ¼d. on the former means an addition of 3d. to the cost of the latter, if it were saddled with the whole burden. The shrewder London grocers are refusing to follow this bad example, but placard their windows with notices recommending the public not to be led away by such tricks, but to buy their sugar only at cutting establishments, buying tea where it is not loaded by the loss on sugar, and where also full weight can be relied on. In considering this

question, it seems that the retailers generally can scarcely realise what sugar costs them, having so long turned their attention to selling it too cheaply. Take for instance German Granulated. The lowest cost of fair qualities of this sugar is as follows:—

	£	s.	d.
F. O. B. Hamburg ... ..	0	9	10½
Wholesale profit ... ..	0	0	3
Freight, carriage inland and delivery ... ..	0	1	3
Packing, and loss in weight by turn of scale, etc. ... ..	0	4	8
Duty ... ..	0	4	2
	1-0	2½	

This is equal to a cost of a small fraction under 2½d. per pound, if packing be taken at ½d., as we have taken it above, for we believe that a ¼d. does not cover it, though we are fully aware that many grocers never reckon anything for the cost of weighing and packing sugar. If these figures be considered, it will be seen that even in the British ports themselves, where sugar is landed, and no railway carriage is incurred, such granulated cannot be sold at a very moderate net profit under 2½d. per pound, yet cutting and advertising shops are selling it at 1½d., a sacrifice of ¾d. per pound, to be added on to tea or other things. If tea alone is to bear the burden, it requires 8½d. extra profit to make up for it. The moral of this is the desirability of the grocers locally refusing to follow such tactics, but setting to work instead to expose them, and thus to keep, extend, or regain their tea trade, and especially in the better sorts.—*Produce Markets' Review.*

### THE AMERICAN NATION'S DRINK BILL.

The *American Grocer* presents its annual estimate of the retail cost of stimulating beverages, from which it appears that the Nation's drink bill is at high-water mark. Since 1880 the use of alcoholic beverages has nearly doubled, having increased from 10.09 gallons *per capita* to 19.48 gallons, a gain of over 93 per cent.

The use of the milder stimulants has not grown so fast, that of coffee rising from 8.78 pounds *per capita* to 13.37 pounds, a little over 52 per cent., while tea dropped from 1.39 pounds to 0.94 pounds, a decrease of nearly 48 per cent. The supplanting of the milder for the stronger stimulants does not indicate greater National regard for better social and higher physical conditions.

The total bill of the Nation for stimulants in 1902 was \$1,369,098,276; the average yearly expenditure for the past five years, \$1,239,108,955. The record for 1902 represents a *per capita* expenditure for stimulants of \$17.33 for the 79,003,000 inhabitants of the United States, or 4.7 cents per day. The users of alcoholic stimulants are estimated to form one-fourth the total population, on which basis the *per capita* cost of alcoholic beverages is \$69.32, or 19 cents. per day.

#### THE TOTAL DRINK BILL.

Bringing together into one group the cost at retail of all beverages, we find that the United States consumed in 1902 alcoholic and non-alcoholic stimulants to the value of \$1,369,098,276, as follows:

	Dollars.
Alcoholic drinks ... ..	1,172,565,235
Non-alcoholic stimulants—	
Coffee ... ..	149,891,030
Tea ... ..	39,642,011
Cocoa ... ..	7,000,000—
	196,533,041
Total, 1902 ... ..	1,369,098,276
Total, 1901 ... ..	1,273,212,386
Total, 1900 ... ..	1,228,674,925
Total, 1899 ... ..	1,146,897,822
Total, 1898 ... ..	1,177,661,366

The above represents a yearly *per capita* expenditure for beverages of \$17.33 for the 79,003,000 inhabitants of the United States, or 4.7 cents a day.

The quantities of the four leading beverages consumed for the year ending June 30, 1902, were as follows:

	Gallons.
Coffee ... ..	1,498,910,304
Beer ... ..	1,381,875,437
Tea ... ..	396,420,115
Spirits and wines ... ..	157,206,554

#### TOTAL ALCOHOLIC DRINK BILL.

Bringing together the items of the estimated cost of all alcoholic beverages, we have as the retail cost to the American people of alcoholic stimulants for the year ending June 30, 1902, the following:

	Dollars.
Beer ... ..	692,791,330
Whiskey (exclusive of quantity used in arts) ... ..	389,681,059
Wines ... ..	90,092,846
Grand total ... ..	1,172,565,235
Estimated cost in 1901 on the same basis ... ..	1,094,644,155
Estimated cost in 1900 on the same basis ... ..	1,059,563,787
Estimated cost in 1899 on the same basis ... ..	973,589,080

The total revenue of the United States Government in 1902 from spirituous and malt liquors was \$193,126,915—a *per capita* tax of \$2.44, or \$12.20 for every family.

#### COFFEE.

The United States consumes more coffee than any other Nation on the earth, and is creeping fast to the time when one billion pounds will be required to meet annual requirements. The imports in 1902 exceeded that quantity, but it is improbable that such an amount went into consumption. It is conservative, however, to accept the average annual import for three years as better representing the quantity consumed and that was 871,459,479 pounds, having an average import value of 6.4 cents per pound, making \$68,114,573 as the value of the net imports of 1902.

The net importations for ten years and *per capita* consumption were as follows:

	Net imports.	Average import cost	Consumption
	Pounds.	per pound.	per capita.
		Cents.	Pounds.
1893 ... ..	531,395,220	14.0	8.31
1894 ... ..	547,068,994	16.4	8.30
1895 ... ..	643,234,766	14.7	9.33
1896 ... ..	572,671,840	14.6	8.11
1897 ... ..	724,559,536	11.0	10.12
1898 ... ..	851,691,084	7.4	11.68
1899 ... ..	801,756,868	6.5	10.79
1900 ... ..	748,800,771	6.5	9.81
1901 ... ..	809,036,029	7.3	10.60
1902 ... ..	1,056,541,637	6.4	13.37

Coffee loses from 12 to 16 per cent. in roasting, with the average about 14 per cent., allowing for which we have a net yearly consumption for three years, 1900-02, of 749,455,152. The bulk of the coffee sold at retail is of low grade, with the average of all sold about 20 cents per pound. On the basis that one pound of coffee makes two gallons of infusion, we have as the measure of the years' consumption 1,498,910,304 gallons, at a cost of \$149,891,030.

#### TEA.

During 1902 the agitation of the removal of the duty on tea caused dealers to allow stocks out of licensed warehouses to run down to the lowest possible point and the result was that deliveries during the year were lighter than usual. Deliveries are accepted as representing consumption, but cannot be regarded as accurately defining its extent. The imports were light and the *per capita* consumption smaller than for several years. The net import in 1902 was 74,275,153 pounds, with an average import cost *plus* the duty of \$16,669,704.

The net imports, assumed to represent consumption, have for ten years past been as follows:

	Net imports.	Average import cost	Consumption
	Pounds.	per pound.	per capita.
		Cents.	Pounds.
1893 ... ..	88,131,088	16.0	1.33
1894 ... ..	91,801,565	15.1	1.36
1895 ... ..	96,437,042	13.5	1.40
1896 ... ..	93,340,248	13.5	1.33
1897 ... ..	112,907,548	13.1	1.58
1898 ... ..	67,697,295	14.2	.93
1899 ... ..	72,834,816	13.1	.98
1900 ... ..	83,303,177	12.4	1.09
1901 ... ..	88,502,554	12.3	1.14
1902 ... ..	74,275,153	12.4	.94

The following table shows the net imports and yearly consumption:

	Pounds.
Tea in warehouse, June 30, 1900	29,425,381
Net imports, June 30, 1901	88,502,554
Net imports, June 30, 1902	74,275,153
Total supply, two years	192,203,088
Less in warehouse June 30, 1902	33,635,042
Net supply, two years	158,568,046
Average yearly consumption	79,284,023

It is conservative to estimate the average retail cost per pound in 1902 at 50 cents, and that one pound of tea as ordinarily brewed will make five gallons of beverage, on which basis the consumption in 1902 was 396,420,115 gallons, at a cost of \$39,642,011, or 10 cents per gallon—with the duty of 10 cents removed we may look for increased use.

#### COCOA, CHOCOLATE, ETC.

The net imports of cocoa and chocolate, crude and prepared, for the year ending June 30, 1902, were 50,280,792 pounds, valued at \$6,796,302. A large proportion of the imports is used for other purposes than a beverage, so that a fair estimate of the value of the retail cost to the consumer for the cocoa used as a beverage is less than \$7,000,000.

#### COFFEE, KING OF BEVERAGES.

Coffee continues to hold first place in the affections of the American people. Its low cost stimulates demand and makes it a formidable competitor of alcoholic liquors and malt beverages. The use of beer, wine, and spirits shows considerable gain over 1901—a notable fact in view of the great prosperity of the United States. It is evident that the American people are temperate in the use of stimulants and that they are not increasing their use of such as tend to debase manhood, increase our taxes, promote pauperism, or stimulate crime.

### MODERN BEE-KEEPING.

In a recent lecture upon this subject before a Meeting of the Society of Arts, in London, Mr. Walter F. Reid, F.I.C., F.C.S., a member of the Council of the British Bee-keepers' Association, and Chairman of the London Section of the Society of Chemical Industry, said that in thousands of apiaries in England methods and appliances were still employed which the Egyptian of 4,000, or the Greek of 2,000 years ago would have condemned as obsolete. Fortunately the British Bee-keepers' Association and the affiliated county Associations were working hard to spread the knowledge of more modern, humane, and remunerative methods, and their efforts were being rewarded with a gratifying amount of success. Some of the county councils also were doing good work. Before real progress could be made in agriculture it was necessary to obtain an intimate knowledge of the organisation and habits of the bees themselves, and the man who contributed most to this branch of knowledge was Huber, the blind naturalist of Geneva. The lecturer traced the development of movable frames, and pointed out that another important step in agriculture was taken when a Bavarian carpenter discovered that bees would build straight combs in the frames if they were supplied with a sheet of wax embossed with a pattern representing the base of the cells. The discovery, in 1865, of extracting honey without injuring the comb led to a great economy, and aids to bee-keeping were now so numerous as to be a source of bewilderment and embarrassment to beginners. While admitting that skeps had a certain air of rusticity about them, and when neglected became positively picturesque, he asserted that they greatly diminished the output of honey, and became the lurking place of foul brood, the bee-keepers' worst enemy. Finally, Mr. Reid pointed out that we imported large quantities of honey from abroad, while every year thousands of tons of excellent honey were wasted in our country districts for want of the bees to gather it. There could be no doubt, he said, that bee-keeping in most rural districts was remunerative, and to illustrate the value of the worth of bees in the fertilisation of blossoms, and the production of fruit and seed, he mentioned that a large grower of bush fruit in Hertfordshire, who established an apiary in his grounds, at once found that his produce increased more than fourfold.

## INDIAN TEA IN SOUTH AFRICA.

### MR. CHAMNEY'S REPORT.

The following report is published in the April Proceedings of the Assam Branch, Indian Tea Association:—

From Mr. M. Chamney, to the Secretary, Indian Tea Association, dated Johannesburg, 1st February, 1903.

The tea producing capacity of South Africa is confined to the Colony of Natal, where the plant is found flourishing in the hot humid tracts a little inland from the Eastern Coast.

*Natal.*—The area at present under cultivation is not much over 3,000 acres, but owing to the favourable conditions at present ruling, this area is being extended. In spite of a short rainfall and weak labour force, the yield is high, the average outturn per acre being above that of India. But the quality produced is indifferent, and labour to work the plantations being almost entirely imported from Madras and Upper India, at great cost and high wages, Natal as a producer would have no chance in an open market, where the industry would be most unremunerative.

A heavy import duty, however, of 6 pence per pound on all foreign teas affords ample protection to the Colony, so that the little industry is flourishing and the crop easily disposed of locally, where the community have acquired a taste for its peculiar "hay" flavour.

The balance of tea consumed in the Colony comes mostly from Ceylon, very little Indian being imported; but the white population of Natal being small, and the field for enterprise owing to the conditions mentioned—being confined, I will say no more about it at present, but will pass to consideration of the Transvaal, where the position is totally different.

*Transvaal.*—Here the duty imposed in Natal on foreign teas does not apply, only a small tax of three shillings for each 100 pounds of tea being levied for passing the tea over the Natal Government Railways. The Transvaal duty is 5 shillings per 100 lbs., *plus* 7½ per cent. Ad Val.—the latter being calculated on the Invoice value *plus* 20 per cent. of such value. Thus a tea purchased in Calcutta at 9d. would pay 7½ per cent. on 10½d., instead of the 9d. it cost. Still the dues levied in this tripple manner amount in all to less than two pence per pound, against 6d. per pound in Natal or in England.

*Small Consumption.*—In spite of this, however, the consumption of tea in South Africa is still small. I have not got complete figures at my disposal, but I doubt if it is much over three pounds per head annually of the white population, which, in view of the richness of the country and the comparative smallness of the infant—or non-consuming—population, is a very indifferent record.

The following table will show the amount and value of tea imports into the Transvaal for some years past. It is to be regretted that the records do not at present show the different sources of supply, or what proportion Indian teas bear to the total imports. I hope, however, to obtain this information in future. Meanwhile it may be taken for certain that India, as a source of supply, is mostly conspicuous by her absence:—

Year.	Weight in pounds.	Value in Sterling (Ad Val. <i>plus</i> 20 p.c.)	Equiv. value per pound.
1897	997,000 lbs.	£39,306	9½d.
1898	990,730 "	£36,370	8½d.
1899-00	...	Years of war	...
1901	596,733 "	£26,147	10½d.
First 10 months of 1901, compared with first 10 months of 1902.			
Jan. to Oct.	/01 491,655 lbs.	£21,542	10½d.
Jan. to Oct.	/02 1,200,675 "	£56,671	11½d.

From this it will be seen that the records for the past year are not yet complete, but I am informed that they will probably work up to some 1,700,000 lbs., imports being heavy towards close of the year; and although this amount is greatly in excess of that of any other year in the Transvaal's history it is still far below what it might have been or is likely to attain to.

*Future Prospects.*—The small annual consumption shows this country to be a clear field for enterprise in pushing the sale of Indian tea, and the general high cost of living prevailing at present should tend towards fostering its use, for even at Transvaal prices tea is much more economical than alcohol, which is

largely consumed in South Africa. Whiskey cost 7s. a bottle, and it is retailed in drinking-bars and hotels at 6 pence an ounce or 14s. per bottle, while beer is 6 pence for a small glass. Even locally manufactured soda or aerated water costs 6 pence per bottle, and in the depressed condition of the country it is not surprising to find that tea-rooms are springing up all over the city and are doing a large and profitable business at a charge of 6 pence per cup. Already there are some 70 tea and refreshment rooms exclusive of Restaurants and Hotels, and their use is spreading. The city is supplied mostly by eight tea "merchants" only, but some of the larger grocers import their own requirements.

The present white population of Johannesburg is within the Municipal limits 65,000, but it is rapidly increasing, and the influx of new blood—tea drinkers from England and the Colonies—is certain to advance tea consumption beyond all normal rates of progress. Unfortunately for India, she has so small a say at present, and Ceylon and Ceylon-China blends so strong a hold, that unless she puts her foot down at once she will enjoy very little of the advance.

*Requirements for an Indian Tea Campaign.*—What is wanted is a constant supply of from 500 to 1,000 half-chests of about 60 lbs. each of Indian teas previously blended in Calcutta. I would suggest its comprising say 40 per cent. of flavoured Assam Pekoe, 40 per cent. of tippy-whole-leaf. Orange Pekoe from Cachar, and 20 per cent. of flavoured Darjeeling Pekoe: which should bear in the blend a characteristic whole-leaf appearance, and disclose a mild and flavoured liquor in cup. Such a blend could be made up, I presume, for 9d. per pound in Calcutta, and I believe it would serve best to educate the taste of the community here towards Indian tea, against which there is now some prejudice because of its supposed "rasping" flavour. The tea should be called *Pure Indian Golden Pekoe*, and be packed in 60 lbs. cases (Venestas preferred), with the exception of 100 out of each challan of 503, which should be packed in 1-pound tin canisters (60 canisters to one case) of a kind similar to the sample sent to you to-day.

In Durban an arrangement would have to be made for receiving and forwarding the tea, there being no through booking. Here Johannesburg a responsible Secretary would be required, a storehouse sufficient for 1,000 half-chests, and a small office, with perhaps an office boy, who would also act as storekeeper. Arrangements would probably be necessary for delivering the tea by cart and rail.

The tea would be advertised and canvassed, the object being to create a taste for it by supplying at the lowest possible cost to the consumers and smaller retailers—the restaurants, clubs, hotels, and tea-rooms, and police, military and constabulary Messes, also to the small grocers who draw their supplies at present from professional importers at high cost. We could not hope to touch the larger grocers to begin with. In their case we would have to attain our object by creating a demand for the article with the public, which the grocers would naturally themselves fall in with, even if they ordered their supplies direct from the Calcutta market.

The feasibility of such a campaign may be gathered from examples what small retailers and the public now pay for their tea. Under separate cover I send samples of tea purchased here representing (Nos. 1, 3 and 4) kinds in common use, and a sample (No. 2) of Assam Pekoe which I was informed was very little in demand, viz.:—

	Per single lb.	Per Chest.
Sample No. 1—Ceylon Golden Pekoe	8s. 3/-	at s. 2/9.
" " 2—Assam Golden Pekoe	" 3/-	at " 2/9.
" " 3—Ceylon G. Pekoe as supplied to Hotels	" 2/6	at " 2/3.
" " 4—Ceylon Drinking blend	" 2/6	at " 2/3.

From this it will be seen that a discount of 3d. per pound is allowed when the tea is purchased by the chest, but that even then the charge is very high for such tea, it being really an ordinary Pekoe and not Orange or Golden kind, and I believe there would be no difficulty about supplying quite as good a tea at a cost of about 1s. 7d. per pound, sold and delivered here, all charges included except interest on the money advanced by the Association for financing the operations. I now append an estimate of the cost to be entailed in carrying through such a campaign as I have proposed. It is made out on the assumption that you can place the tea *f. o. b.* at Calcutta for 10d. per pound, and that the rate of disposal will be at one thousand (1,000) half-chests per six months. At first it will be difficult to dispose of anything like this amount, but afterwards it should be far exceeded, when our teas have become known: and

it was necessary to take some unit of sale. I would suggest the tea be offered at 1s. 9d. per pound per chest, and 1s. 7½d. where lines of 10 or more chests are purchased.

*Estimated outlay per pound of Tea.*—Capacity of packages 60 lbs. nett. Quantity to be disposed of in six months—1,000 half-chests.

	s. d.
Cost of tea in Calcutta, including blending, packing, and shipping	0-10
Steamer freight to Durban at 42s. per ton	0-0½
Insurance, Calcutta to Johannesburg, say	0-0½
Wharfage, handling, forwarding at Durban	0-1
Freights to Jo-Berg 10s. 10d. per 100 lbs. Railway Tax 3s. ditto, Transvaal Duty 5s. ditto, plus 7½ per cent. Ad Val., of 6s. 9d. per 100 pounds	0-3
Clearing, cartage to Store, Coolies, etc., at Johannesburg and delivering tea afterwards	0-1
Insurance, cables, telegrams, stamps, stationery	½
Secretary at £30 for 6 months Stores and office for ditto at £20, office boy (storekeeper) at £8	
Rates Taxes, etc., at £2	0-1½
Total African expenses, before or during the sale of the Tea	6½d.
Commission on sales at 1d. per pound	0-1
Advertising at £20 monthly in two or three Colonies	0-0½
Sundries and Contingencies	0-0½
Total other African Expenses	0-1½
GRAND TOTAL	1s. 7d.

This estimate has been carefully compiled, and should not be far out in the gross cost anticipated. Rents and handling charges are extremely high here: and storage room is difficult to secure. Indeed if you determine to send me a challan of tea soon, it would be well to inform me as quickly as possible the approximate date it would be shipped at Calcutta, as I will require time to arrange for its receipt at Durban, and its storage here. This information could be sent by cable, A-B-C Code (5th Edition).

*Finance.*—You will notice I have shown separately in my Estimate the sum that will be required for current expenses before the first challan of tea is sold, and which your Association would have to remit to me, viz., 6½d. per pound, and allowing another farthing for share of the advertisements, a remittance of 35s. per chest, or £375 on each challan of 250 chests, and £1,750 on challan of 500 chests, would be necessary in the first place: and until the sale proceeds of the tea placed me in funds.

*Conclusion.*—Hoping that you will find this Report interesting and what you required.

## ROYAL BOTANIC GARDENS, CEYLON.

### GENERAL.

In the report for 1901 we read:—

The organization of the Department upon modern lines has continued, and is becoming fairly complete in the case of two of the three main sub-divisions which are proposed, the Scientific and the Botanic and Horticultural Gardens Divisions. The third, the Division of Experimental Gardens is as yet under consideration, but it is hoped that it may soon be organized. The Scientific Division, which includes the Director, Mycologist, Entomologist, Chemist, and Assistant, is charged with the scientific investigation of Ceylon, both indigenous and introduced, with special reference to the economic uses of the plants and the diseases that attack them. The work of this division includes the upkeep and working of the laboratories, library, herbarium, and museum, tours in the Island for the study of plants, cultivations, and diseases, the giving of advice and assistance in all such matters, to the officials and cultivators personally and by letter, and, most important of all, the continual carrying on researches upon the physiology and pathology of plants, their structure, distribution, and other subjects. Successful and practical applications of science must be based upon thorough scientific investigations; such work is laborious and needs long periods of time, and it is of the greatest importance that the scientific officers should have the greater portion of their time at their disposal for

such work. The appointments of the Entomologist and Mycologist in particular have met with much appreciation, and their help is so constantly sought that a great part of their time is taken up with personal visits, interviews, and correspondence. In the past year a great amount of work has been carried out by these officers, whose reports are given below, and the result of their work is becoming clearly apparent in the greater freedom from disease of many districts and estates. The Colony has, on the whole, been free from any very serious epidemics of disease during the year, and the agricultural public has become much more alive to the advantage of keeping a sharp look out for the first appearance of disease and the immediate treatment thereof.

The Director and Chemist have completed an investigation into camphor and have published results, showing a fair possibility of this product proving remunerative as cultivation in Ceylon. It is already being tried in several of the estates, and, if it prove successful, will add another to the few minor products that as yet cultivated in the tea districts. Investigations of citronella oil, india-rubber, and other products have been continued. The good results of similar work in past years are now becoming apparent in the increasing export of, and the high prices obtained for, india-rubber, and cocoa, both originally introduced by this department, and which may now be looked upon as new minor industries in Ceylon.

The Assistant has continued his researches into the mode of formation of ebony, calamander, and similar timbers, and into the important problem of the formation of rings in tropical timbers. He has also explored the guttapercha-yielding districts of the south-west, and investigated our local guttapercha-producing trees. Some of these have been found to yield a gutta in fair quantity by simple tapping, without it being necessary to sacrifice the tree. The gutta is not of good quality, but it is probable that it may prove commercially valuable.

The Director has completed the investigation of the flora of the Maldive Islands, including the cultivated plants. The results have been published in the new scientific journal, the "Annals of the Royal Botanic Gardens, Peradeniya," of which two numbers have been issued during the year, containing several papers by members of the staff and one by a visitor, who worked for some time in the Peradeniya laboratory. Several scientific workmen from abroad have used the laboratories and other facilities now available here, which are becoming widely known. A small branch laboratory has been constructed at Hakgala, with sleeping and living accommodation attached to it, thus rendering the garden of much greater value than hitherto.

Several numbers of the "Circular" have been published during the year, and appear to have met with much appreciation. The circulation of this little periodical continues to increase; it is sent to local subscribers at the lowest possible rate, merely sufficient being charged to cover postage (50 cents for twenty numbers). The articles in this journal are popularly written, and do not overlap those in the "Annals."

In view of the extension of the work of the Department, and the increasing interest manifested in "new" products and in scientific methods of cultivation and preparation of economic products, a reorganization of the Economic Museum at Peradeniya has been commenced, and at the same time an attempt is being made to collect and classify all available information about the existing or possible economic products, of Ceylon the great masses of letters, cuttings, notes, references to books, etc., which have been accumulated at Peradeniya during the past century are being arranged in files of a somewhat new design, which will be kept in a public consulting room at the museum, and the specimens in the museum are being renewed and re-arranged in accordance with the files, so that inquirers may be able to obtain all available information about the products in which they are interested with the least possible trouble to themselves and to the staff of the Department. At the same time a *résumé* of the chief facts of importance about all known economic products of the Island, native, cultivated, are imported, is being put together in book form, and is now in course of publication in the form of supplements to the "Annals." It is hoped that in this way a reliable work of reference may be completed within three years, which may prove valuable to planters, officials, and others interested in the products of the Island. The first chapter, dealing with gums, resins, india-rubber, etc., is now almost completed, and part of it has already appeared in print with the second number of

the "Annals." The local annual subscription of Rs. 250 also covers the supplements.

The second division of the Department (Botanical and Horticultural Gardens) includes the five gardens in different parts of the Island and it has been lately been decided by Government to open a sixth very small garden in the new park of Nuwara Eliya, with the view of trying what can be done on the peculiar soil of that place. The main duty of this division is to introduce and cultivate a few specimens of every possible kind of plant that may prove of use or interest, and to provide beautiful gardens for the pleasure and instruction of the public. At the same time it provides instruction and advice on horticultural matters, and supplies seeds and plants to the public in small quantities. It is no part of the duty of a botanic garden to make large scale trials of economic plants or to supply large quantities of seeds or plants. This is the work of an experimental garden, and hitherto such an institution has been wanting in Ceylon, but negotiations have been in progress during 1901 with the object of providing such a garden, where experiment may be tried on a commercial scale with staples or with plants which may become staples. Such experiments may include not merely the cultivation of considerable areas of one plant but the trial of manures, different modes of cultivation and treatment of disease, modes of preparation of products for market, and their actual sale upon the open market. Such an institution may serve as an object lesson, and supply when necessary large quantities of seeds or plants, besides testing the commercial possibilities of different cultivations. It may also undertake the very desirable work of breeding new and improved races and varieties of cultivated plants.

Office work continues to increase, and correspondence with planters and others becoming very heavy. Working rooms have been provided for the Entomologist and Mycologist by the alterations of the godowns under the library suggested in last report. The library has been largely added to by purchase, gift, and exchange, and is steadily becoming a really good working collection.

An Ordinance (No. 5 of 1901) has been passed enabling the Government to take any necessary steps, such fumigation, quarantine, or exclusion, to prevent the introduction of disease into the Island with plants from abroad. The import of cacao plants from the Dutch Indies has already been prohibited under this law.

A system of small gardens at village schools having been inaugurated by the Department of Public Instruction, this Department has supplied large quantities of seeds and plants of the best useful kinds for distribution to the schools. Good results in the introduction of new cultivations and increased interest in agricultural progress may be hoped for from this work.

The total cost of the Department, including special votes, has been Rs 72,087, as against Rs.71,740, last year. The receipts from sales, though the number of purchasers has increased, show a fall from Rs.4,658 to Rs.3,741, owing to the cessation of the demand for rubber seed.

#### NOTES ON ECONOMIC PRODUCTS, ETC.

Hitherto the notes given annually under this head have somewhat been irregularly arranged, the more important products being treated first. Commencing with the present year the various products will be dealt with according to the different classes to which they belong, following the scheme of classification adopted in the Hand-book of Economic Products of Ceylon now in course of issue.

**CLASS I: Gums, Resins, Caoutchoucs, Guttas, etc.**—An investigation into the gums and resins produced by the wild plants of Ceylon has been started, with the view of finding out which are of value for local use as substitutes for imported articles. It seems improbable that any of our local products of this kind are good enough or cheap enough for export.

India-rubber may be regarded as established as a minor product in the low-country, and an export of appreciable quantities of Hevea or Pará rubber has begun; 66 cwt., valued at Rs.11,986, were exported in 1901 to England. Being carefully prepared, this rubber is of excellent quality and has sold for prices much exceeding those of the best Pará rubber sold on the same market from wild sources. On one occasion 4s. 1½d. per lb. was received for good "biscuits," against 3s. 9½d. for "best Pará." A recent market report says: "Ceylon sells with eager competition. The rubber is much liked, and in large quantities would bring high prices." In most cases the rubber is mixed with tea and planted by roads and ravines, and perhaps this is for the most estates the most satisfactory method of planting under present circumstances.

There has been no demand for, or planting of, guttapercha during the year. At the instance of the Forest Department Mr. Wright was deputed to explore the forests of the low-country of the south-west and test the guttapercha-yielding trees there found. His report below gives a brief statement of work done, and full details will be published after receipt of analysis and valuations.

Camphor has been a good deal planted during the year, the chief check being the difficulty of getting good seed, there being no local supply as yet. A Circular has been issued by the Department showing, as the result of some years' experiments, that the tree can be successfully cultivated in many parts of the Island, and that the twigs and leaves yield about 1 per cent. of camphor by a simple process of distillation, a yield which offers a prospect of proving remunerative. The great risk attending this cultivation is that the high price is due to the action of the Japanese monopoly, and that if Ceylon becomes a serious competitor, the monopolists could probably lower the price enormously by allowing large harvests for a few years. Hence the cultivation of camphor is not to be recommended as the main industry for any estate, but only as a minor industry.

**CLASS II: Oils.**—The export of cocoanut oil rose from 443,959 cwt. in 1900 to 453,531 in 1901, and the copra from 362,467 to 439,865 cwt. At the same time there has been a considerable rise in the market value of these articles, due to short crops in other countries.

The export of citronella oil has been increased from 1,409,058 lbs. to 1,430,168 lbs. but has not reached the figures of 1899. The investigation of the oils, mentioned in last report, has continued, but is not yet complete. The industry is in a very depressed state, owing to the over-production and adulteration, the latter being so bad that even good local oils do not obtain the value that is due to them. Prices have reached a very low ebb,  $9\frac{1}{2}$  to 10d. per lb., and land is going out of cultivation in the grass. On the other hand, the new Java oil, mentioned last year, is selling in increasing quantities at high prices (often 1s 4d.). It is not in reality so superior to the Ceylon oils as the price would indicate, but it is not adulterated, and has no bad reputation to contend against.

Of other oils, the export of cinnamon oil has slightly increased, from 72,904 oz. in 1900 to 73,493 oz., but has not reached yet the figures of past years. Trial plantations of castor oil have been made by various planters during the year; the plant grows well here, and there seems no reason why Ceylon should not export this oil as well as India.

**CLASS III: Dyes and Tanning substances.**—The export of sapanwood has been 7,180 cwt. Planting of *Acacia Decurrens* continues in the higher districts.

**CLASS IV: Fibres.**—There has been a slight decrease in the total export of coir, our chief fibre, the figures being rope 13,030, yarn 75,788, fibre 122,526 cwt., as against 12,572, 87,415, and 115,090 cwt. in 1900. Of palmira and kitul fibres, the export has been 12,353 cwt. and 2,541 cwt. No interest has been taken in other fibres. Sisal hemp is being taken up in India, and the available stock of plants last year was mostly sold to planters there.

**CLASS V: Drugs.**—An investigation of the native drugs of Ceylon is being set on foot, and plots of all possible species are being laid out at Peradeniya (see Mr. Wright's report).

"Of cinchona, the export has materially increased, almost reaching the figures of 1899. Increased interest has been shown in matters relating to this cultivation, and seed has been purchased from abroad and planted in various districts. There is reason to hope that by planting of improved varieties, and by the practice of grafting of better kind on poor stocks, this product may again become of importance in Ceylon." (J. B. Carruthers.)

There has been an appreciable export of cocoa leaves, which have sold on the London market at 1s. to 1s 2d. per lb., a price equal to that of the South American kinds.

**CLASS VI: Foods and Edible Products.**—Of rice and dry grains there is nothing of special interest to report. The export of cocoanuts has decreased, having been 14,850,781 nuts, as against 14,995,909 in 1900; that of desiccated cocoanut has increased from 13,604,913 lbs. to 14,055,493 lbs. Tapioca or cassava cultivation continues to spread in the low-country as a minor and catch crop, but no tapioca is made from the tubers, which are eat like yams. Fruit trees continue to sell steadily from the gardens, but there is but small sign of any attempt to cultivate fruit on any large scale for market,

if the long established industries of cocoanuts and plantains be left out of consideration. The vegetable gardens of Nuwara Eliya have been much troubled with finger and toe disease.

The export of tea seems at last to be reaching its maximum, and shows a slight decrease on the figures of 1900, viz., 145,188,244 lbs. against 148,431,639 lbs. Part of the decrease is, however, made up by the export of 1,110,774 lbs. of green tea, most of which went to America. The export to Russia and Australia has increased, that of black tea to America decreased, but the decrease is more than made up in the export of the green tea. The year has been one of depression, but prospects of the industry are more favourable, the export to England having been 8 million lb. less, and the stock of Ceylon tea there having been considerably reduced. The average price is the lowest as yet recorded, 6'86d., against 7'20d. in 1900 but towards the end of the year prices were considerably improved. The industry has not suffered from any serious outbreaks of disease, and planting has not extended. The remarks made last year on the general prospects of tea in Ceylon continue to hold.

Coffee exports show a further fall from 10,777 to 9,722 cwt. Experiments on grafting coffee are in progress in the gardens (see report of Acting Curator).

"Cacao exports show a very large increase on the figures of 1900 being 49,459 cwt. against 33,476. This, as was foretold in last report, is due to some extent to the lateness of the crop of last year, some of which is credited to 1901, but is also largely due to the energetic measures taken in combating the canker, and especially in reducing the number of diseased pods, the quantity of "black cacao" having been reduced in some instances by 75 per cent. The prices obtained for cacao, even the best qualities, have been below those of last year; this is perhaps more due to the conditions of the home market than to any difference in quality of the product, but the increasing proportion of *Forastero* kinds may have something to do with it. The fall of price should spur planters to consider the questions of cultivation of more productive trees, and the selection of seeds for planting. The canker has, as a rule, been seriously attacked on approved methods, and a number decrease in the number of diseased trees is apparent. There are, however, many estates where no hinderance is put in the way of the invading fungus." (J. B. Carruthers.)

Of spices there is little to record. The cultivation of cardamoms is extending, and the export has increased from 537,455 to 559,704 lbs. Pepper shows signs of extension of cultivation, and it should at least be possible to dispense with the present large import of this spice. Exports of cinnamon show a rise in bales, a fall in chips, the figures for 1900 being 2,678,111 and 1,863,406 lbs. and those for the last year 2,756,270 and 1,516,083 lbs. respectively. The "wild cinnamon" again shows an enormous fall to 8,581 lbs. bales and 5,066 lbs. chips. Vanilla planting has slightly increased. Tobacco cultivation continues to extend in the North and also in the Dumbara district. Of fodder plants there is little to report. An experiment with Swedes is described in Mr. Nock's report. The much-vaunted grass "*Paspalum dilatatum*" is being tried in many districts, and a report will be issued latter as to its success.

**CLASS VII: Timber, etc.**—Mr. Wright's work on the ebonies, etc., is described in his report below.

**Ornamental Plants.**—Cannas and the small white variegated caladiums have been largely in demand through the year.

## DISTRICT ASSOCIATIONS.

### KANAN DEVAN.

Minutes of Annual General Meeting held in the Munaar Reading Room at 1 P.M. on Saturday, the 9th May, 1903. PRESENT:—Messrs. P. R. Buchanan (*Chairman*), A. J. Wright, M. C. Koechlin, E. E. Williams, H. L. Pinches, J. M. Bridgeman, W. Towgood, C. Bell, Baron von Rosenberg, C. B. Holeman Hunt, J. French, G. H. Danvers Davy, T. C. Forbes, W. D. Martin, R. W. Cole, C. E. Hancock, H. S. Holder, *Honorary Secretary*.

Visitors: Messrs. R. F. Thorp, R. Harley.  
Read notice calling the Meeting.

Read Minutes of last General Meeting which were confirmed in Meeting.

Mr. Buchanan who had kindly consented to take the Chair on this occasion, then addressed the Meeting; touching on all subjects of local interest and especially remarking on the unavoidable resignation of Mr. A. F. Martin from the Chairmanship, the conditions of labour in this District, the help given to countries outside India by the Madras Government in order to facilitate emigration of coolies, the good work done on the Northern Outlet Road, the inefficient means of communication and transport between Ammayanayakanur and Bodinaikanur and the desirability of the remission of the Travancore Export Duty on Coffee.

Baron von Rosenberg in proposing a vote of thanks to Mr. Buchanan for his interesting address, supported his views as regards transport and the necessity for bridges over the Tani and Periakulam rivers and further hoped most sincerely that the Association would continue to press for the abolition of the Coffee Export Duty. Seconded by Mr. Williams and carried unanimously.

The Chairman then called for the Honorary Secretary's Annual reports and accounts.

#### THE HONORARY SECRETARY'S ANNUAL REPORT & ACCOUNTS.

Mr. CHAIRMAN & GENTLEMEN,—In submitting to you this brief summary of subjects dealt with during the year, the first that calls for comment is, I think, that of our Address to the King-Emperor of India.

His Majesty has been pleased to accept the address of the United Planters' Association of Southern India on the occasion of his Coronation, an event which marks the closing year as one of the most eventful in history.

We shall none of us forget, with what feelings of sorrow and anxiety we received the news of the postponement of the Coronation, nor with what enthusiasm the event was eventually celebrated here.

**Tea Markets Expansion.**—At the beginning of the year, a great many schemes were talked of for pushing the Sale of Tea in New Markets, but although Messrs. Andrew Yule have done much good work, and Mr. H. M. Knight's scheme has been floated in Madras, it appeared difficult to get anything done on a satisfactory or business-like footing. Now however, that the

**Tea Cess @  $\frac{1}{4}$  pie per lb.** is in force, it is to be hoped that something will really be done not only as regards increasing the consumption of Tea in India itself but in further exploiting old and opening up new Markets.

**The Coffee Cess.**—Nothing seems to come of this and I understand that unless some practical scheme is forthcoming by next U. P. A. Meeting the subject will be dropped for the present.

**The Madras Planters' Labour Act**—has, as you are aware, been passed by the Legislative Council of Fort St. George.

Some District Associations are opposed to the Act and it appears to have been a well nigh impossible task to draft a law that would satisfy each and every District, the labour conditions of which are so extremely varied.

Were the new Bill introduced into Travancore we should gain extradition and enforcement of contracts and I understand that local Governments would be allowed to make certain modifications to suit different areas provided the general principles of the Act are not departed from.

**Travancore Export Duty on Coffee.**—I regret to say that in spite of all endeavours to obtain a reduction of this duty the Sircar at present remains obdurate.

**British Import Duty on Tea.**—It is to be deeply regretted that the home import duty has not been reduced, not even by the hoped-for 2d., but it is to be trusted that next Budget will bring as better luck if in the interval there is not another war.

**The Mettu Bungalow** has been taken over by the Travancore Government and although nothing has yet been done to enlarge the buildings and it is advisable for travellers to provide their own commissariat, the bungalow is far cleaner and more habitable than it used to be.

**Medical Grants.**—The Association at present enjoys two Medical Grants, only one having been granted out of the four applied for last year. When the population of this District be compared with that of others in Travancore I think it will be found that the Medical Grants allowed to us are proportionately small.

With a view to lighten the at present heavy expenditure, applications were sent in for two more grants, one for Ellapatti, and one for Sevenmally Dispensaries, but these have for the present been refused by Government.

**Local Labour Rules** have been drawn up, printed and circulated as well as the revised Association Rules and I trust members are satisfied with them.

**Finances and Accounts.**—The accounts have been audited by Mr. J. A. Gwynne and these I hope you will pass.

There is one item which needs explaining.

The Auditor points out that the balance brought forward, Rs.1,396-1-7, differs from the balance on Capital account at the close of last financial year Rs.1,358-9-7 by Rs.37-8-0 and is explained thus:—The accounts were made up to the 19th April, 1902, but it has been thought better in presenting the accounts to the Association to begin from the 1st April, 1902.

The sum in question was spent during the nineteen days and included in last year's expenditure. It has been accordingly written back and included in this year's expenditure.

	RS.	A.	P.
The total expenditure for the year from 1st April, 1902 to 31st March, 1903 amounts to	1,542	10	8
and the total credits to	3,042	13	7
Made up of:—Balance on 31st March, 1902	1,396	1	7
Subscription for 1902	310	0	0
Subscriptions and Cess for 1902-03	1,336	12	0
leaving a balance at the credit of the Association	1,500	2	11

of which Rs.1,401-12-0 remained to be paid up on the 31st March. The Accounts, Letter book and Circulars are laid on the table.

I now beg to place my resignation in your hands.

The Chairman proposed that the Annual report and accounts be adopted.—Carried *nem. con.*

**Labour Act.**—Proposed by Baron von Rosenberg that this Association do tender the Hon'ble Mr. G. L. Acworth a hearty vote of thanks for time and trouble expended in connection with the passing of the Labour Bill through Council. Seconded by Mr. Williams and carried unanimously.

**Behaviour of Kutcherry Apothecary** when called to attend the late Mr. T. W. Schmid.—Read letter from the Superintendent of Gudrallee Estate and letter from this Association to the Dewan which was approved in Meeting.

**Delegate to U. P. A. S. I. Annual Meeting.**—Proposed by Mr. Buchanan that Mr. Williams who so ably represented us last year should again be requested to attend the Meeting as representative of this Association. Seconded by Mr. Davy and carried unanimously.

Mr. Williams kindly consented to attend and promised to do his best for this Association.

As to the date of the Meeting, the Honorary Secretary explained that he had received a telegram from the Secretary of the U. P. A. stating that the Meeting would probably be held on the 3rd of August.

He had previously written that July would have suited this Association better.

Election of office-bearers for the year resulted as follows:

Chairman	...	Mr. J. A. Richardson.
Honorary Secretary	...	Mr. H. S. Holder.
Committee	...	Mr. E. E. Williams.
Do.	...	Mr. H. L. Pinches.
Do.	...	Mr. R. W. Cole.

(The Committee have power to add to their number.)

As additional Labour Committee Members Messrs. A. J. Wright and J. French were elected.

Mr. Davy proposed a vote of thanks to Mr. Holder for the manner in which he had carried out his arduous duties during the year. Seconded by Mr. Cole and carried unanimously.

With a vote of thanks to the Chair the Meeting terminated.

**Papers laid on the table—**

Honorary Secretary's Annual report and accounts.

U. P. A. Circulars.

I. T. A. Circulars.

Travancore Administration report, 1902.

Indian Gardening and Planting Opinion.

May 11th, 1903.

## WYNAAD.

Proceedings of a General Meeting held at Meppadi Club, May 6, 1903. PRESENT :—Messrs. Abbott, Atzenwiler, Behr, Powell Jr., Taylor, Trollope, and B. Malcolm, *Honorary Secretary*.

Mr. Trollope in the Chair.

1. **Proceedings of last Meeting**—Taken as read.

2. **Roads.**—(a) *Resolved*, that the President's, District Board, attention be drawn to small amount of metal collected on portion of the Chundale-Choladi road and especially between miles 3 and 10 from Vaiyitri. (b) *Resolved*, that the Chief Engineer with Government of Madras be addressed with a view to endeavouring to get the D.P.W. to take over this section of the road again.

3. **Padapadi Hotel.**—Read letter from Mr. Winterbotham and reply.—*Recorded*.

4. **Coffee-stealing Act.**—Read letter from the Collector of Malabar enclosing Mr. Waddington's letter to the Tahsildar of Wynaad and the Tahsildar's remarks thereon.

*Resolved*, that in the opinion of this Association, if the records referred to are kept at all it is advisable they should be kept correctly, or as nearly as possible so; and that the fixing of April 1st instead of March 1st for the rendering of the information required on form "B" would assist in this direction.

5. **Postal and Money Orders.**—Read letter from Mr. Mackinlay complaining of the delay in payment of Money Orders. Read Association's letter to Postmaster-General and reply.—*Recorded*.

6. **Cases under Act XIII.**—Read letter from 2nd Class Magistrate and reply.—*Recorded*.

7. **Plague.**—Read correspondence with Collector of Malabar and his letter stating that Plague Check Stations were being established on the Nilgiri Wynaad frontier.—*Recorded with satisfaction*.

8. **U. P. A. S. I.—NEW LABOUR LAW.**—*Resolved*, that a vote of thanks be passed to the Hon'ble Mr. Acworth and Sir George Arbuthnot for their efforts to get the Bill amended.

**TEA CESS.**—Read correspondence re nomination of members on Tea Cess Committee. *Resolved*, that the Secretary, U. P. A. S. I., be written to for information as to why only one planter was elected when it was understood that the Madras Chamber of Commerce member was an extra member.

**DELEGATE TO BRAZIL.**—*Resolved*, that a Subscription list be circulated among members for the purpose of ascertaining what subscriptions would be forthcoming.

**IMPERIAL PREFERENTIAL TARIFF.**—Read circulars.—*Recorded*.

9. **Stray "Tats."**—Mr. Taylor complained of the number of country "Tats" allowed to graze along the road sides of the main road, to the danger of equestrians. *Resolved*, that the Superintendent of Police be addressed on the matter.

A vote of thanks to the Chair terminated the proceedings.

(Signed) A. TROLLOPE,

*Chairman.*

( " ) BERNARD MALCOLM,

*Honorary Secretary.*

## SHEVAROY.

Proceedings of the Monthly Meeting of the Shevaroy Planters' Association held in the Victoria Rooms, Yercaud, at 1 P.M. on Monday, the 11th May, 1903. PRESENT :—Messrs. W. I. Lechler, C. Dickens, J. C. Large, C. Lechler, Rev. M. Andersen, Mr. Gompertz, *Honorary Secretary*.

1. Notice calling the Meeting was taken as read.

2. Examined and passed accounts showing a balance in hand on the 1st instant of Rs.408-11-3.

3. In continuation of the Resolution passed at the Quarterly General Meeting held on the 9th March last, it was resolved that the Honorary Secretary be requested to open a subscription list towards the expenses of the delegate it is proposed to send to Brazil.

4. Read Collector's letter No. 407/B&G, dated 2nd instant, enquiring (1st) whether in the event of Government's agreeing to construct certain Feeder Roads, the planters will give the land free of cost where said roads pass through their Estates; and (2ndly) whether, when once made, the planters will undertake to maintain the roads themselves.

Honorary Secretary said he had called a Special General Meeting on Friday, the 15th instant, at which he had asked the Collector to preside, and to explain the exact contribution which Government demanded, etc., etc.

After a good deal of discussion it was decided that no answer could be given to Government, till after the Special Meeting alluded to above.

The books and papers received during the month were laid on the table, and a number of letters which had been already circulated to the Committee were read and recorded.

(Signed) ROBT. GOMPERTZ,  
*Honorary Secretary, S. P. A.*

Proceedings of a Special General Meeting of the Shevaroy Planters' Association held on Friday, the 15th May, 1903, at 1 P.M. in the Victoria Rooms at Yercaud; and convened to consider the proposal of Government to construct Feeder Roads on certain conditions. PRESENT :—Messrs. R. B. Clegg, Collector of Salem (*in the Chair*), C. Dickens, E. Dickens, S. Campbell, S. M. Hight, W. W. Hight, J. E. Limouzin, E. King-Harman, Th. Short, A. Morgan, J. C. Large, Revs. T. M. Kempff, M. Andersen, Messrs. B. Cayley, S. Pritchard, C. G. Lechler, C. A. G. Turner, W. E. G. O'Reilly, R. de Chayal, J. C. Cobbe, A. Cole, W. I. Lechler, Bruce Short, R. Gompertz (*Honorary Secretary*).

1. Proposed by Mr. S. M. Hight, seconded by Mr. J. C. Large—That of the two alternative proposals suggested by Government the second will be most acceptable, provided that the second portion of the proposed road starts from Cauvery Peak Saddle.

Seconded by Mr. Large.—Carried unanimously.

2. Proposed by Mr. Gompertz, seconded by Mr. C. G. Lechler—That, in the opinion of this Meeting, there would be no difficulty about complying with the first condition of Government, *viz.*, that all land that may be required for the road should be handed over to Government, free of cost.—Carried with one dissentient.

3. Proposed by Mr. Gompertz, seconded by Mr. C. G. Lechler—That, in the opinion of this Meeting, the second condition imposed by Government, *viz.*, that the roads when constructed should be maintained by the planters, is entirely without precedent and they regret that they cannot see their way to agreeing to it. At the same time they are willing that Government should put on tolls for the maintenance of the roads.—Carried unanimously.

4. Proposed by Mr. King-Harman, seconded by Mr. Cayley—That Government be asked to make an additional road from the Varniar Reserve to the Manjavedi Ghaut to connect it with the Salem Tripatur Cart Road.—Carried unanimously.

5. Proposed by Mr. C. G. Lechler, seconded by Mr. Cobbe—That Government be asked to connect the Estates in the Killiour Valley with the Ghaut Road by a Feeder from the 17th mile of the Cart Road to the Killiour Village and on to Pattapadi.—Carried unanimously.

6. Read endorsement No. 432/B&G, dated 9th May, 1903, by the Collector of Salem on the Board of Revenue's order, dated 4th May, 1903, enquiring whether if lands planted with certain products were exempted from taxation for 3 or 5 years, planters in this district would avail themselves of it to any large extent.

*Resolved*, that the Honorary Secretary be requested to inform the Collector that several planters would gratefully accept the proposed concession.

7. A cordial vote of thanks to the Chairman terminated the proceedings.

(Signed) ROBT. GOMPERTZ,  
*Honorary Secretary.*

( " ) R. B. CLEGG,  
*Chairman.*

## MARKET REPORT.

## COFFEE.

Messrs. G. Duuring & Zoon's Monthly Market Report, dated Rotterdam, April 30th, 1903, says:—Next Trading Company's sale will be held May 5th, good ordinary is being valued at 26 *cts.* 25,185 bags are to pass the hammer, half of which are green coffees, 6,000 bags washed old crop and 4,500 bags Liberian.

First hand sales were quite insignificant and do not call for any remark. Business was very slow, the trade buying with more reserve than during the last few months. The value of Santos coffee on the spot is  $\frac{1}{2}$  *ct.* down and a fair progress has since been made.

Arrivals with us were of no importance, only 28,700 bags from Java and 75,700 bags from Santos, deliveries of the latter description amounting to 97,600 bags, reducing our stock from 902,500 bags to 880,600 bags.

Afloat from Santos to Rotterdam:

22,500 bags per ss. <i>Bonn</i>	...	...	sailed April 8th.
13,000 " " <i>Crefeld</i>	...	...	" " 23rd.

35,500 bags,	
against 68,000 " in 1902.	
" 76,500 " " 1901.	
" 13,000 " " 1900	

Terme dull under the influence of May liquidations and values drooping to the extent of 1 *ct.*, now being 15 $\frac{3}{8}$  *cts.* per May, 15 $\frac{3}{4}$  *cts.* per September, 16 $\frac{1}{8}$  *cts.* per December, and 16 $\frac{1}{2}$  *cts.* per March. Dealings amounted to 125,500 bags or 359,500 bags since 1st January. April dealings 1,500 bags, tenders 1,000 bags.

Receipts in Rio and Santos were smaller than had been anticipated, but did not affect the markets. Terme offerings had a depressing influence and at the same time business was restricted within the narrowest limits.

Next Brazil crop is reported to be an early one and dealers accordingly appear inclined to hold off. Reports from Santos state that the law eliminating 20 % of the crop has been voted, but it now appears that this law only applies to the State of Sao Paulo, excluding the States of Rio de Janeiro, Minas, and Esperito Santo. Such a law, applicable to only one state, cannot be efficient and it is hardly to be admitted that one State should be willing to carry the loss, resulting from a law, equally beneficent to all States. Nevertheless values on this side did not show the slightest improvement, rather disappointing perhaps to Brazilian holders. Any advance upon Brazilian informations, these last three years, has proved to be a failure and the trade is slow to act upon anything but facts; next crop by some is reported to be smaller than the present one, but reports are conflicting.

Stocks during March were further reduced, European stock being 4,850 tons and visible supply 5,220 tons smaller, which is comparing favourably with both the preceding years. Deliveries were rather considerable.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated May 1st, 1903, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

		Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.

In these tables all packages are chests unless otherwise stated. ½c stands for half-chests; p for packages; prices marked thus † represent the highest offer in the room. In calculating these averages two half-chests or four boxes are taken as equal in weight to one chest.

Tea sold on Garden Account 1st June to date 1902-3, 1,103,185 pkgs., av. 7'50d. 1901-2, 1,236,132 pkgs., av. 7'67d

CEYLON.—The auction was again rather heavy owing to recent accumulations, and as buyers were not so eager, quotations were comparatively easy, anything over 7d showing decided irregularity.

Average for week 7'65d against 6'48d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 317,853 pkgs., av. 7'66d. 1902, 368,731 pkgs., av. 7'04d.

JAVA.—Javas sold somewhat slowly, the prices being a shade easier than last week.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1¼½. Colombo 1¼½.

## PEPPER.

Messrs. G. Duuring & Zoon report:—The position is getting stronger every month and more interest has been exhibited during the month under review, as is distinctly shown by increased dealings in the terminal market. The spot market wore a quiet aspect, the trade not yet being inclined to follow the upward movement, else no doubt the advance would have been more marked.

Terme business was very active 31,800 bags or 86,800 bags since 1st January and values ¾ ct. dearer, 31 cts. per May, 31½ cts. per June, 31½ cts. per July, 31½ cts. per August, 31½ cts. per September, and 31½ cts. per October-December.

April dealings 1,000 bags of which 400 bags were tendered.

Stocks of all kinds on the principal markets of Europe:

	April 1st	1903.	1902.	1901.
Netherlands	...	42,300 bags.	67,900 bags.	73,700 bags.

Please post your next reports to reach Madras on Friday, the 5th proximo. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### THE TALK OF A FISCAL UNION.

RECENT telegrams from Home allude to a suggestion of Mr. CHAMBERLAIN's anent the formation of a British Fiscal Union and the adoption of Preferential Duties within the Empire. Mr. CHAMBERLAIN's utterances on the subject have been referred to in the daily papers, which have also announced that Liberals are likely to oppose any such reform as has been suggested. Our readers will, no doubt, remember that the U. P. A. S. I. took the matter into consideration some time ago, and showed a leaning towards Preferential Duties. They were merely a little bit ahead of a good many other people, who are now advocating almost the identical thing that the U. P. A. S. I. expressed a desire for. In spite of this we are not prepared to say that Mr. CHAMBERLAIN has acted wisely in stating that he will bring the question to an issue. One effect of the discussion of the matter some time ago was to bring forth arguments *con* as well as arguments *pro*; and the former are so forcible that we confess to some hesitation in arriving at a definite conclusion. Canada, we might almost say, is the only Colony that "has gone solid" for a preferential tariff. The Dominion has even put the matter to the test of a trial. Early experience was not altogether encouraging, but later reports have been more favourable, and those who are in favour of a Fiscal Union are quite prepared to assert that the Preferential Tariff system introduced in Canada has worked admirably. In Australia the feeling of Premiers appears to be in favour of the system;

but, to judge from the attitude of the Press, public opinion cannot be said to be in harmony with the opinions of the Premiers. This fact does not make it easier to arrive at a conclusion. Then, too, we must recollect that in every section of the Empire the subject is likely to be considered largely in the light of selfish motives. For instance, how Preferential Duties would benefit Victoria is, to Victoria, a much more important consideration than how it would affect the Empire.

Narrowing our outlook to India therefore, is justifiable; in taking this course we do but act as Colonists will do in regard to their respective Colonies. For the moment we propose to take a still narrower view, and consider some of the effects that the establishment of a Fiscal Union, on a basis of Imperial Preference, might have upon Tea and Coffee produced in India. We must remark that until a definite system is propounded our remarks must necessarily be only of a general character; but, for our present purpose, we will assume that the proposed Union would provide for Free Trade within the Empire and a revenue-raising or even a mildly protective tariff as against the rest of the world. If we reflect how this would affect Tea, it will be at once obvious that the immediate result of the establishment of such an Union would mainly depend upon the manner of its reception by certain foreign countries wherein Indian Tea is consumed. We may assume almost with certainty that Germany would adopt a policy of retaliation. In that case it would probably be useless to canvass German dealers or citizens on behalf of this commodity. If we assume that France, Russia, and the United States adopt a course similar to Germany's, we see Indian Tea entirely excluded from every important consuming market except such as can be found in the British Empire. Exclusion from the United States is not a pleasant thing to think of. It would mean for a term of years at least, good-bye to the present level of prices, and a renewed chorus of "Over-production" consequent on the shrinkage on consuming markets. German and American merchants in China and Japan would push the teas of these countries with

revived energy, and Indian Tea would be in a bad way unless and until the British (imperial) demand could be so stimulated as to fill the space left by the withdrawal of foreign demand.

It is possible that the position in regard to Coffee would not be quite so bad, but it would be unhealthy. The exclusion of Brazilian coffee from the position it now occupies in British markets, would involve the levying of a heavy protective tariff, a tariff of a kind that no British Government is likely to introduce. Even were such a tariff agreed to, the result would be that the average cost of Coffee to the consumer in the British Empire would be raised to such an extent as to bring about a great falling-off in demand. Different influences would be at work from those that would affect tea, but the main result would probably be in both cases, to disturb relations between demand and supply in a degree opposed to the interests of the planter in this country. This is not an effect that the planter can look forward to very light-heartedly; and we trust that all our readers will take the matter into serious consideration. It seems to us that the first thing the British Government ought to ascertain is how a Fiscal Union would be regarded and received in the chief foreign countries. Retaliation on the part of Germany alone might be faced cheerfully; on the part of Germany and Russia it might not seriously affect prices of Indian Coffee; but France still takes fair supplies of Coffee from this country; and if we turn to Tea the United States at once becomes the most important factor to be reckoned with. If France, Russia, and the United States raise no objections, and no fiscal barricades against British produce, let us, by all means, have a Fiscal Union. In the abstract it is a grand conception, an important link to be added to the chain of imperialism binding the various parts of the Empire together.

#### COFFEE NOTES.

**Coffee Speculation in 1903.**—Speculation in coffee is not a trait of the present times, as may be gleaned from the following extract from the *London Times* of February 28, 1803: "Baron De — of economical memory had every apartment of his house filled when he died, with the various articles upon which he speculated; even his bedroom was stored with coffee, till only a passage large enough for him to creep through, was left to his bed."

\* \* \*

**The U. S. Coffee Market.**—Conditions in actual coffee are dull with prices steady and in the main unchanged, says the *Tea and Coffee Trade Journal* of 28th April. In the speculative market things are different and new record prices were made on nearly each successive day. May sank down to 3·80, to 3·75, to 3·70, and touched the nadir at 3·65, at which several thousand bags were sold. The pressure to liquidate the nearby months was great, and equally to sell the distant months that advantage might be taken of the wide margin of difference that exists there. The foreign markets were likewise weak and to add to the depressing influences the Santos interior receipts came in unseasonably full. It would

seem that lowest conditions have been reached, but nobody will venture to forecast an arrest in the downward course of speculative prices. The present week began at an advance on reports of better markets abroad and short Santos interior receipts.

Buying option coffee is quite different from buying it in the actual market where no mean difference will be found to exist in the prices at which coffee may be purchased. The difference is commented upon generally, and while understood in the New York coffee district, is not so readily comprehended by the coffee retailer, who is shouting for some of that 4c. coffee, feeling aggrieved that he is not offered the bargains. It may be worth while to explain here that the price of coffee on the Exchange is based on the coffee most in supply and least in demand. The upper grades of coffee at present are in this situation and hence the prices of them in the actual market more nearly approximate the prices ruling on the Exchange. There is there a difference of 50 points between grades, but when a comparison is made with the prices obtaining in the market the difference is wholly fictitious. It is found that the differences between the grades is not 50 points. The nearest that come to the premium above No. 7 Rio, which is the standard grade on the Exchange, are Nos. 2 and 3, which are the coffees now-a-days offered on the Exchange for delivery as being most in supply and least wanted. The differences that obtain are about as follows: No. 1, 1·87½ above No. 7; No. 2, 1·37½ above No. 7; No. 3, 87¼ above No. 7; No. 4, ·50 above No. 7; No. 5, ·37½ above No. 7; No. 6, ·25 above No. 7; No. 8, ·25 below No. 7; No. 9, ·50 below No. 7. In other words, the trade differences between grades is about 25 points or ¼c. a pound. If these unsatisfactory differences continue until the fall, no doubt the Revision Committee of the Exchange will report a regarding of coffee on the Exchange. This would occur in November and cannot be made before that time in conformity with the laws of the Exchange. The difference that exists between the quotations of options between November and the months following that month tell the expectation of the brokers. Further, the quantity of high-grade coffee available is enormous and not desired for other than Exchange purposes. The fact explains the difference between the option and actual coffee bases.

The behaviour of the Brazil coffee merchants is a puzzle to the market. Instead of responding generally to the lowering coffee prices their market remains firm and even above the parity of prices prevailing in New York and elsewhere. And all this in the face of the oncoming heavy crop. Rumours are, however, heard that they are selling high-grade coffees at low record prices. A symptom of an easier tendency is an offer of Santos No. 5 at 5·65 c. and f.

In the spot market for invoices steadiness of prices is observed. Quotations at the close were Rio No. 8, 5c.; Rio No. 7, 5¼c.; Rio No. 4, 5½c.; and Santos No. 1, 5·1½c.

In Milds business is quiet for most growths of West Indies. High-priced coffees are however, in no small demand and being short in supply prices in them rule firm. This is especially true for Bogotas and Maracaibos. Good Cucuta is quoted at 8¼ to 9c. East Indies are quiet and unchanged.

**Prices of Coffee on the Exchange and in the Actual Market.**—Following is a statement from the New York Journal of Commerce clearly explaining why buyers cannot secure coffees at 3·80 cents per pound, the Coffee Exchange net cash price for No. 7 coffee:

The standard on which transactions are based on the Coffee Exchange is "low ordinary No. 7." There are nine standards on which all deliveries are graded, having various values either above or below standard No. 7. They are as follows:

Exchange standard—

No. 1	...	...	Valued 3c. per lb. above No. 7
" 2	...	...	" 2½c. " " " 7
" 3	...	...	" 2c. " " " 7
" 4	...	...	" 1½c. " " " 7
" 5	...	...	" 1c. " " " 7
" 6	...	...	" ½c. " " " 7
" 7	...	...	Basis of all contracts.
" 8	...	...	Valued ½c. per lb. below No. 7
" 9	...	...	" 1c. " " " 7

The question is daily asked why the buyer cannot buy any desired grade of coffee on the basis of the Coffee Exchange prices. It is because the price on the Exchange is governed by the value of the grades most in supply and the least wanted. At present a buyer of coffee on the Exchange would probably receive Rio coffee grading about No. 2, which, at the difference between grades, would cost 2½ cents per pound above No. 7. The standard on which the contract is based with April at 3·80, the coffee delivered would cost the receiver 6·30 cents per pound net cash. Every grade from standard No. 4 and below commands a premium above the Exchange option prices. The grades most difficult to secure are standards No. 6, 7, and 8. To put this clearly, below is given the present market prices of the different grades in New York for 100-bag invoices, and the cost to the buyer if he could select and receive the corresponding grade on the Coffee Exchange, showing that the only grades that could be delivered at near invoice values are Nos. 1, 2, and 3:

Standard.		Invoice price.		Exch. value to
No. 1	...	Rio.	Santos.	receive net cash.
" 1	...	7½c.	7½c.	6·80c per lb.
" 2	...	6½c.	6½c.	6·30c. "
" 3	...	6½c.	6½c.	5·80c. "
" 4	...	5½c.	6c.	5·30c. "
" 5	...	5½c.	5½c.	4·80c. "
" 6	...	5½c.	5½c.	4·30c. "
" 7	...	5½c.	5½c.	3·80c. "
" 8	...	5c.	5½c.	3·30c. "
" 9	...	4½c.	5c.	2·80c. "

**Cost of Carrying 5c. Coffee in the U. S.—**From the New York Coffee Exchange:

Cost per month of carrying coffee that costs 5c. per lb., storage, insurance, one weighing, interest at 6 per cent. and probable loss in weight included:

Storage, per month, 4c. per bag.

Insurance, 40c. on \$100, a year.

Weighing, 2½c. per 100 lbs.

Interest 6 per cent. per annum.

Loss in weight, 3 lbs. per bag—about 11½ points.

At end of 1 month will cost 5·20c.

Do.	2	do.	do.	5·26c.
Do.	3	do.	do.	5·32c.
Do.	4	do.	do.	5·38c.

Do.	12	do.	do.	5·84c.

As is usual at this time of the year, says the *American Grocer*, estimates regarding the outcome of the growing crop

are coming in freely from Brazil. Estimates received lately ranged from 13,000,000 to 16,000,000 bags, which caused a decided bearish sentiment in the trade.

\* \* \*

Mr. Ornstein, of the firm of Ornstein & Co., Rio, who was in Europe, telegraphed on to New York that the growing Rio crop is estimated at 5,500,000 bags and the growing Santos crop at 10,000,000 bags maximum.

\* \* \*

Some Central American crops are expected to be smaller than anticipated. The Costa Rica crop shows a material decrease.

\* \* \*

A member of a leading Brazil firm, who is well informed as to the probable course of the market, and whose past crop predictions have turned out correct, is quoted as saying that the Rio crop will probably reach 5,500,000 bags, and the Santos crop will be about 9,000,000 bags. In reference to the elimination of 20 per cent. of the inferior coffees in Brazil, he agrees with many leading local firms that the plan undoubtedly is not practicable.

\* \* \*

**U. S. Coffee Market.**—What can one expect, says the *American Grocer* of 22nd April, of a market where the visible supply is mountain high with every prospect pointing to its going higher and higher? A visible supply equal to nine months' requirements and a Brazil crop in 1903-04 more than equal to one year's demand or exceeding 15,000,000 bags. Should it be a surprise that coffee options sold at 3·80c? Undoubtedly coffee is one of the cheapest of commodities, ranging in price from 5 to 30 cents, affording a rare opportunity for blending and roasting and large profits. The consumption has been stimulated by low prices and can be largely increased further. The market has been under pressure on the exchange. On the spot prices have ruled steady. Deliveries are fair.

The weak tendency of Brazils and absence of general demand have a depressing influence on the market, buyers anticipating lower prices. Recent arrivals of Good Cucuta meet with ready sales at quotations, 9c., owing to limited supply; medium and low grades are in small demand. Bogota selling well, the best washed 14 @ 14½c. in invoice lots.

**A Week's Review.**—The Brazilian Government may or may not help the coffee-planters out of their hole, as the Greek Government is helping the current growers, but such assistance must, says the *Merchants' Review*, from the very nature of the circumstances be only temporary in its effects. The proper way to check the output of coffee until consumption and production are fairly equal, is to let natural causes have natural effects. When coffee-planters cease producing a superfluity of coffee the price will rise to a more desirable level—more desirable for the producers. But so long as they can make a fair profit they are likely to keep on producing coffee at their full capacity. To insure contraction of output, therefore, the price must be allowed to find a natural level, for the fullness of the volume of production during several years of very low prices is pretty good evidence that the cost of raising coffee in Brazil is less than has been supposed. The writer hopes that the schemes to artificially enhance coffee values will all fall through, for the grocers' interests do not lie that way, but in the direction of large sales, which come through low prices. Consequently we shall "root" for cheapness, with a friendly suggestion to the coffee-growers regarding the importance of quality. Raise the standard of quality, gentlemen, and perhaps prices may follow suit.

\* \* \*

**Hawaii Coffee.**—A Resolution has been introduced in the House of Representatives of Hawaii carrying an appropriation of \$5,000 for the purpose of sending A. L. Louisson to Washington to work for the four-cent coffee bounty on coffee-growing which had been recommended in the report of the Senatorial Commission. The Hawaiians are said to consider it an absolute necessity to have in Washington a man thoroughly conversant with the cultivation of coffee in all its stages in order that the members of Congress may know the exact state of affairs there.

It is stipulated in the Resolution of Mr. Wright that Mr. Louisson must contract to remain in Washington for four months and that his expenses must be duly sworn to and submitted to Governor Dole for his approval.

\* \* \*

Palestine draws its Coffee supplies from Brazil, *via* Trieste or Marseilles. In 1902 it took 243 tons, as against 387 tons in 1901 and an average of 656 tons in 1898-1902. The cause of this rapid decline of trade is not stated in consular reports.

\* \* \*

In 1902 Servia imported Coffee to the value of £27,232, of which America accounted for £25,718.

\* \* \*

**Coffee in Nicaragua.**—The coffee crop for 1902 was a very good one, and the total shipments reached about 200,000 bags of 1 cwt. each; the low price in Europe, however, is discouraging to planters, and were it not for the high rate of exchange, and comparatively low price of labour, (this latter being almost the same in currency as when the exchange was low) many planters would have to abandon their plantations.

\* \* \*

"Any color as long as it's red," said Bill Nye of his barn, but the average coffee-drinker is less particular. Others, though, must have their coffee just so. Says Acker's Weekly:

For *percolating*—always order *pulverized* coffee, otherwise the coffee will be flat and tasteless.

For *boiling*—always order *granulated* coffee, or the coffee will be "muddy."

We have special stone bur mills for pulverizing and special steel cutting mills for granulating.

If you order the coffee pulverized or granulated from us, you will have more uniform grinding than if you attempt it in your own kitchen; and the granulating won't worry our "steam power," while the energy which you thereby save may be more profitably utilized in other directions.

If the pulverized or granulated coffee is kept in a tightly-closed glass jar there need be no loss of strength or aroma within reasonable time.

## TEA NOTES.

**Grant aiding Japan Tea.**—The following explains itself:  
YOKOHAMA, March 13, 1903.

To the CHAIRMAN, Yokohama Foreign Chamber of Commerce:

DEAR SIR,—We beg to call your attention to the fact that the Japanese Tea Guild is now petitioning the Government for a renewal of the grant, or subsidy, that has been allowed the Guild during the past seven years, and amounting to yen 70,000 annually.

We may say that this grant was originally made by the Government as an offset against the extensive advertising in the United States and Canada by the Ceylon and Indian tea-growers and merchants, which it was feared would greatly prejudice Japan teas if some common step was not taken by those interested in the Japan trade.

At the time the grant was originally made many of the foreign firms in Japan engaged in the tea trade offered their assistance to the Japanese Guild in advising on the most suitable means of attaining the object of the Government, that of increasing the sale of Japan teas, but this proposal was coldly received by the Guild, and the foreign firms were not consulted in the matter.

The extensive advertising of the Ceylon growers has been attended with the most successful results, inasmuch as those teas are now being largely taken in the United States and Canada, and the demand for them is increasing. In Canada the Japan tea trade is rapidly disappearing, the export of Japan teas to that country now being one-third only of what it was seven years ago.

During the past seven years, during which time the subsidy for the extension of the Japan tea trade has been paid, the falling off in the export of Japan teas amounts to 10,000,000 lbs.

We are of opinion that this sum is not being used for the purpose for which it was intended by the Government, but is being expended in the furtherance of direct trade by the Japanese.

If this is the case, it is in direct violation of the new treaties, which provide that the subjects of the contracting parties shall enjoy respectively "the same treatment in matters of commerce and navigation as native subjects," and again that "the subjects of each of the high contracting parties shall enjoy, etc., and a perfect equality of treatment with native subjects in all that relates to warehouses, bounties, facilities, and drawbacks."

In the report just published by the Guild the expenditures of the past year are as follows:

	Yen
Expenditure on Extension of the Market in Russia	10,000
New York agency	15,908
Chicago agency	11,260
Montreal agency	10,300
Sample-rooms, New York, Chicago, and Montreal	8,900
Expenses of Commissioner sent abroad	2,500
Incidental expenses	5,332
Expenditure, Central Board Office	2,800
Advertisements	3,000
Total	70,000

It will be noted that the largest part of this bounty is devoted to the maintenance of agencies and sample-rooms in New York, Chicago, and Montreal, but these agencies are not used for the furtherance of the Japan tea trade in general, but are devoted to the interests of certain private Japanese companies, and we would point out that the foreign firms engaged in the business, having similar agencies in these centres, are obliged to defray these expenses themselves, the Japanese firms therefore being relieved of a large item of expenditure.

It will also be seen that out of the yen 70,000 provided, only yen 3,000 is appropriated for advertising.

Without questioning the accuracy of the figures given by the Guild as to the expenditure of the bounty, we may state that some of the native tea-shipping companies include in their balance-sheets considerable sums received as assistance money (Tasuke Kin).

We are, therefore, of opinion that the Japan direct shippers are being largely assisted, if only in the payment of sums towards the upkeep of their branches in the American market, and that this assistance is contrary to treaty and not in accordance with the object of the Government.

We remain, Dear Sir, yours faithfully,

(Signed) {

**Green Tea Settlements.**—Wisner & Co., Shanghai, issue the following table of the settlements of green teas for the season with a comparison :

			Season 1902-03.	Season 1901-02.
			H/c	H/c
Moyune ...	...	...	77,304	62,982
Teenkai ...	...	...	69,355	52,861
Fychow ...	...	...	19,709	13,011
Pingsuey ...	...	...	180,829	111,740
Wenchow and local packed	...	...	33,241	18,480
		Total ...	380,438	259,074

**The Calcutta Tea Sales.**—At the first sale of tea held in Calcutta on Friday (22nd) about 6,000 packages were put up and mostly disposed of to a generally good demand. Common teas showed a very strong tone and prices were much above the closing rates of last season. All good teas met with competition, but medium Pekoes were weak and prices for these were disappointing. The trade has hardly settled down to buying and conclusions as yet are but tentative.

**Ceylon Black Tea Exports.**—During the first four months of this year, according to the last Chamber of Commerce return of monthly shipments, totalled 44,757,309 lbs. as against 45,628,141 lbs. in the corresponding period of 1902 and 49,723,922 lbs. in that of 1901. The exports up to 30th April this year were distributed as follows :—

	lbs.
To United Kingdom ...	31,307,661
Russia ...	2,201,150
Continent of Europe ...	559,646
Australia ...	6,324,157
America ...	2,062,701
All Other Ports ...	2,301,994
Total ...	44,757,309

The quantity of Green Tea exported during the same period had been 2,044,567 lbs., of which 301,620 lbs. went to the United Kingdom, 1,727,801 lbs. to America, 10,411 lbs. to Russia, 4,430 lbs. to the Continent, and 305 lbs. to other ports.

**New Japan Tea.**—The Japan Tea Exporting Company, April 7, says of Japan tea :

“Owing to the favourable prices that were realized last year, which gave to producers generally a fair profit greater attention has been bestowed on tea-plants, and a more superior leaf is expected as the result. The views of producers as to the prices of new crop tea are, as might be expected, very strong, leading to an anticipation of still higher figures when the season opens than those ruling last year.

The reason that, notwithstanding there was a decrease in last year's production, as compared with the preceding year, the total quantity exported shows an increase is due to all the available supply being drawn upon for export, the result being the great scarcity of teas for domestic consumption that is now being experienced. The stocks of tea, not only in Yokohama and Kobe, but also in Tokyo, Osaka and other principal interior towns, are nearly exhausted, and in consequence prices have advanced as much as 10 yen per picul. Dealers in teas for Home consumption are eagerly awaiting the appearance of the new leaf. Under the circumstances the general anticipation as to the prices of the new leaf maintaining a high level during the season is likely to be realized.”

**Formosa and Japan.**—The latest cabled news from Formosa to the U. S. is that the crop is good and that prices are advancing. Settlements are reported as 14,000 half-chests, and private despatches urge buying orders as it is expected that the higher price of silver and the possible Manchurian complications, may later on bring about a contraction of offerings.

Japan cables quote the market there as having opened at prices \$14 per picul higher than last season.

Other cable advices said that the Japan settlements were about 500 half-chests at 37 to 38c., and settlements of new crop Formosa tea to date amounted to about 14,000 packages at 16c. for good cargo.

The great increase in the use of Ceylon teas and Indias in Canada (and also in the United States) has been very noticeable, says the *Tea and Coffee Trade Journal*, as also the falling off in the importations of Japan teas in Canada. But the Japan leaders too have advertised, and yet the tea has not prevailed against the British-grown leaf. The cause is not hard to find. The British tea advocates have followed their public propaganda with an active push of teas from behind; in noticeable blends put up in most attractive packets. These have caught the eye and so the public desire, and opened its purse. The Japan teas have not done likewise. They will have to adopt this example. If a greater future is to be had for tea in America it is going to come through the sales to the retailer of packet teas, and that style of tea that enables the wholesale dealer best to trade with the retailer will prevail. The British men here are operating along these lines and so far practically without rivalry. Unless China and Japan wake and fight with as good foils and as fine dexterity as their rivals from the southern part of Asia, their markets will be taken from them except in so far as one may remain that inexorably calls for their kind of tea. It will be interesting to watch what will be the response of the Chamber mentioned to the complaint made, howsoever this may be founded on facts.

**The U. S. Tea Market.**—The market in tea is quiet with demand so slow that concessions in prices have to be granted to move sales, says the *Tea and Coffee Trade Journal* of April 28. The market is therefore easier also. Interest now centres in the markets about to open in the East. Some sales are reported in the Formosa mart and they are of sufficient moment to be of consequence. Buyers of leading American houses are still *en route*. Excepting in Congous, prices in all teas will undoubtedly open at an advance as a

response to the firm conditions that have prevailed in America. A decided easier condition has consequently been hoped for here to affect the clearer intentions of growers in the East and probably there will be an abstention from buying for several weeks at least. If this shall be effected any common understanding whereby the western men shall act in conjunction the shrewd ambitions of the eastern men may be disappointed.

No change is to be made for 12 months at least in the English tea duty. Such is the decision of the Chancellor. The expectations now is that the deliveries of tea in England will be immediately much stimulated. It should make for lower prices and may draw more on the surplus Congous in stock here, if Indias and Ceylons remain firm in price. General belief will have it that some 40,000 packages have been sold for export although the March figures of the Custom House make the quantity only about 4,000 packages. It would seem that the sale for export of 3,000,000 pounds would make some impression on the price of the tea other than the mere slight hardening of the old basis. The stock of tea in the United States is said to be 17,000,000 pounds. This is excessive of course and what with the market about to open would require a total export of 6,000,000 pounds to make matters at all fairly satisfactory.

### NOTES.

#### The Kanan Devan Hills Co.

The Kanan Devan Hills Company pays its Preference dividend, and carries forward £5,648.

#### Dutch Coffee Sales.

At the last sale of Java coffee by the Dutch Trading Company 24,460 bags were to be offered at Rotterdam. The price named for good ordinary is 26½ cents, against 32 cents accepted in May last, 31 cents in 1901, and 34½ cents established in 1900.

#### Tea and Coffee at Havre.

Actual imports of Coffee into Havre during 1902 amounted to 155,520 tons, as against 150,682 in the preceding year and an average of 130,663 tons per year from 1897 to 1901. By far the greatest quantity was from Brazil. Some was from Venezuela, Hayti, and India. Of Tea, only 575 tons was imported last year, against 779 in 1901.

#### Java Planters' Troubles.

In East Java, planters and producers have fallen upon evil times. Over-planting has done such harm on several sugar estates that they are expected to shut down. The same fate is likely to befall many coffee estates which unremunerative prices have brought low. Growers of pepper, cocoa, tree-cotton, and castor oil are hardly any better off. The general opinion is that total ruin is hanging over coffee-planters there.

#### Boers as Planters.

With regard to the Boer colonists in Java, it is interesting to note that the Governor of German South-West Africa said publicly, the other day, that Boer immigrants were only useful for cattle-breeding operations, and that, if they had no capital, they simply travelled about with their families, subsisting on what they could shoot, and doing damage to the wells, the pastures, and the timber. The Boers, he said, never worked as artisans or labourers.

#### Tea and the Budget.

The *Grocer* writes:—Since the declaration of the Budget the time of the Tea trade has been much taken up by heavy clearances from bond. The total duty-payments for the week ended the 29th ultimo form an important feature considering that the average weekly clearance does not much exceed 4,500,000 lbs., and during the next few weeks stocks must necessarily undergo a continuous reduction. The monthly figures are more than usually interesting, and bear witness to recent developments of the trade. The movement out of bond has not been without its effect on the market as it has involved the employment of additional capital, and with the demand less active prices have exhibited some irregularity. Stocks, however, are considerably reduced, and prospects are favourable for importers.

#### Pará Rubber in the Straits Settlements.

Pará Rubber still holds the field and bids fair to recoup Agriculturists some of the money that has been lost in other cultivations. The largest tree in the Waterfall Garden, of which mention has been made from year to year in annual reports, has been tapped for the seventh time, the yield of dry rubber being 2 lbs. 13¼ ozs.; which makes a total of 18 lbs. 7 ozs. from this tree in seven years, or an average of 2 lbs. 10 ozs. per year. According to a note in the *Agricultural Bulletin*, two of the oldest Pará rubber trees in Perak that had not been previously tapped gave 50 lbs. of dry rubber at one tapping. Mr. Stanley Arden, Superintendent of Experimental Plantation Selangor, has published his report on the tapping of trees in various manners and at different ages. The extension of plantations is pushed on, especially in the Native States, and it is proposed to commence tapping this year on at least two Estates.

#### Cinnamon.

In the early part of the last century, and down to about 1840, the first quality of cinnamon commanded as much as eight shillings (\$2.00) a pound, second sorts selling for six shillings (\$1.50). Until 1833 the cultivation and trade in Ceylon cinnamon remained vested solely in the Government, who maintained a large and costly establishment under highly-paid European supervision for the proper care of the fine plantations which yielded the eight thousand bales which then formed the total export of the spice. In the year above-named the monopoly was abandoned and the Government sold off their large stocks of the spice as well as their gardens, which have since been cultivated by private individuals. Larger crops and competition with inferior spice from the Malabar Coast and China (where an inferior quality of cassia bark is exported to the extent of eleven million pounds) have gradually lowered the value in the home markets, and the best Ceylon cinnamon is now selling at a little more than a shilling (25c.) a pound, so that only very well cultivated and carefully managed properties yield an income to the proprietors. Spain is a large consumer of cinnamon for use as incense, for flavouring drinks, and for making chocolate creams. An inferior description of this spice is shipped under the name of "chips," being the cuttings from imperfectly-grown cinnamon branches.

#### London Tea Market.

Weekly special telegram dated 21st ultimo from Messrs. Gow, Wilson & Stanton to Colombo reports that buyers are operating cautiously and that the market for fine teas generally is dearer, while the market for common Pekoes and Broken

Pekoes is weak. The price of fair liquoring Ceylon Pekoe Souchong is 6 $\frac{3}{4}$ d. (same as last week) and the average 7 $\frac{3}{4}$ d. (same as last week). The average for the same period last year was 6 $\frac{5}{8}$ d. Reuter reports that the tone of Ceylon tea as follows fine qualities full rates, and Broken Pekoes very firm, but common sorts are rather irregular, Pekoe Souchong is quiet. Fair Pekoe Souchong is quoted at 6 $\frac{1}{4}$ d. (a farthing down) and the average for the week is 7 $\frac{3}{4}$ d. (same as last week). 27,000 packages of Ceylon tea were offered for sale and 24,000 disposed of; while of the 28,000 packages of Indian tea offered, 24,000 were sold at an average of 7 $\frac{5}{8}$ d. ( $\frac{1}{8}$ d. less than last week). The *Indian Daily News'* London correspondent cables that Messrs. Ewart and McCongheye's Report, dated the 25th ultimo, says that 1,320 packages found a fairly steady range of prices for teas actually sold, but a good deal was taken out. Assams generally went well and the Dooars were a little uncertain, especially Broken Pekoes. The commonest kinds were steady at 6d., being the lowest quotation.

## GENERAL ARTICLES.

### INSECT PESTS OF TEA.

(From INDIAN MUSEUM NOTES.)

On *Camellia theifera* Griff., Natural Order *Ternstroemiaceæ*.

#### THE TEA PLANT.

1. *Diapromorpha melanopus*, Lacord. Family *Chrysomelidæ*. Order *Coleoptera*. The Orange Beetle.

In June 1900, the Manager of the Baraora (Sylhet) Tea Co., Ltd., forwarded some specimens of the "Orange Beetle," *Diapromorpha melanopus*, Lacord, which was "doing considerable damage to the young shoots of our tea bushes." Writing at a later date in the same month he stated that "as many as from 25,000 to 30,000 Orange Beetles have been daily destroyed." "This pest" he notes, "does not appear to have shown itself to any noticeable extent before in South Sylhet, and it would be interesting to learn, if possible, why it should have appeared in myriads this year."

2. *Biston suppressaria*, Guenée. Family *Geometridæ*. Sub-order *Phalaenæ*. Order *Lepidoptera*.

On 31st January, 1901, Mr. K. D. Murray, Manager of the Lankapara Tea Co., Ltd., Duars, forwarded a large number of pupæ of a moth, which he says resulted from a hairless stick-like larva of a greyish-brown colour very similar in appearance to the bark of the branches of the tea bush, which did great damage in certain places to the tea on his estate during the rainy season—August to October 1900. During the month of January 1901, deep hoeing was commenced, and large numbers of the chrysalises were found in the cultivation, especially in places where the caterpillars were previously most numerous, and he noted that these pupæ are probably those of the caterpillars mentioned above.

The pupæ were placed in a breeding cage on jute and damped every other day. At the end of February and early in March the moths emerged at irregular intervals and were found to be *Biston suppressaria*, Guenée. The moth has been recorded from the Kangra Valley, Sikkim, Assam, Calcutta, Ceylon, and Japan. This insect has not previously been reported to do damage to tea, and is not likely to prove a serious pest. The only remedy for it would appear to be to employ children to hand-pick and kill all the larvæ they can find during the season they are feeding, and in Winter when cultivation is going on to thoroughly dig up the ground where the caterpillars were known, previously, to do much damage, and to thoroughly break up the soil, and crush all the pupæ that may be observed. One pupæ killed in the Winter would probably, if left to come to perfection, be the parent of hundreds of larvæ the next rainy season. The moth would appear to be single-brooded, laying its eggs in the Spring, which emerge

in the rains. The moth may, however, be double-brooded, but this can only be known by studying its life-history throughout the year. This may be the species referred to in "Indian Museum Notes," vol. V, p. 51 (1900), as doing much damage to tea during the rains, appearing in millions and denuding acres of tea bushes of all their leaves. The locality is not stated where the injury occurred.

On June 3rd, 1901, Mr. K. D. Murray sent a large number of full-grown caterpillars of what is probably this species to the Museum. Total length over two inches. Cylindrical, colour dark-brown, exactly the colour of the withered bark of a tree, sometimes with a greenish shade; the whole surface highly rugose, each segment deeply seamed, the head cleft covered with low shining tubercles reminding one much of those of a lizard; the first abdominal segment bears two obtuse tubercles anteriorly; the rest of the body is practically unmarked. The larva has a most offensive smell, so much so that it would probably be nauseous to birds. It spins a good deal of very good silk, by which it drops at slight provocations to the ground. Mr. Murray writes that the caterpillar re-appeared on the portion of the Lankapara tea garden early in May, the larva there being very small; he describes them as mere threads, when they were very difficult to find, but they developed very rapidly, and by the first week in June they were full fed. They have affected the upper end of the garden only. Children were largely employed hand-picking the larvæ. It was at the lower end of the garden that such large numbers of pupæ were destroyed in the Spring, and Mr. Murray hopes that the caterpillars will not appear there later on. The moth is evidently double-brooded in the Duars, the caterpillars being found in May and June, and again in the Autumn.

3. *Capua coffearia*, Nietner. Family *Tortricidæ*. Sub-order *Phalaenæ*. Order *Lepidoptera*.

Mr. E. Ernest Green in a letter dated 10th June, 1901 writes:—"I enclose some remarks on the synonyms of *Capua coffearia*, Nietner, of which you may be able to make some use. You will find reference to the destructiveness of the insect in my circular, Serial No. 19, September 1900—"Some Caterpillar Pests of the Tea Plant," pp. 239-265."

The remarks referred to above consist of some MS. notes by Mr. J. H. Durrant, who writes:—

"In 1890 Mr. E. C. Cotes, of the Indian Museum, Calcutta, submitted to me a dark female of *C. Coffearia*, Nietner. I returned it to him as *Capua menciiana*, Walker. I now consider this identification erroneous, and should regard it as a dark variety of *Homona fasciculana*, Walker. *Capua menciiana* occurs in Japan, Shanghai, Sikkim, the Khasaia, Assam, Borneo, Pulo Laut Island, Celebes, Portuguese Timor, and Batchian, vide Walsingham, Ann. and Mag. of Nat. Hist., seventh series, vol. V, pp. 482, 483 (1900); but I have not yet seen a specimen of this species from Ceylon. I named your (Green's) specimen referred to in your "Insect Pests of the Tea Plant," pp. 89-93, figs. 17 a-e (1890)—*Homona fasciculana*, Walker. Lord Walsingham and I agreed that *Tortrix coffearia*, Nietner = *Homona fasciculana*, Walker, should be known as *Capua coffearia*, Nietner. A good description of this insect and the damage done by it to the tea-plant will be found in Mr. Ernest Green's Circular, Series I, No. 19—"Some Caterpillar Pests of the Tea Plant," pp. 244-274, nn. 1 and 2 (1900).

4. *Acanthopsyche (Pteroma) plagiophleps*, Hampson. Family *Psychidæ*. Sub-order *Phalaenæ*. Order *Lepidoptera*.

*Pteroma plagiophleps*, Hampson, III, Lep. Het. B. M $\frac{1}{2}$ , vol. IX, p. 6, n. 122, p. 65, pl. clix, fig. 19, male; 19a neuration of male; pl. clxxvi, fig. 13, puparium of male showing projecting pupæ case after the moth has emerged (1893); *Acanthopsyche (Pteroma) plagiophleps*, Hampson, Fauna Brit. Ind. Moths, vol. 1, p. 296, n. 628 (1892).

This moth has hitherto only been known from Nawala-pittia, Ceylon. Hampson describes the male as "uniform pale brown; the underside of the hind wing bluish-white. Larva-case suspended by a long silken thread; both case and thread covered with comminuted fragments of leaves. Expanse: 16 millim" ('6 of an inch). Mr. G. C. Dudgeon, Manager of the Holta Tea Co., Kangra Valley, Punjab, furnishes the following notes on the insect:—

"This bag-worm occurs commonly on tea in the Kangra Valley, doing some damage to isolated bushes but not appearing to spread to any great extent. The larva feeds on the old leaves, seeming to eat under the surface only. The case is formed of minute particles

of leaf attached to the outer surface of the silk-cocoon. When about to pupate the case is suspended by a white thread from a half to one-and-a-half times the length of the cocoon itself; this thread has a few particles of dried leaf usually attached to it. The moths emerge in August and September, and probably at other times of the year. The female is a whitish insect without any scale-covering, having the head-end produced to a slight hook, the scutellate segments being shiny dark-brown. The male has the wings entirely sooty-black on the upper side, but the under side of the hind wing milky-white, with the exception of a dark band along the costa: the abdomen is slight, and the wings rather rounded. The female lays her eggs in the cocoon, from which the young larvae ultimately construct their first cases."

## PRODUCE AND PLANTING.

"It's an ill wind," etc. The opposition within the ranks of the supporters of the Government to that part of the Budget which remits the corn tax may possibly lead to some reduction of the tea duty. Mr. Chaplin and his friends, who regarded the corn impost as a permanent means of raising money, are very sore about its remission, and some of them would have gladly seen the tea duty reduced instead, and have said so. It remains to be seen whether they are able to make their influence in this direction felt.

Colonel Robert Mitchell Floyd, an American citizen, who should know something about the matter, maintains that tea cannot be raised economically in the United States. Writing to an American trade journal he says, referring to Dr. Shepard's efforts: "Of course, it is a very delightful thing for him to pose as the successful cultivator of tea in the States; but, as far as any direct benefit has been shown to be possible to other parties to attempt this same line of tea cultivation unsupported by the United States Treasury, there is nothing tangible to base a future upon. From all sections of the Orient where tea is a native shrub, the over-production for the last few years has been so great that even with the cheap labour, that costs almost nothing, tea has paid almost a loss. This fact alone should settle the question of the commercial practicability of our attempting to acclimatise and grow this strange plant."

Statistics showing the exports of tea from Japan during the past season, being brought down to April 28, compared with last year, show an increase of 3,397,263 lbs. The quantity sent to Canada, however, was 2,240,000 lbs. less than during the preceding season. The cultivated area under tea in Japan is, approximately, 150,000 acres.—*H. & C. Mail.*

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Ninety days' Bank rate on London opened on Monday 6th at  $11\frac{1}{4}$ d. and  $11\frac{3}{4}$ d. and closed this evening at  $12\frac{1}{2}$ d. to  $12\frac{1}{4}$ d.

This being holy-week, business was suspended entirely on Thursday and Friday and even on Saturday there was not much doing. In spite of two holidays coffee furnished a fair supply of bills and with small amounts still offering from Manaus and Pará and some repassed paper, which put in an appearance, seemed ample to meet all the requirements of the moment. From Pernambuco bills are reported very scarce.

The Coffee Bill has been promulgated at S. Paulo and has been followed by a slight rise of  $\frac{1}{16}$ cts. at New York and other markets. Whether it will continue remains, however, to be seen; but in any case it seems likely that coffee shipments from Santos will be particularly active during the next two months to avoid the 20 per cent. *ad valorem* duty which will be applied from 1st July next.

In spite of the two holidays during the week ended 10th April the value of coffee shipped (*Embarques*) at Rio and Santos was comparatively large, being £206,000 against £178,000 the previous week and £307,000 last year.

Declared sales were of course smaller, being 70,000 as against 135,000 the previous week and 136,000 last year.

**Coffee.**—RIO DE JANEIRO, April 11th, 1903.—Joint Entries at Rio and Santos during the week ended 10th April, which comprised

two holidays, were 51,761 bags less than the previous week's and 79,982 less than the corresponding week's last year, of which they represent 61.9 per cent.

Entries for the crop were on the 10th instant 2,796,641 less than the previous season of which they represented 79.3 per cent.

With regard to the coming crop 1903-1904, planters seem to be modifying their opinions as regards the yield and are inclined to considerably reduce estimates for Rio and Minas districts for which 5 and even  $5\frac{1}{2}$  million bags were confidently anticipated by merchants in this city. We are informed on very good authority that though certainly better than the present crop, it is probable that it will fall considerably under that of 1901-1902 in weight, the continued dry weather having dried up the cherry too quickly, which in consequence will not yield, in many districts, more than one arroba of coffee to three alqueires of cherry as against one to two-and-a-quarter alqueires for this crop. Should these anticipations prove correct the Rio and Minas crop for 1903-1904 will not exceed four million bags.

SANTOS, April 11th, 1903.—Although there has been very little business during this week our market closed on Wednesday with better feeling. On the 7th instant the lowest point was reached—Hamburg  $25\frac{1}{4}$ , Havre  $30\frac{3}{4}$ , and New York 3-95—and a reaction set in on account of a telegram from Prado Chaves & Co. advising foreign markets that the law (20 per cent. of 300 réis on low coffee) had passed both houses. In consequence better orders (for Superiors from 27s. to 27s. 9d. and Good average  $\frac{1}{3}$  to below) were received and our market firmed up to nearly 3\$900. Commissarios basis 55,000 bags were declared as sold. Lower grades as also Goods and Regulars are in good demand and relatively scarce. On this account proportionally good prices are paid for same.

Primes quote 4\$300 to 4\$500, Superiors 300 réis to 400 réis below, Goods 200 réis below Superiors and Regulars 200 to 300 réis below Goods. Low coffees are not in demand.

The business in specialities has also been smaller. For Washed there is no interest shown and peaberry continue slack.

Receipts—67,000 bags *Passagens* 65,000 for 4 days—are not out of the line and are likely to show a small decrease in the immediate future.

Shipments continue slack. 100,000 bags and our stock amounts to 799,933 bags.

The Pauta is still 410 réis.

It is reported that soon after Easter picking of the new crop will start in the various districts.

**The Coffee Crisis.**—After 38 days warm discussion the bill (to allay the effects of the agricultural crisis) has been passed by the S. Paulo legislature and finally promulgated on the 8th instant. It shows considerable modifications with regard to the original bill, and for that reason we reproduce it entirely:

**Art. I.**—Without prejudice to taxes already existing, an export tax is hereby created on coffees produced in this State of not more than 20 per cent. in kind, or of 300 réis per kilogramme on low grades.

§ 1°. In either case this tax shall be payable from 1st July next.

§ 2°. For payment of this tax in kind the lowest type acceptable shall be determined by the respective authorities and the equivalent be collected and "eliminated" by the process which Government may adopt.

§ 3°. With regard to collection of the tax of 300 réis on low grades Government shall, in the respective regulations, determine the following points:

(a) the classes that shall be subject to this tax.

(b) the fine, equivalent to ten times the value of the mixed or unseparated coffees in prejudice of this law.

**Art. II.**—(1) To aid in the formation of Agricultural Co-operative Associations on approved bases having for their object to bring consumers and producers into more immediate relations.

(2) To come to an understanding with the Federal Government to call an international Congress of coffee-planters to meet in this city to consider the best means of defending production and stimulating consumption everywhere.

(3) To enter into agreements with the other producing States of the Union with the object of raising the value of this product and to ensure the objects of clauses 2 and 5 of this article.

(4) To subsidize to the amount of not more than 400,000\$ per annum the shipping companies willing to reduce freights on coffee sent to other non-producing States.

(5) To encourage the starting of coffee-roasting concerns in the interior where no inter-state duties are levied on the product.

(6) To superintend the roasting industry and impose fines from 100\$ to 500\$ for falsification or admixture, besides confiscation of the goods themselves.

(7) To institute a special mark or stamp by which the quality and origin of coffees from this State shall be authenticated.

**Art. III.**—Government is also authorized—

(1) To employ not more than 25,000,000\$ (about £1,250,000) in aid of the coffee-planters within the State, and with this object to borrow at home or abroad.

(2) To subscribe not more than 50 per cent. of the capital of the agricultural bank created by law 865 of 17th December, 1902, and with this object to dispose of part of the sum mentioned in the preceding article.

*Art. IV.*—In case the agricultural bank were not realized within the period determined by law 865, the product of the transit tax shall be applied to service of the debt created by virtue of clause 1 of article III of this law and to the subvention stipulated in clause 4 of article II and any surplus that may result be applied to further assistance of planters.

*Art. V.*—The aid to planters shall take the form of loans on first mortgage of real state, urban or rural, on the security of crops with collateral guarantee to the satisfaction of the lender or the sole security of railway shares, warrants or bonds of the Federal or Provincial Governments.

§ 1°. No single loan can exceed 50 contos nor may interest exceed 8 per cent. per annum including commissions, with extension of one year on condition of amortisation of 50 per cent. of the respective debt.

§ 2°. These contracts shall be realized through the agency of banks or agricultural syndicates approved by Government.

§ 3°. For this service Government shall give the preference to (1) the Agricultural Bank; (2) Agricultural syndicates, organized under the conditions of the Federal law of 6th January last or to other Banks as Government may determine.

*Art. VI.*—All dispositions to the contrary are hereby revoked.

*April 14th.*—After an exhaustive debate the bill (to improve the price of coffee), as it runs in the preamble, has become law and the Government of S. Paulo stands committed to what we cannot but regard as a most dangerous experiment.

From the 1st July next, in addition to the present specific duties of 11 per cent., shippers will have to pay *in kind* a duty of 20 per cent. *ad valorem* on all coffees exported or an alternative surtax of 300 réis per kilogramme (about 1½d. per lb.) on all coffee below a certain grade to be established by Government.

Coffee received in payment of duties will be burned or otherwise destroyed by Government and heavy fines of ten times the value of the coffee imposed for fraudulent mixture of prohibited grades.

The choice of methods will allow the planters to determine for himself which is more profitable—to send his coffee to market unsorted and pay 20 per cent. in kind on the whole, or to sort it before leaving the State and thus avoid payment of freights, commissions and other expenses on 20 per cent., at least, of his produce.

From an economic point of view there can be no doubt as to which is the more advantageous: but from a purely commercial aspect the accumulation of enormous stocks of low-grade coffees in the interior would be a constant menace to consuming markets and act as a certain drag on prices.

The taxation of lower grades, only, entails an official classification that would be most difficult to enforce and would lead to endless disputes. The fine of ten times the value of the coffee will be a constant menace to exporters, who will probably either refuse to ship on these terms or be obliged to obtain a previous certificate of quality from *Commissarios*. All this will make business more difficult, and fall in the end on the producer, who will have to pay the cost.

Whether the measure will really raise prices is hard to determine. Certainly, unless the other States, Minas, Rio, and Espirito Santo come into the arrangement it does not seem to have any chance of success and, even then, with a visible supply equal to nine months' consumption of the world, it does not seem that in the exhausted state of our planters they will be able to stand out long enough to force consumers to their terms.

Were 20 per cent. of Brazilian production really wiped out, no doubt it would be reflected in prices; but whether the rise would even then be proportionate to the sacrifice is not quite certain. The elimination of the lowest grades will not only affect the supply but consumption and, consequently, general demand as well, and tend on its side to depress prices.

With so many and diverse contingencies to allow for it is difficult, if not impossible, to foretell the ulterior influence that the measure may exercise on prices, but at present, the difficulties attending its precise execution, the situation of the article in the world's markets and the exhaustion of our own resources are such as to point to failure rather than to success.

Whether or no the law just voted will be really put into execution we cannot tell. The ways of Governments are often wonderful and beyond the interpretation of ordinary intellects, but it is scarcely to be credited that the Government of S. Paulo would deliberately summon Congress to special sessions to discuss a project of their own elaboration merely to throw dust in the eyes of the planters, amongst whom are many of their own supporters. Still such an impression is abroad, as the following comments of *O Estado de*

*S. Paulo*, a reputable paper, the reliability of whose opinions are at present, however, somewhat tempered by opposition, indicate:

"This is what has been voted, but we may add that from the very first days of the extraordinary sessions it was evident that none of it will be really put into execution. Planting interests will not lose much because there are some measures that kill. What, however, is a matter of real regret is that the comedy of which the last act was enacted yesterday should have cost the Treasury 200,000\$ absolutely thrown away, whilst coffee has fallen to 3\$000 and the State of S. Paulo is on the verge of bankruptcy or obliged to negotiate another ruinous loan."

**Coast Coffee Shipments.**—In 1902 coast shipments of coffee from Rio were, 303,181 as against 245,080 bags in 1901, an increase of 19.1 per cent. and from Santos, 5,490 as compared with 1,119. Deducting 3,797 shipped from Santos in transit to Rio, the net increase at Santos was 524 bags or 46 per cent.

The best customer was Pernambuco which took 85,581 bags, only 7 of which from Santos, Pará coming next with 82,859 bags, none of which from Santos. The State of Rio Grande comes next with 70,497 bags, of which 916 from Santos. A bad fourth comes Manáos with 17,071 bags, 24 of which from Santos, the only other ports receiving over 10,000 bags being Maranhao with 16,370 and Mossoró with 10,551. Ceará, in spite of being a coffee producer, received 6,186 bags, all from Rio.

## COFFEE IN LONDON.

With much smaller supplies of Costa Rica and other Central American kinds there has, says the *Produce Markets' Review* of 2nd May, 1903, been a decided improvement in values, and a large business has been done at steadily advancing rates. The medium sizes have attracted most attention and are from 1s. to 2s. dearer, while the bold, though still relatively cheaper, has only advanced about 1s. per cwt. Of other kinds, East India has also sold with a better tone, and it has not been possible to follow purchases of last week on quite the same basis. The few fine lots still meet with the most competition, and very high prices have been obtained. In the terminal market quotations have fluctuated only slightly, but close at about the same level as a week ago, although there appears to be a better feeling and an impression that the new law in Brazil will, for a time at least, have some effect upon prices.

## TEA IN LONDON.

**INDIAN TEA.**—The demand was active, says the *Produce Markets' Review* of 2nd May, 1903, and prices at the public sales on Monday were firm, but on Wednesday, when the balance of the tea printed for the 2<sup>nd</sup> ultimo was offered, an easier tendency prevailed and a considerable quantity was withdrawn. There was, however, no quotable change in values, and the supply of sweet, clean tea under 6½d. continues comparatively very limited, so that there certainly appears to be no immediate prospect of any decline of importance in the lower descriptions. The average quantity for the next few weeks will probably be from 30,000 to 35,000 packages, and after this, and until liberal shipments of the new crop arrive, which will be about the end of July or the beginning of August, the offerings will be on a small scale. The reports from most of the gardens in India do not favour an early season, owing to adverse weather, which indicates poor quality for the early arrivals. At the public sales a larger quantity was offered than in the preceding week, and with the exception of the earlier sales, when prices were fully maintained, there was a less active demand, accompanied with an easier tendency. Teas for price, *viz.*, up to 7d., were in good demand, and prices were practically unchanged, but for the better kinds the market was irregular and a decline in some cases was established, but this was mainly confined to teas showing depreciation in quality.

**CEYLON TEAS.**—This market continues to be well supplied, and the sales on Tuesday passed off with fair competition, although a somewhat quieter tone was noticeable in the bidding. Common to fair Whole Leaf kinds remained steady at recent rates, but purchasers were apparently less eager, and Pekoes and Orange Pekoes over 7½d. went rather irregularly. In Broken Pekoes there was an easier tendency in the lower grades, and prices ruled unevenly, but the few really fine invoices sold freely at enhanced rates. At the public sales 27,600 packages were brought forward, of which about 4,900 were withdrawn.

**CONGOU TEAS.**—The market continues steady for all descriptions, and a fair business has been done. Prices, generally, are firm, especially for Black Leaf kinds, for which there has been a good enquiry. Fine teas are now extremely scarce and difficult to obtain, and quotations, therefore, remain firm. Of the 438 packages of Congou offered at public auction 168 failed to find buyers.

**OTHER CHINA TEAS.**—A small quantity of Green Tea was brought forward for public auction on Thursday, but the quality, in most cases, was poor, and a considerable proportion of the sale was taken out, the selling limits not being reached. There is a strong demand for low-price Caper, and with these descriptions getting into very small compass a dearer market is anticipated. The following are the figures for the week:—361 packages of Fancy Tea were offered, and 686 packages of Green Tea were brought forward, 298 of the latter failing to find buyers.

## THE WORLD'S TEA.

### PRODUCTION DECLINING.

#### INCREASED CONSUMPTION.

An expert writes in the *Daily Telegraph*:—

The decision of the Chancellor of the Exchequer to maintain the duty at the rate of sixpence per pound was not unexpected. Its probability was assumed when the matter was referred to in these columns in December, but it has greatly disappointed producers, who believe that the high duty is a principal cause of the decline in value which has taken place since it was imposed in 1900, because it encourages the importation of inferior tea, and discourages the growth of the finer qualities in Ceylon and India. The dealers' and grocers' policy this year has been to take as little as possible out of bond prior to the Budget, the chance of a reduction being deemed greater than that of an increase, whereas in 1900-2 immense quantities were cleared in advance. The year's revenue from this source may, therefore, prove heavier than during the fiscal year lately ended.

Through a long series of years the record has been one of continuous increase in production, owing to the development of estates in Ceylon and India; of uninterrupted decline in value; of extraordinary increase in the quantity consumed; and of the virtual elimination of China tea as an important factor. The following statistics illustrate these points:

AREA OF THE PLANTATIONS.				
		In India.		In Ceylon.
1872	...	About 100,000 acres	...	None
1882	...	250,000 "	...	22,000 acres
1892	...	365,000 "	...	262,000 "
1902	...	525,000 "	...	395,000 "
TOTAL YEAR'S PRODUCTION.				
		India.		Ceylon.
1872	...	18,000,000 lbs.	...	None
1882	...	59,000,000 "	...	1,000,000 lbs.
1892	...	124,000,000 "	...	72,000,000 "
1902	...	175,000,000 "	...	149,000,000 "
CONSUMPTION OF TEA IN THE UNITED KINGDOM.				
		Total lbs.	British-grown.	China, etc.
1872	...	128 millions	13 per cent.	87 per cent.
1882	...	165 "	31 "	69 "
1892	...	207 "	83 "	17 "
1902	...	255 "	92 "	8 "
AVERAGE SALE PRICE OF CROPS.				
		Indian.		Ceylon.
1882	...	About 1s. 3d per lb.	...	1s. 1d. per lb.
1892	...	10d. "	...	9d. "
1902	...	7½d. "	...	7½d. "

A change has now begun to be clearly manifest: production is diminishing instead of increasing, demand has outstripped supply, and prices have begun to recover, some kinds being quoted by the Mincing-lane brokers 40 or 50 per cent. dearer than they were six months ago.

The causes are said to be as follows: For several years the profit on tea-growing has been small, and it has caused embarrassment; the extension of gardens has ceased, some estates have been abandoned in part, while others have been poorly cultivated for lack of means and labour, with the result that the productive capa-

city has diminished. Tea plants are subject to natural decay, and soil is liable to impoverishment, requiring high cultivation and continuous renewal in order to maintain the yield at a maximum. That was reached in 1900, when 197,000,000 lbs. were made in India, and 149,000,000 lbs. in Ceylon. In 1902 the Indian crop fell to 175,000,000 lbs. and the Ceylon output remained stationary, notwithstanding that a large area of young gardens, planted since 1895, were in full bearing. The decreased production is partly attributable to climatic causes. A more serious matter is the difficulty of obtaining sufficient coolie labour, both in India and Ceylon, notwithstanding the efforts of the recruiting agents. Referring to this, Messrs. Carritt, Moran & Co., of Calcutta, write as follows: "Scarcity continues to a serious extent, and the industry is feeling the effect of recent legislation, or, rather, the obstructive manner in which it is administered, to a very marked degree."

While production stands still or decreases, the world's demand steadily increases for British-grown tea, as its cheapness and attractive quality gain recognition abroad. The effect has been to divert from England to other countries a large portion of the crops, and to establish in Calcutta and Colombo an important trade direct with the Colonies, America, Russia, and Central Asia. The following figures show the growth of this business. In 1896 80,000,000 lbs. were sold in the local markets, of which 27,000,000 lbs. were bought for outside use and 53,000,000 lbs. for England; in 1902, 99,000,000 lbs. were sold, of which 75,000,000 lbs. were taken by Colonial and Foreign buyers and only 24,000,000 lbs. sent here. This diversion of supply will receive a fresh impetus from the manufacture of green tea. A process has been discovered by which pure green tea, equal to any made in China or Japan, can be manufactured without the use of artificial colouring matter: it finds a ready sale in America, and some 15,000,000 lbs. will probably be made this year, lessening to that extent the quantity of black tea produced. The use of green tea in this country has almost ceased, but it is not improbable that it may be revived now that pure tea, free from deleterious matter, can be obtained. Of its potency as a stimulant, preferable to alcohol, there seems to be no question.

From what has been written, it will be seen that the change which is coming over the tea market is due to two causes, *viz.*, diminution in the quantity produced, and increase in the quantity used outside the United Kingdom. The extent to which this foreign demand may expand is really the key to the position. It is being fostered by funds raised for the purpose by means of an export levy or tax, collected by the Governments of India and Ceylon, and applied in the shape of a subsidy to the makers of green tea, or for making the merit of British-grown tea known in countries which hitherto have principally used China or Japan tea. A careful survey of the situation leads to the conclusion that the period of depression in value is drawing to a close, and will be followed by a year or two of evenly-balanced supply and demand, and eventually by deficient supply and a higher range of price. Extensions in India and Ceylon practically ceased in 1900, and four or five years must elapse before new gardens, even if it paid to plant them, could come into bearing.

Of the other sources from which tea can be obtained, China, Japan, and Java, little need be said, as China is the only country which serves this country, and that to the extent of only about twenty or twenty-five million pounds. Unfortunately the deterioration of China tea makes much of it unpalatable. How will the changed conditions affect respectively the producer, the retail vendor, and the consumer?

Producers may, we think, fairly count upon a somewhat better return than they have lately received, and no one will grudge it to them. Mr. Seton, an authority on the subject, states that the capital value of 170 planting companies, which in 1897 stood at a total of £24,000,000, fell in 1902 to £12,000,000. There has since been a recovery, say to about £15,000,000, leaving a large margin to be regained.

For the retail vendors the outlook is not so cheerful, except for those whose customers use the finer sorts of tea, and are prepared to pay a fair price for them; but those whose business depends upon a large sale of the cheaper qualities at low prices may find it difficult to make a profit, for whenever tea becomes scarce the advance begins at the bottom; cheap teas rise rapidly, while good and fine teas either stand still or recede, as at the present time.

The effect upon consumers will depend upon the sort of tea they buy. Those who insist upon paying next to nothing for it may find they are using what is practically the refuse of foreign markets, which are searched for anything cheap enough to keep going what is termed "the low-priced canister." It is reported that the advance in price here has attracted from foreign ports a considerable quantity that will be used for this purpose. But consumers can protect themselves by avoiding these very low-priced teas and buying the best their grocers keep. Experts in Mincinglane say that fine tea is really cheaper than common tea, because it is more economical to use, as well as more wholesome.

A different view of the future is taken by some of the great London retail firms. They say that the higher prices now ruling will induce planters to pluck coarse leaf, which will add to the weight of the crops and reduce their value. There is some chance of this, but it is lessened by the combination into which the Indian and Ceylon growers have entered to adopt a common policy, having for its object the regulation of the quantity made, shipped, and sold on this market. Growers are no longer independent units, but an organised body acting in concert with a definite aim.

How completely the position is changed is shown by the fact that private telegrams from Calcutta state that offers are being received from London to buy entire crops in advance. Business of this nature has already been done in Colombo, and it is believed to be without precedent in the history of the trade.

## THE AUSTRALIAN TEA DUTY.

### AGITATION FOR REIMPOSITION.

At a time when all the Australian State Governments are casting about for means of revenue, it may not be inopportune to remind them of one very lucrative source, the tea duties, which the Federal Parliament cut off from them, and which, being done in error, may some time be restored. Mr. Shiels may, perhaps, prick up his ears when he is told that he might get £130,000 a year from this quarter without taxing the Victorian people a single penny. We are impelled to point this out for a double purpose. The facts being known will prove that some kinds of Customs duties, even when not protective, are no tax on the consumers, and they will illustrate the superiority of the Custom House as a means of levying taxation. In the pre-Federal days the Victorian tariff had a duty of 3d. per lb. on tea. That impost brought into the Victorian Treasury a revenue in 1898 of £123,000. With our present population it would reach £130,000. The Federal Government proposed to continue this, and put 3d. per gallon on kerosene. The duty on the oil was levied for a time, and did not cause a rise in the price. When the Federal tariff was before the House of Representatives the Labor party fighting for a free breakfast table, insisted on making both of these items free. It argued that tea is used by everybody, and kerosene by most, and that the bulk of the revenue from these sources came from the poorer classes, and should be remitted. Seeing that in neither case was there any protectionist principle at stake, there was not much opposition to that view, and freetraders and protectionists both helped the Labor Corner to make tea and kerosene free. We have now had plenty of time in which to study the operation of this remission, which was made with the most benevolent intentions. It did appear to be a reasonable supposition that as tea and kerosene are entirely brought from abroad a remission of the duty would make a corresponding decrease in the price. Has it done so? We are informed on the authority of those who are in the business, directly distributing both classes of goods, that the remission of the duty has not made tea a farthing cheaper to Victorian consumers.

\* \* \*

The duty on tea like the kerosene duty seemed a promising item on which to make a concession to the consumer, more especially as tea worth 6d. per lb. paid the same threepenny duty as that worth 2s. 6d. per lb., which made the poor man's tea pay an *ad valorem* rate five times as high as that consumed by the wealthy. Under the Victorian tariff the revenue from the tea duty reached to an average of £123,000 per annum, at 3d. per lb. When that duty was levied, the average price of tea consumed in Victoria ranged from 10d. to 1s. 3d. There was some sold as low as 8d., and some which ran as high as 4s. To-day there is scarcely a perceptible difference in the cost of tea in a comparison with that time. To be strictly accurate,

the manager of a large business reports his average prices as ranging between 9d. and 1s. 3d. per lb. A small quantity is sold as low as 7d., the same he formerly sold at 8d., but very little of it. The higher priced teas are the same as before and the only difference in his average prices is that the popular teas now range between 9d. and 1s. 3d., as compared with 10d. and 1s. 3d. when the tea paid an aggregate duty of £123,000 into the revenue. Opinions gathered from other sources bear out this testimony. In a few cases some tea importers did make a reduction when the duty was first remitted, but they claimed to be exceptions. However that may be, it is certain the average tea consumer of to-day knows of no benefit from the remission of the tea duty. Some few who use teas of the very lowest grades do get a benefit of 1d. per lb., but they are so few as to be quite inappreciable. It is asserted by some tea merchants that, though the price has not been reduced, the quality has been improved. But this is so entirely problematical as to be unworthy of serious consideration, the average quality of tea being the same as before, as far as the experience of consumers can settle the question.

We are thus compelled to the conclusion that in these articles of tea and kerosene the traders and producers—one or both—put the remitted duties into their pockets and charge their customers the same as before. In kerosene the American oil monopoly has made this possible. In the case of tea, advantage has been taken of the customs of a trade which has always been a very profitable one to the trader and in which gradations of quality leave room for importation. Possibly the extra profit has been divided among the foreign grower, the importer and the local distributor. Wherever it has found its way, the consumer has not shared in it, except to so infinitesimal a degree as to be a negligible quantity in the sum. We thus arrive at the conclusion that when the Federal Parliament remitted those two duties on kerosene and tea it took £160,000 or £170,000 a year out of the Treasury, and conferred no benefit on anybody save middlemen and the wealthy American Oil Trust. These facts will present another problem for the free-trader to ponder over. They show once again that Customs duties are often a tax on the foreigner—a toll he is forced to pay for admission to our domestic markets, and that the free-trade nation has to forego this advantage of making the foreigner contribute to its revenue.—*Age*, April 28.

## TEA CLEARING HOUSE REORGANISATION.

### MEETING OF THE CEYLON ASSOCIATION.

#### CONFERENCE SUB-COMMITTEE'S SCHEME ADOPTED.

A General Meeting of members of the Ceylon Association in London was held on Monday afternoon, May 4th, in the Council Chamber of the London Chamber of Commerce, Botolph House, Eastcheap, to consider the report of the sub-Committee of the London Tea Clearing House Conference and the memorandum and articles of Association submitted for approval. There was a large attendance.

The report to be submitted to the Meeting was signed by Mr. Richard A. Bosanquet, Mr. V. Hugh Smith, and Mr. John Lecky, the sub-Committee appointed by the Clearing House Conference, and it proposed the following scheme for the acceptance of the Conference:—A Clearing House to be formed of all branches of the trade as members with an executive council consisting of four importers (two Indian and two Ceylon), four wharfingers, four buyers (two wholesale dealers and two blenders), and one broker. As this council would be possessed of executive power in dealing with the interests of the London tea trade, it is proposed in the scheme that no Resolution of the council shall become effective unless it be carried by a majority of each section, should a division or vote be called for on party lines, with the stipulation that "should a division or vote be taken on party lines it does not require the assent of the broker to become effective, provided that the importers, wharfingers, and buyers carry the same by a majority in their respective sections." The sub-Committee proposed that the cost of the Clearing House, estimated at £4,500 per annum, should be borne by the importers, wharfingers, and buyers in as nearly even proportions as could be arranged; and it was recommended that each Association should determine for itself how the money should be provided.

Sir J. J. Grinlinton proposed that, in the absence of the President, Mr. R. A. Bosanquet should take the chair. This was unanimously agreed to.

The Secretary (Mr. W. Martin Leake) read the notice convening the Meeting, and added: Before we come to the business of the Meeting I think it is a matter of interest to tell you that telegrams have been received, saying that the proposal for the increase of the Tea Cess for eight months has been abandoned—(applause)—and that, as far as is known, Mr. Rutherford's scheme has been adopted. (Applause.)

The Chairman said he was not quite sure that they were right in putting him in the chair. In the absence of the President, Mr. Bois, and Mr. Rutherford, both of whom were familiarly acquainted with the origin of the subject before the Meeting, he himself was, perhaps, having worked with them, the best person to speak on the subject. He had come to do that—but not to take the chair—chiefly because he thought any Resolution they might think fit to pass should not go forward from him, their representative on the Conference, but direct from themselves, either in approval or disapproval of what was now being laid before them. He would, however, try to lay before them as shortly and as clearly as possible the steps which had been taken and the necessity which had arisen for the making of a new scheme. The Clearing House was first brought into existence on July 1, 1888, and what was known as "the Pool" was started on July 1, 1900. He would give only the bare facts because he wanted to leave as much time as possible for discussion. Gun Wharf applied for entry to the Clearing House in May, 1901, and in the early Autumn of 1902 their opposition commenced to be severely felt. He would pass over the various public utterances which had brought the matter into prominence, and would proceed to refer to the next step, which was the convening of a Conference at the Dock House. The first Meeting, at which Mr. Henry Bois and himself were present, was held on November 6, and was adjourned to enable the importers to lay before the members in writing their objections to the existing Clearing House, and to state what changes they desired in the rules. He had brought with him the letter sent by Mr. Bois and the three other importers, laying down their views on the Clearing House and its rules, and he also had the replies of the Secretary of the Clearing House to that letter, and he would be happy to read the correspondence if it was called for. The Conference met again on November 27, and the importers and the buyers pressed home their demand for the cancellation of Rule 14 of the Clearing House rules. The wharfingers said they objected to this very strongly unless they obtained a *quid pro quo*. The result of the Conference was that the buyers gave a verbal undertaking to the wharfingers, which was, however, recorded on the minutes of the Clearing House, that they would use their influence with their Association to discountenance new bonds for tea to any more wharves. The next Meeting was held on January 27, Mr. Bois and himself having been meantime reappointed to act as Ceylon representatives to assist in drawing up the new rules for the Tea Clearing House. He wrote to Mr. Bois suggesting that they should both meet and draw up roughly what their ideas were, as representatives of the importers, because it was absolutely necessary to submit something definite to a largely attended Conference. Then, most unfortunately, Mr. Bois met with his accident, which they all deplored—(hear, hear)—and at the last moment Mr. Rutherford joined him (the Chairman) as Ceylon representative. He (the Chairman) drew up a memorandum which enabled him first to air the importers' side of the question, and at the Meeting of the Conference on January 27 the wharfingers stated that they had cancelled Rule 14, and had also given notice to terminate the lease of the Clearing House, as, having lost their advantage, they declined any longer to meet the cost of keeping up the house, which they stated amounted to some £1,000 a year. It thus became necessary to get to work at once and draw up a scheme to come into effect on Midsummer Day for a new Clearing House. He need scarcely say they would be able to obtain the same rooms if they were required, but the time was short. A sub-Committee was appointed at the Meeting on the 27th, and in the absence of Mr. Bois he was himself appointed to represent Ceylon, the Indian Association members requesting him to represent them also. Many and long Meetings of the sub-Committee were held, and the result was now before this Meeting in print. In drawing up a scheme to meet such conflicting views it was impossible for any one party to obtain all that they desired, and the present scheme was the result of much

careful work and mutual concession. He thought they were all aware that the power of the old Clearing House was not used for the importers' benefit—(hear, hear)—and a great many of them had felt it was a grievance; as he expressed it at a Meeting of the Ceylon Association recently, it began with pin-pricks and ended with a fretting sore. (Hear, hear.) The scheme was drawn up on an eminently fair basis, and gave fair representation to all branches of the trade, the brokers being the only ones not fully represented, for a very good reason.

A member asked the Chairman to state the reason.

The Chairman said that the brokers acted primarily for the sellers, though there were many points in which they acted as intermediaries for buyers and sellers. Importers and others feared that in the new Clearing House there might be a combination of more than one party to sit upon another party, and the scheme had been drawn up with one saving clause to prevent any such combination having effect. It was pointed out to the importers that if at any time their representatives did not defend their interests better men must be put in their places, and that if no redress could be obtained the only thing to do would be to break up the Clearing House. He thought it was eminently desirable with regard to the brokers that they should not be brought into conflict with one side or the other, either with the importers against the buyers or with the buyers against the importers. But he thought nothing would be done without careful consultation with the brokers. The effect of this Clearing House executive Committee would largely depend upon the men who were sent to represent the importers there, and it also should be clearly understood that those who represented them should refer to the people who appointed them all matters relating to such important questions as the conditions and days of sale. He was willing to answer to the best of his ability any questions that might be put to him on the scheme as laid before them. Might he venture to suggest that it would be very much to the advantage of the importers of Ceylon teas if they formed themselves into an Association for the advancement and protection of their own interests, thereby assuring themselves of a body of men who would first of all elect their own representatives to serve upon the executive council of the Tea Clearing House, and also a body with which such representatives should confer on every important proposal? (Applause.) In conclusion, the Chairman said he had no personal object to serve, no axe to grind, and he did not care personally whether the scheme was accepted or rejected. He had been given certain work to do, and he had done it to the best of his ability, and if they disliked it he hoped they would throw it out. (Applause.)

Mr. C. E. G. Hatherell: Is this a unanimous report?

The Chairman: Have you any other question?

Mr. Hatherell: Yes, only one. Will this new idea cost us any more?

The Chairman: The report, as presented to you in its present form, is quite unanimous. It was only arrived at by mutual concession, and at one time it appeared very probable that you would have a majority report and a minority report. This report, however, has been accepted completely and willingly. As to the provision of cost, it is really a most extraordinarily small sum. All that Ceylon has to find is £750 per annum.

A Member: How much on a chest?

The Chairman: It will come to about 1s. per 100 chests. It will come to about the same amount in your account sales as the item for postages.

A Member asked that Rule 14 of the Clearing House might be read.

The Chairman: It might interest you if I read not only Rule 14, but the letter which was sent in by the representatives of the Indian and Ceylon Associations on November 12. Rule 14 reads:—"No subscriber shall be entitled to warehouse or deposit at or employ in connection with teas any dock company or tea warehouse keeper who is not a member of the Clearing House, or to purchase"—and here is where the crucial point comes in—"or to purchase or sample any tea from the warehouse of a non-member." It practically was making a closed borough for the members of the Clearing House. The object of the Clearing House was right, and it is practically incorporated in our new scheme; but we say that if the object was right the rules were wrong. (Hear, hear.)

A member asked the Chairman to say what would happen if the new scheme were not carried.

The Chairman: I think it must be clear to you all, as business men, that the Tea Clearing House will not cease to exist. Such an organisation as that which has been brought into efficient working, and which is of such material benefit to, at any rate, one class of people, the buyers, is not likely to be dropped. (Hear, hear.) The result, if we refuse to come in, is that we shall be shut out. You have got an opportunity now of asserting yourselves, of coming in and having a say on all matters in connection with the Clearing House. You must remember that we were never consulted with regard to the original rules or those based upon them, or on any subject connected with the house, until November last.

Mr. G. Stehn asked if the Tea Clearing House was not taking up new functions. In the articles of Association it was laid down as part of its functions now to act as arbitrator in the settlement of disputes. It seemed to him that this scheme was the tea exchange of last year under an *alias*.

The Chairman said it was true that the rules printed offered a much wider area of business than was originally contemplated in the Clearing House, and if there were any importers who objected to any of the powers mentioned in the articles, let them say so. But they must remember that upon their articles as allowed by the Board of Trade would depend their work in the future, for they would not be able to get them enlarged.

In reply to another member, the Chairman said that before they commenced work as a sub-Committee he applied to several large firms in London for assistance in the way of plans to work upon. He studied them all, and found them all unsuitable, except the one of which a member had just spoken as the rejected scheme of last year. They had tried to eliminate what they believed to be objectionable and to keep what was good in it. If anybody objected to any point in the scheme, let him speak freely. The articles of Association had not yet been brought up to proper form, but if they were substantially approved it was proposed to submit them to Messrs. Holland, Son and Coward.

A Member: What advantages are we to get by being in this scheme? Would it hurt us to be shut out? Where is the advantage to the importer in going in? According to the printed matter before us the wharfinger and the buyer can block anything as far as I can see.

The Chairman: I don't know how to deal with objections of that sort, and I must say that a man who gets up to raise an objection of that character cannot have studied the subject. The clause he refers to is inserted for his protection. If it is cancelled I don't think he will be much the worse, but I do not think many will be in favour of cancelling it. (Hear, hear.) As to the "advantages," what were we sent to the Conference for? We were sent to get representation, which we have never had before. We have never had a say about things, but the Clearing House has ruled us instead of our ruling the house.

Mr. Thornton Williams said that he would support the scheme as a representative of several importers. (Hear, hear.) It had been a great trouble to draw up. They had got to strengthen their position. They, as importers, with the dock charges they had paid, had carried on a Clearing House in which they had had no voice. The expenses of the Clearing House had been paid almost entirely from the wharf charges they had paid, the only portion outside that having been the subscriptions of members, either buyers or brokers. Now, for the first time, owing to the opposition of an outside wharf, which was not within the ring, there was a chance given to the importers, who ought to rule the trade, for them to have a voice in the management of the Tea Clearing House. (Hear, hear.) Surely it would be folly in them not to embrace the opportunity of having this voice? It was true he, as an importer, would have liked to see importers have a larger control than was suggested. He was sorry to see the number of importers on the council reduced from six to four, but he saw the difficulty of any section getting everything it wanted. As it was they would have four votes out of twelve, and, moreover, they had this advantage, which he admired very much—and he thought it a most ingenious clause, for which he believed Mr. Bosanquet was responsible—that if any section felt that something was proposed in which they had a peculiar interest they could call for what was described as a party division and insist upon the proposal not being carried except by a majority in each section. That would prevent

anything like a combination of two interests against a third. Then as to expense, Ceylon would have to find on the value of the tea imported into this country £750. It was a mere bagatelle, not worth considering, particularly if they had a voice in the control of the institution. (Hear, hear.) The institution was doubtless of great convenience to buyers more particularly, and to wharfingers. If the importers did not embrace this opportunity of having a voice in it it was quite conceivable that the other two sections might combine and re-establish the Clearing House, leaving the importers out in the cold. All the same, the expense would come out of their pockets, he maintained, because they paid the dock charges. He was surprised at one or two of the questions raised, which, as the Chairman had said, showed some ignorance of the state of things that had been existing for some time past. But many of them had been investigating the matter for some time, and recognised the utmost importance to them as importers of having some control of the Tea Clearing House. For that reason he strongly supported the scheme. (Hear, hear.) No doubt the details were subject to modification, but the important thing was whom they should have to represent then on the council, and he would like to express at that juncture his warm appreciation of the labours Mr. Bosanquet had undertaken in their interest—(hear, hear)—and he sincerely trusted that when the Association was formed, as he hoped it would be, Mr. Bosanquet would be one member of the council on behalf of Ceylon importers. (Applause.)

Mr. F. Walker asked if a poor broker might say a word. (Laughter.) Mr. Williams had said that the expenses of the Clearing House came out of the charges on tea in London. It seemed to him (the speaker) that the tea importers of London did want to have some control over their own affairs, and that it would be well if an Association of Ceylon importers could be formed, as Mr. Bosanquet suggested. They would all very much like to see that. But it appeared to him that in asking that they should combine with their natural opponents—he said nothing against them—and be joined with them in the management of their business, the tea importers, as such, were not going to advance their own interests. The brokers were, they all knew, the servants of the importers, but so were the wharfingers, and why should the latter be asked to come into this combine and act with their employers on level terms? Mr. Bosanquet had said that it was desired by the Ceylon section of importers that the representation on this council should be six importers, against three wharfingers and three buyers. They then had a sub-Committee of one from each section, and very naturally it took the form that the three sections should be on level terms, only it required "mutual concessions," as had been said, though they had not heard what they were. Now, Mr. Bosanquet said it had been suggested by some of his friends that an Association should be formed of Ceylon importers. He himself thought that before they went into this scheme, and committed themselves to it and became incorporated, they ought to look very closely into the whole matter. One of the objects of the Clearing House as set forth in the memorandum of Association now submitted for approval was:—“(e) The making of bye-laws and regulations with reference to the objects of the Association, and the conduct, rights, and privileges of its members.” Now, were the importers going to ask the tea dealers and buyers of London to say what their rights and privileges as importers were to be? It was time they pulled themselves together, and saw if they were not giving themselves away completely by putting themselves into the hands of their opponents—who were honourable men, of course, but opponents. Were they working with them that they might bring those systems, which hurt them as importers, into this Clearing House? They were putting themselves into the hands of their servants, the wharfingers, and yet they were actually saying that the brokers, their servants, too, should have no control whatever. He did not think the scheme commended itself to the common sense of the tea importers. (Hear, hear.)

Mr. W. Forbes Laurie: I think it best to put the scheme to the Meeting and see what it has to say. It appears to me that we want a body in London through which we can all act collectively. We act now so individually that it seems we are at the mercy of the other side. I move: “That the scheme proposed by the sub-Committee of the Conference convened by the Clearing House Committee be approved and adopted.”

Mr. A. Bethune asked what view the Indian importers took of the scheme.

Mr. Alfred Brown seconded the motion. He said that Mr. Walker took it for granted that the warehouses in London in the past had been their humble servants. He could not admit that. They ought to have been their humble servants, but they had not been. When the Clearing House was formed it was a proper institution, which did not concern the importers; it was for the interchange of documents. But it was afterwards transmogrified, and made into something else—a sort of ring fence. A wharf outside the house had broken the fence for the time being, and Mr. Bosanquet's scheme now presented them with an opportunity of getting inside that ring fence, and of helping in the management of the house in future, and preventing it ever becoming a ring fence again. He thought they would be most unwise not to take it on, because of having to pay 1s. for 100 packages. (Hear, hear.)

A member suggested that there might be an amendment in favour of forming an importers' Association.

Mr. J. Sinclair: I suppose if we find the scheme worse than it was before we can easily retire and form an importers' Association?

The Chairman: I do not understand the opposition of the brokers at all, for we have been very careful to protect their interests. I cannot speak of what has passed in the work of the sub-Committee. There are many things that have passed there which must remain a secret among members of the sub-Committee. It would be unfair to speak publicly of the many minor points which were brought up for discussion and practically settled and placed in oblivion. It is evident that the gentleman who has spoken as a broker on behalf of the importers, but against the interests of the importers—

Mr. F. Walker: Not as a broker.

The Chairman: I certainly understood you to be speaking as a broker. I repeat that I have no axe to grind. The work was given me to do, and I have tried to do it. (Hear, hear.) It has taken some time, but I have gained experience which is of value. For you to throw out the scheme would be most unwise. The importers have a chance of coming in now, and if they do not take it they won't have another chance. As to what Mr. Sinclair said (the Chairman continued), if they found the clause framed for their protection was not good enough they would have to get the Indians to work with them and withdraw; he was sure they would both work harmoniously. He had been at many Conferences between the Ceylon and Indian Associations, and there had been good feeling all through. (Hear, hear.) Mr. Bethune had asked what was being done by the Indian Association. He had purposely abstained from finding out. They (the Ceylon Association) were leading in this matter, and it was for them to say plainly what they wanted. If they did want a say in the Clearing House it was certain that they must pay for it. In the past the money had come out of their pockets and they got nothing in return. There was a ring fence, as Mr. Brown had said, and he objected to it most strongly. (Hear, hear.) He considered that they had been absolute slaves to the wharfingers. He would leave it to the members' cool deliberation to say whether they would take or reject the scheme. (Hear, hear.)

In answer to Mr. C. Bois, the Chairman said that there was very little time to be lost. It was essential that something should be done before the early date at which the building was to be given up, or they would be left out, and the buyers and wharfingers would get together and do it by themselves again.

Mr. C. Bois moved as an amendment: That further opportunity be given to bring the Resolution before the interests represented by those present.

Mr. Campbell (Kelani Valley Tea Association) seconded.

In reply to Mr. James Sinclair, the Chairman said it was with the very greatest difficulty that certain subjects had been kept out of the report and the articles of Association. Mr. Bois and myself, he proceeded to say, when we went into the matter, were of one mind upon one particular point, and that was that it was to be a Tea Clearing House proper, and I suggest to you that we, as importers, should also form a combine of our own. It stands to reason that there is nothing to prevent the wharfingers also forming a combine. I think each trade should form a combine of itself; at the present day it seems to be a necessity. (Hear, hear.) It would be absurd to say that any rules we could draw up could prevent the wharfingers raising their rates if they thought fit. The wharfingers, if they combine, would have to use their authority and their power, but they would have to use it wisely, or they would find there is an authority and a power behind them—the Board of Trade—which would come in on our side. There is

nothing to prevent a combination among Ceylon men having their own wharf. I do not advocate that, because I think there are difficulties which are beyond the understanding of ordinary people. But I give it as my expectation that if you bring into existence an executive council, such as is suggested here, no important changes with regard to rates and sales would ever be made, except with the approval of your executive council. It would have been absurd for me, as representing the importers at the sub-Committee, to have attempted to take a verbal promise from the wharfingers as to their rates. One thing I said all through was, "It is nothing to do with rates." There is nothing about rates in the constitution of the Tea Clearing House, and our one objection in the past was that they brought the rates question in. That is what I object to. (Hear, hear.) We have two separate Resolutions here, for the motion of Mr. Bois cannot properly be called an amendment. You agree to that, Mr. Bois?

Mr. Bois replied in the affirmative.

The first Resolution, adopting the scheme, was then put to the Meeting and carried by 12 votes to 5, and the Meeting terminated.

## UNITED PLANTERS' ASSOCIATION.

### FEDERATED MALAY STATES.

#### REPORT FOR 1902.

The following extracts are taken from the Sixth Annual Report for 1902 of the United Planters' Association, F. M. S. :

LABOUR.—On the whole the supply of coolies from India has not been maintained, and complaints of shortage are to be heard on all sides. There are various reasons for this. A good paddy season in India, the heavy fall in exchange and consequent increase in the cost of living, higher wages offered by other countries, and a rapidly growing demand for the services of the Tamil coolie wherever his employment is permitted by the Indian Government, all provide an explanation for the inadequate supply in the Malay Peninsula. The Governor in Council has just stated that the F. M. S. during the past year have paid, as forfeit to the British India Company, the sum of \$44,000, the equivalent of 4,000 tickets unused, against the guarantee to which a lengthy reference was made in your last annual report. Two labour Conferences have been convened by the Government, one in Penang, and one more recently in Singapore. At these all classes of Tamil labour employers were represented, your Chairman attending on behalf of the Coffee, Coconut, and Rubber interests of the F. M. S., and it has been finally decided that a monopoly, as regards professional recruiting, will be granted to the Madura Company, Negapatam, the wages offered ranging from 35cts. to 45cts. subject to exchange fluctuations, and according to the locality in which the coolie recruit will have to work. These Conferences were arranged with the double object of ascertaining the views of planters and other unofficial employers, especially with respect to wages, and so of avoiding the risk of friction, attendant upon possible Government competition, and also of considering a scheme for putting the whole question of recruiting upon a sound basis, which emanated from Messrs. O'Sullivan and Hill as the result of a visit which these gentlemen have recently paid to India. It should be clearly understood that, whilst no professional recruiting will be permitted except through the Madura Co., the Kanganay system will not be interfered with in any way. It may be that the offer of wages, so much higher than those ruling at present, will compel the employers of Kanganies to raise their rates also, but that has yet to be seen, especially if recruiting by professionals is practically to be confined to Indentured labour, and there was a remarkable consensus of opinion amongst the various delegates that the wages at present paid are quite insufficient to attract the Tamil coolie, in any numbers, to this country. There can be no doubt that if the Rubber industry is to achieve the success which is at present foreshadowed, the importation of very large numbers of coolies in the near future is distinctly indicated. It will not do for planters to wait until their trees are actually ready to tap, and then look round for labour and expect to find a sufficient supply at hand. Your Committee wish earnestly to impress upon you their emphatic conviction that there exists the most urgent need for anticipating a serious scarcity, by importing labour now largely in excess of present requirements, and at the same time they desire to again

record their appreciation of the strenuous efforts of the Government to get into closer touch with the great labour market of India and, whilst endeavouring to procure sufficient coolies for their own requirements, at the same time to keep in line with unofficial employers.

**EXPERIMENTAL GARDENS.**—During June, 1902, the Committee appointed by the Resident-General to confer with and advise the Superintendent, paid a visit to these gardens. At this time the land had not been finally acquired, and there was but little progress to report. Since that date no official inspection by the Committee has been made, but it is reported that some 60 acres have been felled and cleared, and that the Superintendent's bungalow, with a considerable approach road, has been built. The next report of the Committee, following a further inspection which will be shortly made, will be awaited with interest. The Superintendent has compiled an elaborate treatise upon the extraction and preparation of latex from the Pará Rubber tree (*Hevea Braziliensis*), accompanied by extensive statistics in connection with his experiments. The samples of rubber prepared by him were reported upon by the London experts, at the instance of the Kew Garden authorities, with the most satisfactory results, the best quality being valued at 4/4d. per lb. Your Committee are of opinion that the treatise referred to above is a most valuable contribution to the literature of Rubber, and that the Superintendent has succeeded in absolutely dispelling the idea prevailing in certain quarters, that the rubber produced in this part of the world is of inferior quality.

**AGRICULTURAL BULLETIN.**—This periodical has not only survived the first year of its existence, but is growing in popularity as it is becoming more generally known. A great all-round improvement upon the first numbers has been effected, and some very instructive photographs have been reproduced successfully. The opportunity provided in its pages for the exchange of ideas upon matters agricultural might certainly be more fully availed of, and it is to be hoped that additional interest in this respect may be evidenced during the coming year.

**AGRICULTURAL SHOW.**—It has been decided to hold an Agricultural Show at Kuala Lumpur in July, 1904, and a Committee has been appointed to arrange preliminaries, but at present no definite programme has been drawn up.

**PUBLIC AUCTIONS OF COFFEE.**—This question has, for the time being, been shelved, those interested in Singapore, with whom the matter was left, not having so far made any move.

**SAVINGS BANKS FOR COOLIES.**—The idea of providing facilities for coolies to put by their savings, was suggested to your Association, and recommended to the authorities for consideration, the Protector of Labour signifying his sympathy with the proposal.

**CUSTOMS DUTIES ENACTMENT.**—This has been amended at the instance of your Association, and now stands as below with respect to the export duty on coffee of all grades.

**INSECT PESTS.**—White ants (*Terms gestroi*).—The ravages of this pest have been perceptibly less since it has come to be recognised that a disturbance of the soil round the area of attack, and the destruction of the jungle wood on the ground in which they breed, notably nibong stumps and trunks, do more to disorganise their operations than any other treatment. The percentage of affected trees which actually die, is now comparatively small, at any rate on alluvial land. On the hills it is of course more difficult to get at the ants on account of the depth to which they go, but even there, no more satisfactory remedy than continual disturbance wherever they make their appearance, has yet been discovered.

**THE BEE HAWK MOTH.**—The caterpillars of this species have, during the past year, caused a great deal of anxiety to owners of coffee estates in the Klang district. It has only been by the most sustained effort and the expenditure of very large sums of money, that their ravages have been kept within bounds. A feature of the attack has been its persistent recrudescence, in spite of the apparent completeness of the measures taken for its suppression. A small batch of Ceylon crows were imported by the Government at your Chairman's suggestion, in the hope that these useful birds would settle in the country, and perhaps help, in course of time, to keep the caterpillar pest down. The experiment has so far proved a success in that the birds readily devoured the caterpillars when supplied to them whilst in captivity, and have not since their release deserted the locality. It yet remains to be seen, however, if they will breed.

**COCOANUT BEETLES.**—"The staff which I hope shortly to have at my disposal will, I believe, prove sufficient to carry out the necessary measures for the protection of cocoanut trees, and I trust that before long the disastrous effects caused by the present ravages of the beetles, may be minimised as much as possible." The above is a verbatim extract from a letter addressed by the Federal Inspector of Cocoanut Trees to your Association, when first he entered upon the duties of his appointment, and your Committee have great pleasure in testifying to the excellence and already far-reaching effects of the measures that have been taken for the suppression of the beetle pest. It does not seem too much to hope that within the very near future a serious danger to an important industry will have been averted by the ready and liberal assistance extended by the Government at a most critical juncture.

**CHIEF PLANTING PRODUCTS—COFFEE.**—In spite of the fact that most of the large coffee estates are now thickly planted through with Pará Rubber, which will undoubtedly kill the former product in course of time, the export of coffee from Selangor alone in 1902 amounted to 48,906 piculs, against 37,664 piculs for the previous year, an increase of no less than 11,242 piculs, or about 30%. This result can only be due to the fact that a large acreage has just come into full bearing, and your Committee consider that the returns for 1902 will probably constitute a record for the F. M. S., and further that in two years' time the export will not amount to

**CELEBRATED OILMAN'S STORES.**

much more than half its present proportions. During the season under review the extensions in coffee alone have been practically nil, but in some cases it is being planted as a catch crop with Pará Rubber at varying distances through the fields, and, of course, if this system appeals to investors, it may be that there will be a continuous, if lessening, supply for some time to come. The outlook, however, is by no means encouraging, and although well opened estates on rich alluvial land can, even at present prices, be worked at a profit, still the counter attractions and prospects of Pará Rubber, Rembong, and Cocoanuts, will probably divert attention from coffee.

**COCOANUTS.**—A return is attached showing that the export of copra from Selangor in 1902 amounted to 15,136 piculs, towards which practically nothing has been contributed by European-owned plantations, which are only now coming into bearing. Splendid growth is reported on all sides and it seems probable that by the time the trees are five years old, heavy pickings will be commencing. From an estate in the Jengra district, four years and four months old at the end of 1902, thousands of nuts are already coming in, and there are many individual trees carrying over 100 each. Given freedom from the beetle pest, there can be no doubt that such fine results must very soon attract capital to the country, especially as the cocoanut planter, his estate once opened, can usually be assured of sufficient labour for his requirements; Chinese and Malays, neither of whom are much used on coffee and rubber estates, being generally available when Tamil coolies are hard to get.

**PARA RUBBER.**—Statistics (incomplete though they are at present) serve to some extent to show how important an industry is growing up in our midst. It is a significant fact that from Ceylon comes the most pronounced inclination to invest in this product. Ceylon planters and capitalists, with the decline of coffee, have had little cause to congratulate themselves on their connection with the Malay Peninsula, yet it is undoubtedly owing chiefly to the visits to, and personal inspection of, our rubber estates, by some of their foremost men, that they are willing and anxious, if they can get an opportunity, to put more money in. Such support, in

your Committee's opinion, is of infinitely greater value to the country and to the enterprise, than would be the influx of capital where expert knowledge on the part of its investors, was absent. As far as it is possible to judge at present, the Malay Peninsula appears to possess every factor necessary to the successful cultivation of rubber. Climate, soil, transport facilities, the quality of the product, and the yield of the trees, leave little to be desired. As regards labour, this country is at any rate, infinitely better off than any other with which we will be brought into competition, excepting Ceylon, and India itself, where, however, some of the other conditions are far less favourable. It may be contended that little is known of the yield over a large area, which is true, but, on the other hand, we do know what considerable numbers of indifferently cultivated individual trees have given, and there is no reason whatever for fearing that our average yield will be less than that of any other country. The vexed question of the proper distance to plant, has yet to be settled, and your Committee would urge upon all those interested, to institute experiments, if they have not already done so, with the object of arriving at a definite conclusion. The distance perhaps most in favour at present is 15 feet by 15 feet, which, allowing for sites for buildings, roads, etc., gives about 175 trees to the acre. 10 feet by 10 feet planting provides more than double that number, and it is a question for serious consideration whether the closer distance is not the best, in view of the very slight additional outlay, and the fact that superfluous trees can always be removed at will. Providing the cost of collection be not prohibitive, the best financial results will be secured from the largest returns per acre, not per tree, and although it must be apparent to all that a space of 10 feet is not sufficient for a tree with a natural spread of, say, 60 feet, still, it is possible that the gross returns from six small trees may be more than from one large one, and also that a system of coppicing may be introduced, or some other method for artificially retarding the upward and whippy growth, and thickening the stems, with a corresponding increase in yield. If such a result can be achieved, those who have their estates planted 20 feet by 20 feet, will find themselves unable to put matters right, for supplies, and additional trees, planted after their neighbours have had a year

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacob's Oil is far more efficacious than in the old days. To-day St. Jacob's Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

**RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,**

And all Aches and Pains usually treated by outward application.

**IT HAS NO EQUAL ON EARTH AS A PAIN  
RELIEVER.**

*It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.*

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacob's Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacob's Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

## AFTER DINNER

thirty drops of Seigel's Syrup ensure complete digestion, and prevent the pain and torpor consequent on indigestion. Seigel's Syrup builds health on good digestion, for 'tis not what you eat, but only that which you digest nourishes your body and sustains your life.

"For several years," says Miss Ethel Williams, of 9, Wemyss St., Sydney, N.S.W., "my life was rendered miserable by indigestion and general debility. I could not sleep at night and was often afflicted with severe sick headaches and bilious attacks. An old friend recommended Mother Seigel's Syrup. Within a week I discovered it was doing me substantial good. Eight bottles completed my cure."

### AIDS DIGESTION.

or two start, rarely make good growth. The best method of tapping has not yet been definitely settled either. Ceylon planters appear to favour small V-shaped incisions cut fresh every day. Short herring-bone cuts, gradually widened out by the daily removal of a thin slice of bark, to make the latex flow afresh, are most in vogue in this country, and some interesting experiments are now being carried on in the Singapore Gardens under the direction of Mr. Ridley, which may prove to be the best of all. The injury to the tree is practically nil, only a small piece of bark, about 2 inches long by  $\frac{1}{4}$  inch wide, being removed at a time, and although the daily yield is naturally very much less than by the other methods, the cuts being few and far between, still it seems probable that tapping may be continued almost the whole year round, which of course has also an important bearing upon the distribution of labour. The curing of the latex is now so thoroughly understood that no remarks upon the subject are called for here, but your Committee would draw your attention to the unanimous opinion of all the manufacturers that absolute purity and freedom from foreign matter, is the most important point of all. The latex is easily strained, and all impurities removed, and if, in course of time, over-production begins to make itself felt, those who have established a reputation for the quality of their produce will be the last to suffer.

**GUTTA REMBONG (*Ficus elastica*).**—A small sale of this rubber from about 4-year old trees was put through at \$190 per picul, the average yield per tree being about 10 oz. The lot in question was the most ordinary "scrap" and for really good stuff a much higher price would probably have been paid. The cost of collection was very heavy, the quantity being only a very small one, still the margin of profit is sufficiently wide, at the price quoted, to make the cultivation of Rembong well worth considering. This variety has the advantage of yielding nearly two years sooner than Pará, and gives a heavier return per tree. It is also cheaper to

open, being planted not less than 30 feet by 30 feet spreads with great rapidity, consequently keeping the weeds down well, and is indigenous to the country. It moreover grows with great luxuriance in well-drained peat land where no other cultivation does any good at all. Tapping is easy, and requires nothing like the care that is necessary with Pará, but the latex is slow to coagulate, when poured out it pans, and the value of really good Rembong "biscuits" is at present an unknown quantity. The idea seems to be that the quality of this rubber is inferior, but so little is known about it when really carefully prepared, and the price realised for the "scrap" referred to was so satisfactory, that it would certainly appear to merit much greater attention.

## MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated May 8th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1902-1903	1,458,070	1,044,106	76,827
1901-1902	1,582,977	1,102,687	76,925
40,006 pkgs. INDIAN	Total 64,372 packages were offered in public auction this week.		
22,788 " CEYLON			
1,578 " JAVA			

The month's deliveries appear at first sight somewhat disappointing, but clearances in April last year were heavy in anticipation of the Budget, thus unduly depleting London bonded stocks. This year, on the contrary, duty payments before the

Budget were extremely light, while the working days left in April after its declaration were too few for figures to adjust themselves. Clearances so far this month have been very heavy.

Imports of all tea from 1st June to date are considerably less than those of the same period last year, and very far behind the previous year.

INDIAN.—Owing to the large quantity brought forward, buyers displayed considerable hesitation in Monday's sale, and a large proportion was in consequence withdrawn, the teas which sold showing but very little change in price. Wednesday's sale passed with more spirit, confidence among buyers apparently having been restored, while many lots withdrawn on Monday were sold at better prices. Exports to U. K. for the whole of April 243,000 lbs., against 641,000 lbs. last year. Averages:—"Doom Dooma Co. Samdang" and "Seeyok," 1/-; "Amal T E Co. Nahor Kutia," 11½d.

Week's av. of tea sold on Garden Account 1903, 32,478 pkgs., av. 7.74d. 1902, 21,728 pkgs., av. 6.66d.

Tea sold on Garden Account 1st June to date 1902-3, 1,135,663 pkgs., av. 7.49d. 1901-2, 1,257,860 pkgs., av. 7.67d.

CEYLON.—The sale passed with fair spirit, and although prices were in some instances irregular, the general tone was fairly steady. Exports to U. K. for April 8,250,000 lbs., against 9,00,000 lbs. in 1902; from 1st January 31,500,000 lbs., against 34,750,000 lbs. last year. Estimate for May 8½ to 9 millions, against 9,750,000 lbs. shipped last May. Averages:—"Sutton," 1/-; "Valamaly," 11d; "C. T. P. Co. Waverley," 10½d; "Dimbula V. T. Co. Tilli-coultry," "Henfold" and "Nuthourne," 9½d; "Drayto," "E. P. & E. Co. Norwood," "Ritnageria Dimbula" and "Talawakelle," 9½d.

Average for week 7.69d, against 6.55d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 338,486 pkgs., av. 7.66d. 1902, 394,800 pkgs., av. 7.04d.

JAVA.—The teas were mostly sold in the room, although prices were perhaps a shade irregular here and there.

### PEPPER.

Firm. In auction 210 bags Alleppy sold at 6d for good, 186 bags fine heavy Tellicherry at 6½d. Fine heavy bold Singapore sold at 6½d, light shelly 4½d, and greyish bought in at 6½d to 6½d. Of *White pepper* 127 bags Singapore offered, and 40 sold at 11½d for fine bold coriander kind; good 10½d to 10½d, fair to fully fair

(AVERAGE FOR ALL INDIA 7.74d., MAY 8TH.)

													6	6

In these tables all packages are chests unless otherwise stated. ½c stands for half-chests; p for packages; prices marked thus † represent the highest offer in the room. In calculating these averages two half-chests or four boxes are taken as equal in weight to one chest.

9½d. Privately the market for Singapore closes firmer with spot sales at 6½d, and a good business in April-May at 6½d, April-June 6½d, and August-October 6½d per lb. White pepper is firm at 9½d for fair Singapore, and 9½d for fair Penang.

### GINGER.

At auction the heavy supply of 1,411 barrels Jamaica offered, of which the larger proportion sold at rather irregular, but full prices. Good to fine washed brought 52s to 58s, medium dullish to medium washed 42s to 49s 6d, small dullish 42s to 42s 6d. Private advices from Jamaica state there are not likely to be any large shipments later in the season, as was the case last year, and the feeling generally is to hold for firm prices. Unsorted native cut Cochin sold at 53s, small cut being bought in at 42s 6d, bold 72s 6d to 75s. and selected 85s. D. rough ends brought 34s, good cuttings 37s 6d, cut tips 42s 6d per cwt.

### CINCHONA.

The N. V. Nederlandsche Veem at Amsterdam reports the shipments from Java to Europe during April, 1903, at—

Year.	Amst lbs.	Year.	Amst lbs.
1903 ...	1,074,000	1897 ...	560,000
1902 ...	1,000,000	1896 ...	419,000
1901 ...	800,000	1895 ...	615,000
1900 ...	530,000	1894 ...	515,000
1899 ...	996,000	1893 ...	649,000
1898 ...	856,000		

#### Total Shipments January-April.

Year.	Amst lbs.	Year.	Amst lbs.
1903 ...	3,378,000	1897 ...	1,910,000
1902 ...	3,155,000	1896 ...	2,492,000

1899 ...	3,027,800	1893 ...	2,530,000
1898 ...	3,202,000		

### QUININE.

Practically no business has been done this week. Nearest value is 11½d per oz, spot, in second hands.

### CINNAMON.

At auction ten bales Tellicherry offered and sold at 7½d per lb. for broken quill; 25 bags Ceylon sold at 9d for broken quill, 6½d for quillings, and 2d for coarse chips and bark.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JUNE 6, 1903.

[No. 23.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 12th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*Weather*—Wind S.-W. Days fine.

Last week the clouds hanked up so much, that it seemed the monsoon was on us ; now there is no appearance of the same. *Works*—Mapure progressing. *Borer*—Very slight. *Pruning*—Still on, there is an extraordinary quantity of dead work from the December rains. *Health*—Good. *Labour*—Abundant. *Interesting item*—The appearance of the countryside with the denes bright green is now lovely.

### THE INDIAN TEA CESS.

At the first meeting of the Committee appointed to administer the Indian Tea Cess the Hon'ble Mr. G. L. ACWORTH represented the U. P. A. S. I., but we have not yet heard whether the Madras Chamber of Commerce was represented or not. The Committee appears to have settled down promptly to work. A Sub-Committee was appointed to consider the draft rules forwarded by Government. This is a very necessary preliminary to the opening of the campaign. For the purpose of carrying that campaign on, an Executive Committee was appointed. The members will transact the ordinary business connected with the administration of the Cess, and will no doubt issue periodical reports. A Secretary and an Assistant Secretary were appointed. So much for the organization of a working staff. As regards work to be undertaken, it was resolved that a bonus of 6 pies per pound be offered on four million pounds of green tea to be made during the current season. This will absorb Rs.1,25,000, if the tea is forthcoming. And then the interests

of Southern India were dealt with. The Executive Committee was empowered to allot a sum of Rs.12,000 for the purpose of tea exportation to Southern India at the rate of 2,000 a month for six months, the funds to be remitted to Messrs. PARRY & Co., Madras, for allocation. Lastly, it was resolved that the actual expenses of the members travelling to attend the General Meeting of the Cess Committee be paid from the Cess Funds.

This recognition of Messrs. PARRY & Co.'s work on lines similar to those of the Indian Tea Markets Commission will be noted with great satisfaction by Travancore and Nilgiri planters, and is doubtless due to representations made by the Hon'ble Mr. ACWORTH. It is gratifying to note that this gentleman also made another attempt to ally the interests of the South with those of the North. Speaking with reference to the St. Louis Exposition, Mr. ACWORTH expressed the hope that it would be possible to raise about Rs.25,000 in Southern India, provided—(a) that the United Planters' Association of Southern India was permitted to exhibit coffee and cardamoms in addition to tea ; (b) that if brewed tea were sold, brewed coffee might be sold ; and (c) that the Association might have a special show-case of its own in the Tea Pavilion. We are not aware how far Mr. ACWORTH had authority for the above statement regarding probable collections. As far as we have been able to gather, coffee-planters have not shown any great interest in the St. Louis Exposition. There seems to be an idea that, as the United States can have supplies of "mild" coffees from Central and South America—which have a geographical advantage over India—it would be waste of money for India to attempt to find in the States a market for her coffee. We do not share this view. Therefore, we are extremely glad to see that Mr. ACWORTH has taken the matter up. In his estimate of Rs.25,000 he has probably taken into account the probability that assistance may be received from Government. But planters must be fully aware that no such grant is likely to be made if they themselves show symptoms of half-heartedness. While not sanguine that the Americans will ever make large purchases of Indian Coffee, we are certainly of opinion that they might be induced to become customers ; and it must be remembered that every additional ton that can be disposed of in the States is a ton less to be offered in the already overburdened markets of Europe.

In this connection we may say that Mr. ACWORTH gave the Tea Cess Committee some particulars of the progress made in Southern India in the work of pushing the sale of Indian Tea among the native population, most satisfactory progress having been made. This is work that ought to be done in respect to Coffee as well as Tea. Messrs. PARRY & Co., of Madras, and Messrs. ANDREW YULE & Co., of Calcutta, have alike expressed their inability to push coffee as well as tea. This, however, does not lessen the urgency of the need for Coffee sales to be pushed among the natives of India. They number many millions, and if only a small percentage of them can be induced to become regular consumers of Indian Coffee the effect on the planting industry must be great. In the long run, of course, expansion of this kind might help Brazil more than India, unless a Preferential Tariff system were adopted and Indian Coffee, among other products, protected against foreign rivals. Still each *new* consumer of coffee, whether Indian or other, helps to improve the position of the coffee market generally. No effort should be spared to make converts to the creed of coffee drinking. Besides, if planters put their backs into this work and show that they are as energetic in the coffee as in the tea branch, they will have so much the more right to speak on the day, should it ever come, when Mr. CHAMBERLAIN obtains the mandate of the British public to adopt a system of Fiscal Union with a preferential tariff in favour of all parts of the Empire and reasonably protective as against foreign competition. The Indian coffee industry is now small as compared with the Indian tea industry, but perhaps there is yet a chance of the former recovering some of its lost glory.

## THE BOARD OF TRADE RETURNS.

APRIL 1903.

**Cocoa (Raw).**—Movements of this article in the United Kingdom last month appeared very irregular when compared with those in April, 1902, and the position of the bonded stocks was completely reversed.

In the first four months.	1903.	1902.	1901.
Imports ... lbs.	22,464,868	26,319,737	20,562,305
Home consumption ..	15,258,344	23,360,784	19,252,183
Exports ...	4,063,274	4,485,095	3,401,192
Stocks in bond ...	13,601,000	10,953,000	14,607,000
Value of imports ...	£649,882	£780,804	£618,669
Do. exports ...	125,372	126,368	110,916

**Cocoa (prepared).**—In most cases there were increases over the totals in 1902, and the stock in bond was nearly thrice what it was then.

In the first four months.	1903.	1902.	1901.
Imports ... lbs.	3,573,955	2,918,812	2,806,815
Home consumption...	3,322,243	2,845,182	2,719,019
Exports ...	142,320	246,711	303,092

## COFFEE NOTES.

**Coffee Shrinkage only 135,000 Bags.**—This day, Tuesday, says the *Tea and Coffee Trade Journal* of 5th ultimo, it seemed on the Coffee Exchange that the visible supply of coffee on May 1 would have shrunk only 135,000 bags. A shrinkage of at least 200,000 bags had been expected. It would appear that the arrivals of mild coffee in Europe had been unusually and unexpectedly heavy. At the time of this writing the Coffee Exchange had heard from all its correspondents except the one in New Orleans.

Arrivals of Brazil coffee in the United States in April were 513,039 bags and the deliveries 513,620 bags. The world's visible supply April 1 was 12,380,627 bags.

The 1903 crop of washed Caracas is said to be only 70 per cent. of that of last year. Maracaibo is also said to be less in quantity than last year.

**Coffee in 1903.**—There is a capital chance to work up a profitable coffee trade this year, says the *Grocer*. There is a bumper crop, and prices are low. Some very fine coffee is to be had at quite reasonable prices. Those who have already a large coffee trade are to be congratulated; they seem in for a good time. Coffee may not be so much a Summer as a Winter drink, but it is becoming increasingly popular amongst the male sex as an after-dinner beverage. The ladies stick to their old favourite—tea. The trade in the numerous cafés is pretty good evidence of the improving demand for a good cup of coffee—even in Summer. It is strange how many of us, grocers dawdle with the coffee trade, often resolving to go in for pushing it properly, but getting no farther than the resolution. Now is the opportunity. It is also very likely that now is about the time to lay in a bit of stock.

**The U. S. Coffee Market.**—Coffee prices are a little easier in the actual coffee world so far as the Brazil grades are concerned, says the *Tea and Coffee Trade Journal* of 5th ultimo. Rio No. 7 is now quoted at 5½c. In the option market the week has been somewhat irregular but certainly flat. Prices on the Exchange hover around the 3.70 to 3.75 mark for May. Now and then on the seemingly better tone of the European markets there is a slight advance, which is usually lost on the full Santos interior receipts. A flat period seems in order for some time. The recent activity and the low option price was caused by the heavy liquidation of May coffee and this force has now spent itself. Neither bull nor bear is disposed to do much, prices ruling not being fanciful to the stomachs of either. The year's Brazil stock still grows but deliveries remain very large and in excess of receipts so that the world's visible supply for the first of May should show a decrease of 225,000 bags. The Brazil markets remain too high for business from this side, but the quiet condition seems to have no effect easing the market there. In New York the spot market for spot invoices is uneventful and therefore dull. Closing prices are: Rio No. 8, 4½c.; Rio No. 7, 5½c.; Rio No. 4 5½c.; Santos No. 4, 6c.

Jobbing is reported light, especially in the interior where trading is mostly hand to mouth. Seemingly buyers effect some fall in prices out of the low quotations in the recent market for coffee on the Exchange. Evidently there is much need of a more accurate interpretation of the proceedings on the Exchange. Certainly the little learning afforded by the daily Press is a dangerous thing.

In mild coffees the better grades are receiving some attention from jobbers and prices rule steady. Good Cucuta is quoted at 9¼c. All commoner grades are flat. East India growths are quiet.

It is, says the *American Grocer* of 29th April, the same old story of big visible supply; prospective heavy crops next year; fair demand; overloaded speculative interests trying to realize. Options show no change from 3.75c. as the lowest Spot No. 7 sold at 5½c., but, owing to the comparative scarcity of that grade, there is considerable premium over Exchange quotations. The market closed at 5¼c. for No. 7 Rio; 6½c. for No. 3; 6c. for Santos No. 4. Deliveries are

fair; speculative trading rather light in volume. Mild sorts in fair request; firm for Cucuta, with 9c. easy for Good; Java sorts quiet and steady.

Mr. Arnold Shramm, in commenting on the mild coffee situation, said that trade was quiet. The demand for some grades was fair and Bogotas, as well as unwashed Merida and Cucuta, were the principal sellers. Other kinds dragged. Jobbing lots of good Maracaibo were held at 9c.

Offerings of the low grades of Brazil are light, as a result of the limited supply here.

Offerings of jobbing lots of high grade old crop Maracaibo coffee were readily absorbed at prices ranging from 10c. to 12c., according to grade.

A new low record price for coffee futures was established when May option was sold at 3.70c. per pound.

Advices received from Maracaibo noted that prospects indicate small receipts of Cucuta coffee there for some months to come, as the revolutionists are getting stronger and gaining ground in the neighbourhood of Colon, a town which is between San Cristobal and Cucuta and commands the river through which the coffee must be transported and where it is likely to be blocked.

Advices from Brazil say that the prospects of the coming Rio crop in Rio de Janeiro and Minas are most promising, another record being most confidently spoken of, some placing possibilities as high as 5,500,000 bags. As the weather continues favourable there is every probability that the crop will be earlier this year than usual.

During 1901 Coffee to the value of £12,000 was imported into Galveston (Texas). In 1902 this trade only represented a value of £3,413.

Coffee to the value of £24,480 was imported into Alexandretta in 1902, as against £28,925 in 1901. It was mostly from Santos, very little Mocha being included. There are, by the way, several firms in Calcutta who trade direct with Aleppo, though not in Coffee. Mersum took last year coffee to the value of £8,200, and Adena coffee to the value of £9,647, but not a berry from India.

## TEA NOTES.

**The U. S. Tea Market.**—Listless conditions are observed in the tea market, says the *Tea and Coffee Trade Journal* of 5th ultimo, but owing to the lack of supplies of teas in demand prices remain steady and in the main unchanged. A good-sized order could probably obtain concessions. Monday business began to stir somewhat.

Interest, of course, is now centered in the opening markets in the East. They are high beyond all reason and excite the astonishment of all tea traders. Competition among grocers acting independently of exclusive tea importers permits the Easterners to squeeze the Western buyers, and they are therefore in much and we are out proportionately. In the situation the Japanese were enabled to advance their market 5 cents last year, and this year so much as 10 cents. The Formosa market has shown advances though not so drastic. Unless some understanding is reached ere long, the prices of these teas will be so advanced as to prohibit buying on the part of the consumer. Extreme prices in tea are

damaging in the face of the extremely low prices ruling in coffee. Consumption proceeds along the lines of least cost.

No more rumours are heard of exports of Congous. It would seem that probably some 2,500,000 pounds have been exported since January 1, and that so large an export should not have had a decided influence on the quotations for Congou shows that the quantity of the tea in the American warehouses has been larger than supposed. The tea still seems too heavy to permit market buoyancy. It is to be noted too that in England it is reported that so far very few of these teas have been met with, which would indicate such handling over there that the tea shall not suddenly lower the prices of teas.

London advices say that a good demand has again predominated for all grades up to 7½d., and previous rates have been fully maintained; medium and better teas, however, continue slow of sale, but there is no material change in prices. In China teas there is a fair demand and prices are firm. In Indian teas prices on average ruled steady. All grades up to 7½d. met with good competition, and firm rates were realized, while above that price the demand was slow, but quotations showed little change from those previously ruling. In Ceylon teas a good demand prevailed for all grades up to 7½d., and prices ruling before the holidays were fully maintained, while above that price the demand was slow, but there is no material change in quotations.

**Tea in New York.**—There was, says the *American Grocer* of 29th April, a large export demand from England for Congou teas, and bids on 15,000 packages at a price slightly below spot quotations here were made, resulting in fair-sized transactions.

The shipments of tea from New York to London for this year up to date were unusually heavy and amounted to a total of 37,997 packages, of which about 35,000 packages were Congous and 2,000 packages were Indias.

According to brokers' views it is expected that the market for new crop Japan will open at about the latter part of this week. New crop Formosas were offered at 15c. to 16c. per pound.

Mr. A. R. Robertson, in expressing his opinion about the tea situation, said that importers and jobbers are carrying only small stocks, and such demand as manifests itself is met with a general firm tone in prices.

**Tea by the Siberian Railway.**—The British Commercial agent in Russia reports that, with the forthcoming opening of regular traffic on the Manchurian Railway, the tea trade will receive a considerable impulse from the direct communications organised by the new line, with the steamer service attached to it, enabling tea to be carried direct from Hangkow, Shanghai, and Ceylon (for Ceylon tea) to the chief stations of the Siberian and Russian railway systems, including Moscow, Nijni, St. Petersburg, and Warsaw. The full cost of delivery per pound (36 lbs.) of tea from the above-named ports will be from 4.79 roubles to 5.1 roubles to Moscow; 5.8 roubles to 5.30 roubles to St. Petersburg; and 5.31 roubles to 5.53 roubles to Warsaw, according to port of despatch.

Messrs. George White & Co. in their Report, May 14, say: The sales passed with a better tone, and, generally speaking, any movements were in sellers' favour. A satis-

factory feature was the wider inquiry for the higher grades, especially Broken Pekoes, from 8d. to 10d., such often marking an improvement in price. The exceptional value which has for some time been available in good medium to fine qualities in comparison with common Tea is attracting more attention, and this feature of the market is being brought before the public by distributors. As an example of this an advertisement has appeared in a well-known trade journal in the form of a black page bearing the inscription in white letters, "Execution of Common Teas." It is not, however, necessary to advocate this drastic measure, but both Indian and Ceylon growers of the fine article would certainly welcome any movement calculated to raise the value of their produce in some proportion to the enhancement which has taken place in the lower grades.

Tea is coming into increased use in Aleppo as a beverage. Thousands of Circassians residing to the East of Kaisered drink much tea which at present reaches them from Russia or Persia. The British Consul reports:—"No drinkable tea is sold in this country, and yet that sold commands an excessive price. This trade needs to be developed." It is also stated:—"Indian teas are becoming popular; but no good teas are imported, and prices are comparatively high. The trade could easily be increased considerably."

**Improved System of Drying Green Leaf.**—Mr. G. W. Suttan writes from London to the *Indian Planters' Gazette*:—The manufacture of good tea is dependent to a great extent on the leaf being withered naturally, and having it ready to start to roll early the next day. To do this most factories are provided with space to accommodate for the natural process of withering one and a half to two days leaf, and in addition to this a withering chamber with fans for drawing a current of warm air through the chamber is arranged to accelerate the withering in the rainy season. Even with all this accommodation it frequently happens during the rains the leaf is not sufficiently withered to roll till late in the day, and it has to be rolled under-withered to make room for the incoming leaf.

Every planter knows he cannot make as good tea out of leaf that has been on the withering racks for more than 18 hours, or from leaf that has been artificially withered. To get over the difficulty in a way, several methods of artificial withering have been brought out, which have met with a fair amount of success; but it appears to the writer the inventors have not gone thoroughly into the question of why it takes the leaf much longer to wither on a wet day, than it does on a bright hot sunny day. Of course we all know the leaf plucked on a bright hot sunny day has little if any moisture or rain water among it, and only the weight of the basket is cut from the total weight of the leaf and basket; but on the other hand we have to cut at least half the total weight of a basket of leaf on a pouring wet day, i.e., a basket of leaf weighing 20 lbs. (including basket) the plucker would be credited with 10 lbs. of leaf, and of the rest, 6 lbs. would be cut for water, and 4 lbs. for the wet basket which is only just sufficient, as one often finds out at the end of a week's continuous rain, when all the leaf plucked during the week has been manufactured into tea. So for every 10 lbs. of leaf we take 6 lbs. of water with it to the withering house, which has to be evaporated before the leaf can commence to

wither, and when the air is saturated with moisture (as it generally is in wet weather) it cannot possibly take up any more moisture, so the leaf is kept alive on the withering floors or racks until the sun comes out and warms the air sufficiently so as to make it absorb the moisture, or the leaf has to be collected and spread in the withering loft to be placed in contact with heated air set in motion by means of fans; in either case, the surplus water has to be evaporated before the withering process can commence.

By putting the stalks of fresh cut flowers into water, we can keep them fresh and sweet for days by changing the water, but directly we take the flowers out of the water and leave them for a few hours they wither up and die. Precisely the same action takes place with wet leaf, as the rain-water among the leaves gives them something to feed on and keeps them alive, but not being able to change the water it soon becomes putrid and taints the leaf.

Notwithstanding the large amount of withering space most factories are provided with, there are times when the leaf has to be collected very thickly in the withering houses, and it has to be turned over several times to allow the air to get into it to prevent the rain-water amongst it going bad and tainting the leaf before it can be artificially withered in the loft or spread thinly on the withering floors or racks with the hopes that it may be withered naturally.

Of course this means an enormous amount of labour to handle the leaf, besides knocking it about and damaging it, and the wear and tear on machinery and a large consumption of fuel used in the dryers to warm the air as it is drawn into the withering lofts, and after all this expense in labour and fuel, the quality of the tea is very inferior to that which was being made during the fine weather with a natural wither.

When walking through parts of the gardens that have been plucked (more especially in wet weather), I have found a few shoots left on the bushes and have plucked and put them in my pocket, and on returning to the bungalow, taken them out of my pocket and put them on the table in the verandah. I have noticed this leaf, if left there, has been well withered hours before that brought in by the pluckers at the same time; some may say it withered quickly because it was spread thinly on the table, that may be one reason, but I maintain the real reason was that the lining of the pocket absorbed the moisture from the leaf, so it had nothing to feed on and keep it alive, therefore it withered. Anyone can try the experiment by taking two handfuls of wet leaf and place one in a dry cloth and press the water out with slight pressure so as not to damage the leaf but to dry it, and place this handful along side the other handful of wet leaf on the table, the result is naturally the dried leaf withers hours before the wet. It is a very simple experiment and proves we could get over the difficulty of withering leaf in wet weather if we extract the rain-water from the leaf before it was spread out to wither.

It can be easily done as will be seen below and will save an enormous amount of labour, fuel, withering accommodation, and late work, beside improving the quality of the tea.

I have patented an improved form of machine called the "Green Tea Leaf Water Extractor" for extracting the rain-water from the leaf as it is being weighed into the factory on a wet day.

On a wet day instead of the pluckers taking the leaf to the withering houses they empty the contents of their baskets

into strong open-work canvas bags hung up in a convenient place, each bag will hold about 50 lbs. of leaf, three of these bags full of leaf are placed in the "Green Leaf Water Extractor" and after being whizzed round in the machine for three or four minutes the rain-water is expelled by centrifugal force; the pressure on the leaf is gradually applied as the speed of the revolving cage increases and flattens it out against the side of the cage until all the water has been squeezed out and expelled from it by the centrifugal force.

When it is seen no more water is being expelled from the leaf the driving belt is moved on to the loose pulley and the revolving cage is gradually stopped by a hand-brake and the centrifugal force pressing the leaf ceases, and allows the leaf to open out in the bags and resumes its original form. The three bags of leaf are then removed from the machine and carried away to the withering houses where it is spread out thinly to be *naturally* withered, which it does, *no matter what state the atmosphere is in*, as it has *no water* among it to keep it *alive* as already explained. The leaf is *not damaged or bruised* in any way and it can be treated by the "Green Leaf Water Extractor" almost as fast as it is being weighed into the factory.

By adopting this process a great *saving in labour* is effected, as the leaf only requires to be collected *when withered* and taken to the rolling machines; also a *reduction in the area* of the withering accommodation which entails a *heavy annual expense in repairs* and a *saving in fuel* used in the dryers to *heat the air* for the withering loft, and unnecessary wear and tear on machinery and the *furnaces* of the dryers.

Not only will these "Green Leaf Water Extractors" be most useful during *wet weather*, but it frequently happens during a bright hot day a heavy storm of rain comes on just before the leaf is brought in and soaks the leaf in the baskets, so that it has to be spread in the withering loft to be *artificially withered*, which would be avoided if it were treated in a "Green Leaf Water Extractor" before being spread out to wither.

A 36-inch diameter "Green Leaf Water Extractor" occupies a ground space of 4 feet by 9 feet including countershaft. It requires about 3 H.-P. to start the machine. It takes about four minutes to treat a charge of leaf from start to finish.

The wearing parts are well proportioned, and of ample strength, and the general construction of the machine is neat, strong, and well finished off.

When experimenting with the various types of "Hydro-Extractors" on the market, I found the revolving baskets generally in use were not suitable for treating Green Leaf, but I have designed a special form of basket which gives excellent results. Although the external casing of the machine is adhered to, and many may think any "Hydro-Extractor" will answer the purpose; but this is not the case as I have proved.

Another important improvement in this machine, is the driving pulley on the countershaft is fitted with a Patent Automatic Friction Clutch, which allows the revolving basket, containing the leaf, to start slowly, and gradually increase its speed, by this means the leaf remains stationary in the basket, and it is not turned over or knocked about, as would be the case with fixed pulleys, it also prevents any sudden checks being imparted to the belting, shafting, and engine when starting the machine.

These machines can be fitted with a steam engine or water turbine, and can be placed in any part of a Factory or Leaf House, and thus be independent of shafting and belts.

The *Merchants' Review* of 1st ultimo lets itself go thus:—  
 “*Planting Opinion* of Madras thinks there should be a market for Indian Coffee in the United States, and would have the St. Louis Exposition utilized for the purpose of finding an opening. As all kinds of East Indian coffee have hitherto brought the highest prices in this country there cannot be much doubt that the bean of Hindostan would also do well here. The trouble hitherto has been that the American people have had to work hard and save money in order to get out of the depression produced by several severe panics during the past thirty years; and, besides, they have endeavored to accomplish in half a century what took Europe several centuries to accomplish, namely, the transmutation of a wilderness into productive farmlands, busy cities and beautiful parks and pleasure grounds. At the same time the industrial development has been marvellous, and to do all this money had to be found, and the workers of the miracles had to live hard and work hard and eat cheap. As a consequence low grade groceries were for a long time in almost universal demand here, and the finest Mauritius coffee went to France, along with some other kinds of fancy quality; Porto Rico and Cuba and the Philippines sent superior coffee to Spain; Ceylon and Jamaica sent peerless grades to Great Britain, and Holland and Germany took the best that Java and Sumatra could produce. The United States took what was left; but by the great horn spoon, your Uncle Sammy can afford the best that's going now a days, so send along your choicest berries from Hind, esteemed *Planting Opinion*, and we will receive them as the hungry lion of the desert received the unsophisticated tourist.”

\* \* \*

The tea imported into the U. S. during March, 1903, was 4,158,527 lbs., valued at \$642,895, as compared with 5,252,486 lbs. in March, 1902, valued at \$581,836. Notice the reduction of quantity and the increase of value. Are we at the threshold of a brighter era in the tea trade? asks the *Merchants' Review*. Are the coming events casting their shadows before in this exaltation of quality and depression of quantity? A better sign would be an increase in quality and a moderate increase in quantity, for the latter would tell a story of expanding consumption. We shall have more to say on this subject later, for it is highly important and the tea trade has few competent organs to discuss it.

\* \* \*

**Tea Pests and Blights.**—We have received a copy of the second edition of *The Pests and Blights of the Tea Plant*, first published in 1898, and now brought out by Dr. Watt in collaboration with Mr. Mann. The original edition, only professed to be a record of certain special inquiries in the Kangra Valley and Assam. The Authors have now made it a general account of pests and blights affecting the tea plant in India, and to a certain extent in Ceylon. We must defer a detailed review.

\* \* \*

**The Green-Tea Question.**—Finished or Unfinished? A correspondent asks why people are satisfied with selling unfinished green teas, saying that for the finished article a 42 cents average has been obtained. He attributes the dullness in the green-tea trade to Canada to being satisfied with the unfinished article. In order to elicit the views of green-tea men on the subject, a representative of the *Times of Ceylon* called upon several finishers;

and we are not surprised to hear that the reasons assigned by them for the present dullness in Ceylon green-tea are opposed to the theory put forward by our correspondent. From the first Canada has been our great market for unfinished green teas, they say; and, as long as this market exists, green-tea makers in Ceylon will only be too pleased to supply unfinished green-tea. The finished product is different from the unfinished in colour only; and this fact has been beaten so effectively into the head of the Canadian tea-drinker that he has concluded it is better for his pocket to drink a tea which—though its appearance may be against it—is yet in essentials equally as good as a finished tea for which he has to pay 2d. a lb. more perhaps. So much for Canada.

The United States is the great market for Ceylon finished green teas. The American public will not look at the unfinished tea. Primarily it has a soft spot in its heart for Japan and China tea. The China and Japan merchant has always supplied the American customer with a finished green-tea; and, as there is no Imperial sentiment as in the case of Canada, it is obvious that for Ceylon to secure the market, or a portion of the market, it must at the very least compete on an equality with Japan and China. To do this it had to finish its green-tea, or at least that part of it which entered the American market.

\* \* \*

There is another point about the green-tea question which is worth remembering. In Ceylon the industry is practically in its infancy. The market, so to speak, has not been proved, and it is, therefore, not surprising that the planter, on his estate, has been chary of finishing his tea. The firms in Colombo who at present finish green tea are quite in accord with our correspondent that it is the finished green-tea that secures the better prices, and that it would be to the advantage to finish more green-tea. A representative of one of the firms estimated the finished green-tea exported from Colombo at not more than 10 per cent. of the whole quantity of green-tea sent away. According to him, a great deal of unfinished green-tea was finished in America itself. Another green-tea merchant estimates the quantity of finished green tea which leaves Ceylon at 25 per cent. of the whole. There was a great deal more finished in Colombo, he said, than people were aware of. The reason for the temporary slump in the Ceylon green-tea market, according to the latter gentleman, is that Japan and China could not formerly supply the American demand, and the Americans gave us their custom; but now the China season is at its height, and the Americans have gone back in some degree to their old love.

Briefly, the present position as regards Ceylon green tea is this. The Ceylon finished article has not been on the market long enough to prove itself, and planters are waiting to see it prove itself. There is a good deal of theory about the manufacture yet. At the same time, there are those who are hopeful, by careful manipulation of the market, of inducing Americans, like their Canadian neighbours, to accept the unfinished green-tea, against which at present they assert only an unreasonable prejudice exists.

## NOTES.

### Java Cinchona.

The Java shipments for the first half of May were 622,000 Amsterdam lbs.

### German Quinine.

The exports of quinine, quinine preparations, etc., from Germany during the two months ended February, 1903, amounted to 25,100 kilos., against 24,700 kilos. and 24,100 kilos. for the corresponding periods of 1902 and 1901.

### Coffee Substitute.

A new idea in coffee substitutes is called banana coffee. It pretends to have bananas as an ingredient but savors strongly of chicory. It claims the following for itself: “Perfect Imitation of Java and Mocha.” Save the mark!

### Cinchona and Quinine at Amsterdam.

The import of quinine bark in 1902 was large, and prices were in consequence depressed, dropping from 1½d. per unit in January to 0·90d. per unit in August,

recovering in the latter part of the year, and closing in December at 1d. per unit. The production of sulphate of quinine was 714,400 lbs. in 1901 and 705,000 lbs. in 1902, and was sold at prices averaging 1.39d. per unit.

#### Colombo Tea Sale.

Reporting on 27th ultimo Messrs. Somerville & Co., Brokers, said:—

Good liquoring teas were in demand and prices were very firm, common and poor liquoring kinds met with less competition and prices were weaker. Our private wire reports:—"Good medium to fine there is a strong demand and dearer, some parcels shewing as much as  $\frac{1}{4}$ d. to  $\frac{1}{2}$ d. per lb. advanced. Green teas were in better demand and prices were generally firmer."

#### Soja Bean Coffee.

A new industry in Meherrin, Va., among the German settlers is the cultivation of soja beans, to be used in the place of coffee. Up to a few years ago this bean was unknown in that section, and since it has been substituted for coffee its cultivation has largely increased. It is contended by those who have tried raising the beans that they are unsurpassed for food. The German says he would much rather have them to make his coffee than the Rio grain. A result is that the coffee trade among this class of Germans has somewhat decreased.

#### Cocoa at Amsterdam.

No great changes can be noted in the market for cocoa during the past year. There was a fairly active business and prices were well maintained, with some fluctuations during the last months of the year. In Ceylon cocoa, for which there was an active demand, there was a gradual stiffening of prices, but the market closed quietly. The total importation into the Netherlands was on a larger scale than in the previous year; but the supply from Java, in consequence of the short crop, was reduced, not reaching more than 11,000 bags, as compared with 22,000 bags in 1901.

#### Rubber.

It is stated at Manaos that the amount of rubber gathered ready for delivery is eight or nine times larger than has been delivered in any previous year, and that the accumulated stock is worth between £7,000,000 and £8,000,000 sterling. When Porto Acre surrendered, some 20 steamers and launches, with lighters, were waiting to go up to take cargoes of rubber. This explains why it was worth the while of the Manaos Government to buy out the leader of the late Republic of the Acre at so high a price, and why the syndicate are anxious to hold the Bolivians to their bargain.

### LETTERS TO THE EDITOR.

#### TEA MARKETS' EXPANSION.

SIR,—Under this heading I read in the report of the Kanan Devan Association published in *Planting Opinion* of 23rd May "... but although Messrs. Andrew Yule & Co. have done much good work and Mr. H. M. Knight's scheme has been floated in Madras it appeared difficult to get anything done on a satisfactory or businesslike footing. Now however..." I think this statement is likely to convey a false impression to those who have subscribed to my scheme, so that a few facts culled from Messrs. Parry & Co.'s last

report will help to show that the scheme has been worked so far on a satisfactory and businesslike footing and will no doubt interest those concerned.

The scheme in its original form has not been adhered to entirely as no support has been received except from Central and South Travancore.

In response to the call for Tea 9,035 lbs. were contributed from the Central Travancore Plantations, of which 2,086 lbs. had been dealt with at end of April last.

BREWED TEA.—A start with the sale of brewed tea was first made in Madras and is now on sale at one pice per cup in nineteen other Towns. Messrs. Parry & Co. write: "Bazaars were rented in suitable thoroughfares and brewed tea as well as loose tea was for sale. These bazaars however did not give satisfactory results and a service of hawkers was introduced; since then consumption has steadily increased. These hawkers (who require a great deal of supervision) now attend daily at all public and mercantile offices in Madras. From Madras the service of brewed tea has been extended to the principal Towns in each District and we append a statement showing the monthly consumption in each Town. Comparing the consumption in some of the Towns with their population the results are not in all cases satisfactory; this is due (1) to the fact that the limited funds at our disposal did not admit of a service of hawkers suitable to the size of the Town, and (2) plague has caused the inhabitants of Towns like Vellore and Bangalore to migrate elsewhere. From the last report of Messrs. Andrew Yule & Co. we observe their total sales of brewed tea in February last were 56,388 cups as against our figure of 61,762 cups for April. The price per cup was the same, viz. 3 pies. We are confident that the consumption of brewed tea can be very largely increased, there being several outlets which we have been unable to touch for want of funds, e.g., the Railways of this Presidency."

#### Statement (condensed).

	Brewed Tea Sales.	Loose Tea Sales.	Packet Tea Sales.
January, 1903	2,853 cups.	79½ lbs.	...
February " "	17,277 "	695 "	...
March " "	51,688 "	552 "	223 lbs.
April " "	61,762 "	44 "	397 "
	133,580 cups.	1,370½ lbs.	62 lbs.

Brewed tea and dry tea was sold in April at Madras, Cuddalore, Kumbaconam, Tanjore, Negapatam, Pondicherry, Trichinopoly, Tuticorin, Madura, Bezvada, Samalkot, Cocanada, Erode, Salem, Bangalore, Coimbatore, Cuddappah, Nellore, St. Thomas' Mount, Ammayanaikanur.

In December 1902—1,270 cups of brewed tea were sold, so I have no hesitation in saying that the progress made during the first 5 months, showing as it does an increase of over 60,000 cups, will be considered by all concerned most satisfactory. More no doubt might have been done as Messrs. Parry & Co. state if more money had been forthcoming.

PACKET TEA.—It was thought advisable to re-fire the teas before packing, and with this in view a Sirocco was bought and a fund started to defray the cost of the machine. Central and South Travancore Associations agreed to a voluntary cess of 3 annas per cultivated acre in tea and other friends interested in the welfare of the Tea Industry subscribed liberally.

The teas are put up in lead packets containing 1 lb. at 8 as.,  $\frac{1}{2}$  lb. 4 as., and  $\frac{1}{4}$  lb. 2 as. in a very neat wrapper on which is the Trade Mark, a "*Brahminee Bull*," and instructions in English and two Vernaculars, how to make tea. I send a sample. Messrs. Parry & Co. write: "The demand for packet tea is still in its infancy, but we expect it to increase in time"—also "we may say that so far as we know, our sales do not represent sales wrested from anyone else. We hope before long to see the native setting up tea shops on his own account . . . . We propose to continue on similar lines for the present or until we know whether further support will be forthcoming either from the Planters or *via* the Tea Cess." Now that the cess is a "*fait accompli*" I do not for a moment suppose that Planters will render any direct support to the continued working of the scheme, nor is it reasonable to ask them. Our help in the future must—and rightly too—come from the 20 Committee. I do not think it is fair on a small section of the community who have put their hands into their pockets to give the South Indian Tea Exploitation a start, expecting no doubt that others (who benefit equally with them) would come forward in the same liberal spirit, should be allowed to suffer and I hope that the 20 Committee will reimburse the amount subscribed and provide the funds necessary to carry on the work. It cannot be expected that a scheme founded to create a taste for tea drinking among the native hordes of the Madras Presidency, who have up till now never even seen tea, can pay its own way. I do think that a start has been made to pave the way to the introduction of tea to the classes with whom we wish to ingratiate it and at a cost infinitesimal compared with the benefits likely to accrue if the masses acquire the taste we are trying to foist on to them, which seems very probable. Messrs. Parry & Co. are due the thanks of the Tea Planting Community; they have given their services gratuitously, making no charge for supervision or rent of their premises. They are willing, I believe, to carry on the work they have so successfully commenced and I trust that the 20 Committee will recognize the just claim we have upon the Cess Funds

for a liberal grant to meet our obligations and effectually launch the scheme in a manner to which I think it is fairly entitled.

The Hon'ble Mr. Granville L. Acworth and Mr. A. D. Jackson, representing the Planters of South India and Madras Chamber of Commerce respectively on the 20 Committee, may be relied upon to do all in their power at the first meeting to be held on 1st June at Calcutta to obtain a sufficient grant and I hope their endeavours will be crowned with success.

PEERMADE,  
30th May, 1903. }

H. M. KNIGHT.

## GENERAL ARTICLES.

## PRODUCE AND PLANTING.

If the Chancellor of the Exchequer remains obdurate now or in the future upon the subject of a reduction in the tea duty it will not be for lack of having the position placed before him persistently. The representatives of the Indian and Ceylon tea industries in London have done their best to inform Mr. Ritchie of the grievance tea producers suffer, and now that the advocates of the corn tax have taken up the cause of tea and proposed a reduction of the duty in lieu of that on corn, it may be that the Government will endeavour to compromise on these lines. To-day's deputation it is to be hoped will help matters.

From the figures supplied by Mr. George Seton, relating to tea companies, it is shown that the market value of the shares of the forty-five representative companies, chosen by him for particular observation, has again risen substantially during the month of April, and now stands at over a million pounds sterling higher than on January 1 last. The improvement has again extended nearly "all along the line":—

	£
Face value of 45 companies' shares ..	9,500,000
Market value July 1, 1897 (highest) ...	12,000,000
" " April 1, 1902 ...	6,745,000
" " September 1, 1902 (lowest) ..	6,050,000
" " January 1, 1903..	6,600,000
" " April 1, 1903 ...	7,175,000
" " May 1, 1903 ...	7,650,000

As the grand total of the share and debenture capital of the 170 (or thereabouts) tea companies registered, with sterling capital, in the United Kingdom, amounts to about £19,000,000, the fluctuations of the entire volume, based on these figures, may thus be approximately estimated:—

	£
Face value of (about) 170 companies ..	19,000,000
Highest market value, July 1, 1897 ...	24,000,000
Lowest market value, September 1, 1902..	12,100,000
Present market value, May 1, 1903 ...	15,300,000

Taking 100 as representing the top value, the lowest level would be represented by just above 50, and the present value by nearly 64. The feeling among investors in, and holders of, these shares is still, Mr. Seton observes, optimistic—the optimism, however, being based less upon the expectations of any immediate large increase in profits than on a belief the industry has now entered upon a cycle of renewed prosperity, owing to production being kept more within the capabilities of the world's consumption.

The "Salada" Tea Company announce that they have secured a prominent position in the Ceylon Court of the World's Fair to be held next year in St. Louis, where they will make an exhibit of Ceylon tea. The "Globe," of Toronto, publishes a portrait of Mr. P. C. Larkin, and in the course of a biographical notice, mentions that mainly through his instrumentality "to-day, from the Atlantic to the Pacific in Canada, there is not a town, village, or hamlet where Ceylon tea is not a popular drink, and it is fast becoming so in every part of the United States."

Accounts received from India of the position of coffee planters lead the "London Commercial Record" to take a view of the outlook for Indian coffee which we trust is unduly pessimistic. After describing the unfavourable seasons which have played havoc with the coffee crops, our contemporary says: "The rain destroyed the colour and impaired the liquor, and as a natural result the London consumer would not buy, much to the chagrin of the planters. Our trade has been reproached before now of being too particular, of finding fault too frequently; that may or may not be so, this year certainly there was ample and justifiable room for complaint. Home traders have shown by paying fancy prices for fine East Indian how anxious they were to obtain them, but, unfortunately for all concerned, the fine colour coffee was painfully conspicuous by its absence. To make matters worse, the prices realised in auction for these few fine estates were regarded by planters as the real market value, and any valuation or bid submitted to them, showing a marked difference in price was promptly regarded as untrustworthy or emanating from interested sources. They were therefore not considered worthy of serious consideration. The past has unfortunately shown how wrong planters were and how badly they have been advised. Prices, as we know, did not improve they fell with hardly a break until an average of from 45s. to 50s. landed was reached for crops which only last year were regarded as fine East India. This fall is most lamentable, and it is a pity that owing to the nature of things such calamity could not have been prevented, for we are satisfied that before long we shall be brought to realise the fact that fine East India coffees, such as we used to know them, have become things of the past. If he has been lucky the planter has managed to eke out a mere existence from the returns of his estate; there has been no money available for manuring and thorough and careful cultivation, many plantations have therefore been yielding all they could, and are now used up. Their European owners and superintendents are deserting them. This is a sorry picture, another result of over-production."—*H. & O. Mail.*

### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Ninety days' Bank rate on London opened on Monday 13th instant at  $12\frac{1}{32}$ d., rose to  $12\frac{1}{8}$ d. on Tuesday and closed this afternoon at  $12\frac{1}{32}$ d. to  $12\frac{1}{16}$ d.

There is little to write about to exchange—the best that could be said of it. Coffee and other purchase bills are, it is true, getting scarce but money is equally shy and speculation for the moment is quiet.

As regards coffee prices the position is almost identical with last year's, New York quotation for No. 7, being  $5\frac{3}{8}$ d. as against  $5\frac{1}{2}$  and local prices 4\$290 against 4\$370. Shipments it is true are smaller, but not much, their value for the past week having been £225,000 as against £240,000 last year. Last year exchange under similar circumstances was maintained steadily about 12d. all April, whilst in May it rose to  $12\frac{1}{2}$ d. in consequence of speculative selling against the new crop. With a little effort we have no doubt it can be held this year also and not be allowed to fall or to rise much above the present level if proper provision has been made by the Bank, as probably is the case.

Left to itself during the next two months, when the economic balance will be decidedly unfavourable, exchange would fall. But it will not be left to itself, and if any signs of weakness appear the Bank will, we believe, do its best to maintain rates until bills become plentiful again in July or August. What side speculation may take we cannot tell. If it should decide to "bull" the rate the task of the bank will be easier and if to "bear" it, the outcome must depend on the relative strength of the opponent.

It does not, however, seem that with coffee prices so low and the future of coffee so wrapped in uncertainty there will be much inclination to sell futures, and the market for purely speculative paper is too limited to be very dangerous.

At the same time there are several elements of possible disturbance that cannot be overlooked. The present aspect of the Acre question is by no means transquilizing whilst the tightness of money in London, were call money commands  $4\frac{1}{2}$  per cent. and Consols have fallen to 90, neither of them make for a rise.

RIO DE JANEIRO, 18th April, 1903.—Joint Entries at Rio and Santos for the week ending April 17th were 18,773 bags over the previous

weeks, which comprised two holidays, but 76,276 bags less than the corresponding weeks last year of which they represent 65.4 per cent.

For the crop entries on the 17th April, were 2,873,803 less than for last crop of which they represent 79.1 per cent.

Shipments (*embarques*) were larger, being 13,279 bags more than the previous week and only 286 under the corresponding weeks last year.

Stocks in consequence fell off, being 17,064 less than on the previous Friday and 296,712 less than on the same date last year.

Declared Sales were very large, 54,000 bags more than the preceding week and only 6,000 less than the corresponding week's last year, in spite of local prices being so much over parities.

Prices improved slightly at home, the average for the week being 4\$289 as against 4\$221 for the previous week and 4\$364 last year. At New York the average price fell from 5.23 to 5.22 c. as against 5.52 c. last year.

Nothing further is known with regard to the Coffee Bill, but though there is an idea that it is impracticable and will not be put into execution, we think that it is a mistake and that an attempt will be made and probably abandoned should it, as seems almost certain, turn out ill.

New washed coffees are making their appearance in increasing quantities as the weather is again very favourable for harvesting.

SANTOS, April 17th, 1903.—Coffee business gets poorer and poorer. It seems that the short interest in qualities is now covered to a certain extent, the reason that now nearly all exporters offer on the same basis. Messrs. Crossman's estimate of  $15\frac{1}{2}$  millions for next crop had no influence on the market because it is believed that they will soon be buying. The estimate is here considered much over-rated and the question is how they came by it.

The first sale of new crop washed coffee was effected on Tuesday. It proceeded from Pindamonhangaba, a district in the north of the State of Sao Paulo and of poor quality, and cannot be accepted as the basis for future business here as that district for coffee is hardly considered as Paulista. Arrivals from the Mogyana (gene-

rally the earliest) that create the basis for the sale of S. Paulo new crop coffees cannot be expected as yet.

The term markets abroad sustained practically their quotations, whilst orders from consuming centres show slightly lower limits—*Superior* from 26s. 6d. to 27s. 6d. and *Good Average* 1s. 3d. to 1s. 6d. below. It is reported that *Superiors* were done at 26s. 9d. to 27s. for medium types. Currency prices, however, had to give way owing to firmer exchange, *Superiors* being quoted at 4\$000, *Primes* 300 réis above this and *Goods* about 200 réis below, whilst *regulars* were done at 3\$400 to 3\$600. Lower grades also found buyers.

Old yellow coffees are in fair demand, up to 6\$400 being paid for them. *Peaberries* are slack and medium types, *Superior*, difficult to sell at over 4\$200. *Washed* continue neglected. *Fine Bourbons* could be bought freely at 4\$700 to 4\$800.

Entries were small—101,000 bags and *passagens* 88,000. Our stock, nevertheless, does not decrease as shipments are smaller than entries, only 95,000 bags.

The *Pauta* is 460 reis.

Although no improvement can be foreseen for the immediate future, exporters are afraid to accept large orders at present low limits as they can form no idea of the turn the market will take as soon as liquidations are over.

3·85c. at New York is the lowest record known.

**The Coffee Crisis.**—A planter writing to *O Estado* from Moujo-linho proposes the heroic remedy of leaving the coming crop on the trees and, as it leaves a dead loss, to not gather a single berry. We don't know how much it would cost, but if instead of burning coffee and lending money to planters to produce more Government would supply them with enough to pay *custeio* and maintain their forms for another year on condition of not gathering the coffee, there might be something in it. But then, they could never be trusted.

Plans and projects for raising coffee prices are so common that no one takes any further notice of them. Whatever happens coffee will be produced in quantities enough to satisfy consumption.

A good deal of disappointment is felt that the effect of the late coffee legislation has not been immediate, but that instead of going up prices abroad have positively gone down since. But everyone here is in too much of a hurry! At present, prices are apathetic because, for one thing, no one scarcely believes in the law being really executed.

The *Sun* of New York has also been taking the matter up and advocates a tax on coffee because, when Americans took of the import tax Brazilians increased the export duties and got all the advantage. The *Sun* goes on to tax us with ingratitude as America imports from Brazil half a dozen times as much as Brazil imports from them. On the other hand we took more from G. Britain and some other Countries than we sent to them and so helped them to pay for the excess of their imports from the United States and made all things beautiful.

Reciprocity is all very well but Americans do not take our goods out of philanthropy, but because they want them; nor do they refrain from taxing them for our benefit but because they can't produce them themselves and, like sensible people, want them, therefore, as cheap as they can get them! If they clap on a tax they will raise prices, certainly, and probably reduce consumption and injure us that way. But prices are already so low as to make it almost impossible they should fall lower for any long period, and any damage that might be done in that way would certainly fall much more on the American consumer. To tax oneself in order to spite one's neighbour is too silly to recommend itself to so sensible a people as the Americans and is not likely to be done.

Messrs. Alfredo Guedes, José Souza Queiroz, José M. de Camargo Arruda, Barao de Rezende, and Ignacio Mendonça Uchôa, the delegates of the Agricultural Congress that met early in the year, have issued a manifest explaining to planters the outcome of their mission and giving them advice for the future. The co-operation of Government was, they say, disappointing because although adopting several of the measures recommended by the Congress, Government refused to have anything at all to do with compensation of planters for the coffee "eliminated" nor even to approach the Federal Government on the subject. Since the law was passed prices abroad have fallen and everything leads to the conclusion that they will fall lower still and not be sufficient to pay the cost of harvesting. What is to be the outcome of a situation by which the land owner will be ruined and 500,000 labourers left without

work cannot be foreseen. The manifest recommends planters to act all together calmly and hopefully, but does not tell them how. If they are all ruined, and their *colonos* too, and can't even pick their coffee, it seems the best thing to do would be to plant something to eat at any rate. No doubt things are as black as they well can be, but the coffee will be picked that is on the trees, no matter what prices go to, if only to pay the *colono* what is owing.

A Mr. Albert Vinol writes to the Minister of Finance suggesting that the low-grade coffee received in payment of duties be converted into alcohol. Unfortunately we already have more alcohol than we know what to do with.

## TEA CULTURE IN ASSAM.

### ANNUAL REPORT.

The following is the Report on Tea Culture in Assam for the year 1902:—

**Area under cultivation.**—The total number of tea gardens in the province at the close of the year was 782, as compared with 805 at the end of the preceding year. Twelve gardens were closed or abandoned during the year, and twelve were amalgamated with other gardens. Only one new garden was opened, in the Goalpara district. In spite of the reduction in the number of gardens the total area held for tea cultivation (including the area taken up by planters but not planted) shows an increase of 16,608 acres. Unfortunately these statistics of total area cannot be relied on, as accurate information is not available for certain districts, and there has not been uniformity of practice on the part of the Managers who furnish returns in regard to the inclusion or omission of areas of abandoned tea. The statistics of area actually under tea are probably more trustworthy, and they show an increase from 338,186 acres to 339,640 acres. The increase of 1,454 acres is practically confined to the districts of Lakhimpur and Darrang, where cultivation continues to expand slowly. On the other hand, there was nowhere any considerable abandonment of tea during the year, and the condition of the industry may be said to have been stationary, the general attitude being one of expectancy. The area under mature plants increased from 308,588 acres to 321,446 acres owing to recent extensions coming into full bearing.

**Management.**—By far the greater number of the gardens are under the superintendence of salaried Managers. From one district only it is reported that in some cases proprietors of shareholders have, for the sake of economy, been resuming the personal management of their estates. Efforts are being made by every means to promote the economy and efficiency of management which are so necessary in the present condition of the industry. Of the total area under cultivation, 11,489 acres only are owned by natives of India.

**Character of the season.**—The rainfall of the year was unfavourably distributed. A good deal of damage was done by hail in the early part of the year, and excessive and prolonged rain accompanied by low temperature in the months of July, August, and September, prevented the bushes from flushing freely. The rains ceased, and cold weather set in, in October, bringing the season to an early and abrupt termination.

**Outturn of tea.**—The weather had an unfavourable influence on the crop. The total outturn of tea for the whole province was 132,117,278 lbs. as compared with 134,896,317 lbs. in the preceding year. In the Brahmaputra Valley the yield increased from 72,530,943 lbs. to 73,862,668 lbs. owing to the increase in the area in full bearing. In the Surma Valley there was a large falling off from 62,365,374 lbs. to 58,254,610 lbs. The average yield per acre was less in both valleys, as shown by the figures given below:—

Yield per acre.		1901.	1902.
		lbs.	lbs.
Surma Valley	...	499	460
Brahmaputra Valley	...	395	379
For the whole province	...	437	411

**Import and export of tea-seed.**—One hundred and eighty-five maunds of tea-seed were exported from, and 147 maunds imported into, the Surma Valley. No tea-seed was imported into, or exported from, the Brahmaputra Valley during 1902. Seed is now usually obtained locally. The average prices of tea per pound in Calcutta,

as furnished by the Secretary to the Indian Tea Association are given below :—

	Prices.	
	1901.	1902.
	As. p.	As. p.
Surma Valley teas	4 7	5 9
Brahmaputra Valley teas	6 1	7 9

The prices for 1902 show a considerable improvement over those for 1901, which, again, were somewhat better than the prices of 1900. The advance in prices appears to be chiefly due to climatic causes, which for two successive seasons have operated to restrict output. The efforts made to develop markets for Indian tea outside the United Kingdom have also had a stimulating effect on the demand.

*Condition of the industry.*—As the result of the rise in prices as well as of increased economy in manufacture, the industry is undoubtedly in a stronger position than it was two years ago. It is universally admitted that the opening of the Assam-Bengal Railway has been of the greatest service to tea gardens in the Surma Valley, enabling them to effect a considerable saving of freight, and the development of railway communication in the Assam Valley must ultimately have the same result. In the direction of extending markets much may be hoped for from the imposition of the tea cess recently sanctioned by law. The chief drawback from which the industry at present suffers in Assam is the difficulty of labour supply, and there is good reason for expecting that this will prove to be temporary only. The Chief Commissioner's acknowledgments are due to the Indian Tea Association, and to the Managers and Agents of estates who have furnished the information utilised in this report and in the appended statement.

### COFFEE IN LONDON.

There was again a slight reduction in the world's visible supply during last month, says the *Produce Markets' Review* of May 9th, but hardly sufficient to have any effect upon prices. The deliveries from both European ports and the United States were, however, very large, being at the rate of nearly a million tons per annum, a factor which, if continued, would undoubtedly bring about reduced stocks and higher rates. Though very little has been done in the terminal market, there is a distinctly better feeling, and quotations are a shade dearer. The offerings at the auctions have shown a decided falling-off both in quantity and, generally speaking, in quality, but with a good demand both from the home and export trades, last week's advance has not only been maintained, but in some instances, particularly medium and fine Costa Rica, prices are again dearer. A more general assortment of Guatemala and Salvador has been offered, and as the Costa Rica crop shows evident signs of coming to an end, more attention has been paid to these kinds which are relatively cheap. There is no change in East India, but prices are very firm.

### TEA IN LONDON.

**INDIAN TEA**—An easier tone has prevailed in this market, says the *Produce Markets' Review* of 9th ultimo, and a slight concession in prices must be recorded, which would have been more pronounced but for the firmness of holders. The bidding at the public sales was less active, and an increased quantity was withdrawn, while a smaller proportion of the latter has been disposed of since the auctions. The continued firmness of importers is attributable to the strong statistical position, and although the bonded stock of Indian does not appear to be so favourable to a continuance of the present high level for the lowest grades, it must not be overlooked that the available supply is considerably less than last season. Teas above the common kinds are nearly as low in price as at this period last year, and in fact they can be bought for ½d. to a 1d. more, showing a much greater difference in value than these figures indicate. This is now appreciated, as is shown by the larger enquiry and the improved business transacted, and the consumer will no doubt be willing to pay, say, from 1s. 4d. to 1s. 6d. for a much superior Tea than can now be retailed at 1s. 2d. The following are the returns for April and the same month last year, and it will be noticed that the stock in bond is slightly larger, but the heavier clearances since the Budget will

no doubt reverse the position by the end of this month. Imports were 2,679,000 lbs. and 1,917,000 lbs. respectively; the deliveries amounted to 11,323,000 lbs. against 16,253,000 lbs.; the stock is about 3,000,000 lbs. larger, while the stock of all growths is practically on a par with last year.

**CEYLON TEAS.**—A good supply was brought forward at the auction on Tuesday, but a better tone was noticeable, and firm prices were paid for most descriptions. Pekoes and Pekoe Souchongs up to 7d. remained stationary, with an occasional set-back where inferior quality was displayed, but over that figure prices were slightly irregular. In Broken Pekoes there were a few lower quotations, due to the falling-off in quality, but otherwise recent values were well maintained. At the public sales 22,700 packages were brought forward, of which about 2,100 were withdrawn. The following are the figures for the past month, compared with April last year: the imports were 7,213,000 lbs. against 8,768,000 lbs., the deliveries being 6,166,000 lbs. and 9,183,000 lbs. respectively, while the stock stands at 21,603,000 lbs. as compared with 21,252,000 lbs.

**CONGO TEA.**—At the public auctions only 440 packages were offered, and were all disposed of at steady rates. A considerable quantity has been offered privately, chiefly consisting of the lower kinds of Black Leaf, which are now in considerable demand, and consequently a fair amount was sold. Prices for all descriptions remain firm.

**OTHER CHINA TEAS.**—This market remains steady, and at the public sale of Green Tea held on Thursday last week's prices were well maintained. Good liquoring Gunpowders are now very scarce and difficult to find, except at advanced rates. The demand for common Caper still continues and a fair business has been done. At the public sales 880 packages of Green Tea were offered, of which 172 were withdrawn.

### THE CHINA TEA TRADE.

The *Grocer* of 9th ultimo remarks:—It may interest some of our readers to be reminded that the Hankow market for the new season's Moning opened on the 7th instant. Speaking from the experience gained in 1902, it is to be hoped that the Kintucks will turn out to be a better crop than the last one, which was pronounced by the experts in tasting to have been very bad indeed. The admission of this dismal fact has put China tea yet more out of favour with the few old-fashioned firms who still sell the finer qualities of that growth; and the badness of last year's crop has also driven away nearly all the orders that importers here usually get for China teas from the Continent, Denmark, and Sweden. To produce and ship inferior tea to these countries will only drive consumers there all the more on to Ceylon tea, to which they are already taking very kindly. The Ningchows last year were, on the contrary, a fine crop, but, unfortunately for holders, they are but little wanted by the home trade.

As if to make up for so serious a loss, it has so happened that, near the end of the old season just closed, about 1,500,000 lbs. very fair Monings were imported into the United Kingdom. These at first had been kept back expressly for the Russian buyers; but it was afterwards discovered that the latter did not want them, and the teas were disposed of in London cheaply in consequence. Thus, when a sharp rise subsequently took place in the common grades of Indian and Ceylon, the wholesale dealers quickly absorbed them; and got good value for their money; but at the same time it must be borne in mind that, if the above kinds of tea had not been dear, they would have found no buyers in our market, where the demand is getting less and less every year. It has long been a noticeable habit with the London houses that, after they have picked over and bought in July just enough of the first China crop for their year's wants, they altogether cease to operate in the true sense of the term, and business in the article from November until the following June invariably falls into a low rut, being simply for the completion of retail purchases at most depressed, if not ruinous, rates.

Yet, for all this, a good crop of Kintucks, and especially if a small average one, would find a brisk market here, and bring more satisfactory prices. Foochow teas, on the other hand, are not really used in England, as the bulk of what is landed at this port is by-and-by transhipped to the Continent, and particularly where portions consist of the crack chops of Soo Moos. Panyongs are likewise dealt with in the same way, and during the past season

their quality has been very good and the value excellent; but, as Continental purchasers had bought direct from China, it has been difficult to get rid of them here at any price. Luckily, no common red teas were made or sent hither in 1902, and none have been asked for, making it appear as though Foochow descriptions were dying out, so far as their consumption in the United Kingdom is concerned. As each year other countries are buying more and more from Ceylon direct, it looks—at the moment—as if the aggregate supplies in future will not be sufficiently large for dealers' wants here, and if so the price of common tea may keep at a higher level than usual. It follows then that there may be more demand in the coming season for sweet low-priced Monings at about 4½d. to 5d., as the great blenders are now getting them into their blends, and, once in, they may continue to use them in small quantities. China, therefore, will have to watch the Indian and Ceylon markets, and be guided in shipments accordingly; for it must not be forgotten that China teas, even at the best, are now quite an exclusive and fancy trade, as not many dealers know their value, or will be tempted to stock a package for which they have not a buyer beforehand.

### THE MANUFACTURE OF DRUGS.

It is surprising (remarks a correspondent of the *Englisman*) that the successful growing of cinchona by the Government, has not led to its cultivation being taken up as a private enterprise. At one time we believe one concern near Darjeeling, which still retains "Cinchona" in its title, made a considerable profit out of it, but the time it takes to mature, deters many from undertaking any extensive operations in cinchona. The Scientific Officer of the Tea Association recommended some time ago the planting out of cinchona on the edges of "jhras," and land not utilised for tea planting on account of its difficulty of access or other reasons. Land now lying idle might be used, and the outlay, which would be but trifling, could be regarded as an insurance payment. We do not think it would be found advisable to attempt quinine making, but there is always a brisk demand for the bark. There is a wide field for enterprise waiting to be opened out in India in the manufacture of drugs. The problem of disposing of tea dust would be solved if the manufacture of caffeine was taken up. Every year the quantity used increases, in America the demand grows by leaps and bounds. There is no reason why a well equipped factory situated in the hill districts making quinine and caffeine should not pay handsomely. Caffeine realises something like fifteen shillings a pound, and from tea dust it is said two per cent. could be obtained by an inexpensive process. The utilisation of bye-products and the encouragement of subsidiary industries are now regarded as matters of first rate importance in other lands, and in India it is time there was an awakening.

### REVIEW OF THE SPICE TRADE.

From whatever cause it may arise, whether from a shortening of supplies or an expansion of demand, it is none the less a fact that stocks of spices in London (which port for all practical purposes in those articles represents the whole kingdom) are uncommonly light, and mostly below the amounts in hand at the corresponding period last year. That of black pepper, to select that condiment first, was on the 18th instant only 1,050 tons, against 2,210 tons in 1902, whilst of white pepper there were only 1,075 tons in reserve, instead of 1,795 tons in April last. The landings of the latter kind of spice were a moiety of those in 1902, and the deliveries generally were greatly stinted; yet the prices were rather under the former level. Both chillies and capsicums, however, came in for a heavy delivery without improving the value; and notwithstanding that the imports of pimento were confined to 11,100 bags, in opposition to 17,700 bags last year, the current rates keep low at 2½d. to 2¾d. per lb. Little cassia lignea has appeared in the dock and wharf returns as landed, but without making any difference in the market quotations, which are very moderate. Cinnamon also shows a marked falling off in this year's supply at the old (or reduced) range of prices, while cinnamon chips have continued abundant and cheap. Zanzibar cloves on the spot have scarcely varied in price during the past twelve months, nearly always keeping at 3½d. to 4d. per lb., with a stock almost equal to, arrivals above, and clearances

materially short of, those in the first sixteen weeks of 1902. In Penang and Amboyna cloves, as well as clove stalks, the movements here in 1903 were of the most trifling character, but values for the same were at a decided premium. With scanty receipts and increased requirements of the trade, the stock of West India ginger has fallen to 5,610 packages, against 7,120 packages, and the common qualities of Jamaica have latterly fetched shillings more money. Importations and stocks of Cochin ginger have considerably diminished, but though the deliveries have been satisfactory, prices have receded rather than advanced since last April. Bengal ginger, which this year has ceased to arrive and be delivered in London, is worth 5s. per cwt. more than before; but Japan ginger, as the result of a previous glut, has dropped to 28s. to 30s., in lieu of the figures 36s. to 37s. last year. The statistical position of mace has become much stronger than it was a year ago, the entire stock having shrunk to 780 packages, in contrast with 1,100 packages; and quotations have repeatedly risen, till they are now 6d. to 1s. per lb. higher than they were a year since. Landings of nutmegs have been heavier, and stocks have kept up to a parity with those in 1902, but, with enlarged deliveries for home use and exportation, prices have stiffened from time to time so as to exhibit a total rally of 3d. to 6d. from the extreme point of depression previously shown.

Statistics relating to farinaceous articles, so far as they are identified or connected with the spice trade, possess few features of interest, and only trivial changes have occurred. The quantities of sago and sago flour arriving, warehoused, and delivered have, at the best, been but small, being rather under than over the totals in 1902; but prices, excepting for medium and large grain "pearl," have ruled appreciably above the rates quoted last Spring. The consignments, no less than the deliveries, of arrowroot have been unquestionably lighter than in the preceding year, but as the stock, as made up on the 31st ultimo, presented a great surplus, and amounted to 13,000 barrels, as contrasted with 8,560 barrels in 1902, no surprising enhancement of value has been established. Tapioca shows an excessive stock, both for flake and pearl descriptions, without an augmentation of arrivals, and, with sluggish clearances in general, quotations have been declining during the whole season. In other respects operations in spices and the allied trades have been under much restraint, due in a measure to the suspense in the trade pending the Budget.—*Grocer*.

### COFFEE IN DISTANT LANDS.

Mr. J. L. McClelland writes:—

**Hawaii.**—When the visitor views the well-kept Hawaiian coffee plantation, he looks no further. It strikes him as the ideal life. The long ranks of beautiful little trees, whether loaded with bright red cherries or snow-white blossoms and deep green leaves, are very charming to the eye. Then, the climate in the coffee belt of Hawaii is almost perfection. The only fault the coffee farmer has to find with the business is that it has yielded no profits during the past three or four years. Six years ago the price of coffee was abnormally high, and hundreds of small places were opened in the forests, and the business of coffee raising had a great boom. But prices have steadily declined since then. It has been estimated that as much as ten million dollars has been lost in these islands in the attempt to produce coffee. Nevertheless a few plantations and a number of small farms are still kept up in the Kona district, and several good plantations still survive in the Hamakua district. In fact, the acreage in coffee throughout the islands must amount to many hundreds, as the amount of coffee exported last year is estimated as nearly 750,000 pounds, besides a large quantity consumed at home.

#### TREES THAT BEAR CONSTANTLY.

One peculiar feature of the growth of coffee in the Hamakua belt is that the trees bloom and bear constantly. During the months of September, October, November, and December they yield least, and when the price is low it seldom pays to pick the scattering berries of these months. But during the remaining eight months of the year the work of gathering the crop constantly goes on, with the heaviest returns during the four months beginning with April. In the Kona district, on the west side of the island, the crop is nearly all gathered during August, September, and October. But in any case the picking of coffee is not like the

harvesting of crops of the temperate zone, where trees yield all the ripened product at one gathering. The coffee cherries must be picked from branches loaded with fruit in all stages of growth, and the field must be gone over about once every two weeks.

In the coffee belt of Hamakua there is never an hour in any day of the year when it is too hot for a white man, or for any other man, to do manual labour.

#### IMPRISONING WATER.

The soil is too porous and the lava rocks too broken to permit wells, so that to insure a supply of water for washing the coffee beans, and for other uses about a plantation, it is necessary to construct large tanks for containing rain water. For this reason corrugated roofs are plentiful, often more extensive than are actually required for weather protection, so as to afford surface for catching a large supply of water. Otherwise, in this strange land, where ten feet of rain generally fall during the year, the farm stock would be dying of thirst, and the coffee washing would have to be postponed until the next shower.

In most of the regions that now furnish the world with the material for its favourite beverage nearly all of the processes of preparing the bean for market are performed by hand labour. But in the up-to-date places in Hawaii they are employing more and more machinery, so that ere long Yankee ingenuity will make it possible to win a profit from coffee culture, even should the price continue low. The bean is quickly removed from its pulp by means of a machine something like a corn-sheller, propelled by a gasoline engine. A washing machine run by the same power cleans off all the material clinging to the parchment, which is a thin shell fitting closely to the bean. This thin covering, after thorough drying, either in the sun or, if the weather is damp, in the dry house, by artificial heat, is removed by still another machine, which also polishes the bean and completes its preparation for market.

#### TON OF COFFEE PER ACRE.

In one of the leading plantations twelve acres last year yielded twelve tons of clean coffee. Probably no other country in the world could excel this yield. But a thousand pounds per acre would be considered a good average for the entire plantation, which has nearly two hundred acres in bearing.

Hawaiian coffee is regarded as equal to the best. A number of varieties are cultivated, namely, the Guatemala, Java, and all Arabian varieties, and another that has been grown in the islands in gardens and dooryards so long as to be called the Hawaiian, though it appears to be an Arabian variety. All sorts do well; there is land enough in these islands, above the belt now devoted to cane culture, to produce half the coffee supply of the United States if the price justified the enlargement of the industry.

### THE CEYLON EXPERIMENT STATION AT PERADENIYA.

[FROM THE REPORT OF THE CONTROLLER.]

#### CARDAMOMS.

The cultivation of cardamoms is being extended in many up-country districts, and nearly 10,000 acres of forest are now occupied with this product in Ceylon. Hitherto planters have adopted the "stool" method of cultivation, and effected the curing by means of sunlight and fumes of burning sulphur. There are few products which lend themselves better to experiment both in methods of cultivation and curing, and the following plots have been arranged with these objects in view. The time of planting and condition of plants when put out was very unsatisfactory, and much replanting will have to be done in these plots.

#### Varieties.

In Ceylon there are two forms in cultivation, distinguished respectively as the Mysore and Malabar varieties. There is much confusion as to the equivalent of these varieties with those in India, and many assert that the names as applied in Ceylon are reversed in India. In order to avoid further confusion it will be necessary to define the characters of the varieties chosen.

The Mysore cardamoms are characterized by a larger habit, glossy leaves, and usually erect inflorescence; the fruits are elongate and rarely cornered.

The Malabars are characterized by a layer of silky hairs on the under surface of the leaves, a trailing inflorescence, and a more globular and shorter fruit than the Mysore.

The most striking difference is in the erect inflorescence of the Mysore, as against the trailing flower system of the Malabar variety.

The other characters form a continuous series of variations, and the two kinds of cardamoms cannot be regarded as anything but varieties of the same species. From examination of the development and form of the fruit it occurred to me that the Mysore variety was probably the more advanced form in cultivation; the stages presented in the development of the fruit of the Malabar variety were observed in the Mysore variety, but the latter proceeded one stage further, giving a fruit more elongate in outline.

In order to determine the relation of the varieties recognized in Ceylon as 'Mysore and Malabar,' specimens of the true "Mysore" of India were obtained from an experienced Mysore planter. These have been planted in a separate plot.

The wild cardamom (*Elettaria Cardamomum*, Mat.) is said to be common in the wet forests of Ceylon up to 3,000 feet. It can be distinguished from the cultivated varieties by its short and sparsely flowered inflorescence, and when opportunity occurs a plot will be established. It may be possible to improve the Ceylon wild form, and efforts will be made in this direction.

Many natives in Ceylon class several species of *Amomum* as "wild cardamoms." In the Matale district *Amomum pterocarpum*, Thw., and *A. floribundum*, Thw., are thus recorded. Up to the present no attempts have been made to cultivate these species, though the seeds of the former are decidedly aromatic. The genera *Elettaria*, Mat., and *Amomum*, L., are so closely allied that it would appear reasonable to expect profitable results to follow from the experimental cultivation of the aromatic species of *Amomum*.

#### Cultivation.

The only form of cultivation in vogue in Ceylon is the "stool" system. The bulbs are planted two together or one double bulb per hole, the holes being 7 to 8 feet apart. In 4 to 6 years a clump or stool of plants is produced, measuring 3 to 4 feet in diameter. The stool increases in size from within outwards; the old bulbs occupying the central position gradually die down. Such a method of cultivation has been found to yield profitable results, and has been adopted by most cardamom planters in Ceylon. It is, I think, accompanied by several disadvantages. In the first case the stools occupy a limited area, and the roots of the few score of bulbs in each stool have to obtain their nutrition from the immediate neighbourhood. The roots often extend several feet beyond the stool, but the large space between the stools is rarely drawn upon to any great extent. The stools being in lines along hillsides, it is obvious that the rains will successfully carry away the greater part of the soluble materials in the soil between the stools. In order to prevent this, an experimental half-acre plot of each variety has been laid out with a view to establishing what we may call the "terrace" system. In this system single bulbs have been planted 4 feet apart, and their growth will only be allowed to continue in the direction of lines running at right angles to the slope of the hill. The lines will be kept at from two to three bulbs wide.

By this means the whole of the materials washed down the hillsides by the rain will become lodged along the lines of cardamoms, and as their root system will extend upwards and downwards there ought to be minimum loss of nutritive materials.

The original number of plants in these plots is the same as in those which are being cultivated on the "stool" system, the only difference being that they are planted singly 4 feet apart instead of in pairs 3 feet apart.

In the second place the stool method lends itself to the establishment of many fungi, myxomycetes, etc.; in consequence of the crowded nature of the plants preventing the access of light on the lower part of the bulbs. In the terrace system the light will have easier access to the bulbs, and may consequently keep fungi in check.

#### FIBRES.

In view of the opening up of the Northern Province by the new railway an inquiry was made into the native plants most likely to yield commercial fibres.

As a result of this inquiry it has been decided to start experimental plots of *Sansevieria guineensis*, *Sansevieria zeylanica*, *Calotropis gigantea*, and *Musa sapientum*. The object of these ex-

periments will be to determine the yield per acre from the selected species.

The plantain fibre has attracted considerable attention in India and Ceylon during the past year, and I have received excellent samples from Mr. Proudlock, Curator, Ootacamund.

#### CASTOR OIL PLANT.

The extent to which the products of the seeds of this plant are now used in Ceylon is a sufficient reason for carrying out experiments to determine the yield per acre. Seeds of the following varieties have been obtained:—"Calcutta" and "Patana" varieties from the Superintendent, Royal Botanic Gardens, Calcutta, and of the "Madras" variety from the Government Botanist, Madras.

Apropos of cardamoms Mr. W. A. Tytler, of Matale, writes:—

The writer of the Report refers to the unfortunate reversal of the nomenclature of the two varieties of cardamoms in Ceylon. I was engaged in the cultivation of cardamoms for six years in Mysore, and I fully established the fact that what the planters in Ceylon call the *Malabar* is the true and only *Mysore* variety.

What the planters in Ceylon call the *Mysore* is the Allepy or Malabar variety. The former—the true Mysore—has a layer of silky hairs on the under-surface of the leaves, and a trailing inflorescence or raceme.

The latter—the Allepy or Malabar—has a glabrous under-surface of the leaves and an erect inflorescence or raceme. The sowing of seeds obtained from an experienced Mysore planter, in order to settle the point, is a belated though sure method of doing so.

I obtained seeds of the robust or glabrous variety and raised plants from the same which astonished the Mysore natives considerably.

I understand that Travancore has both varieties. Mr. J. A. Hunter can speak of this.

The origin of the mistake, I believe, was stated by the late Mr. Macartney. The first lot was obtained from Travancore, which was the true *Mysore*, and it was named *Malabar*. Another variety arrived and this was ignorantly named the *Mysore*, thus, as I have said before, entirely reversing the names.

KOTUWAGEDERA, MATALE, May 21st.

P.S.—A good way to distinguish the varieties is to call one the *glabrous* and the other the *pubescent*, but it is too late now to attempt to alter the marks in the London market.—W. A. T.

#### ADULTERATED PEPPER.

There appears to be quite a serious recrudescence of the adulteration of white pepper by the admixture of ground olive kernels, *alias* poivrette says the *Produce Markets' Review* of 9th ultimo. In the most recent case of prosecution for this offence, as in previous ones, it is the retailer who suffers in his good name, if not in pocket also, although he is certainly quite innocent of any intent to defraud. The pepper appears to have passed through many hands, always under a guarantee of purity, and the originators of the fraud have as usual not even been exposed by the prosecution. The mixture is supposed to emanate from Liverpool, or from the Continent *via* Liverpool, but it has evidently become widely distributed, and although the prosecutions so far have been confined to Lancashire, where the analysts and inspectors are very much alive, other districts are bound to be on the look out for the evil. Unfortunately, some parts of the country which are well-known to the adulterators, differ from Lancashire, the Food and Drugs Acts are very loosely administered, and the districts in question are to a great extent closed to traders in genuine pepper and other spices. The worst feature of the whole matter is the failure to trace these adulterations to their source and to fix the punishment on the guilty parties; but as there appears to be no hope of this being done, the only remedy retailers have is to make themselves absolutely certain that they are procuring their supplies from the many perfectly reliable wholesale dealers, packed and labelled—if need be. It is clear that no ordinary trader can detect a mixture with "poivrette," especially as the fraudulent mixtures are sold probably at the same price as real pepper. As for "Guarantees of Purity," they seem to be in many cases not worth the paper upon which they are written.

The following is from the *Bacup Times*, of May 2nd, 1903:—

At the Rawtenstall Police Court on Thursday, before the Hon. Wm. Brooks and Mr. R. J. C. Mitchell, William Arthur Hobson,

grocer, etc., 8, Bank Street, Rawtenstall, was summoned for selling adulterated pepper. Mr. W. H. Wilson, from the office of the Clerk of the Peace, Preston, appeared for the prosecution, which was undertaken by Superintendent Whittaker on behalf of the Lancashire County Council, and Mr. J. L. Whittaker appeared to watch the case in the interests of the defendant on behalf of Mr. Joseph Pennington, of Bury, wholesale grocer, and Mr. Pilkington Turner, of Manchester, barrister-at-law (instructed by Messrs. J. C. Walker, Dean & Co., of Manchester), appeared for Messrs. Mayoh & Co., of Manchester, wholesale dealers.

Mr. Wilson said that Police-Sergeant Bland visited the defendant's shop on the 18th March, and asked for six ounces of white pepper which were supplied to him, and for which he paid 5½d., and then stated that he had purchased it for Superintendent Whittaker for analysis, and that it would be divided into three parts, one part for the County Analyst, one for the Superintendent of Police (Mr. Whittaker), and the other for the defendant himself to keep. The defendant said the pepper of which the samples were taken should have been purchased under a warranty, and he produced an invoice, dated January 7th, 1903, but there was no mention of warranty on the invoice, which was from S. Pennington of Bury. The proceedings were taken, Mr. Walton added, under section 6 of the Food and Drugs Act, 1875, and the maximum penalty was £20. The Analysis of the pepper showed that it contained 10 per cent. of brown olive stone which was brought from Italy and ground here. White pepper varied from £85 to £100 per ton. Therefore, the 10 per cent. came to £10 per ton, and if they reckoned that on £5,000 per annum it would give a legitimate profit to the grinder of the pepper of £500 per annum. They did not want, Mr. Wilson said, to get at the small shopkeepers unduly, but for 15 years they had had practically no complaints of the adulteration of pepper by a mixture of olives. It was a most extraordinary thing, but it had now spread over almost all Lancashire. The defendant in this case had his remedy against Mr. Joseph Pennington, of Bury, whom he (Mr. Wilson) had subpoenaed to give evidence. Mr. Pennington purchased the pepper under a warranty from a firm in Manchester, and that firm purchased it under a warranty from the Liverpool grinders. Mr. Justice Wills held, two years ago, in reference to the arsenic poisoning in beer, that "when a man sells an article of food he is supposed to sell something which is wholesome and which is asked for," and, therefore, heavy damages were merited if an offence was proved. He (Mr. Wilson) suggested that if it were proved that the pepper was adulterated the Bench should inflict a heavy penalty on the defendant, because he himself would not have it to pay. The defendant had his remedy against Pennington, and Pennington had his remedy against the man who gave him the warranty, and the latter had his remedy against the original grinder; and that was the only way in which justice could be done, and a stop put to this illegitimate and fraudulent trade.

P. S. Bland gave evidence of the purchase of the pepper as stated by Mr. Wilson, and Mr. Walter Collins Williams, B.Sc., one of the County analysts, gave evidence as to the nature and properties of the adulteration. The last-named said he and Dr. Campbell Brown had identified the stuff as ground olive stones. It was of no value, and as an article of food it was a deliberate fraud and unnecessary for any purpose. He (Mr. Wilson) said he would like to say that in his opinion, the adulteration was never practised, directly, by the retailer. The retailer could not get ground olive stones. It was always the wholesale dealer who got them, and the retailer, of course, got a warranty. The prices of pepper were subject to great variations. Sometimes it was very cheap, and sometimes comparatively very dear. It would go up to three or four times its value. When the price was high they invariably found a large amount of adulterations; when pepper was cheap they could afford to be honest, and it was sold as a pure article.

Joseph Pennington, wholesale confectioner and grocer in Bury, said he had a warehouse in Bury, and also a retail shop. He admitted the transaction with P. S. Bland.

In the course of some discussion between Mr. Wilson and counsel and Mr. Whittaker, as to the matter of disclosing where pepper was obtained from, apart from this case, Mr. Whittaker contending that Mr. Wilson was seeking to drag into the case people who were not parties to the proceedings, and who could not be there to defend themselves, the Bench decided that they had better stick to the case so far as it concerned the sample of pepper before them.

Mr. Wilson then elicited from Mr. Pennington that it was a portion of Mayoh's pepper that he sold to the defendant.

P. C. Nolan said he was with P. S. Bland on the 18th March and saw the purchase made of the pepper, and also the invoice which the defendant produced. He did not see the date. The invoice was from Pennington's.

The Hon. Wm. Brooks: What was the pepper taken out of?

Witness: Out of a jar.

And what was there on the jar? Any label?—No, Sir. And I did not see any label on a drawer. I asked for white pepper.

To Mr. Pennington: What price do you sell that pepper to?—11½d. a pound.

It was a good price?—You can get it for 1s. 3d.

Mr. Turner said that in view of the way in which Mr. Wilson had conducted the case, and the weighty issue raised on a very small part of the affair, he might just say he was going to make one or two observations, with their Worships' permission, and, if they could see their way, ask them to adjourn the case in order that the defence might be taken up by Mayohs' and properly defended, and perhaps it would be more convenient to suggest that course at that stage rather than after the defendant had said what he had to say.

Mr. Wilson: Of course, Sir, if you feel any difficulty at all in hearing the emphatic evidence you can send simply to Somerset House.

The Hon. Wm. Brooks: We do not see sufficient reason for adjourning the case.

The defendant said he had nothing further to say.

Mr. Turner said he was very much obliged for the consideration which their worships' had shown to him in the matter, and, in reply to the assumption that the pepper came from them, said it might be that it was obtained by the defendant somewhere else.

Mr. Wilson said it had been admitted otherwise, as shown by the production of the invoice.

The Bench retired to consider their decision, and after a brief absence returned into court and announced that the defendant would be fined £20 and costs, with the alternative, in default, of two months' imprisonment. Advocate's fee and witness's costs were also granted.

## DR. WEBER ON RUBBERS.

In the literature bearing upon india-rubber we very frequently find the statement that even the most carefully prepared and purified rubber on exposure to the light and atmosphere soon loses its white colour, and turns dark brown owing to oxidation. I am in a position to declare this statement entirely erroneous. I possess samples of Castilloa rubber prepared by myself on the large scale, and which for over eight months have been exposed to air and light without the slightest change in their colour having taken place. The fact that these samples are entirely free from every trace of albumen goes a long way to prove that the well-known discoloration of india-rubber is really due to the albumen it contains.

Even washed and dried rubber may be very far from being a pure product. Cases are by no means exceptional of even the better qualities of African rubbers in the washed and dried state containing not more than 85 per cent. or even less of actual pure rubber. This is a point which certainly fully deserves the attention of the rubber manufacturer. By way of an example, I quote the analysis of a washed sample of black Kassai, which, on receipt at the factory, was not considered altogether satisfactory, but was, in spite of this, taken into work, with the result that no end of trouble arose about the goods manufactured from it. These were the results of the analysis (of the washed and dried rubber be it noted:—

Resins	...	...	...	5.3 per cent.
Albumen	...	...	...	7.4 "
Oxygen	...	...	...	5.3 "
Ash	...	...	...	2.3 "

20.3 per cent.

From these figures it will be seen that this washed and dried rubber which the manufacturer assumed "to be practically pure" rubber, contained not more than 80 per cent. as actual rubber the rest consisting of rather considerable percentages of impurities. —*India-Rubber Journal*, March 30.

## DISTRICT ASSOCIATIONS.

### THE INDIAN TEA ASSOCIATION (LONDON).

#### TEA CLEARING HOUSE REORGANISATION.

A meeting of members of the Indian Tea Association (London) was held on Wednesday, the 13th ultimo, at the London Chamber of Commerce, Botolph House, 10, Eastcheap, London, E.C., Mr. George Henderson presiding, to consider the terms of a resolution which was adopted by the general committee of the Association on the 5th instant as follows:—"This committee approves in principle of the proposal that there shall be a Tea Clearing House under the joint control of importers, buyers, and wharfingers, and recommends it for acceptance to a meeting of the members of the Association to be called at an early date."

Mr. Ernest Tye (the Secretary) read the notice convening the meeting.

The Chairman said: Gentlemen, the resolution which Mr. Tye has read was passed at a meeting of the general committee, and as the proposal formed a new departure in the trade, we thought it necessary before proceeding further to have it confirmed by a general meeting of the Association. Those of you who have followed with attention questions connected with the tea trade must be cognisant of all that has passed connected with the Tea Clearing House, and with the agitation which has marked the last eight or ten months. In case some of you are not, I think I had better put before you briefly the position as it appears to me. Hitherto the Clearing House (an establishment to facilitate the handling of tea) has been managed entirely by the warehousemen, who paid the expenses, looked after the staff and the clerical work, and generally ran it on their own account. The Clearing House consisted (first) of Members who were warehousemen, some of whom formed the "pool" and others who were not members of the "pool"—and (secondly) of Subscribers—buyers and brokers—who paid an annual subscription, and who made use of the Clearing House without having any part in its control or management. The Importers, who, it might be thought, would have the largest interest, had no voice in it whatever. They were consulted neither as to its working nor as to its rules.

The objects of the Clearing House originally were perfectly good, and if the Clearing House had confined their operations to them we should not have had this meeting. But in the course of time the Clearing House became a close monopoly of warehousemen—a "ring"—which used the Clearing House as a means to maintain and strengthen their monopoly in warehousing tea. One of the rules provided for a discount on rent and favourable charges to subscribers as compared with outsiders, and then another rule (No. 14) went on to say that subscribers might not deal with warehouses who were not Members of the Clearing House. The effect of this rule was to prevent buyers from dealing with tea at any warehouses outside the "ring." The same rule applied to brokers buying or selling. We, as importers, were, of course, affected in the same way, because we could not warehouse our teas at a warehouse at which buyers were precluded from buying.

Well, at the commencement of last season an outside wharf, of which you have all heard—Gun Wharf—started warehousing tea, and got a large amount of support from importers. Immediately the Clearing House Committee, seeing their monopoly in danger, put into force their Rule 14, prohibiting buyers and brokers from dealing in tea from Gun Wharf on pain of losing the benefits of the Clearing House. Those subscribers who, in spite of this, ventured to deal at Gun Wharf were promptly expelled from the Clearing House; they lost their facilities for clearing tea, not only at Gun Wharf, but at all the other warehouses. They forfeited their rebates, and rates were put up against them as against buyers who continued to support the "ring." Naturally, there was a great commotion in the trade, and in September and October last the dispute seemed to threaten to bring business to a standstill, and it became necessary for the general committee to intervene. That we did, in concert with the Ceylon Committee, with whom, I may say, we have acted throughout. We claimed (first) that we should have freedom to store our tea where we liked. This we could not do

so long as the "ring" enforced these penalties against certain warehouses; (second) that the Tea Clearing House should be restored to its proper function—that is, to facilitate the transfer of tea warrants, and business of that sort; and (third) that we, as importers, should in future have a voice in the management. There was a good deal of correspondence and many conferences, and eventually our claim was accepted. It was agreed that the Clearing House should be remodelled on a new basis, and a sub-committee was appointed to draw up a scheme. This they have done, and it is now before the various Associations. The sub-committee recommended that the Clearing House should be under the joint control of the three sections of the trade—importers, wharfingers, and buyers; each with an equal voice in the management, and each paying its proportionate share of the expenses. The expenses were put down as £1,500 a year, which I think is rather too much. Of that amount £1,500 would be met by each section of the trade of which the Indian importers' share is £750, equal to about 1s. in every 100 chests. This report came before your general committee, and the resolution which you have heard was passed accepting the principle of joint control. If you agree to that principle the matter will then go back to the general committee for the discussion and settlement of details. I do not propose to go into details now, because I do not think a meeting like this can deal with them. But there is one point I should like to bring to your notice, because there seems to be a certain amount of misconception about it. The new Tea Clearing House would be a Clearing House pure and simple, and not a Tea Exchange, as seems to be the general idea. (Applause.) That question was raised at one of the meetings of the conference, and though personally I do not see that there is much objection to such an extension, it does not come before us now. I will now move the following resolution:—"That this meeting approves of the principle that the Tea Clearing House be reconstituted under the joint control of importers, wharfingers, and buyers, and authorises the general committee to carry the scheme into effect."

Mr. R. B. Magor: I shall be very pleased to second that resolution. I think, if most of us carry our minds back to last August and September, we will have a very vivid recollection of the difficulties the sale of tea was placed under by the existence of the Clearing House as then constituted. Seeing the amount of trouble that has been taken to bring the warehousemen round to the opinion that their Clearing House rules must be cancelled, and that a more open Clearing House must be established, I was rather surprised to find some reluctance on the part of some importers to join in an undertaking similar to this, which gave them a voice in the control of what I maintain is their own tea until it is delivered to the buyers, and in which, I also maintain, they are considerably interested even after it leaves their hands, because any obstacles or difficulties which may be placed in the way of the buyers in obtaining possession of that tea in the easiest possible way must react, as we know from experience, on the man who sells it, that is the importer. Well, at the last committee meeting a letter was read from a firm pointing out that they objected to joining another "ring," as they called it. I had an opportunity of seeing the representative of that firm during this past week, and I said, "What was in your mind when you wrote that letter, because as far as I know the very object of those on the Committee is to abolish the "ring," and to take the power which formerly existed out of the hands of the wharfingers, and give the importers some control?" He replied that he had not gone into the matter very thoroughly, but he did not like to join with the wharfingers and buyers. He thought the buyers might make use of it for their own ends, and so on. I explained there are three Associations—the Indian, the Ceylon, and the Brokers'—and we will assume that there is a Wharfingers' Association. According to these articles, it is not even required that a man should be a member of either of these Associations to take advantage of this Clearing House. The aim and object of the whole thing, as far as I can see, is that every man who sells a pound of tea in London will be entitled to have it passed through the Clearing House. We want to have it an absolutely distinct thing. It has nothing to do with the Associations as Associations, but is simply a Clearing House to facilitate the transfer from one to another. As far as a "ring" is concerned, we will assume, for the sake of argument, that one warehouse joins this Clearing House. There is nothing to prevent that warehouse from reducing its rates 50 per cent.;

it remains in the Clearing House. It may be turned out of the Wharfingers' Association, because their object will be to maintain equal rates throughout, but this Clearing House is totally distinct from all the Associations. The Wharfingers' Association has rights in dealing with its own members, but it has no rights here. Then there is a suspicion that this may be made a means of interfering with the conditions of sale, or something of that kind, but then the objects are quite different. If an Exchange is desirable, and it is proved to the satisfaction of all concerned that it should be carried out, it may be carried out, but it seems to me that if we do not take advantage of the present opportunity for exercising more control than we have had hitherto, we shall be missing an opportunity that we may not get again for many years to come. We should probably be thrown back into the same state as we were before. There is no doubt that our produce, handed to the warehousemen, was made use of to restrict the buyers to our detriment. There may be things to object to; I do not say there are not. Details might be left to the committee, so long as it is distinctly understood that the Clearing House should be a Clearing House pure and simple.

In reply to a question the Chairman said that the meeting was asked only to approve the principle of joint control; they were not asked to vote on details of any sort. The general committee had not, as a fact, expressed any opinion on the details of the report of the sub-committee. They had merely approved the principle that the Tea Clearing House should be reconstituted under joint control. He was of opinion that when the committee received the authority of the Association to proceed they would draw up a scheme and submit it to the members for final approval.

Mr. D. M. Stewart: In that case the words "a scheme" in the resolution would be better than "the scheme."

The Chairman: I have no objection to that at all.

Mr. Arthur Bryans: Though I am in entire accord with what the Chairman and Mr. Magor have said as to what we desire to do, I take rather a different view of past history. The old Clearing House, it seems to me, was formed to facilitate the buyer's business, and for the convenience of their trade. The wharfingers knew that the transmission of documents was inconvenient and troublesome, and they made the suggestion—in 1888, I think—that a Clearing House should be formed. The wharfingers made the suggestion to the buyers, who said, "Yes, this would be a very useful thing to us; and are you going to pay for it?" "Of course," they replied, "we will pay for it, but we want you to agree not to have any more warehouses, and we want the insertion of this Rule 14." The buyers said at that time, "Oh, we don't want any more warehouses. There are too many at present. We will agree to that." Time went on, and our market troubles were accentuated, and I suppose the buying community saw that if they could make a little bonfire something might result in the way of lower prices. That is the way I look at the position. I think this business was brought about very much to upset the market, and it *did* upset the market. The whole disturbance went on for weeks and weeks, and all the time it was playing into the hands of the buyers. They were our chestnuts that were in the fire. Our goods were being used for making this bonfire, and we were the sufferers. Naturally, we objected to the position, and we insisted at last on the abrogation of this Rule 14. That gives you a very clear indication of how the movement was brought about and how we were made the catspaw. Then it was suggested that we should have some control in the Clearing House, quite properly I think, and it seems to me that this circular, drawn up by the sub-committee, really embodies almost all we want. But at the same time, very elaborate memorandum and articles of association have been submitted to the general committee, dealing with a whole lot of objects that do not seem to be those of a Tea Clearing House at all. In fact, there is really only one clause which does—(Applause)—and therefore I feel very strongly that we should be very careful what we are doing. If we can get a voice in the control of the Clearing House, such Clearing House should exist merely to give facilities to the wholesale trade for the lodgement and transmission of documents and so on, as per the old rules, then if we can get a voice in the management, we may save ourselves from being landed again into such a position as we were in the past year. If we agree to that principle to-day we should do very right, but why we should make provision for a much vaster scheme I do not know, and I am not at present prepared to support anything more than that we should have a voice in the control.

In the new rules there is a suggestion that nothing fresh can be passed without a clear majority of each section of the trade. That is very good so far as it goes, if you know who are going to be your representatives, but I should like to add a rider to the effect that nothing beyond the business of a Tea Clearing House proper shall be sanctioned by our representatives without reference to us as importers. (Hear, hear.) I think it would be a very wise thing to pay £750 to keep us from another mess such as we got into during the past year. (Hear, hear.)

Mr. J. N. Stuart: I gather from the applause which has greeted the remarks with reference to making this a Tea Clearing House pure and simple, that a great number on that side of the table agree with the majority of the general committee in thinking that this should be a Tea Clearing House pure and simple, and I think if we added to the resolution the words "That it be an instruction to the general committee that no provision is to be made for extending the scope of the Tea Clearing House beyond that connected with the delivery and handling of tea," that we should help the general committee in dealing with the others who are interested in the scheme. It would show the buyers very clearly that we intend to make a stand on that point, and that they need not hope that they will be able to make a Tea Exchange or something to their special advantage out of it. With regard to the memorandum and articles of Association, they are for a Tea Clearing House incorporated. The reason for putting in all those extraneous articles, allowing us to do almost everything under the sun, is because if you do not take the powers at first, you cannot get them at all. But it seems to me that the simplest way is not to incorporate at all, and to make the rules afterwards, when everyone agrees. (Applause.)

Mr. D. M. Stewart said he entirely concurred with Mr. J. N. Stuart's ideas, and he was sure that others around him were with him in that respect. (Hear, hear.)

After some desultory conversation the Chairman altered his motion to the following form:—"That this meeting approves of the proposal that the Tea Clearing House should be reconstituted under the joint control of importers, wharfingers, and buyers, and authorises the general committee to draw up a scheme to carry this into effect, and that it be an instruction to the general committee that no provision be made for extending the scope of the Tea Clearing House beyond that connected with the handling and delivery of tea."

Mr. Magor formally seconded the resolution, which was adopted. The Chairman said that the completed scheme would be submitted to a meeting of members of the Association, and, he thought of all importers. (Hear, hear.)

A vote of thanks to the Chairman terminated the proceedings.

### MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated May 15th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

		Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903	...	1,487,986	1,066,080	81,289
1901-1902	...	1,601,546	1,129,593	78,027
29,916 pkgs. INDIAN	} Total 56,352 packages were offered in public auction this week.			
21,974 " CEYLON				
4,462 " JAVA				

Under the influence of smaller auctions the market somewhat hardened, with more general bidding throughout the week.

CONSUMPTION OF TEA IN INDIA.—Messrs. Andrew Yule & Co., the Commissioners of the Indian Tea Markets Expansion Com-

# CONQUERS PAIN

mission, have issued an interesting report of their first 18 months' working, ending 31st January, 1903. This shows that good work has been done and that prospects are encouraging. The number of pice packets sold in the first six months amounted to 390,977, in the second six months to 907,089, and the third to 1,239,807, making a total of 2,537,873 packets. The number of cups of tea sold in the first six months was 85,535, in the second six months 217,375, and the third 305,715; a total of 608,625. The total quantity of tea disposed of in the eighteen months reached 430,480 lbs.

**IMPORTS FROM AMERICA.**—Owing to the advance in price of Common Tea, large quantities have recently been brought from America, especially of China Tea. The following figures, kindly furnished us by the Customs House authorities, show the total of all Tea recently imported here from the United States, viz., 1902, September 126 lbs., October nil, November 62,197 lbs., December 129,157 lbs.; 1903, January 211,076 lbs., February 447,600 lbs., March 615,725 lbs., April 1,624,826 lbs. Total from 31st December 2,899,227 lbs.

**INDIAN.**—The smaller sale induced decidedly better competition, common kinds remaining steady, while medium and fine grades appeared to attract rather better attention.

*Revised Imports of Customs Indian and Ceylon Tea from 1st June to end of February:—*

Bengal Presidency (including Calcutta and Chittagong) ...	133,906,088	1902-03. lbs.	141,333,380	1901-02. lbs.
Madras Presidency (including Travancore) ...	3,624,450	138,426,224	3,287,115	145,371,518
Bombay Presidency ...	895,686		751,023	
Ceylon Tea ...		75,143,465		75,722,362

Week's av. of tea sold on Garden Account 1903, 24,101 pkgs., av. 7-71d. 1902, 15,477 pkgs., av. 6-50d.

In these tables all packages are chests unless otherwise stated. 1/2 c stands for half-chests; p for packages; prices marked thus † represent the highest offer in the room. In calculating these averages two half-chests or four boxes are taken as equal in weight to one chest.

**CEYLON.**—Prices for all grades were firm. Medium and fine Teas attracted more attention, better descriptions occasionally realising higher prices.

Average for week 7-72d, against 6-60d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 356,355 pkgs., av. 7-67d. 1902, 419,072 pkgs., av. 6-99d.

**JAVA.**—The comparatively heavy auction passed with good spirit at firm prices with good general competition. 216 pkgs. "Goalpara" averaged 9 1/2 d, 120 pkgs. "Tanawatte," and 240 packages "Perbawatte" 7 1/2 d. 2,379 pkgs. are printed for next Monday.

Bank Rate 4 per cent. Exchange on London three months' sight:—Calcutta 1/4 1/8. Colombo 1/4 3/8.

### CINCHONA.

During the eleven months ended February 1902-3 the exports from British India amounted to 1,310,618 lbs. against 1,695,089 during 1901-2, and 2,561,838 during 1900-1. In auction a parcel of good flat yellow from Antofagasta was held for 1s 8d per lb.

### QUININE.

The market closed easier after the Amsterdam cinchona-sale last week with a few small sales in second hands at 11d, and buyerst. This week the feeling has been rather steadier, the usual German brands of sulphate being quoted 11 1/2 d, but no business is reported. The makers' price is unchanged at 1s 1 1/2 d per oz.

### CARDAMOMS.

The supply was again large, but with a good demand the bulk of the catalogues were cleared, fine selling at irregular, but generally full up to occasionally 1d dearer rates. Medium and common grades were lower; and seeds were unchanged, at from 1s 2d to 1s 3d per lb. The following prices were paid for the pod: Ceylon-Mysore: Good bold pale, well bleached, smooth, 3s to 3s 1d; medium to bold pale, 1s 8d to 2s; small and medium pale, 1s 4d to 1s 6d; small pale, 1s to 1s 2d; peas, 10d to 11d; brown, split and pickings, 9d to 11d. Bold pale splits, 2s 2d; medium splits, 1s 6d; small and medium splits, 1s 1d; bold dull splits, 1s 6d; medium-sized dull splits, 11 1/2 d, subject. Several parcels of Mangalore and Aleppy cardamoms were bought in.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JUNE 13, 1903.

[No. 24.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 19th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*June 8th.—Weather—*Days generally fine, nights generally wet. The atmosphere is very damp, and there is much fever about. There is a Monsoon look about, but it can hardly be said to have broken yet. *Crop—*Trees in good heart for next year, but this crop will be small. *Plant diseases—*Borer slight, leaf disease none. *Works—*Getting ready for planting. *Health—*Moderate. *Labour—*Abundant.

#### Coorg.

*POLLI BETTA, 10th June.—Weather—*It seemed as if the Monsoon had set in last week, but on Saturday last a severe thunderstorm passed over the district from the N.-E. Since then there has been no rain and it is warm and close. *Crop—*The berries have swelled perceptibly, but it is feared that crops won't be up to much. *Plant diseases—*Borer trees are being removed and burnt. There are not much of them this season. Coffee has put on a fine flush and is looking grand. *Labour—*Abundant, for time of year. *General health—*Fair. Plague is reported to have broken out at Veerajapett in S. Coorg.

### SCIENCE AND THE PLANTER.

#### AGRICULTURAL CHEMISTRY IN MYSORE, 1901-02.

Dr. LEHMANN's report on the Department of Agriculture, Mysore, for the year 1901-02 is full of interesting matter. There are various remarks made that reveal how great is Dr. LEHMANN's desire that this Department should be worthy of its name. The Bangalore paper touched upon this subject the other day, urging that the Mysore Government should

not be content with an Agricultural Department that comprises but one scientific expert; and from the report before us it is obvious that this one man cannot cope, cannot be reasonably expected to cope, with the heavy work that ought to be done in his department. The work of the department may be classified under five heads:—(i) analytical work; (ii) tours; (iii) the distribution of information on agricultural matters; (iv) agricultural experiments; (v) the fitting of the remainder of the laboratory. To this classification of Dr. LEHMANN's we would add correspondence and office work, as much of the former must make demands upon the personal attention of the Agricultural Chemist. It stands to reason that while Dr. LEHMANN is away on tour analytical work suffers. On the other hand, there is experimental work to be conducted in the open air as well as in the laboratory, and if both these branches have to be under the care of one man, one or both must suffer. When it is stated that 105 samples were analysed during the year, some of our readers may think the number small. But after a little reflection as to the amount of work involved in even the simplest analytical problem, and the immense demand made upon the time and the brain of the analyst when complicated problems have to be solved, it will be understood that this branch of work takes up a good deal of the Agricultural Chemist's time.

In spite of this, ten tours were made during the year, and among these probably the most interesting to our readers was one made to the Shevaroy's for the purpose of seeing the effect of cutting out every alternate tree on the estate of Mr. LEEMING. The remarks on the Leeming system of coffee cultivation are given in full on another page. Dr. LEHMANN writes with all the caution of the scientist, but is apparently disposed to think that there is much overcrowding of coffee, and that experiments alone can determine how far apart trees on a given piece of land should be to give the most favourable returns. He does not consider that trees planted farther apart than is customary now would be more open to the attacks of borer, unless just for a short time after thinning out. As regards fertilisers Dr. LEHMANN has much to say, and we commend his remarks to the attention of all coffee-planters. He also writes at some length on Insect Pests, and concludes this part of his report with these significant words:—"In the interests of Agriculture I should heartily welcome an

Entomologist to those parts of India in which the services of such a scientist are urgently needed." Again, in remarks about Agricultural Experiments conducted during the year it is but too clearly evident that under present conditions this class of work suffers because the chief part of it must be conducted in the vicinity of Dr. LEHMANN'S headquarters, while experiments made on coffee estates cannot receive that constant scientific care which alone would make them really valuable and reliable.

Experiments with fertilisers on Coffee were made on twelve plots of land on as many estates; but these have afforded no useful information so far. In some cases planters were unable to proceed with the experiments, and the almost total failure of the coffee crop rendered valueless those which were carried out. The object was to ascertain what kind of plant-food was chiefly needed in each case, and to get some indications as to the kind of plant-food most required by coffee. In order to obtain information on the latter subject it is necessary to know as thoroughly as possible the composition of the soil on which experiments are made. Samples were taken for analysis in the cases referred to, and when more favourable conditions occur we shall doubtless hear more about these experiments. So far as coffee-planters are concerned the report for 1901-02 is distinctly disappointing, but for this Dr. LEHMANN cannot be blamed. Throughout the whole report there is evidence that coffee is but one product among many that have to be studied. Some of his work in connection with coffee is still in an incomplete stage. Some can only be properly conducted under normal atmospheric and soil conditions. That he is working along the right lines and to the very best ability of a man who is practically single-handed, we feel assured; and the whole tone and tenor of his report goes to show how urgent is the need for a closer application of scientific investigation and experiment to agriculture in Mysore.

### THE "LEEMING SYSTEM" OF COFFEE CULTIVATION.

In our editorial columns allusion is made to a tour undertaken by the Agricultural Chemist to the Government of Mysore with a view to investigating the "Leeming system of coffee cultivation." We extract the following from Dr. Lehmann's interesting report:—

The tour to the Shevaroyas was for the purpose of seeing the effect of cutting out every alternate tree on the estate of Mr. Leeming, the energetic planter who first practised and advocated this system.

#### LEEMING'S SYSTEM.

Every agriculturist seeing coffee, as generally grown in Southern India for the first time, must be struck by the fact of its being crowded very much. Whether such crowding is necessary or not, or whether coffee will thrive and crop equally well per acre when not crowded so much and whether the soil can be kept in as good or better tilth when the coffee is not so crowded are all questions which can be debated almost indefinitely. They have all their *pros* and *cons*, and in how far the one overbalances the other can only be proved by experiment. For absurd as it may seem to a casual inexperienced observer, the crowding system has something in its favour.

#### DISTANCE BETWEEN COFFEE.

No doubt coffee trees ought, like other plants, to grow a proper distance apart. And no doubt, like in other plants, there is some latitude in this distance for the same soil and the same climate. For example, in sugar-cane practically the same yield of sugar was one year obtained per acre at the New Orleans' Experiment Station

when the rows were three feet apart and when double that distance, and the intervening distances gave almost the same result. In this case we may say that  $4\frac{1}{2}$  feet apart was the proper distance, but by giving one-and-a-half feet either way we still got practically the same yield per acre. Similarly if we know the proper distance to plant coffee we should likely find that planting it a little closer or a little wider apart would make little difference in the yield per acre. But what is the right distance on one estate may not be the right distance for another estate. There is no doubt that on one field I have seen on which the coffee was, I think, planted 6 feet by 6 feet it was not overcrowded, while, on another field, in the same district planted practically the same distance apart there was no doubt of the coffee being overcrowded. In cases where the coffee is overcrowded an attempt is sometimes made to atone for this by heavy pruning. Within certain limits this is, no doubt, effective. But undoubtedly it is expensive, both on account of the extra labour involved and on account of the energy and plant-food wasted by the trees. Sometimes the overcrowding is, however, so great that even heavy pruning will not keep down the wood to the limits the space will permit. Instead of producing crop the trees run to wood. A deep digging may possibly check some of the tendency to produce wood by cutting off a lot of the roots and reducing the vigour of the tree. But there are fields on which even this check was not able to keep the trees within the desired limits. They still produced wood instead of crop. So far as my present experience goes it leads me to believe that the knife should be very sparingly used, and if trees require heavy pruning they are growing too close together. How far the branches of neighbouring trees should be permitted to touch each other it is difficult to say at present. This involves not only the subject of what is best for the tree itself as such but also the welfare of the soil; and the condition of the latter, of course, reacts on the former. For the trees themselves it is probably of advantage to have them so far from each other that none of the branches of neighbouring trees touch each other. For the mechanical condition of the soil, it is, however, more than likely that the closer the trees the better. The soil will have more shade, more mulch and be less likely to become infested with grass. The benefit of these latter factors is not fully recognised as yet. Still it will be difficult to overestimate them. Of course, the fewer the number of trees the larger the crop from each individual tree must be to make up the yield per acre. Just how far the trees should be apart on a given piece of land to give the most favourable returns when considering all the factors, experiments alone can show. They have shown us that in certain places the coffee is undoubtedly too crowded. But to judge from this that the coffee is overcrowded in all places would be a fatal mistake. For they have not even proved to us that it is overcrowded as a rule. And as it is easier to cut down a tree than to grow one, it would not be wise to experiment on too large a scale.

#### BORER.

Fears have been expressed by many that if the trees were further apart than they are, as a general rule, now, the borer would be likely to create more havoc among them. This may be the case shortly after the trees have thinned out. But when they have grown that way for a year or two (provided, of course, that the need of thinning out was indicated by their vigorous growth) the trees protect their own stems to such an extent by the drooping branches which touch the ground that little fear need be entertained on this score, provided the life history of the borer as generally accepted at present is correct. The stem will be even more perfectly shaded by its own branches than it was before notwithstanding that its neighbour is removed.

#### MANURES, CULTIVATION, SUCKERS, BRANCHES.

These and other subjects are often discussed in conjunction with that of growing coffee further apart. They require to be experimented with much more than has been done at present before anything which deserves to carry weight can be said about them in this connection. I cannot see how the distance between the trees can have any influence upon the quantity of manure which ought to be applied provided the same crop of coffee per acre is expected. Cultivation is made easier on the one hand by the trees being further apart, but on the other hand the branches being so much lower makes it more difficult. Furthermore as has been proved in Coorg, the stirring of the soil is, to say the least, not necessary as a rule if the coffee is close enough to cover the ground.

Trenches are supposed to have given marvellous results. Why they should do so it is difficult to say, except that the earth thrown out may possibly act as a mulch. If that be the case the natural mulch of leaves, if it exists, is doubtless much better than the mulch of earth thrown out of the trenches. By making the latter the planter will lose his mulch of leaves for the time being to a large extent and produce an uneven surface and thereby prevent a uniform distribution of his mulch of leaves (a very important matter) for sometime to come. Where surface wash exists and the trenches are used to catch this their beneficial influence can of course be easily explained. If under the existing circumstances on any particular estate they are really showing beneficial results of course well and good, and I sincerely hope that we may find out the cause for this beneficial result so as to be able to apply the trenches intelligibly. For it is not likely that trenching can be practised under all circumstances with success.

### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

The following extracts are taken from the Report of the Department of Agriculture, Mysore, 1901-02:—

#### SHADE FOR COFFEE.

At the request of some of the leading South Mysore planters, twelve samples of leaves from some of the best shade trees have been analysed. The leaves were collected and named by Graham Anderson, Esq., C.I.E., and there could be no better guarantee of the samples being true to name. The analyses are not quite complete at present, the potash in several samples not having been determined. Furthermore there ought to be a few samples of leaves from proverbially bad shade for comparison before the results can be intelligently discussed. I therefore simply give the analytical results at present, with the one comment that many of the leaves contain a higher percentage of nitrogen than might be expected, considering they are those which have dropped from the trees in the natural course of events, when a large portion of the nitrogen is doubtlessly re-absorbed by the tree in the protoplasm which travels back to the stem before the leaves drop.

#### EXPERIMENTS WITH FERTILIZERS ON COFFEE.

Twelve plots of coffee were selected on as many different estates for experiments with fertilizers. These experiments have the double object of telling the planter of what kind of plant-food his estate is in greatest need, and of giving some indication as to the kind of plant-food most required by coffee. For, as is well known, some plants require more of one kind of plant-food to be given them, while for other crops it may be advisable to let another kind of plant-food predominate. For example, for most grains, other things being equal, nitrogenous fertilizers respond best, while legumes generally require potash and phosphoric acid most. What coffee requires most on an average soil is quite unknown. The experiments are therefore primarily to test the soil of the estate on which they are carried on and as such are only applicable to the estate on which they are carried on. But the secondary object of finding out some general principles as to the manuring of coffee is of course of general interest and a very important one. In order to be able to get any information on this latter subject it is necessary to know as thoroughly as possible the composition of the soil on which the experiments were made. As was reported last year, great care was bestowed on the taking of these samples. Two were taken from each plot, one representing the top foot,

another the second foot of soil. Each sample was made up of 10 to 25 different borings taken at regular intervals. Unfortunately several of the planters who had undertaken these experiments discovered afterwards that they were unable to carry them out; and owing to the almost total failure of the coffee crop, those experiments which were carried out are this year practically valueless. For, since the cause of the failure of the crop cannot be attributed to the lack of fertility in the soil, the application of fertilizers to the soil can have had very little, if any, effect on the very small crop picked this year. The results of the experiments this year would be misleading if any difference in crop, is attributed to the fertilizers applied. They are therefore not given, and as the analyses of the samples of soils taken from these plots are principally of no value when studying these experiments they are also omitted, notwithstanding that about half of the work connected with these analyses has been done.

### COFFEE NOTES.

**Coffee in Amsterdam.**—The quantity of all descriptions of coffee imported in 1902 shows a considerable increase over the imports in the previous year, both in Java and Brazil sorts. Prices, fairly satisfactory at the commencement of the season, gradually declined during the year in consequence of the increased quantity offering. Good ordinary Java coffee quoted at 6d. in January fell to 5d. in June, closing at 6d. in December. Santos declined in the course of the year from 4d. to 3½d. per lb. The prospects for 1903 are not considered to be satisfactory. Dealings in futures during 1902 were livelier than in the preceding year, the total in Holland reaching 3,412,500 bags, as compared with 2,833,000 bags in 1901, being nearly exclusively in Santos coffee.

**Getting Rid of Coffee.**—The *San Francisco Grocer* says: On the proposed destruction of one-fifth of the Brazil coffee crop the *Merchants' Review* says:

"There are better ways of using that 20 per cent. of production than by burning or otherwise destroying it. If distributed free or at a nominal price in countries not largely addicted to coffee the yearly consumption of the berry should profit and demand and supply soon be adjusted more equably."

Free distribution would demoralize the market and greatly diminish the consumption instead of promoting it. If we are not mistaken, Adam Smith deals with this subject, in connection, we believe, with the destruction of spices by the Dutch in the spice islands some centuries back order to sustain in the market prices. He showed, as we remember, that the circulation of the Bible was greatly diminished by the action of some well-meaning people who for a time distributed it gratuitously; because it was found that no dealer would carry the book in stock so long as any of the gratuitous copies were unabsorbed. Not so many years ago it was proposed in this State to turn over the excess unsaleable fruit to the Salvation Army to be by them distributed gratuitously. We immediately pointed out that the scheme was impracticable; because even if the farmers allowed the fruit to go free of charge, all the cost of gathering, curing, packing, transportation and distribution would still have to be provided and paid for in cash, and that as these, in the case of fruit, constitute by far the greater part of its market value, the advantage to the recipients would be very trifling.

The *Merchants' Review* remarks:—"Corn Meal" Murphy, the agent of the American Government, has had very fair success in his work to make corn popular in Europe by means of free samples. However, it looks as though those Brazilians thought too highly of the value of their coffee to give it away to European barbarians.

**U. S. April Coffee Statement.**—The shrinkage of coffee drinking April is made out by the Coffee Exchange to be 132,349 bags, which is much smaller than expected and due chiefly to the large arrivals of mild coffee in Europe, which swelled inordinately the grand total. This was May 1, 12,248,278 bags against 12,380,627 bags April 1. The world's visible supply has decreased 985,006 bags since November 1, 1902, when top-notch records were reached, but the supply is 865,532 bags in excess of the total visible May 1, 1902.

**Sao Paulo Legislation.**—Report and Comment thereon by the U. S. Vice-Consul-General. Writing from Rio de Janeiro, Mr. L. C. Irvine, U. S. Vice-Consul-General, says that the agitation over the excessive production of coffee has taken definite shape in a bill which has passed the lower branch of the Sao Paulo State Legislature after summarising the Bill, he adds:—

“Of course, any plan of this kind would prove abortive unless the other coffee-producing States—Minas, Rio, and Espirito Santo—decreed like measures; but, owing to interstate jealousies and diverse economical conditions, it is not at all likely that the various interests will be so reconciled as to bring about united effort. It is generally believed here that no Government measures can prove permanently effectual, and that any expedients will only serve to temporarily ameliorate the condition of the planters. It is pointed out that this country will pay the entire cost of these projects, and the foreign markets, with their existing enormous stocks, will, in all probability, reap as great benefit as Brazil. The one real remedy, it is said, is to let the crisis take care of itself, and then prices will go low enough to force out some of the plantations, and thus give consumption a chance to catch up with supply. From entries of coffee (Rio and Santos) up to date, the year's crop up to June 30 would appear to be not far from 12,000,000 bags, which is too much for requirements, and the following crop, from June 1, 1903, to June 30, 1904, promises a yield fully equal to the present one.”

The *South American Journal* considers that the most efficacious way of promoting consumption of coffee would be to concentrate all the resources and energies, at present disseminated, on a single effort to popularise the consumption in England, the greatest unworked market in the world, if only they would take to it.

Under date of the 7th ultimo it is remarked by Messrs. Carey & Browne, brokers, that “the Costa Rica crop, which this season was abnormally early, is now showing unmistakable signs of diminishing imports, and so far 109,227 bags have been catalogued as compared with 74,338 bags in the same period last season, the yield generally being reported to be about the same.” This week the market has continued tolerably active, and the again rather extensive public sales have passed off with a fair competition, though at uneven rates. Amongst the finer coloury qualities, for example, the wide divergence in value so long perceptible is beginning to disappear, No. 1 (bold) sizes being now disposable only at drooping rates, while No. 2 and the more medium sorts, on the other hand, are commanding repeatedly stiffer prices, thus bringing the general currencies for fancy grades of coffee

closer together, instead of their ruling as before from 10s. to 20s. per cwt. apart.

**Coffee Drinking Increasing in the U. S.**—Last year, says the *Spice Mill*, each one of us drank  $17\frac{1}{2}$  gallons of beer,  $14\frac{1}{2}$  pounds of coffee, a gallon and a third of whiskey, two-thirds of a gallon of wine and a pound of tea. That is, probably many of us did not imbibe exactly these quantities, particularly of some of the beverages mentioned, but the total quantities consumed in the United States in 1902 were equal to these amounts for every man, woman and child in the country. If you drank no beer, then somebody else drank twice the quantity mentioned above, to make the average good; and if you drank 27 pounds of coffee, then somebody else got along without a drop of this most popular beverage. To give the figures of the total consumption of coffee, beer, spirits, etc., is not particularly impressive, but the figures of the *per capita* consumption make it much more plain. And from those *per capita* figures for 1902, which the Government has just published, we find several things of interest. A comparison with the *per capita* consumption of ten years ago is given below.

Year.	Per capita consumption of				
	Tea.	Coffee.	Wines.	Spirits.	Liquors.
	Pounds.	Pounds.	Gals.	Gals.	Malt. Gals.
1871	1.14	7.91	0.40	1.62	6.10
1881	1.54	8.25	0.47	1.38	8.65
1891	1.29	8.00	0.45	1.43	15.31
1901	1.14	10.60	0.37	1.33	16.20
1902	0.94	13.37	0.63	1.36	17.49

Thus we see that people are drinking twice as much coffee as they did a generation ago. Of course coffee is cheaper now than it was then, and it is evident that the many warnings against the use of coffee by those who manufacture “substitutes” for it are not taken very seriously. Tea drinking seems to be a little on the decrease and so does the use of distilled spirits. On the whole, there is much comfort in these figures for the trade.

April deliveries in the United States were 574,164 bags, of which 61,125 bags were mild sorts; 513,039 bags Brazil; against 555,628 bags all kinds April, 1902.

Karl Krische & Co., Rio, estimate that May receipts at Rio and Santos will reach 600,000 bags. This would indicate total receipts for the trade year ending June 30, of over 12,000,000 bags.

On May 1 there was a stock at New York of 11,460 bags Central American coffee; 15,581 bags Maracaibo; 15,298 bags Savanilla. Bogota ranges from  $8\frac{1}{2}$  @ 14c. in invoice lots, with fancy and desirable 1 to 2c. higher in a jobbing way. Good Cucuta, 9c.; choice, 12c.

Lovers of coffee are indignant at the specious and exaggerated statements about coffee being injurious. A correspondent of the *Boston Post*, Mr. T. M. Proctor, of Essex, Mass., says:

“Having seen a great many reports printed which attempt to show the injuriousness of coffee, I wish to state that I am 83 years of age, and have drunk coffee since I was 10 years of age, seldom missing a morning cup, and sometimes three times a day I drink coffee. I think that anyone who drinks the best of coffee cannot feel harmful effects.

"I shall celebrate my fiftieth wedding anniversary to-morrow, and I want you to come and try my coffee. I wish this put into print in your paper, to show that good coffee is not harmful, but on the contrary, a food and drink to the body."

The *American Grocer* remarks :—  
The libelers of coffee are the makers of cheap and nasty baked cereal and other substitutes, devoid of as much nutriment as skim milk.

In 1815 there was printed in London a pamphlet on coffee as an article of diet and medicine, containing a statement of the particular diseases in which it has been found beneficial, from the experience of the most eminent physicians. It claims that "there are many nervous disorders which are much alleviated by the use of coffee. Its effects tend to produce a pleasing sensation and hilarity of mind. . . . Coffee is the proper beverage for those that burn the midnight oil, and wish to have their mental powers awake to the spur of the moment."

That sort of testimony doesn't suit the Battle Creek literary bureau, whose sole aim is to discredit coffee, for what?—a mixture that costs about 2 cents a pound to manufacture and many times that for advertising it in a way to create the impression that it is a sort of cure-all for human maladies. And all the time the consumption of coffee, "which comforteth the heart and aideth digestion," goes forward, and has made the United States a billion pound coffee consumer.

Giuseppe Parini, fifty years ago, wrote a poem, "The Day," which celebrates a day's occupation of a gentleman of fashion. This was translated by Howells and that portion which records the giving of a signal to the cavalier that it is time for the ladies to leave the table as "the grateful odor of the coffee" rises, bids the guests "Drink in the nectar of the feast divine."

We avail ourselves of the statement obtained by the *New York Journal of Commerce*, which explains why buyers cannot secure coffee at 3·80 cents per pound, the Coffee Exchange net cash price for No. 7 coffee. The standard on which transactions are based on the Coffee Exchange is "low ordinary No. 7." There are nine standards on which all deliveries are graded, having various values either above or below standard No. 7. They are as follows :

Exchange standard :			
No. 1	...	...	Valued 3c. per lb. above No. 7
" 2	...	...	" 2½c. " " " 7
" 3	...	...	" 2c. " " " 7
" 4	...	...	" 1½c. " " " 7
" 5	...	...	" 1c. " " " 7
" 6	...	...	" ½c. " " " 7
" 7	...	...	Basis of all contracts.
" 8	...	...	Valued ¼c. per lb. below No. 7
" 9	...	...	" 1c. " " " 7

The question is daily asked why the buyer cannot buy any desired grade of coffee on the basis of the Coffee Exchange prices. It is because the price on the Exchange is governed by the value of the grades most in supply and the least wanted. At present a buyer of coffee on the Exchange would probably receive Rio coffee grading about No. 2, which, at the difference between grades, would cost 2½ cents per pound above No. 7. The standard on which the contract is based with April at 3·80, the coffee delivered would cost the receiver 6·30 cents per pound net cash. Every grade from standard No. 4 and below commands a premium above the Exchange option prices. The grades most difficult to secure are standards Nos. 6, 7, and 8. To put this clearly, below is given the present market prices of the different grades in New York for 1,000-bag invoices, and the cost to the buyer if he could select and receive the corresponding grade on the Coffee Exchange, showing that the only grades that could be delivered at near invoice values are Nos. 1, 2, and 3 :

Standard :	No. 1	...	...	Invoice price.		Exchange value to
				Rio.	Santos.	
	No. 1	...	...	7½c.	7½c.	6·80c. per lb.
	" 2	...	...	6¾c.	6¾c.	6·30c. "
	" 3	...	...	5½c.	6¼c.	5·80c. "
	" 4	...	...	5½c.	6c.	5·30c. "
	" 5	...	...	5¼c.	5½c.	4·80c. "
	" 6	...	...	5¼c.	5¼c.	4·30c. "
	" 7	...	...	5¼c.	5¼c.	3·80c. "
	" 8	...	...	5c.	5¼c.	3·30c. "
	" 9	...	...	4¾c.	5c.	2·80c. "
				*	*	*

Coffee continues in an abnormal situation, says the *Tea and Coffee Trade Journal* of New York. The prices for actual and speculative coffee are at the lowest level, although, viewed statistically, the situation is not so bad as that presented at this time one year ago. The crop that has about all been sent to market is not so large by several million bags and altogether promises to be short of the world's consumption. The visible supply, too, has shrunk one million bags since November, whereas twelve months ago it had grown to the largest figures on record. Viewed thus, coffee, from the standpoint of price, should be at least in the same situation that prevailed one year ago, but speaking generally the commodity is one cent lower. A trouble, in fact the trouble, is the crop now about to be sent to market. On the Herculean quantity of this estimates agree in a most melancholy way. Even should the crop fall short of the least reasonable expectation, such a happening cannot be realized to the full before the passing of one-half year at least. Meantime the market would ail. The peep into the future with all its blind uncertainty consequently sways for the time being the market movements. A fervent wish must be that the lowest price conditions may come with quickness, precision, and certainty. Then the market would take on some buoyancy and yield profits. Such is the practice in trade, which shows obstinate disinclination to buy at falling prices and rushes in without rhyme or reason to buy when prices meet an advancing current. It is always only a few who are wise and courageous enough to gorge themselves when prices are lowest to disengage when they are dearest.

Word has been received in New York that the law proposed in Sao Paulo curtailing the coffee crop has been enacted and will go in force July 1. Official information has still to be received.

**The U. S. Coffee Market.**—The market in coffee is quiet to dullness but prices are steady, says the *Tea and Coffee Trade Journal* of 12th ultimo. These are so low as seemingly to permit no further decline, yet buyers are not tempted to stock up. It would seem that they are already carrying all their requirements call for and are disinclined to store up for a rise. Capital is needed in other directions. Brazil continues indisposed to listen for orders except at figures too high for business from this side. A sample is a firm offer of Santos Nos. 3 and 4 at 6¼c. c. and f. In spot invoices neither roasters nor jobbers are making offers to any extent. Prices closed Rio No. 8, 4¾c., Rio No. 7, 5½c., Rio No. 4, 5½ to 5¾c., Santos No. 4, 6 to 6½c. Dullness also is heard of in jobbing lines.  
The market in futures is flat and slow, showing little change. Interest seems to have almost entirely withdrawn from the market. At any rate orders are few. Santos interior receipts are one day gratifyingly low and on the

next top-notch full. May hovers around 3.80c. The difference between November and December is now 35 points. A change in the grading next Winter is regarded as certain. European markets are also dull.

In milds prices are steady. It would seem that the crop will be shorter than anticipated. The low price of coffee has discouraged coffee-growers in not a few instances, and further the war in South America continues to hold back the supplies there, if they are large at all. At any rate transportation of these coffees by canoes is slow work, and if no relief from such slow locomotion ensues Bogotas and Maracaibos will be comparatively scarce this season. Javas too are in poor supply and moreover their quality is unsatisfactory. Santos coffee will probably have to be drawn upon to make good the shortage. All in all, trading is inactive. Good Cucutas are 8½ to 9c.

\* \* \*

Total stock in United States May 1, 2,531,917 bags against 2,307,894 bags May 1, 1902. Brazil stock in the United States May 9, in store and afloat, 2,548,767 bags against 2,355,637 bags at the same time last year. Other than Brazilian, 331,192 bags, against 319,985 bags last year.

Brazil coffee in New York May 9, 2,038,158. Stock in New York in other coffees May 1, 235,435, in San Francisco, 86,552 bags and in New Orleans, 9,205 bags. Visible supply in the world of all coffees, May 1, 12,248,278 bags.

### TEA NOTES.

**Tea at Amsterdam.**—There is little to report as to transactions in tea in the past year. Imports into Amsterdam, almost entirely from Java, amounted to 88,511 chests. Prices ruled low throughout the year, some improvement being experienced in the last month. British India and Ceylon teas were entirely absent from the market.

\* \* \*

**Tea in the States.**—The Consular report on United States trade last year says that the imports of tea to the States show an increase of over 40,000,000 lbs. over 1901, when the imports were very low, and 12,000,000 lbs. over 1900, which year is taken as a basis of comparisons. Japanese tea shows an increase of a little over 1,000,000 lbs.; China, 6,000,000 lbs.; the United Kingdom, 3,000,000 lbs.; and East Indies, 2,500,000 lbs. In 1900 the United Kingdom and East Indies together were credited with 5½ per cent. of all tea importation, while in 1902 this has increased to over 10 per cent. This is a much more satisfactory return than had been expected, and at last it seems that there is a prospect of Indian teas getting the recognition in the States that their quality warrants. To Chicago the direct importations of tea have fallen off and are the lowest for the five years of which there are records to hand, while the imports from the United Kingdom have advanced and are the highest. For the first time tea merchants speak hopefully of the outlook, but tea merchants and growers are warned not to rush in stocks on speculation, as the increase must be gradual, and any attempt to force sales or to leave large stocks in the bonded warehouses will result in a fall in prices and heavy losses to speculators.

\* \* \*

**Tea for Price.**—It is rather good, says the *Grocer*, that the wholesale and packet tea trade should be lecturing grocers about selling low-priced tea, as if it was they who had begun

it. They did not start selling tenpenny tea in packets. The ordinary grocer was unwillingly forced into the low tea trade by the wholesale packet firms and the multiple-shop companies, and would heartily welcome a demand for better class tea. But getting an advanced price on anything now-a-days is not so easy as it may seem to an outsider.

\* \* \*

In Japan the finest teas are generally packed in earthenware jars.

\* \* \*

When green the tea leaf has no particular flavor, being, in that respect, like coffee and the peanut before roasting.

\* \* \*

The exporters of China and Japan teas are not quite accustomed to sending the best tea here, but the spice imports have much improved in late years and some coffee we get is also a superior grade, says the *Merchants' Review of New York*.

\* \* \*

**Foochow Oolongs, under Standard, must go.**—The recent decision of the Board of Tea Appraisers sustaining the rejection of some 500,000 of Foochow teas has been declared valid by the United States Attorney-General Mr. Knox, says the *Tea and Coffee Trade Journal* of 5th ultimo. The decision of the Board was attacked as illegal, in that it was conducted before only two appraisers, whereas, seemingly, the law required the presence of three appraisers. A re-opening of the case was thus granted, and still in progress when the decision of the Attorney-General was announced Saturday last. Proceedings were opened pending instructions from the Secretary of the Treasury whether or not Mr. Knox's decision should be accepted as final and the re-opening dismissed. This seemed most probable as the decision of Mr. Knox also stated that the Board's decision could not be changed.

The examination began Friday last and one half of the tea under refusal was tested. The importers involved were represented by Counsel, who, as a first thing, presented the following demands:

#### NINE REQUESTS.

We request that the Board instruct such experts as follows:

1. That all consideration of the appearance or so-called style of the dry leaf shall be omitted.
2. That the quality must be equal to the standard, but the flavour may be different, so long as it is equal in sweetness.
3. That by sweetness as here used is meant as distinguished from very sour or otherwise sharp taste, being not sound or wholesome. That by sound and wholesome is meant having a fresh, natural taste, as distinguished from a taste that is stale, sour or rancid.
4. That if any of the experts called has any pecuniary interest or any transactions pending, relating to teas of the same general character as the Foochow teas covered by the protest, he should disclose the fact to the Board and should be excused from acting as an expert or adviser.
5. That if any of the experts called has heretofore formed or expressed an opinion as to the admissibility of the teas in question, he should disclose the fact to the Board and be excused from acting as an expert.
6. That in passing upon the admissibility of the teas the experts are confined to the ground of rejection stated by the examiner, to wit, the quality of the tea, and that by quality of the tea is meant the cup quality of the tea.
7. That the amount of broken leaf or fannings is not to be considered in passing upon the admissibility of the teas.
8. The importers also request the Board to instruct the experts or advisers, who they may call, that the merchantability or market value of the teas is not to be considered in determining their admissibility under the tea act.

9. Also that the sole duty of the experts, or advisers, is to compare it with the standard as it now is, and not as in the opinion of the experts or advisers may it have been when it was established, and unless they find that the teas are inferior to the standard in quality, sweetness and brightness of infused leaf they are not to be rejected, although in flavour and taste they may differ from the flavour and taste of the teas as palatable as the standard.

Nearly all of these requests were favoured affirmatively. Indeed the Board continues to show the complainants the most unusual courtesy and consideration, leaning even to partiality, in order that they and all those who are recognized as opponents of the Tea Standard Act may claim no official prejudice against their legal procedure. As to the quality of the tea Mr. Sharretts said that the Board felt that it had a right to pass upon the quality, on all the necessities provided in the law, and that it was not confined to the particular specifications made by the examiner. Mr Sharretts also ruled that the importers could see the list of experts upon whom the Board was calling for service, and if any were found objectionable to the importers the names would be stricken out. Counselor Bishop produced the list and struck out the objectionable names.

This was extraordinary condescension and unsolved in no small way the previous opinion of the appellants. The list had been made from several names suggested by the men who were plaintiffs, one of whom felt himself as doing nothing immodest in lending his own as a tea expert.

These same selected experts had rejected the Oolong tea of their sponsors, and their judgment was therefore all the more cruel. The list consequently needed revision and was duly blue penciled.

Monday afternoon, May 4, the Board dismissed the re-opening proceedings. Chairman Sharretts said: "According to instructions received from the Treasury Department at Washington, based on the decision of Attorney-General Knox, the Board withdraws its consent for a re-hearing of the cases."

The former decision hence stands. Those who led in the reopening of the case, as interested in the rejected teas were Jardine, Mathieson & Co., W. J. Buttfield, and Brandenstein & Co. All refused to discuss the dismissal. It is believed the rejection will, in some manner, be taken to the courts. The teas will have to be shipped out of the country or destroyed.

\* \* \*

**Exit 1s. Tea.**—It is with much satisfaction, says the *Grocer*, that we are enabled to announce that at a meeting held in London this week, consisting of a large number of "many-shop firms," amongst whom were the International Tea Company (Limited), Lipton's (Limited), the Home and Colonial Stores (Limited), the Empress and Star Companies, Pegram's (Limited), the Maypole Company (Limited), Ridgways (Limited), Hunters the Teamen (Limited), Pearks, Gunston, and Tea (Limited), and D. Melia & Co. (Limited), it was decided to abolish 1s. tea from Wednesday next, the 20th instant, on which date none of the firms mentioned will sell any tea under 1s. 2d., and those firms who have been selling "over-weight tea" at 1s. 6d. will now charge 1s. 8d. It is hardly necessary to point out that this will give our readers a splendid opportunity, not only to abolish the shilling canister, but to improve the occasion by educating their customers to drink better tea, for there can be no doubt that those retailers who have taken our advice in the past, and have induced their customers to buy 1s. 8d. or 2s. tea have

found the results exceedingly encouraging. The present state of the tea market is such that for many months there is not likely to be any great, if, indeed, any, downward change, but rather the opposite; and thus very little, if any, profit can be hoped for on 1s. 4d. or lower-priced teas. We understand that there is a probability of the above firms further arranging minimum prices for several articles that have been seriously cut of late.

\* \* \*

**March U. S. Export and Import Statistics.**—Statistics for March as printed by the Bureau of Statistics of the Treasury Department give the tea exports from the United States during the month at 415,421 pounds and for the last nine months at 1,235,611 pounds. As has been heretofore written examinations of manifests of ships make the totals much larger.

The imports of tea during March according to this authority were 4,158,527 pounds and for the last nine months 100,943,165 pounds against 69,369,297 pounds during the same period ended March 31, 1902. The following table is shown :

Imported from	Nine months ending March 31.	
	1902	1903
	Pounds.	Pounds.
United Kingdom ... ..	2,624,000	4,748,343
British North America ... ..	1,205,926	1,610,288
Chinese Empire ... ..	34,433,284	54,428,074
East Indies ... ..	2,055,444	5,396,075
Japan ... ..	28,723,649	34,323,037
Other Asia and Oceania ... ..	269,042	431,671
Other countries... ..	57,952	5,677
Total ... ..	69,369,297	100,943,165

\* \* \*

At the monthly meeting of the South Shields Grocers' Association, Alderman Imrie, J. P. (President) said: Every-body seemed to be selling tea now-a-days. If the duty was doubled it would send a tremendous lot of stuff out of the market that should never be in the market, and should certainly not be put into the stomach, because it would not be worth the duty, and they should not see the low-priced rubbish that they saw to-day—it would not come into the country. He hoped the Chancellor of the Exchequer would stick to his guns, and whether we liked the corn tax or not that he would not touch tea.

\* \* \*

"It may be well for producers to note," say Messrs. Thomas, Cumberlege and Moss in their report, May 22, "that the action of many large distributing firms in now asking the public to contribute some share of the general advance in the price of tea is resulting in the inferior and undesirable kinds falling into less request. With excessive trade competition no longer, however, sacrificing quality to cheapness the consumer will probably get a better article, and there does not appear to be any good reason to believe that an advance of 2d. per lb. in the retail price will materially affect consumption." Messrs. Wm. Jas and Hy. Thompson say:—"In view of the fact that, with a duty remaining at 6d. per lb., the low-priced canister has ceased to be remunerative, buyers are looking to a future trade based upon the sale of tea of better quality. Some of the largest blenders last week met and decided to discourage as much as possible any further sales of the commonest tea—an important decision, and, if adhered to, likely to affect the industry as a whole very favourably, but it is to be hoped the public will

assist them and not compel the sale of blends which can only be obtained by the purchase of the lowest class tea produced—unsatisfactory alike to both seller and buyer. Supplies are not excessive—nor from latest telegraphic information is the Indian crop likely to prove an early one—while both home consumption and export continue on a favourable scale.”

\* \* \*

Tea is in as abnormal state as coffee, but with a difference, says the *Tea and Coffee Trade Journal* of New York. For once it is not an abundance of supply that colours the view but changing conditions brought about by the advance in prices, which has favoured most lines of tea. It would appear that the keynote which was heard with no uncertain sound in 1902 proclaiming dearer prices would sound with an intensified shrill this season, a significant point in instance being the Japan market, which has opened at a considerable advance over the opening one year ago. This tea has had an interesting history in the year. It advanced in price, and has maintained it with the most confident firmness despite that it was produced in larger quantity than in the year previous. It was especially firm in the United States, where more than the usual supply was offered owing to the refusal of Canada to take its customary quota, which fell short several million pounds. This was replaced by India and Ceylon teas. Usual market rules would suggest that the tea should for this year, perhaps, rule lower. The prospect is that the advance of the price in the tea will call out a larger crop, which will naturally be offered to the United States, the almost exclusive market for the tea, and here also will have to be taken the probable increased rejection of the tea in Canada. Yet in the face of all this the tea opens much higher, and there is general confession of confidence in the outlook. The high price of the tea would seem to threaten its supremacy, as assailed by the Ceylon and India Greens, which have been threatening to come over 14,000,000 pounds strong. But probably no such quantity will be realized. The preference of the Ceylon and India grower is for the black tea, in which he can make more profit unless prices decidedly fall. But these have risen considerably in the last two months, and are such now as to make the advantage of black tea manufacture more desirable. Moreover, the India men are much hampered for lack of capital to introduce green tea machinery, and such capital as they may command is needed to take care of a very short labour market. Doubtless, the Ceylon and India men who have entered upon contracts to furnish green tea will produce them, but it may be safely dismissed that this class of green tea will figure very largely in the immediate tea market. As to other black teas, Formosa excepted, it is more than probable that the low prices that have ruled for them will discourage their manufacture. This will turn more towards the making of the green tea, whose prices have so improved. All in all, the situation seems a most healthy one for tea, and even if the considerable advance in the prices looks alarming, it is after all, only relative, and is the long delayed reaction from the low prices that have prevailed, the recession from which has a long road before it, should the aim be to reach the goal of high prices that prevailed years ago.

\* \* \*

**U. S. Tea Imports.**—The imports of tea for the first nine months of the fiscal year ending June 30 were 19,601,367 pounds, duty free, and 81,341,798 pounds dutiable; total, 100,943,165 pounds, against 69,369,297 pounds for the same

time in 1902; 82,451,690 pounds in 1901. The imports this year are largely in excess of a year's requirements, fully 10,000,000 pounds, and point to a supply far enough ahead of the demand to make a weak market. Consumption must make a big leap forward to keep the market steady to firm.

\* \* \*

**The U. S. Tea Market.**—There is more demand for tea, says the *Tea and Coffee Trade Journal* of 12th ultimo, and the opinion is that at least a moderate market will rule from now on until the fall. Supplies in first hand of course, are limited and prices should, as at present, rule steady.

Some 4,500 packages of Congous were sold for export to London. The tea remains firm on the old basis of prices. London reports that the arrivals of “prices teas” have been shown but the market value allows no profit to the importers, and consequently little of it has changed hands. It may be that very little of it will anyway. It is not improbable that large packet tea houses have bought the teas, and this means no re-selling. New crop Ceylons and Indias are now arriving in considerable quantity. Samples show good quality. The greens are maintaining the favourable impression held of them. Prices hold firm in natural response to the firmer market in London.

Interest centres in the opening markets in the East, Japan and Formosa. They continue very firm. Cable advices from Japan report that all the first crop has been secured for the American market; otherwise no new features are at hand. The China green tea markets open next month. There is some concern whether they too will open at an advance. The high prices for them that have existed should call out larger supplies and therefore stir more competition to sell with the consequent reduction in values. Blacks should suffer by this eagerness to produce greens but they, excepting Formosas have been so plentiful as to be well able to afford a reduction in quantity.

## NOTES.

### Pepper in New York.

The supplies of black pepper here and in Europe are, says the *Merchants' Review*, much smaller than for several years at this date. The exports of black pepper from Singapore and Penang since the first of the year have aggregated 4,035 tons, compared with 4,060 tons corresponding time in 1902 and 3,100 tons corresponding time in 1901.

### Calcutta Tea Sales.

At the sale on 5th instant 7,883 packages were offered for sale and 6,300 were sold. The tone of the market was irregular. Common teas were easier, and medium teas were in fair demand. There was good competition for quality teas, which were generally good and useful. The Russian buyers were active. The Bombay demand is returning. Advance musters indicate a good future quality.

### Adulterated Chicory.

From a French source it is learned that chicory does not escape adulteration. In order to make chicory weigh heavy, it has been proved to be the fraudulent custom in Europe to add to the produce the residues of breweries, grain distilleries and, sugar factories, as well as the residues from the preparation of chicory itself, and a certain proportion of spent animal black.

In a word, everything is to be found in "Chicory"—except, ing chicory! The adulterants most used are horse-chestnuts-acorns, and coffee sediments—substances which most closely resemble coffee with chicory in appearance.

#### Cocoa in the U. S.

Cocoa importations during March into United States, were 5,524,273 lbs. against 4,369,045 lbs. during March, 1902. Total importations for the 9 months ended March 31, were 50,821,232 compared with 38,265,012 lbs. imported during the nine months ended March 31, 1902. "Up! up! up! goes the record of imports of cocoa," says the *American Grocer*. "In February they reached 7,477,644 pounds; in March, 5,524,273 pounds; for the nine months ending March, 50,821,232 pounds, against 38,265,012 pounds for the same time in 1902 and 31,557,634 pounds in 1901. There is an increase in two years of nearly 60 per cent. The high tariff on manufactured cocoa, with free crude cocoa, is doing the business for American manufacturers."

#### The South African Markets.

The coffee men, and the tea men too, should, says the *Merchants' Review*, carry the war into Africa and attack the substitute for their products on the ground of their inferior wholesomeness. People who drink tea and coffee, properly made, seldom suffer from digestive troubles, the high temperature of these beverages, when they are drunk with discretion, preventing or relieving indigestion in a seemingly miraculous manner. When you have safeguarded the digestive organs the doctors find little to do, for most of the ills that flesh is heir to come from digestive troubles originally. If the grocery store deserves to rank as a pharmacy nearly as high as the drug store, as we have contended, then coffee and tea have had a great share in putting the grocery store into that enviable position.

#### The Java Cinchona Trade.

The British Consul, reporting on the trade of Java for the year 1902, says that exports of cinchona bark, almost the whole of which find their way to Holland, were heavier than ever. Taking this circumstance into consideration, prices obtained were fairly satisfactory, although the average unit price for the 75,000 bales sold at the 10 Amsterdam auctions was only 6.90c. (1 $\frac{2}{3}$ d.), as compared with 8.44c. (1 $\frac{7}{10}$ d.) average in 1901. The 22,000 bales sold at the 12 London auctions fetched an average unit price of 1 $\frac{3}{4}$ d., as compared with 1 $\frac{1}{2}$ d. in 1901. The quantity of sulphate of quinine sold by the Bandong Quinine Factory at auction and by tender in Batavia was 821,608 ozs., most of which went to the United States, the average price at the 11 sales being about 11d. per oz. In future the above company's product will be disposed of by tender only. A combination of Java cinchona planters, controlling more than one-third of the total area under cinchona, came to an arrangement in September, 1902, to limit the unit-selling price of the bark in Holland up till the end of March next year to 6c. (1 $\frac{1}{2}$ d.), with a view to preventing temporary over-supply in Europe and consequent low prices, and they have now extended the period for which this limit is in force till the end of 1903. Seeing that this island produces probably 75 per cent. or more of the world's supply, this measure should, if consistently carried out, result in a higher scale of prices both for bark and quinine.

#### Exploiting the Cardamom-market.

The *Chemist and Druggist* says:—Mr. J. A. Spence, of Duckwari, Rangalle, a well-known cardamom-planter and visiting agent, left Ceylon by the Orient steamer *Omrah* on May 4 for the southern colonies, as representative of the Ceylon Planters' Association, bearing with him letters of introduction from Sir West Ridgeway to the Governor-General of the Australian Commonwealth and the Governor of New Zealand. The southern colonies, it appears, obtain their supplies of cardamoms entirely from London, and Mr. Spence is to point out to importers the advantages they will obtain from dealing direct with Ceylon. As it is difficult to find out the names of the importers and others concerned in the trade, official assistance at the different Customs will be requisitioned. After spending five or six months in Australia and New Zealand, Mr. Spence will return to Ceylon, and then visit South Africa on a somewhat similar mission. He will afterwards visit this country and finally Russia, still on behalf of the Planters' Association and the cardamom-growers. This mission is another instance of the desire to establish more direct trade relations between the grower and consumer, but we do not think it will be successful in diverting trade from London to Ceylon. We have yet to learn on what basis Mr. Spence is to fix prices, but so far as regards his own (Duckwari) mark it has always brought the top rates in the London auctions, although it must be admitted that prices have dropped considerably owing to over-production.

### GENERAL ARTICLES.

#### COFFEE IN LONDON.

There has been no improvement in the demand in the terminal market, says the *Produce Markets' Review* of May 16, 1903, the position is still one in which operators are afraid to take sides, not knowing whether the new law will be carried out, and unable to determine what the effect will be if it is. The daily receipts in Brazil are, moreover, too large to encourage speculators to look for any immediate improvement in prices. The auctions have not been as heavy as recently, and the quality of the various marks shows unmistakeable signs that the end of the crop is coming forward. Particularly is this the case with Costa Rica, and, in consequence, prices have further hardened, and, with the exception of Wednesday, have been from day to day rather dearer. A rather larger supply of Colombian has been offered, but the quality is not very attractive to the Home trade and the bulk has been taken for export, either to the Continent or to America. Prices have been firm, and for the second size are decidedly higher. Mocha has been in more demand, particularly short berry, of which there is not much fine quality offering.

#### LONDON TEA MARKET.

INDIAN TEA.—For the quantity brought forward at auction, which was about 10,000 packages less than on Monday week, there was brisk competition, says the *Produce Markets' Review* of 16th ultimo, and the market was generally firmer. The medium grades have attracted more attention, which, considering the excellent value offering, is not surprising. That there will be an increasing demand for these descriptions is almost certain, as the difference in value in their favour compared with the next lower sorts is most marked. The present, therefore, is an opportunity to secure teas at prices showing no material rise from the easy rates ruling some time ago, and it is highly probable that, with a falling-off in the supply later on, buyers will experience difficulty in purchasing on the present favourable terms. The quantity of the fine and finest qualities is being gradually reduced, and the limited offerings met with active competition at hardening rates, while in all probability values will be further enhanced, as there is not likely to be any

additional supply for some time to come. There was stronger bidding for the lower descriptions at firm to slightly higher prices, and as the bids made were in most cases up to the importers' limits, a larger proportion passed the hammer. The later advices of the new crop are not satisfactory, the weather in most districts being detrimental to the production, and a later season than was at one time expected seems probable. The quantity catalogued for next Monday is smaller than in the preceding week, and firm prices are anticipated.

**CEYLON TEAS.**—There was rather more enquiry at the auctions this week, and the moderate supplies on offer were readily taken at firm rates. Whole Leaf kinds up to 7d. were rather stronger, and a smaller quantity was withdrawn, while the medium sorts remained unchanged. More attention was paid to the medium and better grades of Broken Pekoes, and occasionally higher prices were realised, but teas of average quality met with less support. The supply of dusts and fannings continues very small, and the best lines were strongly competed for. At the public sales 21,970 packages were brought forward, of which about 2,900 were withdrawn.

**CONGOU TEA.**—Business in all kinds has been quiet, and no sales of much importance have taken place either privately or at auction. There has been more enquiry for low Black Leafs, which are now being largely used by the blenders, and prices generally remain firm.

**OTHER CHINA TEAS.**—The market remains steady for all descriptions of Green Tea, and a fair business has been transacted during the past week. At Thursday's public auction 1,040 packages were brought forward, of which 482 were withdrawn. Capers are unchanged.

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Saturday, April 25th, 1903.—Ninety days' Bank rate on London opened on Monday at  $12\frac{1}{2}$ d., rose to  $12\frac{1}{2}$ d. on Thursday and closed this evening at  $12\frac{3}{4}$ d. to  $12\frac{1}{2}$ d.

The market is featureless with few bills and less money and no speculation worth mentioning. Exports are now very small and neither coffee nor rubber can supply many ready bills. The value of all the coffee shipped last week was only £156,000 as against £225,000 the previous week and £261,000 last year. It is probable that importers are fairly supplied with bills for the present but before long they are likely to be on the market again when it is to be hoped the Bank of the Republic will be able to supply them. At present the Bank seems to be doing very well and to be keeping the rate steady, as it should do, without much effort. But as the supply of ready bills grows smaller the effort must become more serious. Fortunately there is little or no speculation and the shipment of all the Santos stock, which is sure to take place before 1st July, if the new coffee law comes into effect, will assist the market and help to steady rates. All the same the steadiness of the rate with coffee down to record prices abroad and export business practically paralyzed is remarkable, and if not too dearly achieved, most creditable to the Bank of the Republic, to whom it is unquestionably largely attributable.

**Coffee.**—RIO DE JANEIRO, April 25th, 1903.—Joint Entries at Rio and Santos for the week ended 24th April fell off again and were 43,648 bags less than the previous weeks and 99,268 less than the same week's last year, of which they represent only 50.4 per cent. For the crop entries up to 24th April were 2,973,170 less than for last season of which they represented 78.6 per cent. Should entries continue on the same scale, 50.4 per cent., as last week to the end of the season, their total for Rio and Santos will not exceed 11,69,830 bags; the new crop, however, is unmistakably early and will probably inflate entries towards the end of June and in July disproportionately and raise the total for the season up to 12,000,000 bags. A good deal of new *terreiro* coffee is already offering here, a lot of 1,000 bags having been disposed of. The berry, however, is generally small and poor.

Shipments (*embarques*) fell off both here and at Santos being 47,589 bags less than the previous week and 66,527 under last year.

Stocks, however, fell off a bit and on the 24th were 13,123 bags less than on the corresponding Friday last year.

Prices dropped, the average for the week for No. 9 at Rio being 4\$236 as against 4\$289 for the previous week and 4\$255 last year.

At New York spot No. 7 averaged 5.19 cts. as against 5.22 cts. the previous week and 5.43 cts. last year. On Thursday 23rd options were quoted at 3.70 cts. the lowest yet recorded!

Exchange oscillated between  $12\frac{1}{2}$ d. and  $12\frac{1}{2}$ d.

**SANTOS, April 24th, 1903.**—A quiet and declining week again. On Saturday and Monday we had a slightly better market owing to the really moderate *passagens* but Wednesday the market weakened off again and so continued for the rest of the week. Consuming markets should be satisfied this month with the receipts here, as, for the month of April they seem likely to fall below our estimates.

New York again broke the record, with quotations of only, on Thursday 3.70 cts.

With a declining market on present prices business becomes day by day more dangerous. It is reported that the Rio Coffee market is disorganized owing to the principal buyer, of late months, having withdrawn and this will not fail to influence other markets.

Exporters were able to buy "Superiors" at 4\$000 and condition lots occasionally cheaper. "Primes" command a premium of only 250 réis. "Goods" 300 réis and "Regulars" 700 réis below. Old bellow coffees maintain more or less their former prices. Fine "Bourbons" were sold at 4\$600. Fine "Peas," Green, at 4\$700 (medium tyres). Low coffees and Washed are neglected. Peaberry are slack and with very little demand.

Entries 66,000 and *Passagens* 72,000 were reasonable. Entries are 35,000 bags less than last week. Shipments (77,000) continue poor and our stock is still 94,209 bags. Exchange kept steady at  $12\frac{1}{2}$ d. to  $12\frac{5}{8}$ d. The *Pauta* is still 400 réis. Orders for Superiors ruled to-day round 27s. and Good Average 1s. 3d. below. Receipts for next month are estimated to be slightly below those of this month.

As to whether the law lately passed by the S. Paulo Legislature will be really put into practice nothing has yet transpired but we see no reason to believe that the Government of S. Paulo will, after going to the trouble and expense of summoning the Legislature on purpose, hesitate to put its proposals into execution. There seems little doubt, however, that it would be accompanied at first, at least, by a heavy fall of prices here, as orders have already been given to reduce all offers by the equivalent of the tax, whatever it may be. Exporters, however, are as much in the dark as ourselves both as to what the minimum type may prove to be and generally as to the intention of the Government, all which tends to make business more difficult and to check exports. Local prices here are so much above parity with foreign markets that to make business in any case extremely difficult so that with the additional impediment it is practically paralyzed.

The probable effect of a duty of 3\$000 per 10 kilos. on low grades No. 9 downwards, would be to check entries of higher grades as the *fazendeiro* would probably refuse to separate. There would then be so much less high grades which would command a premium instead of being at a discount as at present. The consequence of such a measure would be an abundance of medium grades, probably 5 to 7 bringing the bulk down to 6 or 7 and be sold on that basis and put higher grades to a premium. The effect on New York exchange would be to create a scarcity of high grades to deliver so that option market would rise all round perhaps to a level with the spot market.

The Lloyd Brasileiro proposes to reduce its rates for coffee 75 per cent. At present the freight of a bag of coffee from here to Manaus cost 5\$, or four times as much as to New York, and even with the reduction will cost the same!

## THE U. S. TEA MARKET.

Mr. A. R. Robertson writes in the *Spice Mill* :—

In reviewing the tea market for the month of April, it would be natural to comment upon the unusually quiet condition of trade, but this must be looked for, when deliveries during January and February are thought of.

At the close of the month more inquiry became noticeable, and even if purchases were not large they were scattered, and small lots of various kinds were in demand, demonstrating that the grocers were again looking to the jobber, who did not have any large stock himself.

The markets of the East have opened up, Japan showing heavy advance over last year's opening figures, with active competition.

The tea is reported as especially good, and evidences are not wanting of great care in manufacture to produce the best article. It is allowed that the Japanese are quite alive to the manner in which India and Ceylon growers are pushing their "green teas" on to this Continent, and preparations are being made to meet emergencies.

Formosa market opened strong, with moderate buying. It still remains to be seen what course will be pursued by buyers from United States. The spot market shows something of a drop in quotations of "Formosa" the past day or two, but it is not generally considered likely that any great or permanent cutting in price will continue.

Foochows are easier, while the export of Congou tea to London has shown no particular effect here, unless, possibly, the hardening in price for lowest grades.

Green teas are in small supply, very strong in price and little change to be reported.

India and Ceylon teas have received more attention, and some buying for English market stimulated inquires for lower and medium grades. The prices remain firm and some good qualities are offering, with occasional demands for "finest."

India and Ceylon Greens are quiet, with no change in price.

### PRODUCE AND PLANTING.

The large and important deputation which waited on the Prime Minister last Friday included representatives of the Indian and Ceylon tea industries, and Mr. Henderson, on behalf of the Indian and Ceylon Tea Associations, protested against the way in which the claims of tea have been passed over by the Government. But outside this protest there was but little reference in the speeches to tea. Mr. Balfour's answer to the deputation disposes of any lingering uncertainty which may have existed on the subject of a reduction of duty. The Government stands absolutely by its proposals. It will not lower the tea duty, and will not meet its opponents half-way by retaining the tax on flour while abolishing that on grain.

Though the Liberal Party as a whole declines to support Mr. Chaplin's amendment on the Second Reading of the Finance Bill, it is understood that in Committee a motion will be made from the Opposition Benches to reduce the tea duty by twopence. Mr. Trevelyan proposes to amend the Chaplin resolution dealing with the reduction of the tea duty by inserting words approving of the remission of the corn tax. The object of this is to make clear the question of Liberal tactics. It is not intended to put the Government into the position of saying that if the House likes to lower the tea duty it must accept the reimposition of the corn tax. It is stated that the following are the terms of Mr. Chaplin's amendment: "This House considers the financial policy of His Majesty's Government in the remission of indirect taxation imposed only last year for the purpose of a permanent character involves a needless and injurious disturbance of trade and a serious loss to the revenue without substantial relief to the consumer, and that if any remission of indirect taxation is considered necessary by His Majesty's Government such remission ought to be made by a reduction of the duties proposed to be levied on tea and other articles of general consumption."

While the Tea Association of London and the majority of growers have been doing all in their power to bring about a reduction in the tea duty, one member at least of the fraternity of grocers does not sympathise with them. Mr. Imrie, J.P., President of the South Shields Grocers' Association, is, so far as regards tea, content with things as they are. He scorns the idea of a reduction of duty, and he explained why at the monthly meeting of his Association. "Everybody seemed to be selling tea now-a-days. If the duty was doubled it would send a tremendous lot of stuff out of the market that should never be in the market, and should certainly not be put into the stomach, because it would not be worth the duty, and they should not see the low-priced rubbish that they saw to-day—it would not come into the country. He hoped the Chancellor of the Exchequer would stick to his guns, and whether we liked the corn tax or not that he would not touch tea."

But the days of shilling tea seem numbered. We hear that a number of the large dealers, including Liptons, the International Tea Company, and others, have decided to abolish the sale of 1s.

tea at once. These firms will not sell any tea under 1s. 2d., and those of them who have been selling over-weight tea at 1s. 6d. will now charge 1s. 8d.

Consul Fraser, of Hankow, in his latest report to the Foreign Office, states that the local supplies of Hankow teas during the season were 505,177, against 531,389 half-chests in 1901, and the settlements 453,123, against 479,587 half-chests. For Kiukiang teas the settlements were 200,982, against 190,620 half-chests last season. Shipments to Shanghai on native account amounted to 60,832, against 62,687 half-chests in 1901. Shipments to London direct were resumed, and amounted to 1,404,702 lbs. The exports show a further decrease of demand in the United Kingdom and a heavy decline in shipments to Russia, against which may be set the doubling of the amount sent to Russia in Asia and a recovery of the United States and Canada figures. The amount of leaf, brick, stalk, and dust sent up the Han River for Mongolia and Siberia fell off again nearly 40 per cent. to 4,177,867 lbs.; the value is returned at £39,230. The market opened on May 5 by the purchase of a few of the more attractive parcels of Ningchows, Khemins being settled the next day as soon as shown. Opening quotations ranged from 31 to 60 taels per picul for the first, from 38 to 63 taels for the second (say from 7d. to 1s. 2d. per lb.), the quality of both crops being considered fully good. Later on Ningchows of good value were obtainable at 20 to 43 taels, while the Khemin market remained firm throughout. Of Hankow teas only Oonfaas sold readily as high as 33 taels, and others were of quite ordinary quality. Seangtans were fair, and one or two of the best chops sold at 12 to 14½ taels. For the two crack chops of Ichang teas 72 taels were paid, and for the second parcels 58 taels. At Kiukiang there were again no settlements, and as a buying market the days of this port seem to have passed. The season's business was conducted quietly and without any special eagerness to buy, but by the end of May the greater portion of the first crop had been disposed of. The Siberian railway route, used for tea for the first time this year, can hardly fail to affect considerably the trade in Russia, since, by its means, large supplies will be able to reach the consuming markets at a date for earlier than before. During this season some 3,000,000 lbs. were thus diverted from the Odessa route. One effect may be to throw the *onus* of holding the teas more on the native sellers, when it is no longer necessary to fill and dispatch, in a very limited time, steamers under special charter for Odessa. The average cost of first-crop tea laid down in London was 7½d. per lb., against 9d. per lb. in 1901; 9½d. per lb. in 1900; 8¾d. per lb. in 1899; and 9d. per lb. in 1898.—*H. & C. Mail.*

### COFFEES AND SPICES.

Mr. W. H. Bennett writes in the *Spice Mill* :—

At a dinner party which I attended last week, the host informed his friends that while he had to pay his grocer 30 cents a pound for the coffee, it could be bought wholesale for 4 cents, and the grocer was making the very exorbitant profit of 26 cents a pound on it. As the coffee seemed very palatable, I inquired of whom he bought and what he asked for. He informed me that it was a combination of Mocha and Java and seemed quite surprised when I told him if that were true, I should be very glad to buy it in a large way at four times the price at which he said he could buy it at wholesale.

He informed me that this was the price quoted in the papers for coffee and naturally, he supposed that it was correct. Now, absurd as his ideas were on coffee, they were not much more so than those of some of the trade who expect to buy good roasting 7's at the price quoted on the exchange. They don't seem to realize that the exchange price is one thing and the price of the actual coffee is another. On buying on the exchange you are obliged to accept anything which may be tendered to you and nothing that could be sold on the street at the price on the exchange would be tendered. Only the most undesirable coffees are delivered on the exchange.

The market for the past month has been quiet, particularly so in the last week. Desirable coffees of all grades are getting scarce. The principal and chief source of supply seems to be exhausted for good roasting coffees and they are not being replaced; consequently, the jobbers are doing more business than they have for some time.

In mild coffees there has been scarcely any change, although Maracaibos, ranging from 8 to 9 cents are very hard to obtain.

The spice market for the past month has been comparatively quiet with more or less agitation in the East in the pepper market, owing to the advance in the price of silver, which, being the currency used in those countries, is bound to affect the price of their produce.

The price of pepper has been going higher and there are buyers here in the market for Singapore black at  $12\frac{1}{2}$  cents for June-August delivery. Peppers are very scarce. There is very little in transit to this country, and with diminished stocks, it would seem as if the price would go higher. The stock of peppers of all descriptions is very much less than at the corresponding period of last year.

While the spot price of cassia is unchanged, yet the shipment price on case cassia has advanced fully a half-cent a pound.

Zanzibar cloves have advanced from  $7\frac{1}{8}$  to 8 cents and are very firmly held.

The stocks of ginger have increased in the past month and there is a little more pressure to sell, consequently they have declined from  $\frac{1}{4}$  to  $\frac{1}{5}$  cent a pound for Cochin. African is unchanged and Jamaica seems to be tending upward.

Mace and nutmegs are unchanged.

Tapiocas are a little higher.

### TO REDUCE COFFEE PRODUCTION.

The weakness of the Brazil coffee market has awakened planters and exporters to the necessity of doing something to protect the industry, and naturally the first remedy that suggests itself is to restrict the production, says the *Canadian Grocer*. Though there are many objections to this, indications are that the movement will gain rather than lose strength. It is stated that the visible supply of coffee six years ago was 4,000,000 bags, and although there has been an increase in the consumption, it has not been sufficient to keep in proportion with the increased output, the visible supply now being about three times the above amount.

Out of many suggested remedies there are only two which are regarded seriously as likely to bring about the desired result, namely, better prices for coffee. One of those is that a tax should be imposed amounting to about 20 per cent. of the total production, the tax to be paid in kind in the lower grades of coffee. This plan is opposed on account of the great waste which would ensue from growing and marketing the coffee, much of which would then be destroyed. Another proposal is to cut down 20 per cent. of the trees, which would grow again, and ultimately there would be no loss of capital, the production of coffee in the meantime being reduced.

Both the above plans have their supporters, and one of them is likely to be acted upon, if nothing else can be found to answer the purpose. At present it is not known which of them, if either, will be adopted.

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, April 23, 1903.

There has been a fair business done in teas since our last issue at fully up prices. Wholesalers, however, show little disposition to stock up, their purchases being more of the character of immediate requirements. The most recent advices from England show a decidedly firm market for all low and medium grades, these teas all changing hands at fully advanced prices. It is anticipated that an active demand will follow immediately upon the publication of the Budget, as many buyers are holding back pending its issue and the prospects are, therefore, of still further hardening. We have received reliable information of the Japan crop promising to be of an exceptionally good character in quality and that there is every probability of the first-crop teas being 10 per cent. higher in price than at the opening of last year's market.

MONTREAL, April 23, 1903.

The tea market abroad, so far as Indian and colonial teas are concerned, exhibits a firm disposition, advices from Colombo,

Calcutta, and London this week being unanimous to that effect. On spot teas for a price are decidedly scarce, and in the execution of the bulk of the current business, sellers experience little difficulty in realizing full figures. In Japans, with the old season's crop passing off, and buyers figuring on the new, demand is of a rather uncertain kind, and prices have eased off a little, but with stocks as they are, it would not be surprising if a reaction was developed before the new crop was offering on the market in any quantity. The first arrivals of early Japans are not expected here before the end of May or the beginning of June. These early Japan pickings have opened up the season fully 2 to 3c. per lb. higher than last, but offers of second and third crop on the other hand have been made in some cases at rather lower prices than they opened at last year. There has been a fair inquiry for China teas, and green teas are rather scarce.

WINNIPEG, April 20, 1903.

The lower grades of Indian teas show an advance of 2 to 3c. over the opening prices of last year. There is nothing much to say as to the trade here as it is steady all the year round.

### THE BRITISH TEA DUTIES.

#### DEPUTATION TO THE PREMIER.

A large and influential deputation waited upon the Prime Minister and the Chancellor of the Exchequer in the Grand Committee Room of the House of Commons on Friday May 15, to urge upon the Government the great objections entertained by numbers of their supporters and others to the repeal of the corn duty, and advocating instead remission of the duty on tea, and urging that the duties on grain and flour in some form, especially on flour, should be retained.

Amongst the Associations represented were the Indian Tea Association and the Ceylon Association in London.

Mr. Chaplin, M.P., in introducing the deputation, explained that the deputation included representatives of agricultural bodies, chambers of commerce, a great number of members of both Houses of Parliament, and taxpayers generally. He pointed out that the proposed repeal of the corn tax was looked upon as a blot on the financial proposals of the Government, and so serious a blot as to mar and spoil what would otherwise be regarded as an excellent Budget. He implored the Government to reconsider what was a deplorable decision, and what might end by being a fatal mistake. (Loud cheers.)

The Duke of Rutland, Mr. W. F. Lawrence, M.P., Mr. Henderson on behalf of the Indian and Ceylon tea industries, and other speakers also addressed the Premier.

Mr. Balfour asked if it was likely the Government had any desire to do anything or suggest anything injurious to the farmers' interests? The Government's position was: They said the tax on introduction was not a protective tax, but it turned out by an accident to have an effect other than was intended. It surely did not constitute a grievance because it was not proposed to retain the tax. He well remembered, when the tax was considered by the Cabinet, the most acute argument against it was that this was an impost which was not merely a trifling one upon corn, but was a tax on the raw material which farmers used in their industry. The point was very seriously considered by the Cabinet. He had made inquiries yesterday, and found that of the £2,500,000 which the tax produced, less than one-fourth, and more than one-fifth, was actually levied on feeding stuffs—in other words, on the raw material. It was unique in the history of the Government of this country that a great deputation should protest against the remission of a tax, and that the deputation should largely consist of persons the raw material of whose industry paid so much of the tax. The tax was imposed with the object and hope that it would form part of the general fiscal system of the country. It was a war tax, of course, and if there had been no war it would not have been suggested. It was quite plain that the hopes which were formed were fallacious, and he did not believe that any one believed that it could form a permanent part of the fiscal system. He maintained that when it became clear that the corn tax divided the two political parties of the country it also became clear that it could not be a permanent part of our system—such as the income-tax, tea duty, etc. He did not believe that any tax which revived the ancient controversies could be a permanent

part of our general system. He did not think the experiment had been altogether in vain; but the corn tax could not survive as an independent tax. It must be connected with a great national need or some great change in policy. Protection could not be introduced quietly, and, as it were, by accident. If it should ever be done it must be on the impulse of the whole of the people of this country. He believed in universal Free Trade; but at present every other civilised country was protected except our own, and we gained greatly by that in many ways. The universal desire of the country and of the colonies to bind themselves more closely together was one which was extremely difficult to carry out by political or constitutional means. It might some day be possible, and there was the other question, which was also a difficult one, of a fiscal union. A movement of that kind, however, must come, not from the representatives of one or two industries, but from the heart, conscience, and intellect of the great body and masses of the people.

### SOUTH CAROLINA TEA GROWING.

Mr. T. R. Tighe writes in the *Tea and Coffee Trade Journal* :—

In Japan a tea is grown under the shelter of matting overspreading the garden whereby the direct sunlight does not strike the plants. The results is a large, blue-tinted, soft leaf, which is adapted for the production of an extremely delicate and sweetish tea, valued in that country at many times that grown in the open. It must be stated that few Americans are of sufficiently effeminate taste to drink what the great public would term simply warm water, so faint are the colour and taste. Nevertheless, it is just such teas that mark the cultivation of the tea taste for many centuries; and it would be just as pertinent to ask why some wines are worth fifty to one hundred times as much money in some communities as some whiskeys are in others, as to fail to appreciate the delicacy of such teas. The sweetish taste is, we are told, due to the habit of plants to store up starch during the night time, which

when the sunlight returns undergoes various chemical changes. But in the case of the sheltered teas, the sunlight is not allowed to reach the protected plants; the leaves become highly charged with starch, which is readily converted into dextrine and sugar in the process of curing.

One great reason why such teas have not been introduced to the wealthy people of this country has been that without "firing," (i.e., drying with artificial heat) at a temperature which is destructive of the best qualities of such teas, they are not capable of withstanding the effects of long ocean transportation. It is very much as with the best Bordeaux wines; they cannot be safely transported across the ocean without fortifying them with brandy, and that addition impairs the delicacy of flavour, which constitutes their chief merit.

#### A PINEHURST EXPERIMENT.

This process of tea production has been attempted on a small scale at Pinehurst. Some years ago a part of a tea garden of healthy plants was boxed in with boards on the top and sides, (about 7 feet high,) but with the exception of frequent watering to compensate for the deprivation of dew and light showers, the bushes were cultivated as if in the open. There resulted on the plants in midsummer such a creation of all animal life that crawls, skips or flies, that it was deemed indispensable to the preservation of the bushes to take the shelter down. Towards the close of the season of 1900 a frame work was erected over half (one-third of an acre) of the Sand Hill garden and covered with rather thick cocoa matting lying on 4-inch woven wire. The matting was spread only by day and during sunny weather.

The same experiment was repeated in the season of 1901, with the introduction of surface irrigation for both open and sheltered halves. During the brief period of trial in 1900 the sheltered part produced slightly more tea than the open. In 1901 the yield of the open half was one-fourth larger than that of the sheltered. There was no appreciable development of animal life and the plants remained healthy throughout the season.

The American tea seed that was introduced into this country many (perhaps fifty) years ago, has proved as hardy and productive

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN  
RELIEVER.

*It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.*

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes :—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

as any imported. It requires the richest of soils or active stimulation for the best results of either quality or quantity. By careful selection it should be capable of great improvement. It is better adapted for black teas; they are strong and somewhat fragrant. As the reader may not know the difference between the black and green teas, it may be stated that green tea is the product after subjecting the freshly-plucked leaf to those two processes of rolling and drying which are indispensable to all tea manufacture. That means that green tea stand nearest in all respects to the original leaf. But if there be introduced between these processes that of oxidation by exposure to the air, the result is black tea. These names in the trade refer to the colour of the dry tea; in China the same teas are called according to the colours of the liquors made from them, *viz.*: green and red.

In reference to the colour of dry green tea, it has long been the general practice in the far Orient to artificially intensify that colour especially (exclusively had better be written,) for the American market, by the addition of Prussian blue and other pigments. But latterly, as the public has begun to appreciate this reprehensible feature of the preparation, there has been a larger demand for the unadulterated, natural coloured, green teas. That colour is a brownish olive-green; but more accurately, it is the colour of translucent horn shavings.

But early last season it was ascertained at Pinehurst (simultaneously with the same observation in British East India, after a lapse of many years from the former practice of the same process) that the simple attrition of particles of dry tea on each other was all that was requisite for imparting a decidedly light green colour to non-oxidized tea. At Pinehurst excellent results have been attained from the use of a simple butter churn or revolving barrel. But care should be exercised to avoid the pulverization of the tea particles; as all dust must be removed from tea before being offered for sale, and this might constitute a serious loss in the absence of a satisfactory market for the dust.

The rotary sterilizer, invented at Pinehurst, has done good service during the past season in the manufacture of green tea. Improvements are being introduced into the charging of the apparatus, so that less cool air can find admittance and the temperature requisite for the sterilization of the oxidized enzymes may be readily obtained. With these new improvements it is confidently expected that the machine must perform its function more thoroughly and cheaply than before. The succession of bright, hot, windless days, which occur in the early and late Summer, are well adapted for the curing of tea by direct sunlight. The freshly-gathered leaf is exposed on fine woven wire trays to the direct rays of the sun until it has softened and is largely in a suitable condition for rolling. It should then be screened through a half-inch wire mesh; what does not pass through is again placed in the sunshine, until all has sufficiently withered for the subsequent rolling. The action of the sun's rays on the leaf appears to disrupt and remove

those astringent qualities which characterize inferior (although, alas! popular) teas, and the result is a tea extremely delicate and yet sufficiently strong for any refined taste.

#### TROUBLESOME PARASITES.

Partly because the cocoa matting had become so rotten that it could not be handled without tearing, and partly because of the great expense in rolling up and spreading it, it was allowed to remain spread over the plants until the middle of the Summer, when plant lice began to appear on the bushes quite abundantly. The matting was rolled up and the bushes pruned back to half of the wood already made during the Summer. When, a few days thereafter, the new tea shoots began to grow the matting was replaced, and remained spread for the rest of the season. The tea from the open half of the garden exceeded that grown under shelter by about one-fifth of a pound.

The sheltered possesses the characteristics of that grown under similar conditions in Japan. The smaller quantity, from the protected half, has been sold at several times the sum obtained for that grown in the open; and so far as heard from has given satisfaction to the few who care for that sort of tea. The experiment will be continued during the approaching season, although it may be necessary to substitute cheese cloth, or a lace work of plaster-laths for the cocoa matting.

#### CLEANLINESS OF MACHINERY.

Manual labour has been so restricted in the factory work by the introduction of machinery that almost no manipulation of the tea, whether green or black, occurs. This revolution in English-speaking countries in the manufacture of tea should appeal to that steadily increasing element in our land which, although derisively termed fastidious by certain interested parties, naturally objects to that blend of the product of the tea bush with the perspiration, etc., of not over-cleanly or always healthy Orientals, which has frequently disgusted Bayard Taylor and other travellers in the East. It is sought at Pinehurst to obviate those bacteriological examinations which must ultimately invade the domain of tea, even though by a system of factory cleanliness the question be raised in the minds of those entirely conversant with the Oriental practices whether any tea is actually cured in the Pinehurst establishment.

The United States Government, and more particularly the department of agriculture, has contributed of late years most important aid towards the accomplishment of these investigations. The most liberal aid has been extended, particularly of late in the purchase of rare tea seed and the importation of new tea machinery.

#### DUTY ON TEA.

So far as Pinehurst interests extend it is a matter of little concern whether foreign tea be dutiable or not: the novelty of the product is sufficient to insure the sale of its drop in the bucket. But as regards the establishment of a national tea industry, it can never be brought about except by the imposition of such a duty on foreign teas as shall counterbalance the difference in the

Agents for LEA & PERRINS'

The King.

**CELEBRATED OILMAN'S STORES**

price of American and Oriental labour. This fact was abundantly demonstrated on the occasion of the repeal of the war tax on foreign teas. A number of moneyed men had been seriously entertaining the thought of embarking in tea planting to a very large extent; but on the revocation of the duty immediately dropped all consideration of the subject. Unfortunately the tea industry, like those of the cane and beet sugar, requires a rather large initial expenditure and the services of an experienced director—one versed not only in agriculture and manufacture, but a good tea judge and a general business man. It is almost needless to indicate that one who can fill these desiderata is always worth a good price in the markets of the world and that it must take a great many acres of tea gardens to contribute enough profit to retain his services.

#### BEST TEA GROWN LATE.

An interesting feature of the Pinehurst crop is that the strongest and, therefore, the most commercially valuable tea, is made during the latter part of the summer, probably due to the greater maturity of the plants, i.e., at the greatest time from the annual spring pruning. The early summer flushes follow each other with great rapidity and the leaves, although very tender, have not probably the requisite time for the chemical changes which produce the strength of the later pluckings. In the very early flushes there appears to be less of those oxidizing ferments whose function in the production of black tea is so important. Therefore the manufacture of green tea in the early part of the season and of black in the latter part is clearly indicated.

When the special tea seed chosen for some gardens already prepared for their reception arrives and they have been duly planted the area in tea at Pinehurst will amount to about 100 acres, which it is not calculated to exceed, as that amount should suffice to answer the original question as to whether commercial tea may be profitably made in the Southern States.

#### MOTHER AND DAUGHTER.

It is remarkable how greatly our estimate of ourselves and our qualities differs from the estimate formed of us by others. If the thing were practicable, many folks would realise heavily by selling themselves at their own valuation (if they could find customers), and afterwards buying themselves back on the basis of other people's notion of their worth. The more numerous and the harder the blows aimed at our self-conceit in the days of our youth, the better for us. They pulverise, as it were, the worser part of our nature, and nothing survives the process but what deserves to endure. "And what are you?" asked a Lord Chief Justice of England of a witness who had just given some rambling and discreditable evidence. "I employ myself as a surgeon," said the witness. "But does anybody else employ you as a surgeon? Are you a surgeon?" asked the judge. And thereat the witness collapsed.

It is claimed for all medicines that they effect cures, though the fact is that some do and some do not. Mother Seigel's Curative Syrup has been very extensively used for thirty-five years, and is to-day the principal domestic medicine in sixteen different countries. The number of cures it has effected (especially among persons suffering from indigestion and bilious diseases) is quite incalculable. Of the many thousands of testimonials as to its efficacy voluntarily given, here is an interesting one from a mother and daughter. "For several years," writes Mrs. Hutchison, of Newcastle Road, Jesmond, N.S.W., on October 19th, 1902, "I suffered agonies from indigestion and liver complaint. I could neither eat, sleep, nor work—in fact, did not know what it was to enjoy a single hour of freedom from pain. I was attended by two of the cleverest medical men in the Newcastle district, but their treatment failed to bring me any relief. Indeed, I went steadily downhill, and began to fear that my case was beyond the aid of medicine. I grew weakly and thin, and became dejected, when, two years ago, I was advised to try what Mother Seigel's Curative Syrup could do for me. It was a happy decision, for before I had taken a quarter of the first bottle my health was much improved. I continued to take the medicine according to the directions for five weeks, by the end of which time I was cured. The cure is evidently a permanent one, for I have remained well and sound to the present day."

This is good testimony—testimony to be proud of. But it don't stop here. Mother Seigel's Curative Syrup not only cured Mrs.

Hutchison of her indigestion and liver complaint, but, in the case of her daughter Agnes, arrested the progress of an insidious and dangerous malady which, if allowed to range unchecked, might have had fatal results. Here is Mrs. Hutchison's own description of her daughter's case: "My daughter," she says, "was in a very bad way. She was suffering from severe nervous debility. She wasted away to a skeleton, and appeared to have no blood in her body. She was so weakly that she could not walk without assistance, and was often compelled to keep to bed for days together. The doctors seemed to be much in the dark as to her ailment, and as impotent in treating her case as they had been in their treatment of mine, so I determined to experiment on her with the medicine which had proved such a boon to myself. The result was that within two months a few bottles of Mother Seigel's Curative Syrup changed her from a helpless invalid into a hearty, healthy, happy girl. She remains as well as one could wish her to be."

Mrs. Hutchison is well known in Jesmond and Lambton, and has lived in these places for twenty years. She is a native of Scotland, and came to Australia in 1872.

#### MARKET REPORT.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated May 22nd, 1903, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1902-1903	1,516,459	1,093,446	83,668
1901-1902	1,601,546	1,129,593	78,027
28,473 pkgs. INDIAN	Total 58,218 packages were offered in public auction this week.		
27,366 " CEYLON			
2,379 " JAVA			

Countries outside the United Kingdom show a satisfactory record for the first quarter of 1903, a larger quantity of both Indian and Ceylon Tea having been taken than in the corresponding period of 1902.

This increase is specially encouraging in view of the higher prices lately ruling for the lower grades, and the fear entertained by some that a check might thus be caused to the expansion of outside markets. The chief advance so far has been in Australasia, which for the corresponding period of last year showed comparatively poor results.

Export of Indian and Ceylon Tea (in lbs.) to places outside U. K. from 1st January to 31st March.

	INDIAN TEA.			
	1903.	1902.	1901.	1900.
Re-exports from U. K.	2,863,094	3,395,469	3,694,517	2,306,419
Transshipments from U. K.	606,827	604,891	489,793	555,289
Direct expts. from Calcutta	4,193,710	3,117,675	4,341,829	2,041,274
Total lbs...	7,663,631	7,118,035	8,526,139	4,875,982

	CEYLON TEA.			
	1903	1902.	1901.	1900.
Re-exports from U. K.	3,894,330	3,483,758	4,300,274	2,830,104
Transshipments from U. K.	373,182	782,510	847,093	482,898
Direct expts. from Ceylon	9,820,935	6,890,138	7,776,838	7,372,900
Total lbs...	14,088,447	11,156,406	12,924,205	10,685,902

Duty payments since the commencement of the month have been very heavy, clearances up to 20th having amounted to 15,567,698 lbs., against 8,734,826 lbs. last year.

INDIAN.—There has been a fair market, medium and better liquoring teas showing a slight improvement, while commoner kinds evinced a little weakness. The official wire gives exports to U. K. for the first half of May as 564,000 lbs., against 520,000 lbs. during the same period last year; making the total from 1st April 807,000 lbs., against 1,161,000 lbs. in 1902.

Southern India is becoming more and more an important factor in the auctions, and since the commencement of the season 53,270 packages from Travancore have been sold at an average of 606d, against 49,241 packages, averaging 631d last year.

Week's av. of tea sold on Garden Account 1903, 22,968 pkgs., av. 7-66d. 1902, — pkgs., av. —.

Tea sold on Garden Account 1st June to date 1902-3, 1,182,732 pkgs., av. 7-52d. 1901-2, 1,273,337 pkgs., av. 7-64d

CEYLON.—With a comparatively heavy sale the market was somewhat irregular, and while commonest kinds were slightly weaker, good and medium sorts were in good demand; fine kinds showed distinct advances. An invoice of fine flavoured tea from the "Sutton" estate realized an average of 1/3.

Private telegraphic advice gives exports to U. K. for the first half of May as 5,500,000 lbs., against 4,500,000 lbs. last year, making the quantity from 1st January 37,000,000 lbs., against 39,250,000 lbs. during the same period 1902.

Average for week 7-76d, against — in 1902. (Whitsuntide.)

Ceylon tea sold on Garden Account 1st January to date, 379,214 pkgs., av. 7-67d. 1902, 419,072 pkgs., av. 6-99d.

JAVAS.—Sold without material alteration in price with good general competition, ten estates being represented in the auction.

Bank Rate  $3\frac{1}{2}$  per cent. Exchange on London three months' sight:— Calcutta  $1\frac{1}{4}\frac{7}{8}$ . Colombo  $1\frac{1}{4}$ .

### CINCHONA.

At the London auction on Tuesday there was a good demand for bark, and practically all the catalogues (with the exception of soft Colombian) were cleared at and after the sale at an average unit of between  $1\frac{1}{4}$ d and  $1\frac{3}{8}$ d per lb., against  $1\frac{1}{2}$ d at the last London auctions, and a slight improvement on the last Amsterdam sale-price of  $1\frac{5}{8}$ d.

The following table shows the quantities of bark offered and sold:—

	Packages Offered.	Packages Sold.
East Indian cinchona ...	720	407
Calisaya cinchona ...	488	406

In these tables all packages are chests unless otherwise stated. ½c stands for half-chests; p for packages; prices marked thus † represent the highest offer in the room. In calculating these averages two half-chests or four boxes are taken as equal in weight to one chest.

The following were the approximate quantities of bark purchased by the principal buyers:—

	lbs.
American factory ...	64,326
Zimmer and Frankfort factories.	27,234
Messrs. Howards & Sons	15,994
Mannheim and Amsterdam factories	5,560
Brunswick factory	3,005
Druggists, brokers, etc.	49,493

Total quantity sold	165,612
Bought in or withdrawn	139,650

305,262

The following prices were paid:

SOUTH AMERICAN.—Bolivian cultivated Calisaya, quill,  $5\frac{1}{8}$ d to  $6\frac{1}{8}$ d per lb.; branch,  $3\frac{1}{4}$ d; 300 bales old soft Colombian were bought in.

JAVA.—Ledgeriana, branch, 7d to  $7\frac{5}{8}$ d; and root,  $6\frac{1}{8}$ d per lb. Succirubra root,  $3\frac{5}{8}$ d; hybrid branch, 7d.

CEYLON.—Succirubra, ordinary to fair stem chips,  $1\frac{1}{4}$ d to  $3\frac{5}{8}$ d; and renewed ditto,  $4\frac{1}{4}$ d per lb.

EAST INDIAN.—Officinalis, good,  $6\frac{3}{8}$ d; ordinary to fair,  $2\frac{1}{8}$ d to 4d; renewed chips,  $8\frac{1}{8}$ d; fair,  $3\frac{1}{8}$ d to  $3\frac{3}{8}$ d; ordinary to good root,  $1\frac{1}{4}$ d to  $6\frac{1}{4}$ d; and branch  $1\frac{3}{8}$ d to  $2\frac{1}{8}$ d. Ledgeriana chips,  $2\frac{3}{4}$ d. Succirubra, stem chips and shavings,  $3\frac{1}{4}$ d to  $3\frac{3}{4}$ d per lb.

The shipments from Java for the first half of the month amounted to 621,800 Amsterdam lbs., against 465,000 Amsterdam lbs. last year.

### QUININE.

On Wednesday the makers announced a reduction of  $\frac{1}{8}$ d per oz., and now quote German sulphate in bulk at 1s 1d. Whiffen's brand has also been reduced  $\frac{1}{8}$ d to 1s 1d and Howards have lowered their price by 1d (as on the last occasion when German sulphate was reduced they made no change). They now quote 1s 2d, their price for vials in 1,000-oz. lots being 1s 4d. P. and G. (French) make is quoted 1s 0½d. The market in second hands has continued very quiet, with a small spot-business at  $11\frac{1}{8}$ d per oz. for German sulphate, and on Wednesday there were sellers of August delivery at  $11\frac{3}{8}$ d. To-day's market is quiet and quotations unchanged.

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JUNE 20, 1903.

[No. 25.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 26th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Coorg.

POLLI BETTA, 17th June.—*Weather*—Monsoon burst here on 12th. Heavy rain first two days. Light since Monday inclusive. *Plant diseases*—It will be an exceptionally short year for borer. There are no signs of leaf-disease. *Works*—Weeding and supply-holing. It is said supply-planting has been finished on one place where it was begun in May! *Labour*—Sufficient.

### NOTICE.

Friday the 26th instant, will be a general holiday in commemoration of the anniversary of the birth of His Majesty the King-Emperor.

There will consequently be no issue of *Planting Opinion* next week.

### THE PESTS AND BLIGHTS OF THE TEA-PLANT.

THE second edition of this book should be possessed and studied by every planter. To the coffee and cinchona planter it conveys useful information; to the tea-planter it is a veritable encyclopædia. The title by no means shows the full character of the contents of the book. While its main purpose is to deal with pests and blights that attack the tea-plant, it contains some very instructive chapters on plant-life, on races of the tea-plant, seed gardens, the improvement of seed, and methods of cultivation of the plant and drainage of the soil. The principles of pruning are discussed, as well as methods of plucking and manuring, the joint authors no doubt desiring to emphasise the lesson that the tea-plant

must be guarded against disease as well by building up its constitution as by resort to measures that are akin to the use of surgery and medicines in the case of diseased human beings. Sir GEORGE WATT and Mr. HAROLD H. MANN proceed throughout with the caution of the skilled scientist. They “make no pretence to finality in any way.” From personal observation and experiment, and from the statements of planters of long experience, they form a work that is not merely a text-book but a standard work of reference. Planters are not invited to accept these experts’ conclusions as final or their suggestions as conclusive; but a mass of information is placed before readers, which they can sift for themselves, adapting it to their own requirements, modifying it according to their own experiences, or accepting it merely as a basis for experiment or for every-day work. The fault will lie with him and not with the authors if every single planter does not profit to some extent by the instruction that is placed at his disposal. We would add also that the authors will doubtless welcome any comments or criticisms that may be made on the basis of experiments or investigations concluded by planters. There is still much to be learnt about the vagaries of plants and blights in different districts and under various conditions; and any information furnished to the above gentlemen will enable them to revise, to verify or to modify certain of their conclusions or opinions.

It is essential to the tea-planter that he should grasp the fundamental principles of plant life and growth. When he has done this, he can proceed to the work of cultivation in the confidence that he has reasons for adopting this or that practice. Competition becomes keener every year. It cannot be doubted that the success of Indian and Ceylon teas in competition with China leaf has resulted very largely from the application of intelligence, aided by science, to the cultivation of the plant. With processes of manufacture the work under review does not concern itself. Its aim is to show planters the lines along which they should proceed to produce healthy and sound tea leaf in its raw state. To do this, they must give the plant every reasonable care from the time of the selection of seed to the time when the leaf-bearing stage is reached. They must strengthen, while refining, the constitution of the plant, and must safeguard it as far as possible from disease, and from the ravages of pests and blights. The planter who reads this book with care and

also refers to it whenever in doubt or whenever his plants appear to be attacked by some insect or fungoid form, cannot go far wrong. He will be able to trace with its aid the cause of any affliction he may observe. He will be able to select the right remedy. If he fails to check an outbreak it will probably be either because he fails to grasp the meaning of the advice at his disposal, or because he is faced by some form with which the authors of the book have not yet had an opportunity to grapple. Their list of enemies is so lengthy that the latter event is scarcely likely to occur, while the former may be regarded as equally improbable, looking to the generally high order of intelligence among those who devote their time to the cultivation of tea.

It would scarcely be fair to quote at any great length from the book. Priced at Rs.3 per copy it is within the reach of all. Its admirably executed plates will facilitate the understanding of advice given and the identification of pests referred to. Some planters have probably had the luck to be free from all such foes hitherto. That is no reason why they should ignore this book, for the enemy may come upon them while they are sleeping. The more the care bestowed upon raising crops of one product in a particular case, the greater the risk of attack on the part of insects. When such an attack has to be made safety lies to a very great extent in prompt action. Insect life multiplies at a marvellous rate, and it is very necessary that any particular pest should be stamped out before it has gathered in such force as to render its extirpation impossible at a cost commensurate with the value of the work. Armed with the fruits of study, and with this book, the planter should be ready to face any pest or blight that is likely to trouble him; for it describes all that have yet been noticed, and gives very valuable hints as to the use of insecticides and fungicides, with formulæ for their preparation. The book is one of a value that cannot be estimated, and the arrangement of its contents is worthy of their great value.

### COFFEE NOTES.

**Adulterated Coffee.**—The annual report of Mr. J. F. Liversedge, public analyst for the city of Birmingham, states that seven of the 132 samples of coffee received, or 5 per cent., were adulterated with chicory. Four other samples contained small quantities of chicory, probably as the result of accident. Five per cent. of the samples of coffee were adulterated last year. This proportion was the same as in 1901, but lower than any other recent year. The report of the Local Government Board for 1901 stated that 11 per cent. of the samples of coffee analysed in London, and 7 per cent. of those analysed in England and Wales, as a whole, were adulterated. It appeared that the local grocers were more careful than those of London and other parts of the country to sell their mixtures of coffee and chicory as mixtures, and not as coffee

\* \* \*

**The Health Coffee Fake.**—The people who allow themselves to be frightened away from the matutinal cup of "Mocha and Java" by the attacks of the cereal coffee people, should take courage from the following communication to the *Boston Post*, reprinted in *Acker's Weekly*:

To the Editor of the *Post*:

SIR,—Having seen a great many reports printed which attempt to show the injuriousness of coffee, I wish to state that I am 83

years of age and have drunk coffee since I was 10 years of age, seldom missing a morning cup, and sometimes three times a day I drank coffee. I think that anyone who drinks the best of coffee cannot feel harmful effects.

I shall celebrate my 50th wedding anniversary to-morrow, and I want you to come and try my coffee. I wish this put into print in your paper, to show that good coffee is not harmful, but on the contrary a food and drink to the body.

Yours truly,

T. M. PROCTOR.

ESSEX, MASS., April 13.

We can cap his experience by the experience of the present writer's father, an octogenarian who drinks two or three cups of strong coffee every morning of his life and who looks good for another ten or twenty years of existence. Coffee never hurt anybody whose liver was sound and who used it in moderation. Moreover, a great many people use it to excess and still do not suffer noticeably from disagreeable symptoms.

There are thousands of shrewd, kind-hearted and experienced housewives of German birth who would laugh to scorn the notion that coffee-drinking is harmful. Two cups at breakfast, as many at lunch, three or four at the mid-afternoon meal so dear to the hearts of those good dames, are their minimum rate of consumption, and there is no more robust class of people on the face of the earth.

Go to, thou Postum Ananias? Are the people paretic, that they should believe the coffee slanders from Battle Creek? —*Merchants' Review*.

\* \* \*

**Coffee in Manitoba.**—The demand is good and prices are without change. The market here is practically unaffected by the regulation *re* green coffees from Holland, as the only effect it can have is to increase direct importation from Java, and this would naturally come by way of Vancouver. Indeed, Vancouver is quite elated over the possible opening of a direct import trade. The heavy business of this market is in Rios, which are extensively bought by the Germans, Russians, and Ice-landers, and these continue at 7½ to 8½c. Jobbers anticipate an increased consumption of coffee from the influx of Americans, but the difference at present is not appreciable.

\* \* \*

**Landed Coffee.**—Some surprising changes have occurred in the movements of the article this year, says the *Grocer*, as a few statistics will plainly show. First, we extract the following figures from the Board of Trade returns, giving the imports and exports (in cwts.) for the United Kingdom during the four months ended April 30 last, as compared with those in the previous year:—

Imports from—	1903.	1902.	Exports to—	1903.	1902.
Central America	127,186	101,624	Sweden	8,084	1,968
Brazil ..	144,288	82,212	Germany	76,786	31,240
O. foreign countries..	241,477	167,369	Holland	35,051	15,420
Ceylon	2,227	1,969	Belgium	13,663	7,438
O. Brit. possessions...	152,742	88,607	Other countries	69,747	26,090
Total cwts ..	667,920	441,781	Total cwts...	203,331	82,156

In each instance it will be noticed that the quantities of coffee imported exhibit a marked increase over those in the first four months of 1902, which clearly proves that the London market has been furnished with supplies of the new season's crops both earlier and more liberally than in the former year, and that an excellent opportunity has been

offered the trade at large to replenish their exhausted stocks which remained on hand at the close of the old season. As a counterpoise to this excess in the arrivals of coffee it is in a certain sense satisfactory to find that the shipments hence for 1903 to date have considerably more than doubled those in 1902, and have in a corresponding degree relieved the London market of a supply which otherwise must have become very burdensome to importers and troublesome to distributors. Among the latter we include the wholesale dealers, who have acted very cautiously throughout, taking out of the bonded warehouses of the United Kingdom only 2,432 cwts., in lieu of 121,008 cwts. last year, with the undesirable result that the stock in bond, as officially rendered on the 30th ultimo, was augmented to 895,000 cwts., in contrast with 493,000 cwts. in the preceding year.

Private returns of the movements of coffee in London alone point to similar conclusions. For example, the clearances of coffee for home use during the first twenty weeks of the present year have been curtailed to an equivalent of 6,940 tons, against 7,910 tons in the same period of 1902; and the aggregate stock on the 16th instant was piled up to 38,250 tons, as contrasted with 22,880 tons in May, 1902. More significant still are the landings at this port, which have reached 31,580 tons, in comparison with 23,170 tons last May; and for what might be called almost a phenomenal event, the exports in the twenty weeks have been equal to 10,920 tons, as opposed to 4,750 tons in 1892. By dissecting these figures, and separating one class of coffee from another, we find that Central American sorts, which also embrace the growths of Costa Rica and Guatemala, were represented in this year's gross shipments from London by about 75,000 bags, in opposition to 36,600 bags in the previous season. Here was an expansion of 38,400 bags in one kind of coffee, whereas the extra amount of Central American kinds delivered exclusively on home trade account was only 7,700 bags, as the difference between 65,700 bags and 58,000 bags in the two years.

It is this divergence of operations between the home traders and exporters that constitutes the peculiarity of the London coffee market this season. Contrary to last year, when they were first in, buyers for consumption in the kingdom have, for reasons best known to themselves, hung back, while shippers to the Continent have rushed boldly forward the moment consignments of the new season's crops of Costa Rica, etc., began to appear on offer, and have thus secured the best portions of the general supply at a time when prices were at their most moderate point in March. An advantage so palpable has practically been lost to the home trade through their tardiness in buying, and on all sides it is witnessed that, the choicest of the coloury growths having been worked off, the dealers are only now waking up to the fact that, unless they wish to be deprived of the benefits of new season's crops, they must bestir themselves, or the bulk of the fancy new coffee will be taken for shipment abroad, leaving only the faded and more indifferent grades to select from, as they come along towards the close of the year. Such mismanagement in operating is like letting the foreign purchaser come in and clear off the cream of the fresh supply and handing over the refuse portion to the home dealers at stiffer rates. Already there has been a strong reaction in prices, and medium qualities from 56s. per cwt and upwards have materially advanced in value. Comparing one sort of raw coffee with another, it is mostly admitted by valuers and

others that the finer kinds of Costa Rica, Guatemala, and East India plantation are just now the dearest, and that Salvador and such like descriptions are relatively the cheapest to be met with, and consequently well worthy of attention whenever they are put up for sale by auction.

\* \* \*

The legislation that the Sao Paulo congress has discussed providing for an elimination of one-fifth of the coffee crop growing in that State is now said to be law in effect July 1. It will be interesting, says the *Tea and Coffee Trade Journal*, to watch its career, for, apart from other consideration, should it prove even only moderately operative, it must have its influence on coffee prices. It will not be the first time such a law will have been tried. The Dutch employed the device when over-production made spice growing unprofitable. But their situation was not quite that which bothers Sao Paulo. The Dutch were united and in control of the spice trade, something which cannot be said for the Santos men. Their legislation applies only to their State, which, although it grows a very large proportion of the superabundant Brazil coffee, leaves not a little to be supplied by other Brazilian States. These are in no hurry to adopt the severe Santos measures, and should prices be affected for the better by the restrictions made use of by Santos, they would share in the improved conditions, and probably to realize the most possible in them be anxious to extend their own coffee plantations. Then would come again the inevitable over-production. There are other influences too, that should operate against the Sao Paulo law, influences contained in other provisions of the law not enumerated. The situation is complicated. The outlook, consequently, is most uncertain, and should the worst happen only an exasperating addition will have been contributed to the injuries inflicted by the outraged law of supply and demand. Moreover, it yet remains to be seen whether coffee is selling below the cost of production. Reports are current to the contrary, and if true, coffee growing will go on with still more lavish production. Economic forces will not have done all they have been called upon to perform, and there will be still more to hear from as to what ails the coffee market.

\* \* \*

**North Dakota's Pure Food Law.**—The North Dakota pure food law goes into effect July 1, 1903. Coffees must be pure, free from chicory, unglazed, not polished, and not extracted.

\* \* \*

A quiet market, with spot quotations steady and unchanged. A review of the April movement will be found elsewhere and also other trade items. Even at present at nominally low cost there are, says the *American Grocer*, those who look for a still further decline. On the spot, Rio No. 7 still held at 5½c.; No. 3, at 6½c.; Santo No. 4, at 6c. Good Cucuta, 9c. Mild sorts are unchanged and with light demand. General conditions are unchanged.

\* \* \*

C. E. Bickford's coffee circular says: "Coffee markets in all consuming countries are greatly depressed. Prices for Brazils in New York have gone lower than in the history of the article, while mild growths are seeking outlets at irregular figures, tending lower everywhere when sold. Arrivals here since the first of April exceed those of any former period of like duration. Offerings have been free and the constant

pressure to sell has resulted in a steady decline, but with considerable business done. Not all holders are following the movement in a competitive way, and our quotations are therefore somewhat irregular. To-day's first hand stock consists of 20,231 bags Costa Rica, 2,188 Nicaragua, 26,231 Salvador, 41,564 Guatemala, 5,226 Mexican, and 8,527 various; in all, 103,967 bags."

\* \* \*

Excessive boiling of coffee is about as bad as any boiling of tea, for in each case there are substances dissolved in the water which ought not to be allowed to pass into the human stomach. The boiled tea gives out tannin, which is good for making leather, but bad for the stomach, and the over-boiled coffee yields a certain acid or acids which are unpleasant to the taste and discomforting to the stomach.

\* \* \*

**Checking Coffee Production.**—The Sao Paulo State Legislature has adopted the bill to aid the coffee-planters, but the opinion of the best-informed people is that nothing useful will result, and that the question of excessive supply must be left to settle itself, just the same as it does when it is a matter of oversupply of wheat or corn or cotton.

The United States Vice-Consul at Rio Janeiro expresses himself very shrewdly as follows:

"Of course, any plan of this kind would prove abortive unless the other coffee producing States—Minas, Rio, and Espirito Santo—decreed like measures; but, owing to interstate jealousies and diverse economical conditions, it is not at all likely that the various interests will be so reconciled as to bring about united effort. Sao Paulo is by far the largest producing State, having yielded in the crop year 1901-2 (the largest ever known) about two-thirds of the total crop. But it is generally believed here that no Government measures can prove permanently effectual, and that any expedients will only serve to temporarily ameliorate the condition of the planters. It is pointed out that this country will pay the entire cost of these projects, and the foreign markets, with their existing enormous stocks, will, in all probability, reap as great benefit as Brazil. The one real remedy, it is said, is to let the crisis take care of itself, and then prices will go low enough to force out some of the plantations and thus give consumption a chance to catch up with the supply. From entries of coffee (Rio and Santos) up to date, the year's crop up to June 30 would appear to be not far from 12,000,000 bags, which is too much for requirements, and the following crop, from July 1, 1903, to June 30, 1904, promises a yield fully equal to the present one."

Among the sections of the bill which may interest our readers, says the *Merchants' Review*, are several providing, first, for encouraging the starting of coffee-roasting plants in the interior of the Union where coffee is admitted free of interstate duty; second, to promote the creation of commercial and industrial establishments for sale of Sao Paulo coffee abroad, granting favours to the same; third, to pay certain subsidies and impose fines for falsification or admixture of coffee.

\* \* \*

**The U. S. Coffee Market.**—Coffee is steady but the market is dull and listless, says the *Tea and Coffee Trade Journal* of 19th ultimo. The only trouble is the great quantity in supply and the over-stocked condition everywhere. It would seem probable that the season of 1903-04, commencing July 1, will begin with a world's visible supply of 12,500,000 bags. This is a record breaker, and then there is the invisible supply, which probably is abnormally large. On top of both now will come the new crop harvested, which, it is feared, will pass all previous records. Little confidence is placed in Brazil legislation curtailing the

supply. The forces of commerce usually brush away such obstructions as if they were mere spider webs. 'Tis a pity to be writing bearishly so much of the time, but regard for truth permits no other indulgence.

The spot market closed flat but a little easier. Sellers are more inclined to listen to bids on bases hitherto not entertained. The prices at the close were 4 $\frac{7}{8}$ c. for Rio No. 8, 5 $\frac{1}{8}$ c. for Rio No. 7, 5 $\frac{3}{4}$ c. for Rio No. 4, and 6c. to 6 $\frac{1}{8}$ c. for Santos No. 4.

In Europe and Brazil the close was unchanged. Firm offers from Brazil were Santos Nos. 3 to 9, averaging No. 6, 5 $\frac{1}{4}$ c. c. and f.

In the option market deadness prevails. Interest seemingly has entirely died out. The trading is very limited. Especially watched are the Santos receipts, which continue full for this time of the season. May option hovers around 3 $\cdot$ 80.

In the mild market steady conditions are observed. There is fair interest, especially in Bogotas and Maracaibos, but sales are few and not large. Good Cucuta is selling on the basis of 9c. East India growths are quiet.

Total stock in United States May 1, 2,531,917 bags against 2,307,894 bags May 1, 1902. Brazil stock in the United States May 16, in store and afloat, 2,501,643 bags against 2,346,579 bags at the same time last year. Other than Brazilian, 357,733 bags, against 331,192 bags last year.

Brazil coffee in New York May 16, 2,017,857. Stock in New York in other coffees May 11, 244,891, in San Francisco, 103,967 bags, and in New Orleans, 8,875 bags. Visible supply in the world of all coffees, May 1, 12,248,278 bags.

\* \* \*

**The New York Market.**—New crop Formosa in primary market opened higher than last season. Good Congou, 18 $\frac{1}{4}$ c. latest quotation by cable.

London has again been buying Congous. Saturday's steamer took about 4,000 packages.

New crop Japan tea is fully 20 per cent. higher than last season.

Basket-fired Japan, fancy, offered by jobbers at 45c.; sun-dried, 35c.; pan-fired, 35c. Claimed to be "the fanciest quality obtainable." Oolong of same high grade, 52c. A line of Oolong as low as 15c. Hyson, special, 16c.; some good lines of Japan, 21@22c.

\* \* \*

*Anco-Special*, the sprightly journal issued by Austin Nichols & Co., says:

"The higher the price of the coffee the less it takes to make a cup of the desired strength.

"Besides that, the higher-priced coffees have infinitely better flavour than the cheaper grades, so that all things considered the dearest coffee is the most satisfactory to buy."

\* \* \*

**Brazilian Bank's View on Brazil Coffee Situation.**—The London and Brazilian Bank reporting May 4 to its stockholders says of coffee in Brazil:

"The situation is becoming complicated owing to the labour question. The liberated slaves have been replaced by immigrants, principally Italians, who are spending very little money and are sending almost their entire wages abroad which fact contributes to restricting circulation and business and in view of the present crisis labour is likely to be scarce. Relative to the recent law to benefit the Brazil coffee trade enacted by the S. Paulo Legislature, such as it is, it certainly

makes numerous malcontents among the planters because they cannot count on an immediate compensation from the new tax which will be exacted from them. This is the principal reason for their dissatisfaction and this is also a reason which should make Bernardina de Campos hesitate. Entirely imperfect and incomplete as it certainly is in its dispositions, the law must be applied; it will not be a definite remedy; it will not at all solve the crisis; but it will be a palliative which will only postpone the solution and permit enterprising planters to safeguard as soon as possible, their interests so greatly compromised by their own faults. However this may be, it is probable that the President will not sanction this law without having the assurance of the co-operation of the other Brazil States, which will not be easy judging from the lively opposition manifested by the States of Rio and Minas, which say, that having nothing to do with the creation of the crisis which is to be averted, they cannot see why they should suffer the consequences."

\* \* \*

**Coffea Laurentii (Robusta), Hort. Kew.**—This is a new species of coffee growing in the Botanic Garden at Entebbe, in Uganda. The plant was received from Kew in 1901 as a seedling, and has now attained a height of 5 feet. The shining green leaves and the clusters of white flowers show that the plant is very ornamental, but probably this is the least valuable of its qualities, as it is hoped that its robust habit will give it immunity from fungous and other pests which have so seriously interfered with the cultivation of coffee in Ceylon and other countries.

\* \* \*

**A Good Cup of Coffee.**—The secret of making palatable, non-injurious coffee, lies in the two words: quick infusion.

In the first place, have the Coffee ground to the finest powder, so that its full virtue may be quickly extracted. Allow a dessert-spoonful for each person, mix it with just enough cold water to make it thick paste, and let it stand until five minutes before the time to serve. Have fresh water boiling, pour on a cupful for each person, and two more for the persons who are likely to (but should not) wish a second cup. Put the cup over the fire and let the infusion come to a boil, settle with a dash of cold water, or a clean egg shell, and serve immediately. This is a cup of coffee and not a cup of tannin Coffee made in this way may be taken morning, noon and night without injury, but the quantity drunk at one time should not be greater than one cupful.

Coffee that has boiled, or stood more than five minutes, should be thrown away.

### TEA NOTES.

**Tea Examinations in New York.**—Following, says the *Tea and Coffee Trade Journal*, is the statement showing the quantity of tea that has been examined in accordance with the provisions of the national tea standard act at the port of New York during the last ten months ended April 30. The entire import of tea of the United States during that time was a trifle in excess of 100,000,000 lbs., and as the teas inspected here were in excess of 66,000,000 lbs. it will be seen that New York does two-thirds of the tea business of the land so far as importations are concerned. Formosa tea heads the list, closely followed by Congous, and

not far away are the India and Ceylons, which in tables go together like Siamese twins. The importation of Japan teas during the last ten months was 34,000,000 lbs., and as New York handled only a little more than 9,000,000 lbs. it follows that the city does only about one quarter of the business in Japan teas. Chicago is headquarters for that tea. In the other teas New York has a safe lead.

Surprisingly large is the quantity of tea rejected for being under standard. The quantity in the ten months was 1,248,100 lbs., or two per cent. The statement follows: Accepted—

	Pkgs.	Pounds.
Formosa	379,633	12,130,597
Congou	203,899	11,900,148
Japan	111,288	9,700,300
Pingsuey	275,126	9,612,915
India and Ceylon	122,379	9,232,028
Foochow	132,350	6,151,461

**Morocco and Green Tea.**—It is not generally known that Morocco is a country of importance to tea, but that is a fact, and how important may be seen from the circumstance that the recent political troubles there made the London green tea market so nervous that it completely collapsed. Much green tea is drunk in Morocco, and a revolution naturally would have its influence on selling tea there, and London, which supplied the tea, knew it well.

\* \* \*

**Tower Tea.**—The report for the year ended March 31, 1903, shows an amount of £20,469 (including £2,200 received as premium on new shares) to be disposed of, after providing for trading expenses. The Directors recommend that a dividend be paid at the rate of 10 per cent. per annum for the last six months, making 8 per cent. for the year, and interest at the rate of 8 per cent. per annum since the dates of payment of the instalments on the new ordinary shares, and that £3,000 be carried to reserve.

\* \* \*

**Increased Use of Java Tea.**—A feature of the Java tea enterprise is said to be the very considerable and steadily increasing proportion of the produce which is shipped direct to Holland. This means the gradual conversion of a good many of the Dutch people to afternoon, and, perhaps morning, tea. If this process continues, and Belgium, as well as the adjacent portion of Germany—the people of the Groningen and East Friesland Provinces have always been great tea-drinkers—were induced to consume increasing quantities of

Java tea, no one would regret some expansion in the Dutch planting enterprise.

**The U. S. Tea Market.**—A fairly active market at steady prices is noticed in tea, says the *Tea and Coffee Trade Journal* of 19th ultimo. The higher opening of the Eastern markets is making its influence felt, so that more inquiry is met for such teas as are in stock here, which, high though they be, look desirable when viewed in the light of prices ruling abroad. A firm market at least may be expected for the rest of the season and even a hardening one, should the Eastern markets show no diminution in their demands. The next market of interest to open will be the green tea, which is expected to show a large advance because of the firmness and high price of the tea during the past season. There should be an abundance in quantity, for beyond doubt many teas heretofore turned into a black, will be made into a green this year. This is what has probably happened to the Congous, the rise in the opening price of which is explained in this way. Detailed reports are that the market has opened at an advance of ten per cent. for the high grades and twenty per cent. for the medium grades, the comparison being with the prices at the opening one year ago.

In Japans there is no further news than that the market continues to rule high. Speaking generally the advance is twenty per cent. over the opening prices one year ago. It is said that the prospects are favourable for a large yield of the second crop. A considerable quantity of samples of the new tea arrived in the United States this week. The samples are, of course, of the better grades.

The Formosa market continues firm at the higher rates. The advance has induced some trading in the old tea at hand in New York; 6,000 packages changed hands last week at firm rates.

The green teas are very scarce, firmly held and high. Ceylons and Greens are coming in fair quantity but rule firm in response to the strong London market.

Advices from London say that the offerings at the auctions have been on a larger scale. A fair demand has prevailed, at generally steady rates but later a quieter tone has predominated, and, to sell, lower prices have had to be accepted, most noticeably in the medium grades. In Indian teas, owing to the large quantity brought forward, buyers have displayed considerable hesitation, and a large proportion was in consequence withdrawn, the teas which sold showing but very little change in price. In Ceylon teas the sales have passed with fair spirit, and although prices were in some instances irregular, the general tone has been fairly steady. Average for the week ending May 9, 7.69d., against 6.55d. in 1902. There has been a fair inquiry for all kinds of China teas from exporters, but so far the response is small. There has been a brisk demand for Scented Capers up to 6d. per pound. The Green tea market is stagnant.

*The Ohemiker Zeitung* report the results of experiments made by G. Wahgel, which indicate that the aroma of tea is due to the presence of special kinds of bacteria.

The U. S. tea imports during the fiscal year have been so liberal as to remove all fears that high prices will prevail for the remainder of the season. Somehow firmness in the tea market seldom lasts long. As with coffee and sugar, the preponderance of production is generally the feature of the

tea market. Population grows, but not so fast as the production of staple products of the soil.

Until quite recently there has been little machinery used by the tea trade in this country, says the *Spice Mill* (New York). The wholesaler or jobber has merely sold packages of tea—packages just as received by him—without any manipulation of their contents. This is in great contrast to the conduct of the coffee business, in which careful manipulation of the goods is considered essential to success.

Perhaps the great increase of coffee consumption in this country, compared with that of tea, has been partly due to the competitive efforts of so many coffee dealers, all producing blended goods such as will suit the varied tastes of consumers. Think how few straight coffees—just as received in the original import bags—ever go to the consumer. If straight coffees are the exception, straight teas are certainly the rule; and yet it is admitted that the possibilities for producing a great variety of acceptable blends is quite as great with tea as with coffee.

Blending is done, of course, by the retail tea dealer; but the trouble here, as with coffee, is that most retailers do not know the goods well enough (or have not sufficient command of uniform supplies) to get results which give continued satisfaction. This hurts the tea trade immeasurably.

Many large dealers now recognize this fact, and see that by wholesale blending, combining expert tea knowledge and free command of supplies, they will not only help tea consumption as a whole, but can establish an appreciative demand for their own special output.

## NOTES.

### Ceará Coffee.

Ceará is falling back as an exporter of Coffee. From 42 tons in 1900 to 23 tons in 1901, and only 10 tons in 1903 is a smart decline, especially in view of the drop that has occurred in prices.

### A New Rubber.

The plant *Landolphia thralloni* has been discovered in the French Congo. Produce valuable rubber which is selling at 3s. per lb. It is claimed that the new discovery will revolutionise the rubber industry.

### The Agricultural Ledger.

The latest numbers of this valuable publication are No. 2 of 1903, "The Agricultural Value of City Sewage in India," by Dr. Leather, Agricultural Chemist to the Government of India, with a note by Mr. J. Mollison, Inspector-General of Agriculture; and No. 3 of 1903, "On a Plague of Grasshoppers in the Central Provinces," by Mr. Stewart Dockman, C.V.D.

### Cocoa and Coffee in Jamaica.

Of the Jamaica coffee crop it is said: "The crop is nearly all in and only small lots 25s. to 60s. are to be had." In regard to cocoa it is said: "Cocoa is coming freely to market; 41s. to 44s. as to quality. Ginger stocks are held locally for 28s. to 32s. Honey at 1s. 7d. to 1s. 9d. per gallon; scarce owing to severe drouth and consequent akma of flowers. Pimento crop over and stocks held for 17s. 6d. per 100 pounds; new on north side will be late owing to dry weather; the south side will be ready by June.

**Tea and Coffee for Texas.**

Mr. Samuel J. Wilde, of New York, has been travelling in Texas, and the Fort Worth Register reports his observations, which include the availability of the Texan soil for coffee-growing. He said: "The soil is almost identical with that of the island of Ceylon, and the climate is perfect for the successful growing of coffee. I have looked into the tea-growing section of South Carolina, and compared some of this tea with that imported from China and Japan, and in some respects I find the tea grown in this country superior to the imported article. And I am certain that coffee culture could be followed with profit in South Texas."

**Calcutta Tea Sales.**

At the tea sale at Calcutta on 12th instant 7,475 packages were sold. The market was fully firm for all except common teas. The demand for Russia, the Colonies, and Bombay was good, with exceptional prices. The following conditions have been added to the conditions of sale to take effect on and after the 1st April:—"A sum corresponding to the rate of the tea cess, one-fourth pie per lb., shall be charged by brokers to sellers' account and deducted from the buyers' bill." "In calculating charges an odd fraction up to half-a-pie shall be disregarded; if exceeding half-a-pie it shall be taken as one pie."

**Yet another Rubber.**

Experts sent by the Philippine Government to the island of Mindoro report that a fine quality of rubber equal to that from India, and known by the natives as "ducting aha," was found to exist in large quantities. At nearly all points visited were signs of the rubber vine, which, in size, is from one-half to one inch in diameter. It grows to a length of from forty to sixty feet. This vine, however, is to be found only in dry forests. The natives do not know the real value of the vines and use them for no other than medical purposes. They rub it on burns, sores, and wounds, and outside of its usefulness for healing purposes they place no other value upon the rubber. A large quantity of low-grade guttapercha was also found in several places.

**London Tea Market.**

Weekly special telegram dated 11th instant from Messrs. Gow, Wilson & Stanton of Colombo reports demand is strong for fine kinds and that medium liquoring Pekoes and Broken Pekoes is steady while the market for common Pekoes and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (¼d. less than the previous report) and the average 7½d. (same as last report). The average for the same period last year was 6½d. Reuter reports that the tone of Ceylon tea as follows good demand at fully previous rates and Broken Pekoe firm; for all the fine teas Pekoe Souchong steady; fair Pekoe Souchong is quoted at 6¼d. (same as last report) and the average for the week is 7½d. (same as last report). 26,000 packages of Ceylon tea were offered for sale and 24,000 disposed of; while of the 28,000 packages of Indian tea offered, 21,000 were sold at an average of 7½d. (¼d. higher than last report).

**Java Quinine.**

In his annual report on the trade of Java during 1902, the British Consul at Batavia reports that the quantity of quinine sold by the Bandong quinine factory at auction and by tender

was 821,608 oz., most of which went to the United States, the average price of the eleven sales being about 11d. per oz. The combination of Java cinchona-planters controlling more than one-third of the area under cinchona have now decided to extend the period of their agreement until the end of 1903. The exports of quinine from Java have been—

	1902.	1901.	1900.
Oz. ...	794,400	1,032,800	766,400

The result of the tender held at Batavia on May 27 was as follows: Of 7,452 kilos. Ed. II. offered, 71 kilos. sold at an average of 17f per kilo. (about equal to 6¼c. Amsterdam unit), against 20f. per kilo. at the previous tender. The next tender will take place on June 24.

**Journal d'Agriculture  
Tropicale.**

*Aperçu du contenu du n° 23 (mis en vente à Paris le 31 mai 1903):* 15 contributions inédites, de MM. Berthelot du Chesnay, Apfelbaum, Poulain, Judge, Cibot, Hamel Smith, Bardey, Karpelès, de Sornay, Bertoni, Main, Couturier, Dulieu, Tabel.—Une usine de défibrage d'aloès en Algérie.—Le Palmier à huile, comme porte-ombre.—Un débouché nouveau du kapok.—Culture moderne de la ramie au Bengal.—Le riz en brasserie.—La machine paraguayenne, pour casser les noix d'Acrocomia.—Les dessoucheuses à bras (av. 3 fig.).—Articles et notes sur l'oranger, l'arachide, le coton, le séné, le thé, le caoutchouc, la canne, la banane, le patchouli, le henequen, le manioc, le poivre, le cocotier, les termites, les tiques, le surra.—Etudes commerciales sur le caoutchouc, le cacao, le café.—24 analyses bibliographiques (N.-S.-Wales, Chine, Inde française, Java, Sumatra, Anatolie, Afrique en général, Egypte, Algérie, Antilles.—Canne, tabac, plantes potagères en général, oignons, riz, café, coton, soie).

**Canton Tea.**

In his report on the Trade of Canton for the year 1902 Mr. Consul-General Scott says:—"Tea, chiefly Congou, again shows a decline, amounting to 1,800,000 lbs., and this notwithstanding the reduction of duty levied during the past year. Canton teas are principally used for blending purposes, and cannot be produced at lower prices than those now ruling, so that it is impossible for them to compete in the European market with cheap Indian and Ceylon teas, which, for blending purposes, answer equally well. The result is that growers, who can readily dispose of their leaf in the form of Pouchong, both at home and in the United States and the Colonies, are losing all interest in the European trade, which would appear to be rapidly approaching total extinction." It is noteworthy that 5,645 cwt. of Tea was imported from foreign countries, as against 2,483 in 1901 and 2,900, the average of the last five years. The Exports of tea (black) in 1902 were 27,476 cwt., as against 7,924 in 1901 and 14,300, the average of the last five years—figures that are not reconcilable with the Consular remarks quoted above.

**Tea and Coffee in  
America.**

The complaint frequently heard that the best teas and coffees are to be had in the retail stores only after severe questioning, should be heeded by the trade, says the *Tea and Coffee Trade Journal*, and a thorough and abiding reform instituted. There are very many Americans that want the best of coffee, literally the best coffee, but are unable to obtain it owing to the subterfuges of the retail dealers, who seemingly purposefully throw difficulties in the

way of the consummation of such a purpose or sale. . . . . All merchants want the largest profits, and all know that the best coffee always contains the most of this ingredient of success. How all the more lamentable, then, when there is a world waiting about willing to be led into using the best! The same is true of tea. How frequent is the sign—"The Finest Formosa 60 Cents a Pound." Far from this price is the finest of this tea. Where the good sense comes in that permits the perpetration of this deception we cannot see. We appeal to coffee and tea men who unconsciously or otherwise thus sin and others who can influence such sinners to approve an extension into the nomenclature employed in the selling of teas and coffees of the maxim that "honesty is the best policy."

GENERAL ARTICLES.

COFFEE IN LONDON.

At the auctions supplies have been freely but not excessively offered, says the *Produce Markets' Review* of May 23, 1903, what falling-off has taken place has been in Costa Rica, for, as we have already pointed out, the crop came to hand so early this year that it will all be sold much before the usual time. The demand for this growth has continued good, and prices are from 2s. to 4s. up from the recent lowest point. A further advance is for the time checked by better supplies of Salvador and Nicaragua, which are taken on the Continent in place of Costa Rica, if there is sufficient difference in the price. These kinds have been selling freely and rates have tended upwards. East India is also very decidedly dearer, although supplies continue to arrive plentifully, and the quality shows a very decided falling-off. There are indeed very few parcels coming to hand now that are really suited to the home trade, and as the season advances this will increasingly be the case. Colombian has been offered in larger quantities, but it is still almost entirely damaged and of inferior quality; some really good parcels would do much to check the advance in Costa Rica, but from all accounts there does not seem much prospect of such arriving.

TEA IN LONDON.

INDIAN TEA.—The demand has improved, says the *Produce Markets' Review* of May 23, 1903, and most of the 28,000 packages offered at the auctions met with buyers. The fine and finest qualities which are gradually getting into very limited supply were readily bought at improved rates, and as there is every probability of a further diminution later on, still higher values may be expected. Medium descriptions continue in much stronger demand, and have been taken freely at firmer rates, and now that the lowest retail price has been advanced to 1s. 2d., these kinds will, no doubt, attract a larger share of the consumption. At any rate, the difference in values is so marked compared with the lower sorts that the medium kinds are almost certain to meet with an increased share of atten-

tion. For the lower grades the tendency of the market is weaker and some lower quotations were established, caused mainly by the poor quality and undesirable leaf which characterises most of the common teas now coming forward. The deliveries are on a satisfactory basis, showing an increase of 6,500,000 lbs. up to the 19th of this month as compared with the same period in May, 1902, and the improvement is likely to continue with a further deficiency in the available supply.

CEYLON TEAS.—The offerings at the auctions this week were again on a fairly large scale, but prices ruled firm for all descriptions. The lowest grades of Pekoe and Pekoe Souchongs met with a ready sale at late rates, only a few common Colombo bought teas selling under 6½d., which is still practically the lowest quotation. There was more enquiry for the medium Broken Pekoes, which class of Ceylon is the cheapest now offering, and many invoices showed a fractional advance on previous prices. Finest kinds have been in small supply, and the few lots offered sold well. At the public sales 27,360 packages were brought forward, of which about 4,400 were withdrawn.

CONGOU TEA.—At the public auctions held on Wednesday a larger quantity was offered, consisting almost entirely of the lower kinds. Most of the teas offered were disposed of, and realised steady rates. There has been a much better enquiry for Panyongs, and a good business has been done. These teas show excellent value against anything that can be bought at the price. Of the 1,475 packages offered at public auction, 528 failed to pass the hammer.

OTHER CHINA TEAS.—No public sales of Green Tea have been held this week, and the market remains unchanged. Common Capers and Oolongs are wanted, and a fair business is reported, but the demand for the finer grades continues somewhat restricted.

FACTS ABOUT TEA.

Mr. Thomas A. Phelan, President, National Tea Association, writes in the *Spice Mill* :—

Most women think they know everything about tea, or at least enough, but, as a matter of fact, I don't believe there is any other single article that appears on American tables about which the consumers know so little.

Before 1897 there was practically no protective legislation for this import, and the United States was a sort of dumping ground for the refuse brands which could find a sale nowhere else in the world. Throughout the South, where the majority of the buyers and handlers were not experts, whole sections and States practically gave up the use of tea because of its inferior quality, though they did not know where to turn for a remedy. So clever were the imitations that only an expert could detect them, but they were no less spurious for that. Many herbs, some of them harmless, but having no relation whatever to the tea plant, were shipped here by the million pounds and sold as tea. By some chemical process they were colored so that to the eye they were identical with the genuine article.

While many of them were not injurious to health, they had no more right to be sold as tea than would, for instance, a paper imitation of a beefsteak painted red. They were green painted weeds, and the country was flooded with them for so long that even now American consumption of tea is still as low as a pound *per-capita* per annum, while in Canada it is four pounds, in England six, and in Australia seven. There, you see, they try to out-English the English. So far as the average housewife is concerned, she simply knows that she likes this brand or that, black tea or green, and in the matter of making she is doubtless as ignorant.

Now, the fact is that of the so-called black tea alone there are at least five hundred varieties, with as many flavors as are known to the most luxurious flower garden. The greens and Japans might each be sub-divided into a like number. One of the black teas, the so-called English breakfast, a name unknown incidentally in either China or England, is really the Congou, of which alone there are at least two hundred different flavors and grades. Other varieties of black tea are the Oolongs from Foochow and the island of Formosa and the Ceylons and Indias. All these are sold as "black tea," but there is as much difference in taste between an Oolong and a Congou as between coffee and chocolate, or whiskey and claret. The Congou, Ceylon

and India are fermented in their preparation or allowed to "stew in their own juice," so to speak, which gives them a heavy, malty flavor. The Oolong is prepared like green tea, without fermentation, and is fired almost immediately after picking, giving it a bright, toasty character, which results in a light colored infusion. They are equally good, despite their differences.

As a rule the English, Irish, and their descendants drink the Congous, while the older residents of America, and especially of New York and Boston, prefer the Oologs. The variations in soil and temperature under which the different teas are grown produce the radically different flavors so dear to the true tea lover and so inexplicable to the uninitiated. The North Congous, for instance, are sub-divided into fifty districts, the leaves from each having a flavor differing as distinctly from the others as does the Bartlett pear from the Seckel, and of each variety there are half-a-dozen or more different grades. The Spring, early and late Summer and the Autumn gatherings all have different flavors which the expert can distinguish blindfolded.

Since the law of 1897 went into effect only tea that is tea has been admitted into the United States. Inferior grades, of course, are allowed, just as we do 25-cent silk as well as that which costs \$25 a yard, but, though poor, it is all genuine tea. The retail price to-day is no higher than it was back in the 70's and 80's when the country was flooded with adulterations. The individual consumer pays the same money, only now he gets his money's worth.

Perhaps one woman in a hundred knows how to make tea as it should be made. Properly prepared, it can be chemically demonstrated that tea has no more injurious effect upon the nerves than has cocoa or even water. Cocoa, indeed, unless properly prepared by the manufacturer, contains an amount of cocaine which decidedly impairs digestion if taken for any length of time. Tea, to be a pure tonic and wholly harmless, should be made with water which has not only "come to a boil," but has boiled hard for at least five minutes. The leaves then should be steeped for about five minutes; by no means more than seven. Previous to that time the tonic property only is developed; after seven minutes the tannin becomes operative and the decoction more and more injurious with the increase of time. You can imagine the state of affairs in restaurants and such places where the tea is made in the morning, to last all day, or even every few hours. The English have it upon the ideal time for drinking tea, at breakfast and between luncheon and dinner. Taken then it is the best sort of a tonic.

## PRODUCE AND PLANTING.

In its review of the working of Ceylon tea companies during 1902, the *Financial Times* points out in evidence of the magnitude of the Ceylon tea industry that there exist altogether nearly seventy different English companies, large and small. After complimenting the administrations of these undertakings on the promptness with which the accounts are rendered, our contemporary says:—"The last of the produce can scarcely be marketed before the end of March, and yet the last day of April saw reports issued, and in many cases the annual meetings held, by very nearly all of them. The average price of Ceylon tea continued to rule low during the first three quarters of the selling season, which extended, roughly, from the beginning of 1902 to the end of March last, and it was not until well on in January that any material improvement occurred, and even then it was confined mainly to the lower grades, on which demand has continued chiefly to run. This recovery towards the close was brought about mainly by the ascertained shortage of the Indian crop of 1902 and by the increased diversion direct, both from Calcutta and from Colombo, to markets other than London—more notably to America and Russia. The better prices ruling at the close, however, failed to bring up the average realised for the twelve months even to the comparatively low range of the previous year. But by means of economies, both in working costs and also in some cases in administrative expenses, the overhead profit was increased, although it is satisfactory to note that a larger proportion than usual has been devoted to writings off for depreciation.

"A bird's-eye view of the main results achieved may be obtained from the following table, which, however, we should explain, is prepared on a basis somewhat different from that of a similar one

which appeared in our issue of May 20 of last year, the profits being now computed before deduction of debenture interest where this is incurred. The companies having debentures in issue are marked with an asterisk:—

Company.	Profits.		Appropriations to Reserve or Depreciation.		Dividends.	
	1901. £	1902. £	1901. £	1902. £	1902. %	1902. %
Alliance *	7,560	8,275	1,000	1,000	6	7
Ceylon Plantations	37,200	37,975	5,000	10,000	15	15
Dimbula Valley	14,000	13,950	2,500	500	8	8
Eastern Produce *	24,060	29,900	11,490	11,000	3	3
General Ceylon *	10,720	8,200	2,000	2,000	nil.	nil.
Imperial *	4,360	3,170	500	500	3	3
Nuwara Eliya *	13,690	17,600	2,000	2,000	6	6
Ouvah	6,060	8,600	500	1,500	6	7
Ragalla	5,680	7,000	200	1,300	4½	4½
Scottish Ceylon	4,150	3,200	430	495	8	5
Standard...	8,960	10,375	...	1,500	15	15
Yatiantota	5,960	8,160	1,000	1,000	2½	5
Total or average ...	142,400	156,405	26,620	32,795	6.42	6.54

It will be seen that the total profit was about 10 per cent. more in 1902 than in 1901, while the appropriations to depreciation, etc., amount to nearly 20 per cent. more. All of the companies, however, except the Alliance, the Dimbula Valley, the Nuwara Eliya, and Ouvah, made inroads on the balances brought forward, while all except the Ouvah carried sums of varying amounts (as much as £8,000 in the case of Eastern Produce) to the debit of block account, thus relieving revenue to that extent. To make this clear, and also to show the relative financial soundness of the various companies, we have compiled, as accurately as is possible from the varying material in the different reports, the following further table:—

Company.	Additions to block during year.	Total reserves, etc.	Capital Account.	
			Debit.	Credit.
	£	£	£	£
Alliance	920	1,240	...	75
Ceylon Tea Plant	1,655	106,130	95,900	...
Dimbula Valley	345	6,680	...	3,720
Eastern Produce	8,720	31,620	15,000	...
General	1,320	6,425	...	5,420
Imperial	1,210	765	2,680	...
Nuwara Eliya	1,420	3,590	...	2,150
Ouvah	...	4,350	1,000	...
Ragalla	995	76	1,325	...
Scottish	...	7,260	2,365	...
Standard	830	14,110	12,800	...
Yatiantota	240	2,030	...	7,180
Total	17,655	184,276	131,070	18,545

From this it appears that, overhead, appropriations to depreciations have been offset by additions to block of about one-half the amount.

"As regards the heavy debits on capital accounts, these are, of course, in most cases offset by good accumulations of reserve—notably in the case of the Ceylon Plantations, the Eastern Produce, and the Standard. As regards the Ceylon Plantations Company, it may be noted that about £55,000 out of the reserve has been sunk in cocoanut plantations, which are expected to yield good profits before long, and this company is to be specially commended in thus securing a second string to its bow, rendering it not entirely dependent on the uncertain profits from tea alone. The Eastern Produce Company, too, has a reserve double the amount by which its block exceeds its capital, and while steadily improving its property by betterments over a series of years, it has steadily reduced its debenture debt by a sinking fund of £8,500 per annum, this sink-

ing fund still being in existence. The Standard Company sails rather close to the wind—practically its entire reserves being sunk in improvements; but the company is reputed to possess very fine estates indeed. Of course, these figures must be taken in conjunction with the size of, as well as with the amount of capital issued by, each company, but they will help investors to judge for themselves of the soundness or otherwise of the various undertakings. In regard to the future the establishment of a rational relation between supply and demand seems likely to result in a more profitable future for the industry both in India and in Ceylon, while the greater solidarity that is now being manifested among the planting communities, as represented by the Ceylon Association in London and the Indian Tea Association, is likely to have a decided influence for good on all that concerns the trade. The imposition of the Government directed cesses both in India and Ceylon (about which our readers have from time to time been informed in these columns) should provide sinews of war for the various campaigns for developing a taste for tea—and especially for British-grown tea—in the many new markets of the world. In the bi-weekly share reports supplied to us by the Indian Tea Share Exchange, our readers will find the market for this important group of securities closely followed."

The report of Liptons shows that this year the expenses of advertising were defrayed by the company, instead of being, as in the previous year, paid out of Sir Thomas Lipton's pocket. A gross trading profit is reported of £226,915, whilst expenses of management absorbed £45,559. The heavy increase in working expenses is due to the inclusion of advertising expenses in the present accounts. The Directors recommend a final dividend on the ordinary shares at the rate of 8 per cent. per annum for the past half-year, which, with the interim dividend, makes 8 per cent. for the year. £10,000 is placed to reserve, and £4,814 is carried forward. The sum of £19,630 is written off for depreciation. Directors express themselves as very well satisfied, taking into account the state of the markets and the conditions of trading generally, and they add that the volume of business shows an increase. But the gross profit has been almost stationary, and is substantially lower than it was a few years ago.

According to advices recently received from Ceylon, Pará rubber is "rapidly taking its place as one of the most important cultivations of the island." During the past year 250,000 seeds were distributed from the trees in the Henaratgoda Gardens, from which good yields have been obtained. With these satisfactory observations a note of warning is given to planters. It is important, it is urged, that the Ceylon name in the London market as representing the best quality of this rubber should be maintained, and that carelessly prepared or inferior rubber should not be exported. Rubber, it is hoped, will prove one of the most valuable of the crops of Ceylon.—*H. & C. Mail.*

## THE VANILLA INDUSTRY IN MAURITIUS.

A document has just been communicated by the Government to the local Press which is of very considerable importance to those persons who are engaged in the cultivation of vanilla; a pursuit which at one time was of much greater importance to the Colony than it is at present and which, in the opinion of all those who are competent to form one, might with reasonable intelligence and care be made to take the place of a valuable and satisfactory secondary industry.

The document we refer to is the Report of the Committee appointed by the Governor some months ago to consider and report upon the draft Ordinance, "to amend and consolidate the laws relating to vanilla." In it the President of the Committee, Mr. Joseph Vankeirsbilck, the Director of Forests and Gardens, informs His Excellency that it is hardly possible to give an exact estimate of the area of land cultivated in vanilla, most of the planters growing it in their gardens and private grounds and in small quantities. There are supposed to be about 3,000 vanilla planters in the Colony, but of that number there are not thought to be more than a hundred who grow yearly 50 kilos. or above. The production of 1902 was about 15 tons of green vanilla, yielding nearly 3,500 kilos. of vanilla prepared for exportation. The Com-

mittee is of opinion that the cultivation of the plant might be easily developed, and that if the planters were protected by good laws they would extend the industry. It is a matter of notoriety that the vanilla pods sold in the markets or hawked about the country are the product of thefts, and with a view of putting an end to such a state of things, the Committee make the following recommendations: (1) that each seller and preparer of vanilla shall have to take out a license, (2) that every grower shall have a special mark for his green vanilla pods, (3) the area under cultivation shall be declared to the authorities every year, (4) the vanilla shall not be gathered until notice thereof has been given to the authorities, (5) the plants or pods shall not be sold or given away without the purchaser or donee taking a certificate of origin, (6) that power be given to the police to arrest delinquents, with or without warrant, (7) that the declarations that have been hitherto made at a police station shall, in future, be made; first to the Magistrate of the district and afterwards to the police, and (8) the appointment of a special vanilla Inspector whose duty it will be to visit plantations, factories, etc., and who will make monthly report to the Receiver General, under whose direct orders he will be placed. He will receive a salary of at least Rs.3,600 per annum, his expenses and a share of the fines inflicted under the law. He must be well versed in the cultivation and preparation of vanilla, as well as of the local laws and shall have the right to enter any plantation or factory and then make any enquiry he may think proper.

The above are, as we have said, the recommendations of the Committee; but three of its members have sent in a dissent to certain of those suggestions. Those gentlemen are Messrs. Langlois, Péguilhan and de St. Pern, the principal growers and preparers of vanilla in the Colony; and they say that as in their opinion—the object of the law must be to give security to the planters and thereby to extend the cultivation of the plant—considering the large number of small growers and the fact that they are generally at a more or less long distance from the Magistrates' office, it will not be possible to ask or expect them to fulfil the various formalities required by the proposed law, and they therefore think that a simple declaration made before the crops, either to the Magistrate or to the nearest police station, would be sufficient and would not have the effect of discouraging small growers, and that, as regards the fifth recommendation of the Committee, they think that a simple register to be kept by the purchaser of vanilla would be sufficient.

In the Seychelles, where the laws are strict and where, on account of the nature of the plantations and the physical conditions of the country, the industry can be carried on with comparative—security, great success has attended the efforts of the people to improve and extend the cultivation—so much so that vanilla is now the staple industry of that dependency, and although we do not suppose it can ever occupy a corresponding position in this Colony, there is no reason why it should not receive a great extension and provide employment for many persons who are not seeking for it in vain.—*Mauritius Planters' and Commercial Gazette.*

## ADULTERATION OF CHICORY.

Our scientific French contemporary "Science, Arts, Nature," writing on the adulteration of chicory, asserts that, in spite of its low price, chicory is subjected to a variety of forms of adulteration. The following may be cited as the average chemical composition of chicory:—Water, 12·70; nitrogenised matters, 6·25; fatty matters, 2·35; sugar, 16·25; non-nitrogenised extracted matters, 44·50; cellulose, 11·85; ashes 6·10—100 per cent. It may be added that the proportion of ashes varies according to the quality of the chicory. Our contemporary says that the powdered state in which coffee containing chicory goes into consumption greatly facilitates adulteration. In order to make chicory weigh heavy, it has been proved to be the fraudulent custom to add to the product the residues of breweries, grain distilleries, and sugar factories, as well as the residues from the preparation of chicory itself, and a certain proportion of spent animal black. In a word, adds our contemporary, everything is to be found in "chicory"—excepting chicory! The adulterants most used are horse chestnuts, acorns, and coffee sediments—substances which most closely resemble coffee with chicory in appearance. By means of microscopical examination, however,

the adulteration can be detected. Moreover, the amount of ashes is a certain indication as to the nature of the product sold under the name of "chicory," for if the quantity of ashes be higher than 12 per cent. it may be accepted that the product contains certain foreign mineral matters. Under the microscope chicory can be recognised by the very special cellular tissue, composed of large transparent cells containing small clusters of a greenish-yellow matter; and the presence of amylaceous matters can be detected by the violet coloration which a decoction of chicory will assume in the presence of iodine. The fact should not be overlooked that coffee becomes coloured upon the addition of chicory, and hence it is not always correct to assume that coffee is of good quality merely owing to its being of good colour.

### NITRATE PRODUCTION IN CHILE.

Consul R. E. Mansfield writes from Valparaiso:

The annual report of the Nitrate Association contains statistics that are of general interest, as practically all of the world's supply of nitrate comes from Chile.

The production in 1902 amounted to 2,982,967,900 pounds, or 146,131,900 pounds, as compared with 2,738,522,800 pounds more than in 1901. The exportation amounted to 3,008,944 pounds, as compared with 2,738,522,800 pounds in the previous year. The deliveries for consumption showed a considerable decrease in the period of greatest demand—January to May—as compared with the corresponding period in 1901. The total deliveries in 1902 amounted to 2,840,084,000 pounds, or 293,703,200 pounds less than in 1901. The decrease to Europe and other countries was 333,999,800 pounds; to the United States there was a gain of 40,200,000 pounds.

The total deliveries in each year of the quinquennial—1898—1902—were:

	Pounds.
1898	2,768,322,200
1899	3,071,276,900
1900	3,044,304,000
1901	3,133,787,200
1902	2,840,084,000

The visible supplies on December 31, 1902, were as under:

	Pounds.
On shore	576,607,400
Afloat	1,071,617,000
Supplies for foreign markets	1,648,224,400
Stocks on the coast	548,400,000
Total	2,196,624,400

The smallest number of works in operation in the four years was 44 in February, 1899, and the largest was 78 in December, 1902. The total of the quotas already assigned amounts to 4,041,500,000 pounds, and it will soon be necessary to take into consideration the quotas for several new works, now in course of erection.

### THE NEW RUBBER.

Mr. J. C. Willis, of Ceylon, though he confesses ignorance of this particular plant, Mr. Willis has observed that the *Landolphia* is a well-known genus of rubber, of which there are many species found in tropical Africa. New rubber plants were, he said to a representative of the *Times of Ceylon*, constantly being brought to light, and "of course if you found them in your jungle they would be worth attending to. I don't think 3s. per lb. is anything out of the way for African rubber," he said. "To the best of my knowledge African rubber is generally worth at present from 3s. to 3s. 6d. per lb., and 4s. 3d. has recently been paid for the best Pará; so that it doesn't strike me that this new plant is anything unusually good.

"Of course any new find in Africa is sure to be made the most of, because everybody is looking for rubber now and, owing to the extremely wasteful manner in which rubber trees are tapped where native labour is employed, new trees are constantly having to be found; and the old trees are given up. Those interested in rubber have to go further inland to find their rubber. In order to prevent this, to some extent, I think in the British West African Colonies the Government does not allow the trees to be thus wastefully

dealt with and they have something like a Forest Department to protect the industry. Naturally if you leave it to a private Company to come in, you may be pretty certain that the Company will take all the rubber it can get away; and that means that the trees will be more or less killed, unless the Company has sense enough to see that it pays to tap gently."

Mr. Willis instanced, as a result of this ruthless tapping, the fact that those in search of rubber on the Amazon have to go an immense distance up the river and then far inland before they can find the rubber trees; all this means heavy freight charges, and consequently the industry does not in the end pay so well as it might do. He also pointed out the significant fact that rubber cost more in Pará than rubber grown in Ceylon did when sold on the London market.

"Turning again to the *Landolphia* species, it occurs all over tropical Africa, as above-mentioned. It is found in German East Africa, British West Africa, and in many parts of the Soudan. Mr. Broun, our late Conservator of Forests and now Director of Forests in the Soudan, has been finding the *Landolphia* genus of rubber over a good part of the Soudan forests—that is, of course, the Egyptian Soudan. The French Congo touches this district, and there is reason," said Mr. Willis, "why there should not be *Landolphia* in the French Congo."

In conclusion he said: "But the new variety can only revolutionise the industry if it is found in such enormous quantities as to swamp the market and reduce prices all round. Then it would be very serious. Otherwise it is nothing to be alarmed at. Three shillings is a good price, but it is not the top price. The best Pará is 3s. 8d. per lb."

### THE COFFEE INDUSTRY.

Coffee is now consumed by the people of the United States to the amount of 1,000,000,000 lbs. annually, says the *Canadian Grocer*. Since 1894 the imports have more than doubled, and within the same period the *per-capita* consumption has increased four pounds, the gain being greater than that made by any article used as a beverage. A division of this 1,000,000,000 lbs. among the inhabitants of the country gives to each man, woman and child about 14½ lbs., remarks the *Chicago Tribune*.

For a family of five persons this would mean one pound each five days, or 73 lbs. a year. A fair average price for coffee of good grade at retail is 20c. per pound, involving an annual expenditure for this bean, which delights the palate, aids digestion, and makes the user thankful for the pleasures of the table, to the amount of \$14.60. This would make the annual expenditure of the people of the United States for coffee alone exceed \$200,000,000.

Imports for 1901 reached the grand total of 1,072,009,182 lbs. In 1902 there was a slight decrease, the amount being 955,283,919 lbs., making the annual average for the two years 1,013,646,550 lbs. The source of this supply, together with the percentage of the total import contributed by each country, is shown in the following table. The figures are official and were compiled from the Government records:

	lbs.	Per cent.
Brazil	764,658,963	80.1
Other countries, South America	63,824,056	6.7
Central America...	45,512,114	4.8
Mexico	30,719,800	3.2
East Indies	20,814,403	2.2
West Indies	20,429,314	2.1
Other Asia and Oceanica	5,003,563	...
United Kingdom	1,778,461	...
Netherlands	1,828,935	...
All other countries	714,310	...
Totals	955,283,919	99.1

It will be observed that from the western continent alone came almost 95 per cent. of the entire imports. Brazil furnished over 80 per cent. of the amount, while other South American countries, Central America and Mexico, sent us about 15 per cent. Of the 5 per cent. coming from coffee-producing countries other than those located in the western hemisphere, the entire East Indies sent to us but 2.2 per cent. The product of the island of Java, which is but a fraction of this 2.2 per cent., is considered the best of all coffees, and notwithstanding the small amount reaching us, it can,

thanks to the enterprise of the American grocer, be obtained at any and all stores selling coffee.

Coffee sells at wholesale at from 8½c. to 33c. per pound for the green or unroasted article, the former being the lowest grade of Rio and the latter the best Java. A fair average price is around 15 to 18c. a pound. The range of prices on the roasted article is about the same as on the green, and the average near the same figure, perhaps 2 to 3c. higher. In roasting there is a shrinkage of about 15 per cent., and for roasting about 50c. per bag of 130 lbs. is charged. The article is also sold ground or pulverized, and in broken grains, siftings or crushed. In whatever form desired it is packed in bulk, cans or packages to suit the wishes of the retailer, who finds it among the most profitable articles of merchandise. The profit varies from 25 per cent. to 40 per cent., and, like sugar, is a staple with a regular and steady sale, which yields a handsome return.

As a substitute for and adulterant of coffee chicory easily leads the list. It is largely grown in European countries, and in some localities takes the place of the coffee bean entirely. In other lands it is used in connection with coffee for the preparation of the decoction which so universally pleases mankind. This latter is its almost universal use in the United States, and epicures claim that it imparts an agreeable flavour to the drink unattainable without its presence. Chicory is known to be entirely harmless, whether used as an entire substitute for coffee or in connection with it. Until within comparatively few years all chicory consumed in the United States was imported, the main supplies coming from Germany. It now is grown in large quantities in several of the western states, Nebraska being the principal producer, where its culture and preparation for market occupies the time of several thousand persons.

A chemical fact in connection with coffee should ever be remembered by the housewife. Green (unroasted) coffee improves with age up to about four years, from which time it rapidly deteriorates in quality. Roasted coffee, on the other hand, quickly loses strength and flavour after leaving the ovens, and even when rigidly excluded from the air is not nearly so good as when first roasted. Coffee should never be ground or pulverized until the hour of its need if one is anxious to preserve the delightful aroma indicative of a really good cup of this popular beverage, nor should it ever be boiled, for the same reason. The French or drip process is considered by epicures to be the best method of preparing it. This makes an infusion instead of a decoction.

Should no great disaster strike the coffee industry prices are almost certain to remain low for years to come. Brazil has more than quadrupled its production since 1880, and despite the fact that the grower realizes quite low prices, plantations are being extended in all of the most available sections of the country. Mexico is making rapid strides as a coffee-producing nation, the bean there grown being of a fine flavour and by some considered the peer of any raised.

## AGRICULTURE IN UGANDA.

### AN INTERESTING REPORT.

A special report of considerable interest has been published by the Foreign Office on the exotic plants of economic value now being experimented upon in the botanic gardens at Entebbe, Uganda. In view of the fact that the world's natural supplies of rubber are practically determinable by the greater or less activity of the collectors, the cultivation of the various rubber-yielding trees has naturally been one of the first things taken in hand. Many seedlings of the Pará species (*Hevea brasiliensis*) were brought out from Kew, but a two months' journey and a long period of drought combined to make their success a matter of doubt. The survivors, however, seem at present to be doing well, which is rather remarkable, for the tree is from the low country of the Amazons, and the Entebbe gardens appear to be at an elevation of some 4,000 feet or more. It is probable that it is only in the neighbourhood of the Victoria Nyanza that they are likely to get the climate suitable for them. The Central American rubber (*Castilloa elastica*) is more or less a highland plant, and may, therefore, be expected to do well in its new home. So far it has succeeded well, and its seeds are, therefore, to be introduced in quantity, direct from Mexico. The Ceará rubber (*Minikot glazovii*) grows very vigorously; but it is by no means the best of the rubbers, and is

sometimes scarcely worth growing. The Lagos silk rubber, as *Funtumia elastica* is called, is said to have a future before it in the lake region; but its cultivation has been delayed owing to a fire which burned up a large batch of seedlings waiting to be distributed. The rubber vine (*Landolphia*) is indigenous, but it is rather curious that it does not seem to do very well under cultivation, growing very slowly, and much resenting transplanting.

Cacao does excellently, in spite of the elevation. It is probable, as Mr. Mahon states, that there is no country where it is grown for commercial purposes at a height of 4,000 feet above the sea, and it would be interesting if Uganda should prove an exception. Of the coffees, an indigenous species allied to the large-leaved West Coast types responds rapidly to cultivation, and a Congou sort, *C. robusta*, grows splendidly. Other kinds are also under trial; but with the world's market overstocked as it is at present it would hardly be wise to do more than provide for local wants. The rain at Entebbe is hardly sufficient for tea, though Mr. Scott Elliot thinks that a considerable part of the Ruwenzori country offers a fine field for its cultivation. That vanilla is only growing moderately well is scarcely to be wondered at seeing that it is essentially a tropical lowland orchid. Among various introduced fruits are oranges and other citrus fruits, including limes, as well as custard apples, soursops, mangoes, granadillas, pineapples, bananas, and the delicious Moluccan Canari nut.

The introduction of timber trees of the most suitable kinds has been specially taken in hand. Mahogany will be extensively planted, and a large selection of the Australian acacias, both useful and ornamental, have been established. Many of the best Malayan timber trees are among recent introductions, but it seems practically impossible to get any of the Australian gums to succeed owing to the ravages of the white ants, which quickly ringbark the young trees as they are put out. The injury is done just below the surface, and is immediately fatal to the tree, and almost all the species of the genus yet tried seem to be equally liable to attack. Indigenous cotton is by no means bad, and imported sorts hitherto experimented with do very well, the fibre being favourably reported on in Manchester. A certain amount of exportation of *Sansevieria* and *Raphia* fibres has begun. Both are very abundant. Ramie grass has also been planted, and it is considered that many parts of the country are specially suitable for growing this product. Though Mr. Mahon speaks very encouragingly, on the whole, as to the agricultural capabilities of the country, he admits that "exotic vegetation has hosts of insidious insects to battle against here—to a greater extent, in my opinion, than in many other tropical countries."

## APRIL COFFEE MOVEMENT IN THE U. S.

Thus far, says the *American Grocer*, the deliveries of coffee for the first ten months of the current trade year are 549,719 bags ahead of the same time in 1901-02, and 1,516,690 bags more than the corresponding period in 1900-01. If the May and June deliveries are up to the average monthly deliveries for the year the total for 1902-03 will show the heaviest deliveries on record, exceeding 16,000,000 bags.

Since July 1, 1902, the world's visible supply has increased 986,947 bags, proving conclusively that expansion in distribution is not as great as expansion in production, and thus in obedience to the law of supply and demand prices rule low and are below the corresponding date of last year.

April deliveries were lighter than for each of the preceding months of 1903, but to a small extent. For Europe and the United States they fell 143,420 bags behind March, but were above the monthly average for the year.

The total visible supply of the world on May 1 was 12,248,278 bags, against 12,380,627 bags April 1, 1903, and 11,247,903 bags April 1, 1902. Highest visible, 13,233,284 bags, November 1, 1902. On May 1, 1901, it was 7,359,112 bags, showing an increase in three years of 4,889,166 bags.

The receipts at Rio for the first ten months of the trade year 1902-03 were 3,543,000 bags; at Santos, 7,525,000 bags; at both ports, 11,068,000 bags, against 13,981,000 bags in 1901-02; 9,906,000 bags in 1900-01. During three previous semi-annual crop years the receipts for this period averaged 91.3 per cent. of the total crop. On this basis the total receipts for the year should be over 12,500,000 bags.

The following statement shows the April movement in detail :

Stocks, April 1, 1903—	Bags.	Bags.
United States ..	2,502,406	
Europe ..	7,395,721—	9,898,127
Receipts during April—		
United States ..	634,141	
Europe ..	700,233—	1,334,347
Total supply, May 1, 1903		11,232,501
Less stocks, May 1, 1903 —		
United States ..	2,531,917	
Europe ..	7,369,861—	9,901,778
Deliveries, April, 1903—		
United States ..	604,630	
Europe ..	726,093—	1,330,723
Deliveries, April, 1903		1,198,208
Increase as compared with April, 1902		132,515
Deliveries, July, 1902		1,211,088
Deliveries, August, 1902		1,302,949
Deliveries, September, 1902		1,396,975
Deliveries, October, 1902		1,545,611
Deliveries, November, 1902		1,240,213
Deliveries, December, 1902		1,183,298
Deliveries, January, 1903		1,407,123
Deliveries, February, 1903		1,320,514
Deliveries, March, 1903		1,474,143
Deliveries, April, 1903		1,330,723
Total deliveries, ten months, 1902-03		13,412,637
Total deliveries, ten months, 1902		12,862,918
Total deliveries, ten months, 1901		11,895,947
Total deliveries, year ending June 30, 1902		15,516,663
Total deliveries, year ending June 30, 1901		14,329,925
Average deliveries monthly, year 1901-02		1,293,055
Average deliveries, ten months, 1902-03		1,341,637

The March sales of options were 854,000 bags. The lowest price for No. 7 Rio was 3.65 cents for May; the highest, 5.00 cents for March.

Of the total deliveries in the United States, 513,620 bags were Brazil and 91,010 bags of all other sorts. Over 85 per cent. of the total deliveries were of Brazil sorts and 15 per cent. of all other kinds. This shows a loss of 3½ per cent. in the deliveries of mild coffee as compared with March. The receipts were 121,102 bags out of total receipts of 634,141, or 19 per cent. The receipts at New York are behind last year's record by 1,076,616 bags.

The outlook is for a continued low level of prices, as the world's crops in 1903-04 promise to be much larger than during this year. If Brazil turns out 14,000,000 bags next year there will result a total supply of 30,000,000 bags or over to meet requirements of 16,000,000 bags. Nothing but some great reduction in supply or miraculous increase in consumption can bring about a much higher level of cost than at present exists. It is claimed that even at the present low basis, planters fully equipped and working under the most economical condition can make a profit cultivating coffee. At any rate, whatever may result, it is certain that there never was a more favourable time to make money in roasted coffee than now. Never were conditions more favourable to sell coffee at a good profit and push for an extension of demand.

DISTRICT ASSOCIATIONS.

COORG.

Proceedings of the Annual General Meeting held at the North Coorg Club House, Mercara, on Saturday, June 6th, 1903. PRESENT :—Messrs. H. F. Davy, G. K. Martin, C. J. Maclean, M. I. Maudanna, James T. Morgan, A. J. Wright and A. Lambert, *Honorary Secretary*.

Mr. Martin was duly elected to the Chair. Read Minutes of last Quarterly Meeting held on February 14th at the Bamboo Club, Polli Betta. PRESENT: Messrs. Boponna, H. Cockerton, H. G. Grant, A. H. Jackson, J. Logan, F. Macrae, H. G. Parsons, H. T. Shaw, Bidunda Ganapathy, M. I. Maudanna and A. Lambert, *Honorary Secretary*.

*Re Deputation to the Commissioner* in December last, and non-submittance of Report thereon, the Honorary Secretary read letter from Mr. Sprott—which was considered satisfactory by the Members present.

**Non-receipt of notices of sales of land** by holders of Estates adjoining such lands. The Honorary Secretary stated that he understood that such notices are now being issued.

**New Fishing Regulation and Rod Fishing.**—Government has no power to make any special exemptions, a river closed for the purpose of protecting and preserving fish must be entirely closed to all kinds of fishing during certain periods as laid down.

**The Deputation to the Chief Commissioner** was, in every way, satisfactory. The two Tax remission questions, and the suggestion as to the alteration in the Revenue rules in the interests of the destruction and eradication of "Borer", being favourably received and approved of by the Chief. In regard to the Railway, Sir Donald Robertson advised us to send in a formal representation to Government stating that we were prepared to pay a Cess to guarantee interest on capital utilised for construction of that part of the Line which would run through Coorg, provided that was the feeling amongst our Members generally. A Farewell address was offered to the Chief Commissioner—who replied in a suitable manner.

**New Labour Act.**—The Honorary Secretary read correspondence thereon, showing that to put an optional clause in the Act was quite impossible and would be against all precedent, but stated that there was no likelihood of the Act being applied to Coorg without ample prior discussion, and thus we may rest assured that there is no necessity to fear its being forced upon us against our wish.

AGENDA PAPER OF GENERAL MEETING.

Mr. Martin read the Honorary Secretary's Annual Report, as follows:—

GENTLEMEN.—It is again my pleasing duty to lay before you the Annual Report of our Proceedings during the past season, and to submit for your approval the accounts—which I trust you will find in order. I do not propose to deal at length with any of the questions which have been before us during the past year, but merely to give a synopsis of the work done during that period by our Association. It will not be necessary, moreover, for me to more than refer to the Annual Meeting, U. P. A. S. I., a short and concise report of the Proceedings of which having already been rendered by our delegate, Mr. Sprott, and published in our Minutes of the Quarterly Meeting held on November 1st last. In any case the business of the U. P. A. S. I. is, altogether, on too great a scale to meet with more than a passing reference in the space available in my Annual Report. The *New Labour Act* has at last been passed, and I consider that, taking it on the whole, and especially in these days of modern legislation, it is as fair and impartial a Bill as any one of us could reasonably have expected, and I think our best thanks are due to Sir Geo. Arbuthnot and the Hon'ble Mr. Acworth for the excellent work they did as Members of the Select Committee thereon. The *Proposed Coffee Cess* which has occupied a good deal of our attention during the past season has not, apparently, met with general approval and support, owing, I think, chiefly to the fact that there does not appear to exist any definite or feasible scheme for the utilisation of the funds to be raised by the said Cess, before the Planting Public. The *Railway question* has not, I fear, progressed much since our last Annual Meeting. Though H. E. the Viceroy received our Deputation graciously, and in reply to our Railway Memorial spoke in a sympathetic and practical manner, giving us much sound advice—some of which has already borne fruit in the favourable manner in which the suggestion to raise funds by means of a small special Railway cess to be levied with a view to at first guaranteeing the interest on the capital expended during the construction of the Line through Coorg Territory, and afterwards to be utilised, in a subsidiary manner, in case of the said Railway failing to pay the required rate of interest, and we are now advised by our Chief Commissioner to represent to Government that we are prepared to pay a cess for such a purpose. I may add that the chief difficulties in the way of advancing the Mysore-Coorg-Tellicherry Railway scheme now appear to lie with our neighbours on either side, and that it therefore behoves us to do our best and exert to the full extent our influence in endeavouring to persuade the powers that be in those countries to take a more favourable view of the project. However, without wearying you by going into further details

on the various subjects which we have had before us, and have dealt with successfully during the season now ending. I will merely mention the following: new rules for the protection of rivers and fishing in Coorg, remission of taxes on wet lands, or uncultivated paisari, alteration in the Coorg Revenue rules in the interest of the destruction and eradication of "Borer," alteration in, and improved delivery of English Mails in the Province, and many other more or less purely local matters—which, while not affecting the general welfare of the whole Province, are of real benefit to the few whose interests they chiefly concern. We received a final visit from our Chief Commissioner, Sir Donald Robertson, K.C.S.I., in February last, pending his retirement—and it was with genuine regret that we wished him farewell, as not only by his social qualities, but by his unfailingly capable and sympathetic support of all affairs affecting Planting interests he has endeared himself to all connected with the Planting Industry in the Province and we offer our sincere congratulations to him on his recent appointment to Knighthood. The Association still keeps up a fair average of Members—there now being 59 names on the list—though several of the Members are at present in Europe. The coffee crops this season have been very good throughout the Province, but the very inferior quality of the berry and the consequent ruinously low prices which are being obtained therefor, have caused it to be one of the worst seasons ever experienced amongst Planters in Coorg—and we can but hope that there are brighter times in store for us in the near future.

**Roads and Communications.**—I think we may fairly congratulate both our Executive Engineer and ourselves on the general satisfactory condition of these. In any case, complaints have been practically *nil*. Though we have received one or two suggestions as to repairs and improvements of a minor description which, on representation, have been promptly attended to by the authorities. The following works and improvements directly affecting the convenience of Planters and other residents in the Province have either been successfully carried out or commenced during the last season.

The Madapur Bridge has been opened for Traffic as well as that over the Hatti river.

The Bridges on the Wynaad Road have been put in hand. Luxmanthista bridge has both abutments and piers well up. The foundations of Ramanthista and Poojakal bridges will be done shortly. This work has been much delayed by sickness, I am given to understand. Raising the Embankment between Veerajpett and Bettangal is in hand. The road between Napoklu and Nalknad has been opened to fair weather traffic and the approaches to the Kudiyy and Hudgoor Ferries near Fraserpett are being metalled.

In conclusion, Gentlemen. I beg to tender the resignations of your President, Honorary Secretary and Committee, and to thank those Members who, by their help and the sympathetic interest they have always taken in our Proceedings, have rendered our task less arduous, and I sincerely trust that the number of such Members will continue to increase for the future and that our Association will also continue to flourish for many years to come in spite of the difficulties with which it is, at present, coping. The following is a statement of the yearly accounts of the S. Coorg Coffee-stealing Prevention Fund which the Honorary Secretary, Mr. Fred. W. Gerrard, has asked me to embody in my Annual Report.

There was only one case of theft with conviction during the season, and a reward of Rs.20 was paid.

E. & O. E.

A. LAMBERT,  
Honorary Secretary, C. P. A.

Votes of thanks to Sir Geo. Arbuthnot and the Hon'ble Mr. Acworth were heartily approved of by the Members present, also congratulations to Sir Donald Robertson, K.C.S.I., our Chief Commissioner on his Knighthood.

**Funds.**—After some examination of the Report and suggestions of our Committee, and a general discussion on the subject, the following Resolution was put to the Meeting—proposed by Mr. Martin, seconded by Mr. Lambert and was carried unanimously—

That this Meeting is unanimously of opinion that in view of the unsatisfactory state of the finances of the Association as shown in the statement of accounts placed before them, the support given to the Association is insufficient for its needs, and therefore no useful purpose can be served by continuing on the present lines. We recommend therefore

1. That the Association go into voluntary liquidation.
2. That a Committee of four Members be formed to effect the liquidation.
3. That in the meanwhile the usual subscriptions for the new year be not collected, and no office-bearers be elected, or further expenditure be incurred until the Liquidation Committee present their Report.

4. *Addition suggested by Mr. Maclean*—that by reason of the paucity of Members attending this Meeting and of the extreme measures suggested in Mr. Martin's resolution, an Extraordinary General Meeting be called at an early date, at Polli Betta, with a view to finally deciding what is to be done in the matter, and to thoroughly discuss the question of either dissolution or reconstruction of the Association.

(Signed) G. K. MARTIN.  
( „ ) A. LAMBERT.

The Ballotting papers were, therefore, not opened, in conformance with the above Resolution. The present Honorary Secretary also consented to remain in office until the date of the next Meeting (Extraordinary General).

**Railway.**—Read correspondence in connection therewith. *Resolved*, that it was not advisable to make any further move in the matter at present.

**Enhanced Coffee rates.**—On the Southern Mahratta Railway, read correspondence thereon, decided that the Association, hereafter, take up the matter strongly, also that it be represented to the U. P. A. S. I. and brought up at its next Annual Meeting.

**General.**—U. P. A. S. I. affairs, etc.

**St. Louis Exhibition.**—Agreed that it would be judicious for the U. P. A. to associate itself with the Indian Tea Association with a view to coffee representation thereat. Enquiry made as to whether Government is prepared to subscribe any funds towards the representation of coffee and tea at the said Exhibition.

**Brazil Delegate.**—It was the general opinion that a subscription list, for such a purpose, would meet with poor success in Coorg.

**The Annual Meeting.**—U. P. A. S. I. opens on August 3rd next at Bangalore.

Copies of the Revenue Manual (Vol. I) containing the Coorg Land and Revenue Regulation, 1899 and the rules issued thereunder are available for sale at Re.1 per copy at the Government offices in Mercara.

The Association loan of Rs.500 has been liquidated.

A vote of thanks to the Chair and Honorary Secretary by Mr. A. J. Wright terminated the Proceedings.

The following papers were laid on the table:—

Proceedings of Shevaroy P. A. Meeting, dated March 9, 1903.

Do. Nellimpathy do. do. 27 „  
Do. Wynaad do. May 6 „

Report on the Administration of Coorg for the year 1901-02.

Various papers connected with the Tea Industry.

The following gentlemen have been duly appointed "River Wardens" with powers to effect arrests without warrant for offences under sections 4 or 5 of the Indian Fisheries Act, 1897 (IV of 1897) or under rule of section 6 thereof subject to the conditions laid down in section 7 of the said Act.

Messrs. H. F. Davy, C. J. Maclean, J. A. Graham, W. F. A. Bracken, A. Lambert, Cheppudirā Somaiya R. B., Apparandra Maudanna R. B. and Colevendra Appaiya.

MERCARA, } (Signed) A. LAMBERT,

## MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated May 29th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1902-1903 ..	1,547,779	1,122,040	85,432
1901-1902 ..	1,626,581	1,159,793	80,470
31,320 pkgs. INDIAN	Total 61,678 packages were offered in public auction this week.		
28,594 „ CEYLON			
1,764 „ JAVA			

The market closed for Whitsuntide with a rather better tone for medium and good teas, while common kinds were inclined to droop a little. There will in all probability be no more auctions until the week commencing 8th June.

Duty payments are continuing very satisfactory, and it is evident that deliveries for May will be exceptionally large, while the next few months will probably show much heavier clearances than last year; consequently stock in bonded warehouses is likely soon to be very much reduced.

Green tea is becoming a feature in the auctions, 1,256 packages from India and 1,279 packages from Ceylon having been brought forward during May.

The distribution of direct exports from Calcutta shows a heavy falling off in shipments to Australasia with a slight increase to "Indian ports" (mostly for the Persian Gulf). Exports to Russia are steadily growing, while Persia and Arabia have also taken larger quantities. The figures to North America, showing an apparently heavy increase, included many teas entered to that country on an "optional" Bill of Lading, many of which were ultimately landed in the United Kingdom; this causes the total to appear unduly large.

INDIAN.—Desirable liquoring teas frequently sold at slightly improved rates, common kinds on the other hand displayed weakness. "Last of the season" invoices are now being very freely printed, and it is probable that less tea remains in Importers' hands than is generally realised by the Trade, while the possibility of a somewhat late season in India may considerably retard the arrival of new teas in London. The following averages are worthy of note:—"Amal T. E. Co. Namroop" and "Rungajaun," 11½d.

Week's av. of tea sold on Garden Account 1903, 25,255 pkgs., av. 7.70d. 1902, 18,396 pkgs., av. 6.97.

Tea sold on Garden Account 1st June to date 1902-3, 1,207,987 pkgs., av. 7.48d. 1901-2, 1,291,724 pkgs., av. 7.65d.

CEYLON.—The heavy sale met with good attention, good and fine teas showing an advance of ½d to 1d per lb. Common teas were inclined to be a trifle easier here and there. The following averages may be mentioned:—"Alliance T Co. Udar." & "Tala-wakelle T E Co.," 11d.

Average for week 7.61d, against 6.77d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 404,608 pkgs., av. 7.66d. 1902, 445,941 pkgs., av. 6.99d.

JAVA.—Javas were not in full supply. With good competition offerings were mostly sold in the room; some teas brought over from Holland were included in the auction.

Bank Rate 3½ per cent. Exchange on London three months' sight:—Calcutta 1/4½. Colombo 1/4½.

## CINCHONA.

A bale of thin Guayaquil sold, "without reserve," at 4½d.

## QUININE.

After the close of our last report values of good German sulphate in bulk dropped to 10½d in second hands, at which small sales were made, but this week the market has been steadier, with rather buyers at 10½d and sellers at 11d. For delivery, October has been sold at 11d and December at 11½d per oz.

The Amsterdam Quinine-works have reduced their price by 1½f. and 1f. per kilo., and now quote Ed. II. at 22f. and Ed. III. at 27f. per kilo.

## CARDAMOMS.

The excessive quantities offered were brought to a very dull market, and met with an irregular decline of from 2d to 3d per lb. on the finer qualities, but the medium and lower grades were about steady. Seeds were 1d easier, selling at 1s 2d per lb. The following prices were paid for the pod: Ceylon-Mysore, bold pale, well bleached, 2s 1d; medium and bold pale, 1s 10d to 2s; bold medium pale, 1s 6d to 1s 9d; small and medium pale, 1s 1d to 1s 2d; extra bold dull, 1s 7d; medium and bold dull, 1s 3d to 1s 5d; small and medium dullish, 11½d to 1s; peas, 8½d to 9½d; brown, split and pickings, 8½d to 10d. Extra bold well-bleached were held at 2s 10d, a bid of 2s 8d being declined. Travancore, small to medium long, sold at 1s 4d; brownish ditto, 1s 2d; and small brown, 11d to 1s per lb.

## CINNAMON.

The usual quarterly auctions were held last Monday. Good and superior qualities, being in short supply, brought steady rates; but ordinary and common descriptions were ½d per lb. lower. Superior firsts sold at 1s 4d to 1s 8d per lb.; seconds at 1s 6d (1s 2d to 1s 3d being refused for slightly inferior); thirds at 1s 1d to 1s 4d; and fourths, 9d to 11d; good firsts brought 11½d to 1s; seconds, 10½d; thirds, 8½d to 9½d; and fourths, 7½d; ordinary firsts realised 10½d; seconds, 9d; thirds, 8½d; and fourths, 7d to 7½d. Common dull and hard sold at 8d down to 4½d, according to quality. Fine quillings and pieces sold at 9d to 9½d per lb. Chips partly sold at 1½d to 2d per lb. for ordinary, being ¼d to ¾d per lb. lower.

(AVERAGE FOR ALL INDIA 7.70d., MAY 29TH.)

In these tables all packages are chests unless otherwise stated. ½c stands for half-chests; p for packages; prices marked thus † represent the highest offer in the room. In calculating these averages two half-chests or four boxes are taken as equal in weight to one chest.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JULY 4, 1903.

[No. 26.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 10th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*June 22nd.*—*Weather*—The weather this last week has been continuously damp, rain every day except Saturday, average  $\frac{1}{2}$  inch daily. *Works*—Principally preparing for planting. Weeds growing apace. *Coffee*—Luxuriant. *Health*—Better now the rain has properly come. *Labour*—Sufficient.

#### Kotagiri.

*24th June.*—The monsoon burst here on the 11th instant, but the wind has been unsteady and showers very light. Mornings are generally fine, clouding up in the afternoon. Only 2.20 inches has fallen in 11 days. *Work*—Not enough rain yet for planting. Manuring is mostly finished, and there is a general lack of work all round, except on Tea Estates, to which the light showers have been very beneficial. *Health*—Ootacamund is declared plague infected, but it is hoped that it will be stamped out long before crop commences, or we are likely to have a bad time of it. *Labour*—More than enough for present requirements.

#### Kotagiri.

*1st July.*—*Weather*—Only very slightly monsoonish. Light showers, but mostly fine days. Grand weather for putting on wood and leaf. Rainfall for June 3.02 inches; 11 rainy days. *Work*—Manuring finished on most Estates. Second weeding of the season just commencing. *Coffee*—on the whole is looking very fine, and quite recovered from last season's heavy crops. *Health*—Good on the whole, but there are more fresh cases of plague in Ootacamund than is altogether pleasant. *Labour*—More than sufficient.

#### Coorg.

*POLLI BETTA, 24th June.*—*Weather*—The monsoon has been very weak for some time. *Crop*—The last blossom in May seems to have set well. *Plant diseases*—Borer is still being removed

and burnt. There will not be much of it. *Works*—Besides above, supply-holing, weeding and some handling are being carried on. Planting out supplies has also been done to some small extent. *Interesting item*—Plague is said to be abating at Veerajapett.

#### Coorg.

*POLLI BETTA, 1st July.*—*Weather*—The monsoon is still continuing to be very light. Paddy fields require more rain. Coffee is looking well and is covered with good growth. Borer cannot be complained of this season. *Crop*—is looking up much better than was expected. *Labour*—Some places are a bit short. *Health*—Very fair.

### COFFEE PROSPECTS.

FROM all quarters comes the same tale of depressed markets and hopefulness as to the future. As regards the chief producing country, Brazil, interest hinges on two points: the possibility of a decrease in crop during the season now opening, and the effects of recent legislation in S. Paulo, should that legislation ever take effect. News as to the first point is vague, but some interesting remarks appear in Messrs. DUURING & ZOON's latest report, which are given on another page. As to the second point, it may be well to remind our readers what S. Paulo legislation aims at. The Bill lately passed in the lower branch of the S. Paulo State Legislature provides:—Article 1. The executive is authorized—(1) To levy a tax from July 1 next not over 20 per cent. in kind on all coffee exported, or *ad valorem* on the lower grades, which shall be appraised to taxation of this law and insuring taxation of higher types being less than that of lower. (5) To provide for the roasting of coffee for purposes of propaganda in those States of the Union where roasted coffee is admitted free of interstate duty. (6) To promote the creation of commercial and industrial establishments for sale of São Paulo coffee abroad, granting favors to the same. (7) To finance the trade in roasted and ground coffee, in order to prevent admixture or falsification. Article 2. The executive is hereby authorized to expend up to 10,000,000 milréis in aid to planters and to undertake the necessary credit operations entailed thereby, on the basis of the pauta, or official valuation, in addition to

existing duties. (2) To punish with fines, equivalent to ten times the value of the goods, all admixture made with intention to elude the stipulations of this law. (3) To grant subsidies up to 200,000 milreis (the average market value of the milreis is at present 20 cents) to shipping companies willing to reduce freights on coffee between Santos and other non-producing Brazilian States. (4) To create official types of coffee, with the object of regulating the execution. Article 3. In case the Banco de Crédito Agricola be not organized within the period determined by the law of December, 1902, the product of the transit tax shall be applied to the service of the loan or payment of differences of exchange and the subsidy mentioned in Article III. Article 4. Aid to planters shall take the form of loans on first mortgage, on agricultural mortgage (penhor agricola) with collateral guarantee, on collateral securities alone, and be realized through the agency of banks or agricultural syndicates approved and financed by the Government. Article 5. No loan to any planter can exceed 50,000 milreis, on which interest at a rate not exceeding 8 per cent. per annum shall be paid. Article 6. Loans on mortgage are not to exceed three years, with payment of interest annually and amortizations in three instalments of 20, 30, and 50 per cent. of the loan. Loans on the other specified classes of security shall be for one year only, renewable for one year more on amortization of at least 50 per cent. Article 7. The executive is authorized to treat with the Union Government to promote the meeting of an international congress of coffee-planters in this city, to determine the best manner to defend the interests of producers and consumers of this article. Article 8. The executive is also authorized to come to an agreement with the Governments of other producing States of the Union for the protection of this product and execution of the stipulations of this law. Article 9. All provisions to the contrary are hereby revoked.

Of course, any plan of this kind would prove abortive unless the other coffee-producing States—Minas, Rio, and Espirito Santo—decreed like measures; but, owing to inter-state jealousies and diverse economical conditions, it is, in the opinion of the American Vice-Consul-General at Rio, not at all likely that the various interests will be so reconciled as to bring about united effort. São Paulo is by far the largest producing State, having yielded in the crop year 1901-2 (the largest ever known) about two-thirds of the total crop. But it is generally believed at Rio that no Government measures can prove permanently effectual, and that any expedients will only serve to temporarily ameliorate the condition of the planters. It is pointed out that Brazil will pay the entire cost of these projects, and the foreign markets, with their existing enormous stocks, will, in all probability, reap as great benefit as Brazil. The one real remedy, it is said, is to let the crisis take care of itself, and then prices will go low enough to force out some of the plantations, and thus give consumption a chance to catch up with supply. Nevertheless, the *Grocer* remarks upon the Bill as having been passed "in order to give the coffee market a strong upward tendency," and remarks:—"In other words, nearly one-fourth of the Santos supply is to be destroyed to save the producers, who are in financial perplexities, from ruin, since many of them find it increasingly difficult to obtain the necessary loans from the money-lenders, whilst others are abandoning such coffee estates as do not pay ordinary working expenses. By this law the Brazilian coffee-planter will likewise have the option of retaining his coffee by paying a fine equal to about 15s.

per cwt., so that he may, if he likes, take his chance of doing better by keeping the coffee, in the event of the market going up, instead of allowing it to be thrown away. The newly-made law may, after all, be an ineffectual remedy against over-production, which should be rather checked by permitting the trees to go out of cultivation in a natural way than by resorting to artificial devices for creating scarcity. There are parties who entirely disapprove of the policy of appealing for State aid to lift them out of their monetary difficulties, and would prefer taking all risks to sanctioning Government interference; but to avert commercial panic, which would scatter misfortune all around, it has been deemed advisable to take such means of restoring confidence, and it is to be hoped that the result will be satisfactory."

American advices are of a contradictory character. A New York paper states in its report on the market:—"It would seem that no change can occur until the receipts of the new crop in Brazil swell the grand totals until they look afreshingly alarming and so bear down prices to a lower level than yet reached and then there should ensue a recovery. Meantime prices continue very low." Commenting on prospects, the same papers states:—"Although the coffee market is exceeding quiet at present, with prices very low and the possibility imminent of 3.50c. option coffee, a bull movement of marked power in the fall of the present year is within the range of sane mental contemplation and manipulation. It is not a paradox we are discussing. The Brazil crop now about to be closed will not have yielded much more than 12,000,000 bags, and so the world's consumption will have disposed of all the coffee grown in the last year, leaving the market at the worst but little poorer off than were conditions one year ago when the 15,000,000-bag Brazil crop was shipped. It is generally agreed that while the Brazil crop now about to be offered will be in excess of that shipped during the last twelve months, in other words be about 14,000,000 bags, inasmuch as the world's consumption shows an annual increase of at least 500,000 bags, this crop will be taken care of by the consuming world. Moreover, nearly all the coffee grown is actually sold and taken care of by the legitimate users of it, and so at the most there is only left some 2,000,000 bags as a surplus not provided for by the consuming markets. This is by no means an extraordinary over-supply, which would quickly disappear on the prospect of an effective curtailment of crops in Brazil by the legislation enacted or by such acts of nature to which crops are at any time liable. A bull movement would thus have a plausible basis on which to operate." There are good many assumptions or "ifs" here, and we fear that coffee-planters will incur disappointment if they rely much upon ideas either that Brazilian crops will fall far below the mark of consumption, or that S. Paulo legislation will cause a sharp rise in prices.

#### COFFEE NOTES.

**Painting Coffee.**—In a letter from Rio de Janeiro on coffee printed in the *Honolulu Bulletin* occurs:

"Painting of coffee—this statement will probably be denied by some of our grocers. They will tell you that they can tell Mocha and Java by the smell or the colour of the grain. Don't you believe them. The coffee as it comes from the plantation, the Simonpure genuine article, is often far different from

that which goes away on the ships. I have visited here in Rio enormous establishments who make a business of painting coffee and dressing it up for the markets. In South Africa, for instance, the people want black coffee beans. It seems that the coffee they have been buying is of that colour. The bags that come from the plantation are filled with olive green beans. They are turned into a great mill and rolled round and round in contact with coloured powder. Just what it is, Lord only knows, but when the beans come out they are as black as any coffee that can be grown in Africa. Other grades are given a tinge of yellow by the use of other colours, and others are varnished in different shades of green. Some of the colouring stuff is unhealthful, and the men use gloves when they handle it. In one Portuguese house I saw them colouring 30,000 bags for the Cape of Good Hope, and in another they were colouring coffee for the Argentine market. This is no fiction. I saw it myself, although I am told that the most of the coffee sent to the United States goes there in its natural colour."

**Java.**—The Government crop is estimated at 204,000 Peculs against 200,000 Peculs in May.

**Borneo Liberian Coffee.**—Messrs. Shand, Haldane & Co., London, have reported favourably on Borneo grown-Liberian Coffee as treated by Mr. Carnarvon:—The sample of Coffee was in parchment and peeled. *Process.*—After pulping all skins it is washed off in the usual way, then lime water is run on to the coffee, and left for  $\frac{1}{2}$  to 1 hour steeping—or until glucose is mostly all dissolved, then fresh clean water is turned on and the coffee washed off and dried in the usual way. The brokers report:—"We send herewith sample of Liberian Coffee roasted as desired. In tasting this Coffee in company with others, we find that the flavour peculiar to the growth is still there, but in a less degree. Formerly we found that a mixture of 8 per cent. of Liberian with other Coffee was noticeable in the liquor, but of this lot a 30 per cent. admixture is barely discernible."

**Cuban Duty on Coffee Increased.**—The Cuban congress has passed a bill increasing the duty on coffee from \$12 to \$18 per 100 kilos. While the measure was being debated in the senate Senor Bravo declared that the increase was necessary to save the coffee industry in the province of Santiago. Senor Bustamente pointed out that the increase would enhance the cost to the consumer to the extent of \$1,200,000, as the greater portion of the coffee used in Cuba is imported from Brazil.

The stock of coffee at Hamburg June 1 shows an unexpected decrease of 175,000 bags owing to a recount of stock, which showed that an error had been committed in previous counting; the shrinkage was augmented 97,000 bags.

Coffee does not vary so widely as tea in the matter of yielding liquor, but the finer kinds generally allow of a larger proportion of water than the cheap, rank Rios. It ought to pay any grocer to test all his coffees and teas for liquor-making qualities as well as for flavour and "strength." They should be compared with one another, and the exact amount of water required to bring out the best flavour should be noted and printed on the label under which the goods are sold.

The quality of some of the Nicaragua and Mexican is again this year exceptionally good, and much of it is being used for home consumption in place of Costa Rica.

Of coffee there were 111,223 cwt. exported from Jamaica last year, (ending 31st March, 1903) against 100,861 cwt. in the previous year—an increase of over 10,000 cwt. America is almost altogether responsible for the increase.

**The Coffee Duty in France.**—A deputation, representing the Chambers of Commerce and the coffee syndicates of Havre, Marseilles, and Bordeaux, accompanied by some deputies, waited upon M. Rouvier at Paris on June 9 to discuss the further increase which has been announced of the duty on coffee to 156f. per 100 kilos. The deputation asked when the new tariff would come into force. The Minister replied that Budget considerations had compelled him to raise the duty by 20f., and said that he would ask for the denunciation of the Franco-Brazilian Treaty before June 30, in order that the new tariff might be applied before the end of the year. Since the above was received, cable advices have announced the confirmation of Trade Conventions with France relating to India and Ceylon.

San Francisco trade advices dated 21st ultimo say that the coffee market continues dull and weak. Arrivals of Central Americans have been far heavier than last year at this time and stocks are about twice as large. Nearly all low-grade coffees are in the market in great abundance and can be bought at almost any price.

In the annual report of the Agri-Horticultural Society of Madras for the year 1902-03 there is the following paragraph relating to *Coffea Arabica*:—Four dozen plants were presented to the Gardens by Mr. L. E. Kirwan. The old leaf pits in the south-west corner of the Botanic Gardens have been filled in and the Coffee has been put out in rows 10 feet apart. The site should be admirably suited to the experimental culture of Coffee, the whole ground being not too heavily shaded with *Ficus Indica* and *Parkia biglandulosa*. There are also a few plants of Coffee hybrids of Arabian crossed with Liberian. Seeds of this hybrid were presented by Mr. W. Mackinlay, of Meppadi, Wynaad. These, it is intended also to plant. A noteworthy feature is that none of the coffee plants in Madras show any sign of leaf-disease.

The value of Exports of Coffee from Costa Rica last year was over £6,30,000, showing an increase of about £75,000 over the previous year's figures. About 15 per cent. of this Coffee goes to the United States, 75 per cent. to England, and the rest to other countries.

Hawaiian Kona coffee of high grade retails on the Pacific Coast at 35 cents per pound. The finest Guatemala realises from 14 cents upward.

The Porto Rico coffee growers have, perhaps, the least reason to complain, as the coffee region has suffered least from the drought and the present prospects are quite encouraging.

The *Brazilian Review* remarks:—We have already commented on Mr. Lacerda's opinions when they appeared in

*O. Estado de S. Paulo.* The matter is now settled, for the present, at any rate, as far as Government interference is concerned and, good as Mr. Lacerda's recommendations are, there is now no use in discussing them.

Mr. Lacerda calculates the cost of production as follows:

For a plantation of 100,000 trees:

Weeding ...	8:000\$
Harvesting ...	6:000\$
Cartage on Estate, drying and sorting ...	6:000\$
Cartage to Station ...	600\$
Maintenance of machinery, animals, carts, roads, etc. ...	2:500\$
Administration ...	4:000\$
Eventual expenses ...	1:000\$
Municipal taxes ...	240\$

28:340\$

Calculating the average yield at 60 *arrobas* per 1,000 trees, in all 6,000 *arrobas*, the cost of production comes out at 4\$000 per *arropa*.

Expenses of delivery at Santos are estimated as follows:

Freight per Railway of empty sacks from Santos ...	\$012.5
Average Railway freight on one sack of coffee ...	1\$250
Transit tax ...	\$037.5
Cartage to store at Santos ...	\$0100
Commission to <i>Commissarios</i> ...	\$0200
Municipal tax Santos... ..	\$015

1\$615

Expenses of export:

Classification and bag ...	\$340
Tax on Jute bagging ...	\$085
Export duty 11 per cent. on 4\$200... ..	\$693
Dock charges ...	\$075
Cartage to Dock ...	\$00

1\$293

TOTAL EXPENDITURE.

Production per <i>arropa</i> ... ..	4\$723
Cost of delivery at Santos ...	1\$615
Expenses for Export ...	1\$203

Total per *arropa* ... 7\$631

At present coffee is selling at 6\$300 per *arropa* or less, which according to this is 17.4 per cent. below cost.

The cost of production has no doubt been falling continuously for the last five years. In 1898 we published an elaborate estimate of the cost of the plantations and production of coffee... which, at 60 *arrobas* per 1,000 trees, worked out at Rs.8 \$159 per *arropa* delivered at a station and exclusive of freights and expenses at Santos and exclusive of interest on capital. Since, exchange has risen from 6½d. to 12d. and paper money has doubled in sterling value. No doubt this has reduced many items of cost, but we doubt whether the price of labour has fallen in proportion, or whether, without a very further considerable rise of exchange and simultaneous fall in the price of labour, any further reduction is possible. Unfortunately, whilst exchange has risen and thus tended to reduce cost, taxes have increased almost in proportion and the benefit derived from higher exchange is greatly discounted. Still there has been some reduction and if planters' judgment were sounder, instead of impossible plans for burning or further taxing coffee, they would insist on the cost of Government accompanying exchange and on taxation being reduced as the value of the currency goes up. Otherwise there can be no equilibrium and they will be always in difficulties, because taxation is out of proportion to their earnings.

\* \* \*

**The Coffee Problem in Australia.**—Senor Don J. J. Tellechea, a Chilean gentleman resident in Sydney, N. S. W.,

sends a Home paper the following interesting note upon the coffee question:—"For a long time I have noticed the sound practical advice you have been giving in your columns to South American coffee producers upon how to solve the coffee problem. They might do worse than put your advice to the test in Australia, as this would be a virgin market for that article. The coffee that is imported here (N. S. W.) amounts to some 400 and odd tons; this would represent a consumption of a little more than three-fifths of a pound per head per annum, which is poor enough; but considering the quality of the stuff that is retailed here I don't wonder why Australians are such inveterate tea drinkers. To whoever has tasted Brazilian or Central American coffee, the stuff sold here is simply abominable, but so depraved has become the public taste, that no coffee is appreciated unless it be richly blended with chicory. Local merchants, you may depend, are not slow to profit of this, yet their horrible concoction is given out to an unsophisticated public as "prime coffee" at 2s. per lb. retail. Our sources of supply are mainly Ceylon and the Pacific Islands."

\* \* \*

**The U. S. Coffee Market.**—The coffee market is quiet and prices are steady, says the *Tea and Coffee Trade Journal* of 2nd ultimo. The same depressing conditions that have been the keynote of all reports for so long a time depress the market. It would seem that the forthcoming receipts in Brazil would cause pressure to sell, but the sellers, if they ease at all in their demands, do not do so worth the while. Apparently stocks everywhere are so large as not to stir any interest on the part of buyers, though prices are very low compared with the low ones ruling one year ago. It would seem besides that still worse bear tidings are looked for, but it is a question whether even greater unfavourable news would still further depress market quotations. It is probable that the world's visible supply on June 1 will show little change. No large decrease in the supply is expected. In the United States the deliveries for the month have been less than normal and it is thought that conditions about the same have prevailed elsewhere. The receipts have been full at the same time.

On offer from Brazil a sale of 2,000 bags was made in New York at 5c. c. and f. for Rio No. 6, which is a fair sample of what was

done in that line last week locally. In spot invoices the market closed flat and quiet with prices 4<sup>7</sup>/<sub>8</sub>c. for Rio No. 8, 5<sup>1</sup>/<sub>8</sub>c. for Rio No. 7, 5<sup>5</sup>/<sub>8</sub> to 5<sup>3</sup>/<sub>4</sub>c. for Rio No. 4, and 5<sup>7</sup>/<sub>8</sub> to 6c. for Santos No. 4.

There is a little movement in jobbing business.

In speculative circles trading continues limited. There is little to encourage interest. The European markets are weak and the Santos interior receipts too full for anything except derision. June hovers around 3.70 bid and September at 3.95. It seems most probable that a change in the grading of coffee on the Exchange will be ordered. This has for some time been foreshadowed in the difference that rules between November and December options, the change taking place, if at all, in November. The new legal regulations in Sao Paulo, it is contended, will compel a marked increase in the shipping of lower grade coffees, putting a premium on the high grades. The abundance will lie with the medium grades, Nos. 5 to 7, bringing the bulk down to Nos. 6 or 7.

Mild coffees are quiet too. There is always good inquiry for good drinking coffees, which are reported scarce. The market is really easier and good Cucuta has declined to 8<sup>1</sup>/<sub>2</sub>c. East India growths are steady.

Total stock in United States May 1, 2,531,917 bags against 2,307,894 bags May 1, 1902. Brazil stock in the United States May 29, in store and afloat, 2,381,747 bags against 2,465,479 bags at the same time last year. Other than Brazilian, 372,839 bags, against 323,094 bags last year.

Brazil coffee in New York May 29, 1,963,676. Stock in New York in other coffees May 25, 163,961, in San Francisco, 101,283 bags and in New Orleans, 7,565 bags. Visible supply in the world of all coffees, May 1, 12,248,278 bags.

TEA NOTES.

**London Tea Market.**—Special telegram dated 18th ultimo from Messrs. Gow, Wilson & Stanton to Columbo reports a dull tone generally among buyers and that medium liquoring Pekoes is weak while the market for teas for price is easier. The price of fair liquoring Ceylon Pekoe Souchong is 6<sup>1</sup>/<sub>2</sub>d. (same as last week) and the average 7<sup>1</sup>/<sub>2</sub>d. (<sup>1</sup>/<sub>8</sub>d. down). The average for the same period last year was 6<sup>1</sup>/<sub>2</sub>d. Renter reports that the tone of Ceylon tea as follows common to medium qualities easier and Broken Pekoe fine qualities firm, common are slightly easier. Pekoe Souchong steady; Fair Pekoe Souchong is quoted at 6<sup>1</sup>/<sub>4</sub>d. (same as last week) and the average for the week is 7<sup>1</sup>/<sub>2</sub>d. (<sup>1</sup>/<sub>8</sub>d. down). 35,000 packages of Ceylon tea were offered for sale and 32,000 disposed of; while of the 22,000 packages of Indian tea offered, 20,000 were sold at an average of 7<sup>3</sup>/<sub>4</sub>d. (<sup>1</sup>/<sub>8</sub>d. down).

**Tea Statistics.**—Messrs. Gow, Wilson & Stanton, of London, issued no circular on June 2nd, as there were no sales that week. They prepared, however, the following table showing.—Quantity of tea (all growths) on which duty has been paid during the current month up to 31st ultimo 22,311,965 lbs. against 14,215,673 lbs. during the same period last year.

MONTHLY STATISTICS.

Movements (in lbs.) of Indian and Ceylon tea during			
	May, 1903.		May, 1902.
	Indian.	Ceylon.	
Imports ...	1,237,782	8,556,729	974,935

Deliveries...	149,941,025	97,016,395	150,490,003

**Tea in Jamaica.**—It is stated that an expert has arrived in Kingston on behalf of Sir Alfred Jones, who was knighted for his services to Jamaica, to inquire into the possibility of tea cultivation here on an extensive scale. The idea is to make of Jamaica another Ceylon, if conditions are found to be favourable to tea growing.

**Calcutta Tea Sales.**—At the fourth tea auction of the season at Calcutta, on the 19th ultimo, 9,900 packages were sold. The market was strong for all kinds, which sold at advancing rates. There was keen competition. Bombay and Persian Gulf buyers were keen for all suitable kinds, buying at three pies over last sale. Russian, Colonial, and Continental operators took an unusually large proportion of the offerings, about 5,000 packages being taken off the London market. the quality continues good for the season.

**Indian Tea Exports Still Short.**—The exports of tea to the United Kingdom, according to the Calcutta Customs, for the first half of June, are 2,602,068 lbs. against 3,153,232 lbs. for the corresponding fortnight of 1902. The total exports from the 1st April to the 15th June are 5,091,420 lbs., against 6,542,783 lbs. last year.

**The British Tea Duty.**—The House of Commons went into Committee on the Finance Bill, and Mr. Francis Allston Channing, Radical M.P. for East Northamptonshire, moved an amendment to make the duty on tea 4d. He declared that the extra 2d had resulted in a marked diminution of imports and an increase of price. Mr. Ritchie refused to accept the amendment.

During 1902 tea to the value of £16,720 was imported at the Turkish port of Bussorah. The whole of this was from India, only the cheapest kinds being in demand.

The Treasury Department has instructed the Collector of Customs at Chicago to make a test case to determine what are "unusual" coverings for tea. Certain importers' claim that tea in canisters should pay duty on the package, as they are offered as an inducement or premium to buyers, and by being admitted here free of duty a competition is created which is unfair and difficult, if not impossible, to meet. Those who import teas in the canisters or special coverings contend that they should be free of duty.

The *Merchants' Review* points out to its readers that the finest teas of India and Ceylon growth yield twice as many cups of beverage to the pound as the common sorts, and the flavour is more agreeable. Superior China teas also have more body than the cheaper kinds. Grocers always should warn consumers against boiling tea.

Why shouldn't grocers pack tea in ten or twenty-five cent lots instead of by the pound or half was the question which the *Review* has several times put to the trade. Why not put up special kinds in special packages, in order to induce people to try a new brand of tea? Why not, we urged, have a big basket placed just outside the door, containing fine tea in 5c. or 10c. sample boxes, with a big placard describing the article and giving the price in this fashion: "Only 5c. Take one!" Why not? Well Finley Acker & Co. have answered. In their Weekly they say:

We've secured several thousand little tins, decorated with the figure of a Ceylon maiden and we've had them packed with Acker's Ceylon Blend Tea.

While they last, 5c. each; 55c. doz.  
Getting out of the beaten track has taken Finley Acker & Co. very far, but it appears that they are still moving.

Shilling (25c.) tea in England is frowned upon by the big houses of the trade, and they will hereafter sell no tea below 1s. 2d., or say 29c. The *Merchants' Review* of New York asks:—If the Britishers can't stand 25c. tea, how in the world does this country consume the tea that some of the grocers sell at 20 cents?

The tea trade needs a strong tonic, says the *Merchants' Review*, one which may take the shape of an advertising campaign in behalf of standard brands under wholesale or importing labels, which shall be absolutely uniform in quality and yield a good profit to the retailer.

New crop Japan teas to arrive early June week have been sold to a New York wholesale grocery house at 35 to 40c. They are first arrivals and hence high grade.

**Tea Imports** to the amount of 500,000 pounds are involved in a matter before the Tea Board of the United States General Appraisers. Several large importers are endeavouring to convince the Board that certain importations of Foochow Oolong teas, rejected by the tea inspector as not being up to standard, should be admitted for consumption in the United States. The Board of Experts has again confirmed the judgment of the tea examiners at New York in the rejection of Foochow teas in addition to the large quantity rejected some time ago.

**Tea in the West.**—Reporting on the trade of California, Nevada, Utah, and Arizona for 1902 Mr. Consul-General Bennett remarks:—"Although tea to the value of over £1,80,000 was imported into San Francisco in 1902, over £1,60,000 worth came from China and Japan. For some strange reason or other tea seems to be a decreasing import in California. Probably good Ceylon tea, if pressed, might find a market, as in spite of statistics it is alleged that the taste for tea is growing here."

"A gigantic tea competition," as it is termed, has been organised by Messrs. Black & White, tea merchants, of Manchester and other places. Purchasers are invited to save coupons supplied with packets of tea, and at the end of the year a cottage, or 250l. in cash, will be given to the person sending in the largest number of coupons. Fifteen hundred other prizes, ranging in value from 40l. to 5s., will also be given.

**Russian Tea and Sugar in Persia.**—The Board of Trade have received a despatch from Odessa in which it is stated that 350,000 lbs. to 400,000 lbs. of Chinese tea is annually sent from Odessa to Persia by way of Baku. The Russian Consul-General at Bender-Bushire, reporting on the sugar trade, says that in Persia local tastes and ideas must be taken into account, as the consumer judges the sugar by its outward appearance, shape, size of loaves ( $4\frac{1}{2}$  lbs. recommended), and packing. Loaf sugar sells best if offered in small loaves of not more than two kilogrammes, the end rather flattened and the bottom concave. It should be easily soluble in hot water and make no froth, though as cheap as possible. Each loaf should be first wrapped in thin white and then in thick blue paper, and then tied crosswise with thin string, and given a black factory mark. The loaves must be packed in wooden boxes of sufficient strength, hooped with willow-withes. No case to contain over thirty-two loaves, which must be wrapped in straw and other

packing materials to avoid breakage when carried on beasts of burden. In a word, the more the sugar imported at the ports of the Persian Gulf resembles French, the better its chance of success. Of sand sugar the most saleable is cheap sugar in large crystals, white and pure, in double or even treble (if for Shiraz or Isfahan) sacks of which the inner one must be the stronger and of closer texture, and the outer one thinner and with the mark of the factory. No bag must contain more than 2 cwts. Just as it is necessary for refined sugar to be made in imitation of French sugar, so the sand sugar must copy Austrian sugar.

**Growing American Tea.**—"The department of agriculture is studying the sciences that are grouped around the production of tea. Encouraging progress is being made. We are introducing the best kinds of tea from oriental countries and studying the preparation of the leaves for the market without chemicals. There is hope that we shall succeed in making higher priced teas economically. There are plenty of idle young people who can pick tea in the localities where the tea plant is at home."—Mr. Wilson, secretary of agriculture in a recent address.

**The U. S. Tea Market.**—"The activity in the tea market continues rising, says the *Tea and Coffee Trade Journal* of 2nd ultimo. There is more trading in the teas on hand, and of course more interest than ever in the markets abroad. Since the last writing the eastern markets have become if anything, stronger, and they do not seem to be at all influenced by the small business done here. Formosa continues very firm with a fair business doing on a basis of 16c. for strict good, 18c. for strict superior, 24c. for strict fine, and 28c. for strict finest.

The Hankow market is extremely active with prices tending upward all the time. First crop Keemuns are reported entirely bought up. Ningchows are said to be one cent higher and actively competed for, the supply being scanty. It is currently reported that the exportation to America this season will be fully 15 per cent. shorter than last year.

The Japan market remains very dear. Some of the grades have felt an advance of 50 per cent. over the opening prices of one year ago. Mail advices say that the bulk has been bought by one American firm. The new teas that are open to sale here are fair in quality and are being extensively examined. Very few sales are reported. Evidently the trade is slow to accustom itself to the high prices asked.

Not a few sales are heard in India and Ceylons which continue firm at the rates hitherto ruling.

Ceylon greens are being viewed to take the place of the dear Japans. However, as a considerable disparity exists in price between Ceylon blacks and greens, same grade, the grower will give the blacks preference and greens will not be so abundant.

## NOTES.

### Java Quinine.

The exports from Java during March amount to 106 cases. From January 1 to March 31 the shipments have been

	1903	1902	1901	1900	1899
Cases ...	489	412	500	470	337

### Quinine in London.

The decrease in the London stock which was noticeable in the April returns continued during May. There were 3,433,520 oz. in the public warehouse at the end of May against 3,824,368 oz. at the corresponding period of 1902. The landings during May were 78,304 oz. and the deliveries 42,672 oz.

### A new Coffee Journal.

"El Cafetal" (The Coffee Tree) is the title of a new monthly publication, printed in two languages (Spanish and Portuguese), and designed to promote the interests of producers of coffee in Latin-America. The journal is subsidized by the Government of the different countries in which the coffee industry

is located. It will contain official data of different character, including statistical tables.

#### Cocoa in Madras.

The specimen in the border at the East end of No. 2 Palm House continues to make strong healthy growth, says the annual report of the Agri-Horticultural Society of Madras. It was in full flower in September and a number of blossoms were fertilised and a good crop of fruits has been obtained. These are now reaching the ripening stage. Up to the present the plant has remained healthy, there being no sign of any fungoid growth.

#### How to make Quinine.

The Italian Central Military Pharmacy has published the method now decided upon of preparing the "State Quinine." The difficulty to be overcome was the probable loss of water, and this has been solved by the following method: 100 kilos. of quinine bisulphate is dried at a temperature of 55° to 60° C. (a loss of about six molecules of water, or 20 per cent. by weight, is observed), and is then mixed with 20 kilos. of sugar of milk and 20 kilos. of alcohol. The mass is dried at 45° C., until its weight is about 100 kilos., then powdered and formed into tablets of 20 centigrammes (about 3 grs.) each. Ten of these are sold in a gelatin tube for 2½d.

#### Protected Pepper.

The protection that is given to French Indo-China pepper on entering France has so largely stimulated pepper-growing in Cochin-China among Europeans and Chinese, says the *Straits Times*, that the French market is glutted with spice from that colony. Growing the article has therefore become unprofitable. The European planters seek to ward off heavy loss by starting an agitation against Chinese pepper-planters being allowed to share in the preferential tariff-rates, which would mean ruin to the Chinese planters. The opinion is that the planters should seek to meet the bad times by turning to other markets and by resorting to improved business-methods.

#### Sisal in Madras.

*Agave rigida* var. *Sisalana*.—The piece of ground put under cultivation with these plants is doing well, says the annual report of the Agri-Horticultural Society of Madras. The plants have a healthy appearance and average about 2 feet in height. In all about 900 plants have been put out in two squares separated by the main avenue. As the square on the north side containing 500 plants is considered sufficient for experimental and stock purposes, it is suggested to part with the rest when a reasonable offer is received, and to utilise the ground for other purposes. A few rows of other fibre yielding plants have also been planted, and it is intended to add to them as opportunity occurs.

#### Austrian Quinine in Malaria.

The Austrian Government is advocating the general use of quinine in the malarial districts of the country, and has organised a system of treatment. An order was recently issued by the Austrian Minister of the Interior, stating that the necessary quinine was to be prepared in pastilles in the Royal Hospital at Vienna and sold through the pharmacies. This order really amounts to a State monopoly for quinine similar to that which already exists in Italy.

*The Zeitschrift des allgem. oesterreich. Apotheker-Vereines* says that the order must be regarded as exceptional, and that the State has adopted this course in order to supply the poor in the malarial districts with quinine at the lowest possible price. That journal expresses the hope that it will remain exceptional, otherwise Austrian pharmacists will sink into mere purveyors of prepared medicaments.

#### Java Cinchona.

The auctions to be held on June 18 were to consist of 10,890 bales and 556 cases, weighing 996,509 kilos. The N. V. Nederlandsche Veem at Amsterdam reports the shipments from Java to Europe during May, 1903, as follows:—

Year.	Amst. lbs.	Year.	Amst. lbs.
1903 ...	1,188,000	1897 ...	600,000
1902 ...	1,044,000	1896 ...	768,000
1901 ...	746,000	1895 ...	402,700
1900 ...	816,000	1894 ...	900,000
1899 ...	943,000	1893 ...	714,000
1898 ...	672,000		
Total Shipments January - May.			
Year.	Amst. lbs.	Year.	Amst. lbs.
1903 ...	4,566,000	1897 ...	2,510,000

1901 ...	4,169,000	1895 ...	2,879,700
1900 ...	3,252,000	1894 ...	3,288,000
1899 ...	3,964,800	1893 ...	3,244,000
1898 ...	3,884,000		

#### Pepper.

Messrs. G. Duuring & Zoon report:—Spot business continued quiet whilst terme has been extremely active and speculative buying during the course of this month systematically continued. Cost freight offers from Java were considerably beyond. . . parity and holders not inclined to make any concession. Dealings amounted to 45,200 bags or 132,000 bags since January 1st. Values slowly improved, quotations now are 32½cts. per June/July, 32½cts. per August, 32½cts. per September/October, 32½cts. per November, 33cts. per December/January, 33½cts. per February, and 33½cts. per March. May dealings 31,800 bags of which 7,000 bags were tendered.

Stocks of all kinds on the principal markets of Europe:

	May 1st	1903.	1902.	1901.
Netherlands	...	41,300 bags.	66,600 bags.	71,700 bags.
London...	...	40,700 "	79,500 "	95,600 "
Hamburg	...	4,400 "	12,500 "	13,400 "
Håvre	...	17,600 "	60,700 "	57,500 "
Bordeaux	...	200 "	2,300 "	1,400 "
Marseilles	...	2,200 "	5,400 "	3,400 "
Trieste	...	9,800 "	12,000 "	19,000 "
Total	...	116,200 bags.	239,000 bags.	262,000 bags.
On April 1st	...	135,700 "	238,400 "	268,700 "

#### Java Cinchona Combination.

H. M. Consul at Batavia reports that the exports of cinchona bark from Java, almost the whole of which find their way to Holland, were heavier than ever in 1902. Taking this circumstance into consideration, prices obtained were fairly satisfactory, although the average unit price for the 75,000 bales sold at the 10 Amsterdam auctions was only 6·90c. (1½d.), as compared with 8·44c. (1⅞d.) average in 1901. The 22,000 bales sold at the 12 London auctions fetched an average unit price of 1½d., as compared with 1½d. in 1901. A combination of Java cinchona planters, controlling more than one-third of the total area under cinchona, came to an arrangement in September, 1902, to limit the unit selling price of the bark in Holland up to the end of March next

year to 6c. (1½d.) with a view to preventing temporary oversupply in Europe and consequent low prices, and they have now extended the period for which this limit is in force till the end of 1903. Seeing that Java produces probably 75 per cent. or more of the world's supply, this measure should, if consistently carried out, result in a higher scale of prices both for bark and quinine.

#### A Rubber Vine in Central America.

The *Scientific American* says:—"Recently Señor Don Floriano Davadi, Governor of the Department of Conyagua, Honduras, informed the American Consul at Tequicigalpa that, some time previous, he discovered in the Pijo mountains a vine growing in an uncultivated state, varying in diameter from 4 inches to 2 feet, which on cutting produces a sap the nature of which is rubber. These vines grow to 100 feet in length, and they are said to belong to the African family of rubber vines. In Honduras no one seems to know the name of the vine or the botanical family to which it belongs. The discoverer regards it as superior in quality to the Pará rubber of commerce, and asserts that his convictions are borne out by the analysis made by American and European chemists. The vine thrives at great altitudes, as well as in the lower valley level. Such luxuriance of growth has this plant attained that it is quite capable of being cut in commercial quantities. It may be quickly propagated in the rich soil of the department by means of seedlings, and, growth being so much faster than that of rubber trees, Señor Davadi thinks the quantity of gum obtained would be large. The trees require six years' attention before tapping can begin. It has been proposed to form a company for the exploitation of rubber in the Toro district, but, though the names of several prominent men have been connected with the enterprise, nothing has, as yet, been done to begin operations."

#### London Tea Market.

Weekly special telegram dated 25th ultimo from Messrs. Gow, Wilson Stanton reports the market is generally steady and that the market for medium liquoring Pekoes and Broken Pekoes is steady, while the market for common Pekoes and Broken Pekoes is also steady. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (same as last week) and the average 7½d. (½d. down). The average for the same period last year was 6¼d. Reuter reports that the tone of Ceylon tea as follows good to fine qualities very firm, medium irregular and Broken Pekoe fine qualities firm, common are slightly easier. Pekoe Souchong steady; Fair Pekoe Souchong is quoted at 6¼d. (same as last week) and the average for the week is 7½d. (½d. down). 22,000 packages of Ceylon tea were offered for sale and 21,000 disposed of; while of the 21,000 packages of Indian tea offered, 20,000 were sold at an average of 7½d. (½d. down). On 26th ultimo, 10,400 packages were sold. Dooars and Cachars comprised more than three-fourths of the offerings. The quality generally was below that of the last sale. The market was firm for common sorts, and some Darjeeling invoices sold in the sellers' favour. Bombay and Persian Gulf buyers took all suitable kinds, and buyers for other outside markets were also busy. 137 chests greens from Mount Somerset and Kangra Valley averaged seven annas. Since the opening of the season four gardens, which usually sell in Calcutta, have sold the entire crops forward for London.

## GENERAL ARTICLES.

### TEA IN CANADA.

The *Canadian Grocer* reports:—

TORONTO, May 28, 1903.

The trade done in tea since our last issue has been satisfactory and prices are ruling from at previous quotations.

MONTREAL, May 28, 1903.

The dominant fact of the tea market is the firm tone displayed in all descriptions of the staple with prospects of much higher prices if the present tendency at primary markets is maintained. As a result of this a good inquiry is experienced for all sorts of teas which are offering here and sellers find no difficulty in securing their own figures, while it is noticeable that they are not urging sales to any extent. Male advices from Japan state that the advance in the opening prices of new-crop teas was in some instances 50 per cent. higher than those of 1902 and that the bulk of the offerings were bought by one large American firm. Cable advices from China reported the market for Congou tea higher, and quoted United States standard at 10c. A cable from Hankow stated that prices for medium grade Congous were 2c. per lb. higher than last year at 11c., as against 9c. a year ago.

### COFFEE IN LONDON.

A marked reduction in the total European imports during May and a decided increase in the deliveries have combined to produce a reduction in the European stocks of some 13,000 tons, and in the world's visible supply of, roughly, 17,000 tons, says the *Produce Markets' Review* of June 6, 1903. We have several times pointed out that the different crops were arriving much sooner than they generally do, so that it was to be expected that the heaviest stock would be reached at a period earlier than usual. During the next few months the deliveries will probably not be heavy, but, as far as London is concerned, the stocks other than Santos are much below the average at this time of year, and prices are at such an extremely low level that an advance can hardly fail to take place in the Autumn when a renewal of the heavy trade may be looked for. During the holidays very little coffee has arrived, so that the auctions, which re-commenced on Thursday, have been small and unattractive, while prices have been well maintained. In the terminal market quotations have been irregular, closing at about the same level as last week.

### TEA IN LONDON.

INDIAN TEA.—Owing to the suspension of public sales during the past fortnight, and the intervention of the Whitsuntide holidays, the market has been practically closed, says the *Produce Markets' Review* of June 6, and only very limited transactions have taken place. For Monday, the 8th instant, about 30,000 packages have been catalogued, comprising several final and a large number of the last but one invoices of the past season, most of which are of the more popular marks. There will probably be a good demand at firm prices, especially for those of a stand-out character, as the supply is likely to be well within requirements. For the lower grades little or no change in values is expected. It will be seen by the under-mentioned figures that the removals from bond in May were largely in excess of the same period last year, and instead of a surplus of 3,000,000 lbs., as was the case at the end of April, there is now a deficiency of upwards of 3,000,000 lbs. while the total stock of all growths is 7,400,000 lbs. smaller than in 1902, or 74,634,000 lbs. against 82,035,000 lbs. The following are the returns for the end of May compared with those of last year: The imports were 1,237,000 lbs. and 974,000 lbs., the deliveries amounted to 15,115,000 lbs. as compared with 9,033,000 lbs., the stock now standing at 40,950,000 lbs. against 44,157,000 lbs. Later advices from Calcutta report more favourable weather generally, and consequently prospects are brighter for an increased out-turn, and the quality of the teas is said to be above the average at the early part of last season.

CEYLON TEAS.—This market has not yet opened, no sales having been held since the holiday. The next auctions will take place on

Tuesday, 9th instant, when about 25,700 packages will be brought forward. The following are the figures for the past month compared with May last year: The imports were 8,557,000 lbs. against 8,075,000 lbs., the deliveries being 8,898,000 lbs. and 7,028,000 lbs. respectively, while the stock stands at 21,262,000 lbs. is compared with 22,304,000 lbs.

**CONGOU TEA.**—Business has been limited, partly owing to the fact that there have been no public auctions during the week. The market for new season's Blacks opened in Hankow on the 10th May, and according to a recent telegram it appears that Kintucks and Keemans are much finer than last year, and prices are also higher.

**OTHER CHINA TEAS.**—Green and Scented teas remain unaltered in value.

## BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—RIO DE JANEIRO, 16th May, 1903.—Ninety days' Bank Rate on London opened on Monday 11th instant at 12½ and rose without interruption to 12½ on Saturday, when it closed at 12½ to 12½d.

Confirmation of the loan having been definitely settled on what cannot but be regarded as exceptionally favourable terms gave a little animation to a market otherwise featureless and rates were inclined to boom. Fortunately, however, none of the banks seem inclined to assist speculation and this kind of paper is not in request. No doubt the Bank of the Republic will do all in its power by drawing prudently or refusing to draw at all and even by if necessary to keep rates down but in spite of its efforts, it is possible that, if people at home take into their heads that the time for a rise has come, to send out orders to draw, the Bank may be unable to resist the pressure and rates boom in spite of all precautions. The lack of elasticity in the currency makes such oscillations inevitable and, were the Bank at any time to be reorganized, it would be well to provide a fund for such purposes, allowing paper to be issued against gold or gold-bonds and *vice versa*.

It is said that exchange will not be allowed to go over 13d. but unless the Bank utilized the 45,000,000\$ in deposit, mostly belonging to Government, for the purpose of keeping it steady, it seems doubtful if it can be prevented.

On the question of the advisability of doing so there can be no doubt. Spot Coffee is already down to 5½c. at New York. The rise of exchange here has not been accompanied by any improvement in prices on the other side, which are already below parity with our own. Hence, prices have fallen to 3\$968 per 10 kilos. and will certainly go lower if exchange rise and the new crop be entered under the most depressing and ruinous conditions for planters, without any immediate prospect of improvement. The President of the Republic who is himself a planter, is fully aware of this and may be relied on not to allow rates to boom if it is in his power to prevent it. After the loan is issued and done with, it is, therefore, reasonable to believe that a reaction will set in. Until then it might not be politic.

How necessary and opportune the loan really was, is shown by the value of coffee shipments which fell off to only £130,000, here and at Santos, compared with £216,000 the previous week, and £259,000 last year; declared sales being also smaller, 111,000 bags against 122,000 and 144,000 for the previous week and year respectively.

**Coffee.**—RIO DE JANEIRO, 16th May, 1903.—Joint entries at Rio and Santos during the week ended May 15th were 676 bags smaller than the previous week and 16,836 under those of the corresponding week last year of which they represent 89 per cent.

For the crop entries on the 15th instant were 3,088,752 bags less than last crop of which they represented 8·6 per cent.

Shipments (*Embarques*) were smaller, 67,936 bags under the previous week's and 73,923 bags less than last year.

Stocks consequently increased and on the 15th instant showed 45,651 bags more than on the previous Friday but 374,055 less than on the corresponding date last year.

Declared Sales were likewise smaller, being 11,000 bags under the previous week's and 22,000 less than the corresponding week's last year.

Local prices accompanied the fall of exchange, the average for the week for No. 7 being 3\$968 per 10 kilos. as against 4\$017 the

previous week and 4\$296 last year. Abroad prices also fell, the average at New York for No. 7 being 5½c. as against 5½ for the previous week and 5½ last year. Exchange rose uninterruptedly during the week from 12½ to 12½d.

**SANTOS, 15th May.**—This week the first new "Terreiro" was offered; although the new coffee contains a large percentage of unripe beans it is very well dried and shows, on the whole, satisfactory quality. The quantity is as yet small but by the end of the month we may see sufficient new coffee, considering the early stage of the season. Our market kept quiet and was occasionally even weak owing to the rise in exchange closing at 12½ to-day, term market keeping practically unchanged. Orders for *Superiors* were executed at from 26s. 9d. to 27s. 6d. *Good Average* 1/3 to 1/6 below. *Primes* were sold at 4\$200 to 4\$500; *Superiors* 300 réis below; *Goods* 500 to 600 réis below and *Regulars* at 3\$300 to 3\$400; *Low Coffees* from 2\$300 to 3\$000 showed a slightly better demand. *Peaberrys* continued slack at 4\$100 to 4\$300 for *Superior Peaberry*; *Old Yellow* is somewhat slower on former prices. *Washed* are very irregular attracting little attention. Receipts (83,000) *Passagens* (81,000) are increasing and the total for the month is likely to exceed 400,000 owing to new coffee coming in. Shipments are poor. Our stock this morning was 889,457. *Pauta* remains unchanged at 380 réis.

A correspondent of the *Correio Paulistano* describes the state of plantations in the Campinas district as magnificent. Shrubs planted one hundred years ago are still bearing. The type is almost exclusively "bourbon" and commands better prices than any other districts. The percentage of very low types is extremely small in this district where the prospect of 20 per cent. duty raised the greatest opposition. The plantations are well cared for and are in a better position, perhaps, than any other place, to face the crisis.

The Minas Agricultural Congress has recommended the imposition of differential duties for coffee exported from that state in addition to the current 9 per cent. on the following scale: 50 per cent. on unclassified (*escolha*); 30 per cent. on No 9, New York type and 12 per cent. on No 8; all above that to pay the current 9 per cent.

Messrs. Prado Chaves estimate the coming crop for Rio, Minas, and Espirito Santo at 3,000,000 bags. This seems to us very low as that figure will probably be exceeded by Rio and Minas alone. So far as we have been able to gather, the Rio and Minas crop will be about 75 per cent. of 1900-1901. In an article signed by Sr. Alberto Salles *O Estado de Sao Paulo* estimates the coming crop in that State at 9,000,000 bags, which is probably a maximum if half the reports of drought and frost are true.

## LIPTON (LIMITED).

The fifth ordinary general meeting of the shareholders of this company was held on Wednesday June 3, at Winchester House, Old Broad-street, E.C., Sir T. Lipton presiding.—The Chairman, in proposing the adoption of the report, said he was pleased to say that, although they had had on the whole a continuance of unfavourable markets to contend with, he did not think the shareholders could feel other than gratified at the results shown in the report. The improvement which they naturally anticipated after the long spell of high prices which had been ruling for the past few years for the materials used in their manufactures, as well as for other goods dealt in by the company, had not been realised, and, in addition, they had had to face the keenest competition, which had frequently meant selling goods at a dead loss, and in some cases without a profit. They had not only been able to meet all forms of competition, as he expected they always would be able to do, but they had also obtained results from the trading which, he thought, they would regard as satisfactory. They would have been better pleased had the results been more favourable, and he could only hope that the time was not far distant when they would have a return to their former favourable trading conditions. The item of stock showed a decrease of 43,000l. as compared with last year, the directors believing that it was in the best interests of the company to keep the stock as low as possible in view of the unsatisfactory state of the markets. The trading profit for the past year, after deducting wages and working expenses, was 226,915l., which was several thousand pounds better than the previous year. The general expenses and expenses of management, including advertising, had increased by about 17,000l. Ample provision had

been made for depreciation, and the branches had been, in a great many instances, thoroughly overhauled; and improved at considerable expenses; all of which had been charged to revenue. With the amount brought forward—9,865*l.*—they had a balance of 164,814*l.* at their disposal. The interest on the debenture stock and the dividends on the preference shares absorbed 70,000*l.*, and an interim dividend had been paid on the ordinary shares amounting to 40,000*l.*, which left a balance of 54,814*l.* They now proposed to pay a further dividend on the ordinary shares at the rate of 8 per cent. for the past half-year, which would absorb 40,000*l.*; to place 10,000*l.* to the reserve account, and to carry forward 4,814*l.* As to

#### THE PROSPECTS OF THE BUSINESS,

in view of their experiences of the past few years the rôle of a prophet was not a very safe one to assume. All he could say was that it very greatly depended on the condition of the markets. If they went in the company's favour the directors were alert and ready to take the fullest advantage of every favourable opportunity which might present itself for the benefit of the business. At the same time, he thought they might reasonably hope that better times were in store for them. In any event, whether markets were favourable or unfavourable, their aim would be, as it always had been, to cater for the public wants in such a manner as to merit their custom and support. The fact that their turnover was a good deal better than last year showed that they had got the customers, and that they had been able, in face of all competition, to more than hold their own was the best proof that the business was on the right tack.

Mr. D. McDiarmid seconded the motion.

Mr. J. M. Goldie said he was surprised that the directors should say that they considered the results of the past year satisfactory. In the first year of the company's business the balance left for appropriation between reserve and dividend on the ordinary shares was 108,000*l.*, while last year the amount had dropped to 54,814*l.* He also considered that the expenses were unnecessarily high.

After further discussion the report was adopted.

## PRODUCE AND PLANTING.

In the discussion of the proposed change in the fiscal policy of Great Britain and its effect on the Colonies, very little mention has been made of India. In referring to the speeches on the subject last week in the House of Commons, Sir Charles Dilke pointed out that a striking omission was one that robbed the new policy of all claims to be considered as a truly Imperial one, and that was that the 300 millions of India were excluded. India paid her share of running the Empire, which was not done by other people, and they could not leave India out in any scheme of federal union. India and Ceylon tea planters will be anxious to learn, when Mr. Chamberlain's plan is revealed, how it will affect them, but doubtless they think, with many other people, that the new proposals are merely in the air, and may remain in that position.

On the subject of tea and its price the *Grocer* has the following: "As to the desirability of persuading consumers to use better tea there are no two opinions. For some years there has been such excellent value about in the medium and lower grades, and there has been so much pushing of those qualities by the multiple-shop companies, that the public have acquired a disposition to pay gradually less and less for their tea, and now that an advance has taken place the situation has been rendered awkward. Moreover, the advance threatens to be of a permanent kind. It is satisfactory to note that shilling tea has been abolished, and that 1*s.* 2*d.* is now the lowest price; but what good is it to a grocer or to anybody else to be retailing tea now at 1*s.* 2*d.*? Clean Indian or Ceylon tea cannot be bought on the London market for less than 6½*d.* or 6½*d.* On the top of that there is 6*d.* and ¼ per cent. duty; to many places over a farthing a pound carriage; retailed "full weight without the wrapper"; also the wholesaler's profit to be added. We know that some one-and-twopenny blends have been lowered by the use of common China tea bought on the market at about 3½*d.* per lb.; but such tinkering can only cause dissatisfaction to retail customers. Respecting the price alteration, is anything being done by the grocers' associations to acquaint the public with the fact that they must expect to pay more for their tea—that there is a short supply and an advance in the wholesale price? These facts might with advantage be advertised in local papers, as is sometimes done in regard to advances in sugar, and with good results. This is one of the ways by which grocers' associations can, and do, please the rank and file of their members, because an official announcement carries conviction to the public mind and enables tradesmen to obtain an advance with much less trouble than would otherwise be the case."

The methods of the firms who sell tea and offer pensions are receiving some attention just now from writers on financial topics. The *Financial Times*, referring to the pension system, says:—"If properly arranged the scheme would be useful, but it is beyond doubt that the present arrangement is wrong. Much more is being given to present beneficiaries than can possibly be continued, and the result will be that after, at the most, a few years the allowances will drop very far below the much smaller sum which might have been given all along if the rates had been based on actuarial principles instead of being made by rule-of-thumb, with a keen eye to the advertising value of the round half-sovereign weekly."

In order to give the coffee market a strong upward tendency, the Congress in Santos have passed a Bill by which 20 per cent. of the low qualities in the Santos receipts will be confiscated from and after July 1 next. This means that nearly one-fourth of the Santos supply is to be destroyed to save the producers, who are in financial perplexities, from ruin, since many of them find it increasingly difficult to obtain the necessary loans from the moneylenders, while others are abandoning such coffee estates as do not pay ordinary working expenses. By this law the Brazilian coffee planter will likewise have the option of retaining his coffee by paying a fine equal to about 15*s.* per cwt., so that he may, if he likes, take his chance of doing better by keeping the coffee, in the event of the market going up, instead of allowing it to be thrown away.

In the first bulletin issued by the Board of Trade from the Imperial Institute there are references to products recently received

from British Central Africa, including coffee, tea, tobacco, rubber fibres, beeswax, ginger, chillies, gum, cotton, and timbers. The coffee leaf-disease is as yet unknown in the Shire Highlands. Chillies grow freely and require little attention. In recent years chilli cultivation has been taken up by almost every planter in Nyassaland. Fibres from Sierra Leone and cohune nuts from British Honduras are dealt with, and there are articles on the chemical analysis of gutta percha as a guide in its cultivation and valuation, rubber cultivation in the Congou Free State, the cultivation of economic plants in Uganda, cassava as a source of starch and allied products, and the cultivation of aloe fibres.—*H. & C. Mail*, June 5th.

If at a first glance the large majority in the House of Commons against Mr. Chaplin's amendment in favour of a reduction of the tea duty as against the remission of the tax on corn seems to indicate that the case for the reduction of the duty on tea does not find much support in Parliament, further consideration of the subject will allay fears. The members who opposed Mr. Chaplin were more concerned with corn and the question of Free Trade than tea, and although there may be nothing to be hoped for under existing circumstances in the way of a reduction of duty, tea growers may console themselves with the knowledge that the question of the duty has cropped up prominently in connection with the whole economic position, and that the adverse majority recorded against Mr. Chaplin was really a protest against the corn duty, and was no indication of the feelings of the majority about tea.

On all sides it seems recognised that a reduction of the duty on tea was a reasonable expectation, and that the continuance of it at its present rate is unfair, both to the consumer and the grower. Whether Mr. Chamberlain's fiscal proposals are ultimately accepted by the country or not, the admissions made by politicians, irrespective of party, show that the tea duty question demands attention at the first opportunity. The ease with which the duty on tea can be gathered into the Treasury has no doubt assisted successive Chancellors of the Exchequer in keeping a blind eye to the claims of justice in this matter. Mr. Ritchie, by maintaining the present duty on tea and abandoning the new impost on corn, has defeated the purpose which the Government put forward as the justification of their policy last year.

There seems to be no real change in the methods of either the Chinese Government or the tea-grower in regard to the taxation, production, or treatment of tea. The report of the Statistical Secretary to the Chinese Maritime Customs on the foreign trade of China for the past year has now reached this country. The exports of tea were higher than in the previous year; but Mr. Taylor has great misgivings about the trade, for the Chinese will take no advice about the production and treatment of tea, and the taxation on it is still very high. Hence the quality has seriously declined. Mr. Taylor says that the three most important events of the year connected with trade were the negotiation of the Mackay Treaty, the revision of the import tariff, and the heavy fall in exchange. The new tariff has left the duties very much as before, because of the fall in exchange and the rise in silver prices during recent years. This fall also, which leads to higher currency prices for new imports, coupled with the uncertainty in the future movements of silver, naturally disturbs the import trade, and, by increasing the amount China has to pay to meet its gold obligations, has led to heavier internal taxation, and has thus tended to counteract the temporary advantage of low exchange to exports.

We notice that Mr. Chamney, lately an Assam planter, has presented a report to the Assam branch of the Tea Association on the prospects of tea in South Africa. It is pointed out that the tea-producing capacity, which is at present confined to Natal, is limited to an area of 3,000 acres, and the labour is imported from India at great expense. The import duty of 6d. per lb. protects the colonial tea. The balance of tea to South Africa comes from Ceylon, and there is very little from India. All duties except on tea are 2d. per lb. The present consumption of tea is small, and there is a clear field for exploitation. The selling price of tea is 2s. 6d. to 3s. per lb., and India could supply profitably, selling at 1s. 7d. per lb. and paying all expenses. He strongly recommends India exploiting South Africa.

In this connection it may be pointed out that the annual report of the Durban Chamber of Commerce for 1902 gives figures in excess of Mr. Chamney's estimate, although he mentioned that tea cultivation was extending. According to this report, owing to increased planting on several of the estates, the total acreage of tea plantations in Natal reaches now about 4,000 acres, of which about 3,700 acres will have been picked from during the current season 1902-1903. The manufacture will be about 1,600,000 lbs. weight. The shortage in rainfall will account for reduced output in all districts. The prospective yield for next season should, in consequence of a considerable portion of the acreage of the young tea planted three years ago coming into fuller yield, amount to 2,000,000 lbs. The demand is steadily increasing, and there is room for further development provided the necessary labour is obtainable.

In their fortnightly tea report, which we printed last week, Messrs. Lloyd, Matheson and Carritt showed that in the past ten seasons the consumption of India tea has grown from 48 to 54 per cent., and that of Ceylon tea from 30 to 35 per cent., while the figure for China tea has dropped from 21 to 9 per cent. Comparing the two seasons 1902-3 and 1901-2, the percentage of India tea has remained stationary at 54, but that of Ceylon has receded from 36 to 35 per cent., to the advantage of China, which has risen from 8 to 9 per cent. This is the first upward movement shown by the China product in ten years, though in the previous season the decline had been arrested. It is noticeable that imports of India tea record a shrinkage of 9 million lbs. for the season ended 31st ultimo, while the previous season itself exhibited a decrease of 15 million lbs. Meantime the deliveries for the three seasons have remained stationary at 150 million lbs. Owing to Budget influences the imports into this country for 1900-1 were exceptionally heavy, and the two following years suffer by comparison, but the consumption in America and elsewhere, with the exception of Australia, has increased largely in the period.

Speaking on the subject of Mr. Chamberlain's proposals last week, Sir J. B. Maple said: "A four-shilling duty on wheat would bring in nearly ten millions, and would mean only an increase in the price of the loaf of a farthing per day per working-man, or 1½d. a week. To counteract that increase in the price of the loaf he declared that something could be taken off sugar, and, perhaps, 6d. off tea. No working-man would grudge 1½d. a week more for bread for his family if he can get 3d. or, perhaps, 6d. off his tea. He was a Free Trader, but it must be Free Trade for everybody."

The British Consul-General at Odessa, referring to the tea annually sent from that port into Persia by way of Baku, gives the amount at 350,000 to 400,000 lbs. It is nearly all Chinese tea, and very little has been sent up to the present by the Persian Gulf steamers, but a large quantity is sent from Moscow by rail to Baku and so into Persia. The business is highly profitable to the merchants engaged in it, the tea being mostly of the poorest quality, while the exporters get the benefit of substantial bounties and heavily subsidised transport. But Indian tea is so superior that it would be sure to monopolise the Persian market if it found free and direct entrance overland from the country of its production. To prevent that, the Shah, under Russian influence, seeks to bar it out by heavy Customs dues; while the quarantine regulations are so vexatiously used against incoming caravans that the cost of transport from Quetta is seriously augmented.—*H. & C. Mail*.

#### ABOUT TEAS AND HOW TO JUDGE THEM.

Every dealer in tea should have an apparatus to draw his teas. The importers, jobbers, and wholesale grocers have copper kettles in which the water is boiled with the use of gas; also small tea scales and teacups made for the express purpose; these cups are rather expensive. Some of the country dealers, who have not the benefit of gas, use alcohol for boiling, using the ordinary teacup. By drawing teas in this way the buyer can soon become expert enough to recognize the flavour that pleases his customers.

In drawing teas one should be careful that the kettle is clean and the water fresh. Before putting the water on the leaf the water should come to a good boil. If put on when the water just commences to bubble the leaves will float on the surface.

Proposed by Mr. Congreve and seconded by Mr. Duncan that in the event of any dispute arising regarding local labour—the Maistry bringing up the coolies has the first claim on their services.

The question of a Liquor Tavern in the District being brought up, it was decided that this subject be left over to a future Meeting for discussion.

With a vote of thanks to the Chair the Meeting terminated.

Honorary Secretary.

### CEYLON ASSOCIATION IN LONDON.

The following is from the report of the Executive Committee, for the year 1902-1903, to be laid before the fifteenth Annual General Meeting, on Monday, June 15, 1903.

The number of members on the roll is 159 as against 154 last year. The Association celebrated the King's Coronation by a dinner at the Hotel Cecil on June 23, at which the Right Hon. Sir J. West Ridgeway, Governor of Ceylon and representative, on the occasion, of the Eastern Colonies, presided. A hundred guests attended, and as, on that evening, nothing had yet been made public in regard to the serious nature of His Majesty's illness, the proceedings were in no way marred by the subsequent postponement of the great ceremony. The Committee desires to express its deep sorrow at the sad accident which in January last befell Mr. Henry Bois, whose services to the Association, first as Vice-President, and for the last two years as President, have been so highly appreciated. Since his accident Mr. Bois has been unable to take an active part in the affairs of the Association, and, as it is likely to be many months yet before he can resume his duties, he desires to retire from office. The only death reported during the year amongst the members of the Association was that of Mr. M. P. Evans, a well-known importer of Ceylon tea. The duties of the Executive Committee have been very light. A record of all the more important business of the Association will be found in the report of the tea and produce Committee, which, together with the accounts for the year, are appended in this report.

#### REPORT OF THE TEA AND PRODUCE COMMITTEE FOR THE YEAR 1902-1903.

The Committee has held fourteen Meetings during the year. No further steps have been taken towards the formation of a Joint Indian and Ceylon Tea Growers' Association, as recommended last year by the Joint Special Committee of Indian and Ceylon representatives appointed to consider the matter. The question of damage to teas by fruit, etc., shipped by the same vessel, which was pending at the date of the last report, has since been settled by a compromise with the shipowners. In June last a proposal was submitted to the Committee at the instance of an influential Committee of Indian tea growers for the issue of a circular recommending Ceylon tea growers to stop the manufacture of tea from August 1 to 21 inclusive. The Committee agreed to the proposal provided that support to the extent of 75 per cent. of both Indian and Ceylon crops be obtained prior to the adoption of the scheme. But, on inquiry, it was found impossible to satisfy this condition in respect of Ceylon, and the proposal fell to the ground. It was pointed out, however, to the Indian Committee that Ceylon producers are doing everything possible to keep the supply of their tea within reasonable limits by developing new markets and by the manufacture of green teas. In September last attention was called by the Tea Buyers' Association to the action of the Tea Clearing House Committee in enforcing its rules against its subscribers, buyers and brokers, who had dealt with teas warehoused at Gun Wharf, a bonded warehouse outside the Clearing House. The Committee, while declining to interfere in the dispute, confirmed the view previously expressed that reform in the rules and constitution of the Tea Clearing House was urgently needed. The outcome of the Gun Wharf dispute was that on November 6 a Conference was summoned at the Dock House of representatives of all sections of the trade, at which Mr. H. Bois and Mr. R. A. Bosanquet represented Ceylon importers. Some little delay was caused by the absence on that day of representatives of the tea buyers, but at a subsequent Meeting of the Conference it was

announced that the obnoxious Rule 14 had been suspended, the tea buyers undertaking not to foster the opening of new bonded warehouses, and that the Tea Clearing House, as at present constituted, would at Midsummer cease to exist. A sub-Committee of the Conference, consisting of Mr. R. A. Bosanquet, Mr. J. Lecky, and Mr. V. H. Smith, was appointed on January 27 to draw up a scheme for a new Clearing House to come into force at Midsummer. The report of the sub-Committee, together with the proposed memorandum and articles of Association, was submitted to this Committee on April 20 and approved by the members present. In pursuance of a Resolution of the Committee a General Meeting of the Association was called for May 4, at which the proposals were adopted by a majority. The Indian Tea Association, at its Meeting on May 13, passed a Resolution approving of the proposal for the reconstitution of the Tea Clearing House, subject to an instruction that no provision be made for extending the scope of the institution beyond that connected with the handling and delivery of tea. The Committee has a high sense of the value of the services rendered by Mr. Bosanquet in his conduct of this prolonged negotiation. Owing to the sad accident that befell his colleague, Mr. Bois, the whole burden of the work was left upon him alone. In October last a proposal made by the Thirty Committee for the increase of the tea cess in Ceylon from 30 cents to 50 cents per 100 lb. came before the Committee in a letter from Mr. A. C. Kingsford, Chairman of the Planters' Association, the object of the proposal being to increase largely the funds available for the bonus on green teas. The Committee, on the initiative of Mr. H. K. Rutherford, suggested as an alternative that any amount required, in excess of the sum already allotted, for the bonus on green teas should be made a first charge on the cess of the following year. A circular was issued to those interested inviting an expression of opinion on the subject, and of the replies a large majority were found to be in favour of the Committee's suggestion. The Thirty Committee, however, considered the proposal inadvisable. In February a further proposal for the increase of the cess, set forth in a second letter from Mr. A. C. Kingsford, came before the Committee, the increase to be limited to the last eight months of the current year. The Committee, anxious to meet the views of the Thirty Committee, on this occasion reversed the previous decision, and in issuing a second circular recommended the increase of the cess for the eight months. Of the 117 replies received 59 proved to be in favour of the increase, 10 would have preferred that the extra sum required should be made a first charge on the cess of 1904, and the remaining 48 were against the increase. The matter has since been settled by the Ceylon Government agreeing, if necessary, to advance funds, on the security of next year's cess, to the limit of Rs.1,50,000, the bonus on green tea over and above the estimated 7,000,000 lbs. to be at the rate of 3 cents per lb. A memorial to the Chancellor of the Exchequer praying for the remission of 2d. from the tea duty, in which the Indian Tea Association joined, was presented in January last; and since the Budget was introduced a Resolution has been passed by the Committee in support of Mr. Chaplin's view that where the choice of remission of indirect taxation is confined to two articles, as stated by the Chancellor of the Exchequer, the remission should certainly be upon tea rather than upon corn. Other matters that engaged the attention of the Committee were the French import duty on tea and other colonial produce, the absence of exhibits of tea machinery at South Kensington Museum, the Port of London Bill, the rates of insurance of tea factories using circular saws, and the limits of weight of tea packages as inserted in bills of lading from Colombo to Australia.

#### A TRUE STORY.

England is a long way off and fifty-three years is rather far in the past; still there are a few people among us able to recall what the old country was like in 1850, the year of the incident to be related.

At that time there lived in a detached cottage near an English cathedral city a very eccentric bachelor. He had formerly been wealthy; but having dissipated the greater part of his fortune, he went to the other extreme, and not only became a teetotaller but almost denied himself the necessities of life. For years he kept himself a prisoner in his cottage, his only companions being too ferocious bull dogs named Beer and Whisky.

Two tramps, who chanced to hear that this singular recluse was very well off, and that he was never without beer and whisky, resolved to rob him. Accordingly they one night broke into the lonely man's cottage, and immediately discovered that the Beer and Whisky therein were of quite different brands than they had expected to find. One of the tramps, fleeing in mad terror from the dogs, fell into a mill stream and was drowned. His companion, badly bitten, just managed to climb a tall fence; but fell over it and fractured his skull, so that he died the next day.

The incident caused much excitement at the time, and it had scarcely subsided when the local shopkeeper reported that the only answer he could obtain to his knocking was the growls of Beer and Whisky; whereupon the police broke into the cottage and discovered the old man dead. The inquest was remarkable for a dispute which it occasioned between two doctors. One maintained that death was the result of fright at the recent attempted robbery; the other, that deceased died from chronic indigestion brought about by improper diet and want of exercise, he not having been outside his cottage for eighteen years. The discussion was taken up by the giants of the medical profession, and ably debated, the conclusion reached being that indigestion is a disease arising from infinitely numerous causes, and itself productive of complaints hardly less numerous. But it was not then known (as it has been now for thirty-five years) that indigestion has one sure cure, viz., Seigel's Syrup.

Mr. H. C. Blackie, of Post Office Chambers, Auckland, N.Z., has not kept within his house for eighteen years. On the contrary, he is a traveller and knows the world well. Writing on 16th March, 1903, Mr. Blackie observes: "For years I was a martyr to indigestion and flatulence. Wind used to press on the valve of my heart to such an alarming degree that on two occasions I fainted on the platform when publicly speaking. Dietary and medicinal treatment failed utterly until, on the recommendation of a Professor at the working Men's College, Melbourne, I tried Mother Seigel's Syrup. By taking it regularly after each meal I very soon found relief, and have ever since been able to enjoy all foods without inconvenience. My cure was effected about four years ago, when I had consumed from six to eight bottles; but one bottle was sufficient to afford me relief. I have never ceased to praise the virtues of Seigel's Syrup in the Colonies I visit as commercial traveller, merely in gratitude for the great benefit derived from it—for I have no business connection whatever with its proprietors. What I now say is quite unsolicited. Certainly there is no other such potent and easy remedy for all forms of indigestion." Such is the testimony of an intelligent and experienced man. Of indigestion it may be said, as was said of fame, some inherit it, some achieve it, and some have it thrust upon them (as in the case of persons compelled to lead a sedentary life); but *all* may eradicate it by following the example of Mr. Blackie.

## MARKET REPORT.

### COFFEE.

Messrs. G. Duuring & Zoon state in their Monthly Market Report dated Rotterdam, May 30th, 1903, says:—The month under review is devoid of interest, scarcely any alteration in values, whilst business was restricted within the narrowest limits.

The Trading Company's sale of May 5th only comprised 25,000 bags of which 9,000 bags good ordinary, selling at  $25\frac{1}{4}$  cts., as against  $26\frac{1}{2}$  cts., in the previous month. This new shrinkage caused a fair demand, which enabled holders to raise their limits to 26 cts.

Next Trading Company's sale will be held June 23rd.

First hand sales were quite insignificant and second hand dealings were equally unsatisfactory, chiefly consisting of better grades Santos Coffee at unchanged values.

Arrivals with us were small, both from Java and Santos, the latter amounting to 42,400 bags, against 70,000 bags deliveries. The stock is now 853,000 bags against 880,600 bags last month.

Afloat from Santos to Rotterdam direct:

31,000 bags per ss. <i>Markomania</i>	...	...	sailed May 4th.
20,000 " " " <i>Erlangen</i>	...	...	" " 20th.

51,000 bags,

against 66,500 " in 1902.

" 76,500 " " 1901.

" 13,000 " " 1900.

Loading ss. *Halle*.

Afloat from Java to Holland:

<i>Salak</i>	...	sailed April 22nd.	<i>Koning Willem I.</i>	sailed May 13th.
<i>Java</i>	...	" " 24th.	<i>Ardjoeno</i>	" " 20th.
<i>Kedirie</i>	...	May 6th.	<i>Soerabaya</i>	" " 22nd.
<i>Lawoe</i>	...	" 7th.	<i>Stassfurt</i>	" " 23rd.
<i>Memnon</i>	...	" 10th.	<i>Prinses Sophie</i>	" " 27th.

Loading ss. *Ambon, Soembawa, Rhipesus, Koningin Wilhelmina, Besoeiki and Merapi.*

Terme business was on a very moderate scale, owing to utter want of fluctuations, quotations being  $15\frac{1}{2}$  cts. per September,  $15\frac{7}{8}$  cts. per December,  $16\frac{1}{4}$  cts. per March and  $16\frac{1}{2}$  cts. per May. Dealings amounted to 25,500 bags or 385,000 bags since first January. May dealings 331,500 bags, tenders 78,000 bags.

In the speculative market the deadlock continues and also less avidity was shown by home trade.

We are nearing the close of another crop-year with the Brazils and all interests seems centered upon the coming crop. No fresh sensational news came to hand, although the Rio-zone production is said to be smaller this year as previously anticipated. Estimates for the Santos crop owing to the greatly extended area under cultivation, become more difficult, but taken into consideration

Agents for LEA & PERRINS'

WORCESTERSHIRE SAUCE.

**CROSSE & BLACKWELL'S LTD.**

By Special Warrant  
Purveyors to

His Majesty  
The King.

**CELEBRATED OILMAN'S STORES.**

that the present crop is unmistakably a very early one, receipts are proportionately small. The question, as to how low a price Coffee can be produced, has not resolved itself yet, and as consumption has not kept pace with production, it is only natural that a feeling of caution impresses itself on trade, more so as consuming countries owing to heavy stocks, are practically independent of the Brazils.

European stocks were only 50 tons less at the end of April, whereas the visible supply again decreased 5,220 tons.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated June 12th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1903-1904 ... ..	28,222	26,248	2,481
1902-1903 ... ..	44,722	59,940	4,751

28,222 pkgs. INDIAN  
26,248 " CEYLON  
2,481 " JAVA

Total 56,951 packages were offered in public auction this week.

The heavy clearances of last month were sufficient to bring the total deliveries for the season up to within a fraction of a year ago, at which time *duty-paid* stocks were exceedingly heavy, whereas at present there is no doubt they are unusually light.

The total deliveries for the last three years afford no indication of the actual progress of the Trade, owing to the large quantities taken out of bond in anticipation of the Budget in the two earlier years; but if we go back to the time before the commencement of the war, *viz.*, to the season ending May, 1899, we see that the delivery was only 266 million lbs., while figures for the season just closed were doubtless unfavourably affected by the possibility of reduced taxation.

INDIAN.—The market opened with rates about up to those ruling before Whitsuntide with a generally steady demand, especially for medium and better liquoring teas, the only weakness being noticeable in commonest grades. An invoice of 79 packages New Season's Tea from "Chubwa" realised 8½d. per lb. Exports to U. K. second half of May 1,645,000 lbs., against 2,229,000 lbs. From 1st

April 2,452,000 lbs., against 3,390,000 lbs. in 1902. The following averages are worthy of note:—"Beheading," 1/3¼; "Amal. T E Co. Latt.," "Con T & L Powai" & "Digultarung," 11¼d.

Week's av. of tea on Garden Account Season 1902-3, 23,380 pkgs., av. 7-92d 1901-2, 11,690 pkgs., av. 6-85d.

Tea sold on Garden Account 1st June to date 1902-3, 1,231,446 pkgs., av. 7-50d. 1901-2, 1,319,194 pkgs., av. 7-63d.

CEYLON.—With a good general demand rates current before the holidays were well maintained, finer teas showing a tendency towards improved prices. Exports to U. K. May 10,250,000 lbs., against 9,750,000 lbs. From 1st January 41,750,000 lbs., against 44,500,000 lbs. last year. Estimate for June 11 to 11½ million, against 13,000,000 lbs. shipped June, 1902. 35,541 packages are advertised for sale next week. The following averages may be mentioned:—"Portmore T Co.," 1/0¼; "Carolina T Co. Goatfell," 11¼d.; "Talawakelle T Co.," 11¼d.; and "Dimbula V T Co. Tillicoultry," 11d.

Average for week 7-60d, against 6-63d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 429,054 pkgs., av. 7-66d. 1902, 499,874 pkgs., av. 6-94d.

JAVA.—Javas sold with good competition at rates a trifle below those ruling a fortnight ago.

### CINCHONA.

The quantity offered at the monthly auction on Tuesday was exceptionally small, the six catalogues comprising 771 packages only. There was a good demand, and the bulk was disposed of at rather easier rates compared with the previous London auction, the average unit being fully 1½d for the manufacturing-bark against 1½d. Most of the druggists' bark was sold at high prices, being exceedingly rich in cinchonidine.

The following table shows the quantity of bark offered and sold:

	Offered.	Sold.
East Indian cinchona ... ..	211	168
Ceylon cinchona ... ..	169	104
South American cinchona ... ..	391	391
	771	663

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA; GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN  
RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/11 & 2/6.

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

The following approximate quantities represent the purchases of bark by the principal buyers:—

	Lbs.
Messrs. Howards & Sons	25,300
The Brunswick factory	14,650
The American and Italian factories	10,580
The Frankfort-on-Main and Stuttgart factories	5,700
Druggists, Brokers, etc.	19,450
Total quantity sold	75,680
Bought in or withdrawn	20,120
Total quantity offered	95,800

The following prices were paid:

**SOUTH AMERICAN.**—Bolivian cultivated Calisaya,  $5\frac{1}{4}$ d to 8d; and broken,  $3\frac{3}{4}$ d to  $5\frac{1}{4}$ d.

**CEYLON.**—Succirubra, renewed bright chips,  $3\frac{3}{4}$ d; 26 cases red silvery druggists' quill,  $5\frac{3}{4}$ d to  $6\frac{1}{2}$ d.

**EAST INDIAN.**—Succirubra, branch,  $4\frac{1}{2}$ d; chips,  $1\frac{7}{8}$ d to 2d; root,  $2\frac{3}{4}$ d; good,  $5\frac{1}{2}$ d. Crown, chips,  $3\frac{3}{4}$ d; shavings,  $2\frac{3}{4}$ d; renewed,  $4\frac{3}{4}$ d. Hybrid and Ledger, siftings, 2d; branch,  $1\frac{1}{4}$ d to  $3\frac{1}{4}$ d; chips,  $2\frac{3}{4}$ d to  $3\frac{5}{8}$ d; root,  $2\frac{1}{2}$ d to 5d; and renewed,  $3\frac{3}{4}$ d to  $4\frac{7}{8}$ d per lb.

The auction to be held at Amsterdam on June 18 will constitute a record, the quantity to be offered—viz., 10,890 bales and 556 cases—being the largest ever offered at a single auction. The total weight of the bark is 996,509 kilos, containing 47,403 kilos. sulphate of quinine (1,659,000 oz.). The manufacturing-bark contains an average of 5.20 per cent. quinine sulphate, against 5.42 per cent. for the May auction, and an average of 5.51 per cent. for the ten auctions of 1902. In the London drug-auction 10 cases long thin Calisaya quill were limited at 1s per lb.

## QUININE.

After the close of our last report a steadier feeling prevailed, the week closing with small sales for December at  $11\frac{1}{2}$ d per oz., and sellers for spot at  $10\frac{7}{8}$ d for good German sulphate in bulk. This week the market has been unchanged with a continued quiet tone, and not until after the Amsterdam sale next week (when forty-seven tons of quinine in bark form will be offered) is any development looked for. A small sale of December delivery has been made at 11d.

## CARDAMOMS.

A moderate supply was offered, over two-thirds of which were sold at an irregular decline of about 2d per lb. below valuations on medium and lower grades, while the finer qualities were about steady. The following prices were paid: Ceylon-Mysore, extra bold good pale, 2s 3d to 2s 5d; good medium and bold pale, 1s 9d to 1s 10d; bold medium pale, 1s 3d to 1s 6d; medium yellowish, 11d; small and medium pale, 1s to 1s 2d; small round dull,  $10\frac{1}{2}$ d; peas, 9d to  $9\frac{1}{2}$ d; brown and split,  $8\frac{1}{2}$ d to 10d, and small splits, 9d. Seed sold at from 1s to 1s 2d per lb.

## VANILLA.

At auction on Friday, June 5, the important supply of 846 tins was offered, and with a slow demand over 600 tins were sold at a decline of 2s per lb. for good long, 1s. for short, and 1s. for Brown and foxy beans. Good to fine chocolate Seychelles and Mauritius,  $7\frac{1}{2}$  to  $8\frac{1}{2}$  inches, sold at from 15s to 23s,  $5\frac{1}{2}$  to  $7\frac{1}{2}$  inches 7s to 14s,  $3\frac{1}{2}$  to  $5\frac{1}{2}$  inches 5s 6d to 7s 6d, fair 7 to  $8\frac{1}{2}$  inches 9s to 16s 6d,  $5\frac{1}{2}$  to  $6\frac{1}{2}$  inches 8s to 10s. 4 to  $5\frac{1}{2}$  inches 5s. to 8s 6d, ordinary foxy short 4s 9d to 5s 3d, medium 5s to 6s 3d, common and split 3s 9d to 7s, per lb.

# PLANTING

# OPINION.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JULY 11, 1903.

[No. 27.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 17th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Coorg.

POLLI BETTA, 8th July—*Weather*

—The monsoon is still continuing extraordinarily light. There was a small increase of rain yesterday. The paddy fields are very dry and the ryots are crying out. Coffee is looking well. Removing and burning borer is still in hand. Most places have been gone over once. *Labour*—Canarese have not been coming in. We are getting along with mostly Coast coolies. *General health*—Good. Every effort is being made to stamp out plague in Veerajapett.

#### Kotagiri.

9th July.—*Weather*—Very showery, with an extraordinary amount of thunder

for a monsoon. Rainfall for past week 2.60 inches, of which nearly 2 inches fell within one hour on the evening of the 7th instant. *Work*—Planting out supplies in full swing and weeding. *Health*—Good. *Labour*—Plentiful. There is a far greater influx of natives into Kotagiri than is pleasant, all coming from Ootacamund to escape the plague there which seems to be steadily increasing.

### THE ST. LOUIS EXPOSITION, 1904.

IN previous articles we have given some details of the arrangements proposed in regard to the St. Louis Purchase Exposition of 1904. We have urged the desirability of having Indian Coffee represented thereat. That Indian Tea will be represented, is a foregone conclusion. In respect to Coffee, however, there is a feeling of hesitancy or diffidence manifest in some quarters. The belief is widely prevalent that there are other producing centres of mild coffees that are, geographically and commercially, more conveniently situated than India is with respect to American markets. That this is a fact, there is no gainsaying. When, however, we investigate the position more closely we find that these

favourably situated countries do not in reality dump the bulk of their supplies down on the United States. They ship large quantities to England, thus weakening prices there. On the other hand, Java, which has no advantages that India does not possess, supplies considerable quantities of mild coffees to the States, where they are sold as 'East Indian' and command comparatively good prices. One result of this appears to be that there is a belief among many dealers in America that 'East India' Coffee possesses a very distinctive flavour, and that the taste for it must be acquired. Of British Indian Coffee we know that there is no flavour of such a peculiar kind as to involve the necessity for an acquired taste relative to the infusion "in the cup." We know that it is a very fine Coffee. The best sorts are delicate yet full-flavoured; and the palate accustomed to the roughest of Brazil descriptions would probably turn with relief to the enjoyment of first-class Mysore and Coorg coffees. The question is, whether the producer of genuine East Indian Coffees will take the trouble to bring his coffees under the notice of the Americans, and will then throw out a small sprat or two in the hope of catching, not the mackerel, but the leviathan whole of coffee consumers.

There are many among our readers who cannot fail to remember the time when it was urged that Ceylon and Indian teas could find no market in the States. Why? For identically the same reason: the American palate was not accustomed to the distinctive flavour of these teas. Were they available at lower prices than China or Japan leaf? Certainly not. Yet, on their merits, they have forced a way into the American markets. Perhaps the wedge has not been driven far in up to the present time, but it is being hammered home. What Indian Tea can do, Indian Coffee should have hopes of doing. We do not for a moment suggest that an attempt should be made to compete with Brazil Coffees on level terms. What we do urge is that, with Coffee, as with Tea, planters should try to find room "on top" in the United States, and that by doing this they should strive to reduce the volume of offerings on European markets. For years past we have heard much of the propagation of the gospel of Tea, as opposed to that of Coffee; of the promulgation of a belief in good tea as against an idea that anything that is called "tea" and will give an infusion when left in boiling water for a few minutes. Is it not time that another propaganda should be preached: that of really delicious, refreshing, invigorating

Coffee as against sorts that might almost be guaranteed "to kill at 100 yards?"

Working in with the Indian Tea Association, the coffee industry of Southern India might secure adequate representatives at St. Louis with a minimum of outlay. Properly pushed on an occasion such as this, Indian Coffee ought to be able to establish its superiority over other descriptions, and to place itself in a position to demand and to obtain a fair price. It is well known that in the tea markets of the world there is, the year round, a demand for teas "for price." So it must always be with Coffee also. There is, however, always another demand, that for *quality*; and we are firm believers in the doctrine that, in the long run, quality will pay the best. This it is that we urge upon coffee-planters in Southern India. They should endeavour, by reasonable means and at reasonable cost, to procure for a fair proportion of the pick of their crops a market in the greatest coffee-consuming country in the world. They should not regard this as hopeless, until they have at least made a vigorous and sustained attack upon that country. Tea-men have shown what *can* be done; and though Coffee-men in India are unfortunately not so favourably placed, financially, as tea-planters, they have this knowledge to urge them forward; the knowledge that they must either open up new markets or, as coffee-planters, die. It is, or should be, a great incentive to effort. We do not for a moment believe that coffee-planters in this country are yet prepared to band themselves together and march part, chanting the old, sad exclamation of the gladiators to CÆSAR—"morituri te salutant." In CÆSAR'S days, as now, some were doomed to die but not all, and we would fain picture to ourselves our coffee-planters as among the hopeful, uttering such words, if at all, more as a sort of charm or as a matter of traditional usage than as a belief. This much is certain, however; they must fight to the very best of their ability or be content to die. We urge them to fight, to fight the Americans, and to fight them at St. Louis next year.

### BOARD OF TRADE RETURNS.

MAY 1903.

**Cocoa (Raw).**—Duty-paid entries in the United Kingdom for the past month were much heavier than in 1902, but those up to date appeared very short, and the stock in bond largely preponderated over that of a twelve month back.

In the first five months.	1903.	1902.	1901.
Imports ... lbs.	27,769,074	29,403,054	25,605,366

### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

### The Planters' Labour Bill.

A Madras G. O. dated 26th ultimo says:—"The District Magistrates of Malabar, the Nilgiris, South Canara, Salem, Madura, Coimbatore, Tinnevely and Vizagapatam will be requested to report, after making such enquiries, and consulting such local bodies and persons interested in the matter as they may deem necessary, whether it is desirable that the provisions of the Madras Planters' Labour Act, 1903, should be brought into force in any areas within their respective districts. Should a District Magistrate recommend the extension of the Act to any area in his district, he should state whether he considers that a notification should be issued

under section 3 (1) (b) of the Act specifying any products other than tea, coffee, pepper, cardamom, or cinchona, the production of which on land will constitute it an estate within the meaning of that clause. He should also submit the necessary draft notifications for the extension of the provisions of the Act as well as proposals regarding the forms and rules which may appropriately be framed under section 42 of the Act."

#### A MEMORIAL TO GOVERNMENT.

The following Memorial to the Madras Government is now being signed by planters on the Nilgiris:—

We, the undersigned planters beg to protest against the extension of this new Labour Act at present to the Nilgiri District for the following reasons:—

We do not require it, and will, at present in no way be benefited by it, as we have no difficulty in obtaining labour in this district, or in recovering any advances given to the maistries. Some of us have been planters for 40 years and have never required a Labour Act. Our coolies have been well looked after and when necessary are sent to the local hospital, and the same coolies return year by year to the same estates.

From this it will be seen that we will derive no *quid pro quo* by the extension of the Act to the Nilgiris.

The great drawback to this Act is that of Government interference, and the loss that will have to be sustained by the planters thereby, and it opens the door to constant worry by the Government inspection.

In these hard times the planter has to consider every rupee that is expended, and how then can he afford to build pukka lines hospitals, etc., besides medical attendance and other expenses necessary for the working of the new Labour Act?

Another great drawback is that everything appears to be left in the hands of the Local Native Magistrate, who is ignorant of the working of an estate.

We all know how timid natives are, and to require coolies and maistries to sign all contracts in the presence of a Magistrate will not only interfere with our present labour-supply, but drive many coolies from these Hills.

For these and many other reasons it appears to us that the Nilgiris is the last district to which this Act should be extended. Let the Act be tried elsewhere where it is required, and only extended to these Hills when found to be absolutely necessary.

We most firmly protest against the extension of this Labour Act at present to the Nilgiri District.

#### COFFEE NOTES.

**Coffee in Roumania.**—Mr. Vice-Consul Dundas reports that imports of Coffee into Roumania from the United Kingdom were as follows:—

	£
1897	13,413
1898	8,136
1899	7,840
1900	6,713
1901	4,980

Commenting on trade in 1901 he remarks that imports come mostly from Genoa, Hamburg, and Trieste, *already coloured and polished, etc.* The italics are, of course, ours.

**Quality of New Crop Rio.**—Norton, Megaw & Co., Rio say of the Rio coffee crop: "New crop coffees, both washed and ordinary, have been arriving freely of late, confirming the anticipations of a very early Rio crop. Both kinds show a small bean and the ordinary coffees average of very low grade, the bulk being between Nos. 8 and 9 New York Exchange standards. While we think it is still early to form a definite opinion as to the coming crop, the quality of these entries has led to ideas as to quantity of the 1903-04 crop being reduced, and we think that consuming centres

must take into consideration the possibility that it will be deficient in weight and of low average grade."

Karl Krische & Co., Rio, estimate the receipts of coffee at Rio during June at 200,000 to 250,000 bags and at Santos 400,000 to 450,000 bags, or a total of 600,000 to 700,000 bags.

**Sao Paulo Legislation.**—"Bill will not be enforced," is the cable message received in New York from Naumann, Gepp & Co., Brazil, referring to the recent Sao Paulo legislation restricting the export of Santos coffee.

There is an impression abroad that Lewisohns are trying to get out of coffee, though of course they deny it themselves. I do not think that, with the enormous visible supply and the wholesale and retail trade both fully supplied, and an immense crop looming in the immediate future, there is much room for optimism, or that Lewisohns or anyone else will be inclined to load up any further. The only point in favour of highest prices seems to me to lie in the possibility of labour running short of the plantations, as, at present prices, there can scarcely be enough to pay for picking. Straws show which way the wind blows, and the arrival here of some 170 Italian *Colonos* by the ss. *Byron* seems to indicate that such emigration has already commenced. Indeed, I believe that it would have begun last year but for Lewisohns being in the market and keeping prices up. There are now no "shorts," as the market is too low; and no "bulls," because of the tremendous supply. There is, however, an opinion in some circles that prices will improve in about three or four months, but I don't know on what it may be founded, as at present I can see no reason whatever for a rise.—American Paper.

**Coffee in London.**—Although there has been no pressure to sell from Brazil, and no new feature as regards crops, yet says the *Produce Markets' Review* of June 13, there has been a steady and continuous fall in all the different terminal markets, and business has been done at 9d. under the previous lowest record. Apparently the fall has been brought about by speculators who have held options for a long period and at last have determined to close their accounts. Should this be the case there is every reason to expect a recovery, as the deliveries evidently point to a consumption having been reached of 11 million bags of Brazil in the year, a total only slightly less than this year's production, and rather more than is looked for in the coming one. In the auctions, values of common descriptions have been correspondingly depressed, and lower rates had to be accepted for Colombian, which has been arriving in large quantities of late, while foxy green Nicaragua has been sold at a decline of fully 3s. from a month ago. These coffees have, however, little influence upon home trade descriptions, and values for such have been fully maintained.

**Nicaragua Coffee.**—Consul Chester Donaldson writes from Managua:—"The present crop is very small, and will probably be less than 100,000 centals (10,000,000 pounds)—about half the average yield; and although for several years past coffee planting has not been profitable in this country, and many of the principal planters have been forced into

bankruptcy, there seems to be no decrease in the acreage devoted to this industry and everyone expects better times.

The market value of coffee to-day in this city is from 40 to 60 pesos paper currency, or about \$7 to \$10 gold, per cental 100 pounds). The crop in the Departments of Jinotega and Matagalpa—where the finest grades are produced owing to the salubrious climate and the rich, moist soil—has, for the first time in many years, been a sad disappointment to the energetic planters (mostly Americans) who have settled there.

\* \* \*

The coffee crop of Guatemala is again reported ruined by the volcanic demonstrations in that country, and this time the shortage is reported as 25,000,000 pounds. We are thus reminded of a similar occurrence nearly one year ago with as fearsome reports regarding the extent of the damage to the coffee, all of which turned out to be much exaggerated. Guatemala is a country difficult to judge in the matter of coffee growing. When the disaster reported last year became known, one large San Francisco house sent a special and competent representative down there to report, and such was the character of his advice that the house was warranted in conceiving a great shortage in the coffee, and it proceeded to buy all that was in sight in and out of Guatemala. It seemed a corner was in sight, but lo! presently every nook and crevice in Guatemala yielded up its mite and the whole when gathered in put to flight the visible shortage and there was gnashing of teeth. It thereupon follows that Guatemalan coffee reports are not to be accepted until all the returns are in.

\* \* \*

From Brazil now comes the report that the Sao Paulo law restricting the export of coffee by twenty per cent. will not be enforced. This is to be regretted for the sake of seeing just what would have happened. There were not a few who had faith in the law if conscientiously executed. One of these, basing his remarks on such an assumption, goes on to say the following of interest here:

"The big roasters in the States and Europe who more and more monopolize the market will have to change their method of working. They will be obliged to roast a better quality and sell it at a higher price lowering the price margins between the goods for wholesale consumption, which they alone can produce, and the small roaster who caters for the middle and better classes. As a consequence the grocers will have to bring down their prices, as otherwise the big roasters would with their better goods take their clients too. In a roasting concern where thousands of bags are wasted daily, an admixture and a large one sometimes, as the analyses you published sometime ago of very low grades showed, can be made without materially altering appearance to an unexperienced eye. This will be done away with when the exportation of all low grades is prohibited."

\* \* \*

**Coffee Shrinkage.**—All the coffee prophets were shamed last week, says the *Tea and Coffee Trade Journal* of 9th ultimo, when the complete figures of the world's visible supply of coffee on June 1 were found to be 11,856,843 bags, which was a shrinkage of 391,135 bags since May 1, when the visible supply was 12,248,978 bags. As the deliveries everywhere during May had seemed less than normal, little if any change in the June figures was expected, but the reduction of practically 400,000 bags is substantial, and were not the supply as it is so great, there might have been occasion for felicitations. Still for this *multum in parvo* the trade is duly grateful.

The explanation for the decrease is found in the correction of the count of the stock of coffee at Hamburg, which fell 97,000 bags below expectations, fulsome deliveries and in the small arrivals of mild coffee in Europe of 231,000 bags. Where the coffee in Hamburg has gone to is a question. The surmise is that it has been shipped to France, where rumours are current of an increase in duties on coffee from 136 francs to 156 francs per 100 kilos. Such a duty

would stimulate a demand for spot coffee, providing against the duty, and may be the coffee that has disappeared is serving this end. Havre, too, unexpectedly showed a decrease in stock of 50,000 bags, whereas an increase had been looked for.

#### THINGS A YEAR AGO.

The world's visible supply is now nearly 500,000 bags within the supply noticed one year ago. It would seem probable that there will be a further shrinkage during June, and if so the new coffee year beginning July 1 will start on practically even terms with the year now about to close. This circumstance is not especially a happy one, but at all events the darkness is not much blacker than it was one year ago at this time.

Deliveries or consumption during May were 1,310,000 bags, which again was not looked for so extensively as they prove, and they show that the world will have taken care of all the coffee that was grown in the present coffee year.

The Brazil product during the year will at least reach 12,000,000 bags, as was predicted by trustworthy observers. The movement during May was 614,000 bags, fairly full but according to expectations. The receipts to June 1 were 11,697,000 bags.

\* \* \*

**The U. S. Coffee Market.**—The market rules quiet in coffee and at slightly easier values in the lower Brazil grades, says the *Tea and Coffee Trade Journal* of 9th ultimo. As noted elsewhere the shrinkage in the world's visible supply is nearly 400,000 bags which was not looked for, but there has been no improvement in values and tone on that account. The inclination is to see what Brazil will do in marketing the crop now grown.

From Brazil firm offers include Rio No. 7, 4½c., c. and f., shipment by. In the spot market for invoices Rio No. 7 registered a new mark in 5 1/16c. Other quotations are 4 1/16c. for Rio No. 8, 5½ to 5¾c. for Rio No. 4, and 5½ to 6c. for Santos No. 4.

The future market is flat on absence of the speculative interests. Prices tend to sag. June hovers around 3.70 and September 3.90.

In milds arrivals continue heavy, more than immediate requirements, and prices are therefore easier. Good roasting and drinking coffees are scarce, and whether Brazil or otherwise command stiff prices. Good Cuxta is from 8¼ to 8½c. East India growths are weaker.

Total stock in United States June 1, 2,585,938 bags against 2,300,387 bags June 1, 1902. Brazil stock in the United States June 6, in store and afloat, 2,357,277 bags against 2,491,008 bags at the same time last year. Other than Brazilian, 370,075 bags, against 331,192 bags last year.

Brazil coffee in New York June 6, 2,002,000. Stock in New York in other coffees June 1, 269,743, in San Francisco, 93,043 bags, and in New Orleans, 7,289 bags. Visible supply in the world of all coffees, June 1, 11,856,843 bags.

#### TEA NOTES.

**Natal Tea.**—Natal is one of the colonies which, with a little encouragement, might become a useful contributor to the Empire's tea and sugar supplies, just as the Cape might help out our wine and fruit, the Orange Colony our grain, and the Transvaal our tobacco and many other "lines." The annual report of the Durban Chamber of Commerce for 1902 states, with regard to tea cultivation in Natal, that, owing to increased planting on several of the estates, the total acreage of tea plantations reaches now about 4,000 acres, of which about 3,700 acres will have been picked from during the current season, 1902-1903. The manufacture will be about 1,600,000 lbs. weight. The shortage in rainfall will account for reduced output in all districts. The prospective yield for next season should, in consequence of a considerable portion of the acreage of the young tea planted three years ago coming into fuller yield, amount to 2,000,000 lbs. The demand is steadily increasing, and there is room for further development provided the necessary labour is obtainable.

\* \* \*

**Tea in London.**—INDIAN TEA.—The market opened with a distinctly better feeling, the bidding was more animated,

and importers were able to, says the *Produce Markets' Review* of 13th ultimo, dispose of a larger proportion of their offerings. The demand was mainly concentrated on the good medium and finer descriptions, and an improving business was transacted. Prices have shown a steady to firmer tendency which is likely to be well maintained, as most of the Assam gardens have disposed of the balance of the past season's crop, and during the next few weeks there is every probability of materially diminished supplies, and a less useful selection. For the common teas the easier rates recently established continue, and a fair quantity is to be obtained from 6d. to 6½d., which shows a decline from the highest point of a ¼d. At the public sales held in Calcutta on the 5th instant 8,000 packages were offered and met with an active demand at prices fully up to those in the preceding sale, the finer qualities fetching very firm rates. Shipments for the United Kingdom for the second half of May were 1,645,000 lbs. against 2,229,000 lbs. in 1902, while those for the past two months were 940,000 lbs. smaller. The reports generally do not speak favourably of the prospects of the coming crop; with the exception of two or three districts, the pluckings fall short of last year. The public sales on this side for next week will comprise about 22,000 packages, or 6,000 smaller than the last.

**CEYLON TEAS.**—This market opened after the Whitsun recess with a good demand, and the auctions on Tuesday passed off at about previous rates. Teas for "price" showed no change, 6½d. still being practically the lowest quotation, although some inferior grades of Colombo-bought Teas caused a few lower quotations. Medium Broken Pekoes continue to show the same good value, but more attention is beginning to be paid to them, as in some instances these kinds, more particularly from 7½d. to 9d., marked a fractional advance. Most of the finer sorts now arriving are of poor appearance, and Teas with a well made tippy leaf are difficult to obtain. At the public sales 26,200 packages were brought forward, of which about 3,500 were withdrawn.

**CONGOU TEA.**—At the public auctions held on Wednesday some 1,189 packages were offered, consisting almost entirely of the lower grades, which sold at steady rates. This class of Tea is now freely used by the blenders for their cheap blends, and consequently a considerable business has been done. Owing to the nearness of the arrival of the new season's crop very little has been done in the finer grades.

**OTHER CHINA TEAS.**—The demand for Green Tea continues quiet, and only a limited business is reported. At Thursday's public auctions Gunpowders showed a slightly easier tendency, but the Teas offered were, in most instances, of poor quality. Scented and Fancy Teas remain unchanged. The following are the figures for the week:—922 packages of Green Tea were brought forward, of which 135 were withdrawn, and about 100 packages of Fancy Tea were offered for public auction.

\* \* \*

**Calcutta Tea Sales.**—The general average of the tea sales on the 26th ultimo was six annas.

For the sale on 3rd instant 15,300 packages were catalogued. Assams and Darjeelings are in poor supply; but are of good quality. Among Dooars there is nothing of quality, it being the usual monsoon tea. Cachars and Sylhets show moderate quality. A few green tea invoices from Kumaun are good;

and the remainder of the green teas are average. There was a slightly stronger feeling amongst buyers at sale on the 3rd instant and previous prices were more than fully maintained. One striking feature of the sale was the manner in which indifferent and "weathery" Dooars kinds were avoided, with a fall in prices as a result. Sellers apparently were not disposed to accept the lower rates, due entirely to the inferior value offered, and many Dooars marks were withdrawn. The soundness of this policy remains to be seen, as the teas are almost certain to be outclassed when they come up for sale again later on. Assam teas were in keen request yesterday, and buyers were paying higher prices to secure their requirements. Darjeeling and Cachar marks also attracted considerable attention, "stand out" invoices commanding prices slightly dearer than those which ruled last week when compared mark for mark. Bombay buyers were very much in evidence, and they secured a fair portion of the sale, the bidding from this quarter was spirited and all suitable Pekoes were readily taken, a slight advance in values being marked. The Colonial and other markets so appeared to be operating freely, while is rumoured that a fair portion of yesterday's sale will be diverted to London.

Green teas were not in very keen demand, but when quality was of the right description some fair prices were paid. The position in London is without change, and the market there continues to rule generally steady. A contemporary yesterday published a special cable from London to the effect that buyers in Mincing Lane were operating with caution, and the report also indicated the market at Home as being slightly easier. This news is not confirmed by private cables, and looking to the fact that out of 16,000 packages offered during the week, 15,000 packages are reported as sold, it is a matter of difficulty to see in what direction Home buyers are acting cautiously. Statistics relating to the movement of Indian tea in London to the end of last month, indicate a position strongly in favour of sellers. During last month the landings totalled one million less than in the corresponding month of last year, while for the same period, deliveries out of Bond into consumption, were two-and-a-half million in excess. Stocks are being rapidly depleted, and on the 30th ultimo they were six-and-three-quarter million pounds less than the 1902 figures to the same date.

\* \* \*

**Tea Statistics.**—A report by Messrs. Lloyd, Matheson and Carritt, contains some interesting statistics with regard to the percentage of consumption of India, Ceylon, and China teas for the past ten seasons. In this period the consumption of India tea has grown from 48 to 54 per cent., and that of Ceylon tea from 30 to 35 per cent., while the figure for China tea has dropped from 21 to 9 per cent. Comparing the two seasons 1902-3 and 1901-2, the percentage of India tea has remained stationary at 54, but that of Ceylon has receded from 36 to 35 per cent., to the advantage of China, which has risen from 8 to 9 per cent. This is the first upward movement shown by the China product in ten years, though in the previous season the decline had been arrested. It is noticeable that imports of India tea record a shrinkage of 9 million pounds for the season ended 31st ultimo, while the previous season itself exhibited a decrease of 15 million pounds. Meantime the deliveries for the three seasons have remained stationary at 150 million pounds. Owing to Budget influences the imports into this

country for 1900-1 were exceptionally heavy, and the two following years suffer by comparison, but the consumption in America and elsewhere, with the exception of Australia, has increased largely in the period.

\* \* \*

One of the largest Sylhet gardens is making two million pounds of tea, and has sold forward privately the remainder of the crop to London buyers.

\* \* \*

Millions of lbs. of Ceylon tea dust, says the *Indian Planters' Gazette*, are already going this year to China to improve the China bricks; and excellent prices are being paid.

\* \* \*

**U. S. Tea Association Constitution.**—The National Tea Association of the United States has now adopted its constitution. Two of the important articles are these:

#### ARTICLE II.

The objects of this Association are:

1. To take concerted measures to establish tea in its natural position as the most popular and desirable of beverages.
2. To promote the consumption of tea by insuring its preservation from adulteration and spurious imitations; especially by upholding the Tea Inspections Law, which guarantees to the American consumer the absolute purity of the tea admitted into the United States.
3. To promote the interests of the members in any way that circumstances may require.

#### MEMBERSHIP.

Section 1.—Any shipper of teas into the United States, or importer of or wholesale dealer in tea, shall be eligible to membership in the Association. Corporations and firms are eligible for membership in the same manner as individuals.

\* \* \*

**Advices from Shanghai.**—Wisner & Co., writing from Shanghai, May 15, say:

**BLACK TEAS.**—Our latest written advices from Hankow are dated the 12th instant: The first musters of Keemuns were shewn on the afternoon of the 9th instant, and settlements were reported the following morning. To date 21,000 packages have been offered and the greater part settled. These teas are attractive, the cup being of good strength and distinctly good quality; the infusions are bright and the style is very good. Prices have ranged from 45.00 to 7.00 taels per picul.

Only a few musters of Ningchows have been shewn. No Hankow district teas have yet been offered.

**GREEN TEAS.**—The only news we have of new crop Country Teas is that teamen are paying very high prices for the unfired leaf.

**WENCHOW GREENS.**—Musters of the new teas are expected about the 15th of June. The teas are likely to prove of good quality. Prices paid in the country are considerably over last year's.

**PIGSEYES.**—Musters are expected during the first week of June; it is believed the teas will be of good quality but first cost is, it is said, extreme.

Some quantity of Green Tea is being made in Foochow, but no details of quality or prices are yet available.

\* \* \*

#### Ceylon Tea: Monthly Shipments to United Kingdom and Estimate.

Estimate for	June 1903—11 to 11½ million lbs.
Total Shipments „	1903 11,250,000 lbs.
„ „	1902 12,563,050 lbs.
„ „	1901 11,425,044 lbs.
[Estimate for July 1903—10 to 10½ million lbs.]	

\* \* \*

**Colombo Tea Sale Report.**—At to-day's sale reported Messrs. Somerville & Co., of Colombo, on the 1st instant, there was keen competition for all kinds at decidedly firmer rates, and especially for Broken Pekoes and common sorts. Quality in many instances shewed some improvement. Our

private wire reports:—“The poor quality of the bulk of supplies is having a depressing effect, and though we cannot quote an actual all-round fall in rates, yet things are far from brisk with an occasional easier tendency.” Teas for price declined ¼d. Green Teas were in demand at fully previous rates.

\* \* \*

**The Indian Tea Crop.**—The following telegram with reference to the tea crop in the various districts has been despatched by the General Committee of the Indian Tea Association here to the Committee of the Association in London, viz.:—**ASSAM**—Outturn last month about normal, immediate prospects fair; there is too much rain in some portions of Assam. **CACHAR**—Outturn last month about normal, immediate prospects fair; weather generally too cold for the time of the year, and is checking leaf. **SYLHET**—Outturn last month about normal, immediate prospects fair; weather generally too cold for the time of the year, and is checking leaf. **DOOARS AND TERAI**—Outturn last month about normal, immediate prospects fair; there has been unusually heavy rain with floods in some portions of the district. **DARJEELING**—Outturn last month about normal, immediate prospects fair; blight is now not so severe.

\* \* \*

**A Warning.**—The following has been issued by the Indian Tea Association (London) to all importers and members of the Association: “Dear Sirs,—The notice of my Committee having been drawn to the fact that nearly 600 packages of new season's tea are printed for sale next week, I am instructed to send you a copy of a Resolution which was passed at a Meeting of importers held on the 8th instant, as follows—‘That no new season's tea be offered for sale before July 1.’ The Committee earnestly hope that all importers will see their way to act on this Resolution, as unless such an arrangement is carried out the market for the balance of the old crop, which has been kept back from sale in the interests of all producers, will be seriously prejudiced.—I am, yours faithfully, ERNEST TYE, *Secretary*.”

\* \* \*

A newspaper says: “It is the biggest teapot on record. It will hold at least four gallons, and that is more of a teapot than many of the young women who preside at afternoon teas would care to handle. It is a beautiful Japanese affair of Imari ware, with a big reed handle, and it would be worth an admission fee to gaze at it at a charity tea. It is in one of the shops, and the only one of the size they have ever seen. It is worth \$125. The only room that could hold it would be unusually large, and with dark, massive furniture.” What a window attraction that teapot would make! For a tea window it couldn't be improved upon.

\* \* \*

#### Tea in Roumania.—Imports during the last five years:—

	£
1897	10,130
1898	11,859
1899	9,854
1900	8,072
1901	12,940

Mr. Vice-Consul Dundas remarks:—“Strong competition from Hamburg, where original cases are opened, mixed and coloured, etc., and repacked to suit requirements. United Kingdom loses by insisting on sending original cases.” In another part of his report the Vice-Consul refers to “tea coloured and tanned as required.”

**Japanese Surprised and Delighted.**—Writing from Yokohama, May 21, Smith, Baker & Co. say:

"The tea market has been in full operation for three weeks, and prices have ranged from Yen 10.00 to 15.00 above the corresponding period of last season, somewhat to the surprise and much to the delight of the native grower, whose picul of tea is now exchangeable for eight piculs of rice; and every owner of a small tea garden is posing as a capitalist. This condition alone, added to favourable weather, should result in a large increase for export, not only over last season's supply, which was an avowed short crop due to frost, but over previous seasons when prices were Yen 20.00 lower; nevertheless statistics of arrivals do not, as yet, fully confirm such an inference.

"Total arrivals at both ports are 83,985 piculs, against 41,116 piculs same time last year; total settlements at both ports are 73,480 piculs against 33,429 piculs same time last year.

"The final statistics for 1902-03 make the total exports 39,724,032 pounds, of which 4,563,858 pounds went to New York by steamer and rail and 8,827,769 pounds by way of Suez Canal; 3,816,899 pounds to San Francisco, 17,887,828 pounds to Chicago, 4,312,898 pounds to Canada, and 318,780 pounds to Europe.

"From May 1, 1903, to May 18, inclusive, 1,984,283 pounds have been exported on eight steamships, of which 742,295 pounds were sent to New York, 244,550 pounds to San Francisco, 983,973 pounds to Chicago, and 53,465 pounds to Canada.

\* \* \*

**The U. S. Tea Market.**—The market in tea is generally quiet but prices remain steady, says the *Tea and Coffee Trade Journal* of 9th ultimo. The trade generally would wish these easier for the sake of their influence on the bounding character of conditions in the East, but the matter seems beyond control. The latest market to open is the Pingsuey, at an advance of 4 cents over the opening prices one year ago. It is hard to compare this price with those ruling at the present time, for they are practically nominal as none of the tea is in first hands and the market is therefore barren. Little news is heard from Hankow. Foochow is giving some attention to turning blacks to green. It should seem that there would be enough of this tea to go around at even moderate prices. The advances reported are entirely uncalled for. In Japan a fall in prices is hinted but after they have all been sold. It is thought that there will be an increase in the export of this tea from three to four million pounds. Last season's export was close to 40,000,000 pounds. Still the market rules high. The shipments are comparatively heavy and are expected to decline relatively.

Some fine Indias have been sold here recently. This tea and Ceylon, which alone are coming in at present in large quantity, naturally in the matter of testing and transaction have a monopoly. Prices rule firm in response to firm conditions in England. New crop India teas is  $\frac{1}{2}$ d. to  $\frac{3}{4}$ d. higher at Calcutta than one year ago. Ceylon greens are being considered with a view to displace the high Japans. In view of the advancing and much higher value of the Ceylon and India black teas it is highly improbable that this can be consummated to any extent, as the inclination will be to prefer the manufacture of black tea as by far more profitable.

Out West the report is that there has been considerable activity during May in the replenishing of stocks. June and July are usually months included in the dull season of tea.

\* \* \*

**Japan Tea Market.**—Writing from Kobe, May 14, the Japan Tea Exporting Co., Ltd., says:

"The peculiar circumstances attending this year's new tea market renders it necessary to preface the report with the word 'Extraordinary.' Serious damage to the tea leaf was experienced last year from frost, and this year the market opens with extraordinarily high prices, all of which are contrary to general expectation. Judging from past experience, it is impossible to tell what further and more surprising feature may still be in store for us. The weather, which continued favourable until the middle of April, suddenly changed and became colder, while there was continual rainfall in advance of the regular rainy season. This proved more or less injurious to the tea plants, yet the budding generally was favourable, and in consequence of the timely attention given by the growers, the plants, it is satisfactory to learn that no serious consequences resulted. In certain districts there has been some slight damage by frost, but to such an insignificant extent that the market will not be affected thereby.

"As usual, the first settlement took place on April 26, 28 piculs of Tosa new leaf changing hands at Y35 per picul, which is 15 per cent. higher as compared with the opening price of the preceding season. Prior to this—on April 20th—a firm in Yokohama having bought a small quantity at fabulous prices, an excited feeling has generally set in there, prices advancing enormously. This state of affairs naturally affected the market here, and prices were steadily maintained without exhibiting any weakness in the interval. At the present moment buyers generally are endeavouring to bring down prices, but so long as the activity in Yokohama continues there is but little prospect of this being accomplished. Moreover, as a little later small leaf will not be procurable, regardless of price unless secured as it arrives on the market, it appears that high prices are now being paid.

"The quality of the new teas is excellent, being much in advance of the quality of recent years, and this will no doubt afford entire satisfaction to consumers. The prices, as compared with the corresponding period last year are about Y12 to Y13 per picul higher, and if comparisons are made with the time of first free arrivals last year, which was later than is the case this season, it is still Y6 to Y7 per picul higher. Owing to the early harvesting, arrivals seem to be larger than last year, and this also applies to the amount of settlements.

"As to the production of first crop teas, estimates vary, but it is probable that the figures will show an increase on last year.

"The market being at present as stated, it is now questionable whether a reaction will not set in, causing prices to collapse. Judging from the high lever of the prices now ruling, it is considered possible a drop may take place. However, even if such a drop takes place, it must be purely nominal, since desirable descriptions, if not secured within the next fortnight, will be impossible to obtain during the remainder of the season.

"Arrivals, settlements and stocks to date as compared with corresponding period last year are: "Arrivals to date, 49,084 piculs; corresponding period 1902, 18,978 piculs; settlements to date, 40,481; corresponding period 1902, 15,110; stocks, 8,603; corresponding period 1902, 3,868.

TEA SHIPMENTS FROM YOKOHAMA AND KOBE.

## NOTES.

### Vanilla from Reunion.

In 1902 111 tons of vanilla were exported from the island against 50 tons in 1901 and 95 tons in 1900.

### German Quinine.

During the three months ending March the exports of quinine, quinine preparations, etc., from Germany have been:

	1903.	1902.	1901.
Kilos. ...	41,600	33,800	49,800

### Jamaica Cocoa.

In trade returns for the year ending 31st March last, Jamaica cocoa shows an increase of 1,000 cwt. to all quarters. Exports to Great

Britain and Canada fell off whilst America took about 4,000 cwt. more.

#### Essays on Tea Pruning.

With the extension of time and the offer of three prices of Rs.500, Rs.200, and Rs.100, made some months ago, the widespread interest felt in the Essays on Pruning of Tea in Ceylon has borne fruit in 41 contributions.

#### Java Cinchona.

The exports from Java during the first half of June amounted to 693,000 Amsterdam lbs., against 666,000 Amsterdam lbs. last year, and 500,000 Amsterdam lbs. in 1901. The exports from British India during the twelve months ending March amounted to :

	1902-03.	1901-02.	1900-01.
Lbs. ...	1,579,498	1,917,259	2,753,858

#### Amsterdam Bark Sales.

At Amsterdam on June 19, 10,890 bales and 556 cases were offered, containing 1,659,000 ozs. of quinine. The *Chemist & Druggist* reports :—"Owing to the large quantity of cinchona to be disposed of at the Amsterdam auctions to-day our usual cablegram had not arrived at the time of closing for Press. We understand the auction opened at 6c., a decline of 20 per cent. on the previous auction."

#### The South African Tariff.

The tariff agreed upon by the representatives of the South African Colonies at the Bloemfontein Conference in March last includes the following items yet to be obtained from the various Legislatures :

	£	s.	d.
Coffee, raw, per lb. ...	0	0	0 $\frac{1}{2}$
Coffee, roasted, ground, or mixed, per lb. ...	0	0	2
Cocoa and chocolate, unsweetened, per lb. ...	0	0	1
Cocoa and milk, chocolate and milk, and coffee and milk, per lb. ...	0	0	1
Tea, per lb. ...	0	0	4
Manures ...			free.

#### London Tea Market.

Weekly special telegram dated 2nd instant from Messrs. Gow, Wilson & Stanton to Colombo reports there is a dull tone generally among buyers and that the market for medium liquoring Pekoes is weak, while the market for teas for price is easier. The price of fair liquoring Ceylon Pekoe Souchong is 6 $\frac{1}{2}$ d. (same as last week) and the average 7 $\frac{1}{4}$ d. ( $\frac{1}{8}$ d. down). The average for the same period last year was 6 $\frac{1}{4}$ d. Reuter reports that the tone of Ceylon tea generally steady, Broken Pekoe rather irregular. Pekoe Souchong steady; Fair Pekoe Souchong is quoted at 6 $\frac{1}{4}$ d. (same as last week) and the average for the week is 7 $\frac{1}{4}$ d. ( $\frac{1}{8}$ d. down). 31,000 packages of Ceylon tea were offered for sale and 29,000 disposed of. Indian tea:—Packages offered and sold not quoted. Average price of Indian tea at 7 $\frac{1}{2}$ d. ( $\frac{1}{4}$ d. down).

#### Old Tea Leaves as Manure.

In the Report of the Agri-Horticultural Society of India for 1902 it is stated :—Two bags of infused tea leaves were presented by Messrs. Andrew Yule & Co., Commissioners for the Indian Tea Markets Expansion Commission, with a view to test the manurial value of the infused leaves. The contents of one bag were immediately used on Cannas, Hibiscus, etc., in the case of the former there was a distinct deepening in the colour of flowers, but where applied to woody stemmed shrubs white ants appeared in abundance.

The contents of the second bag were allowed to dry, the leaves were then pounded and sifted, and used in lieu of leaf-mould in which seeds were sown. The result appeared to be favourable, as seedlings came up stronger when thus treated than where ordinary leaf-mould was used.

## GENERAL ARTICLES.

### PRODUCE AND PLANTING.

Elsewhere we print a circular relative to the new season's tea. Dealers are as anxious as holders of old season's tea not to prejudice the teas they have in hand. It is on all sides, therefore, to be desired that the advice given in the circular referred to will be accepted, and that little dribbles of new season's tea will not continue to be offered, under a mistaken idea that the market is anxious to see these small samples of the new crop. In old days, when the first shipment of new season's tea arrived from China, there used to be some excitement about the matter, as, of course, then it did not arrive in little dribbles, but in a sufficiently large bulk to attract general attention. It is quite another thing in these days. New season's Indian tea is not, as a rule, especially desirable; it is generally the produce either of unpruned plants or the first tipping of pruned plants, which rarely produce a desirable class of tea, as is evident by the prices obtained, while the result of offering "new season's tea" is that the dealers' crop which is not yet disposed of, as well as the crop held by the merchants themselves, becomes "old tea" and is naturally prejudiced thereby. It is a different matter after July 1, for then the remnant of the old season's crop has been sold and the trade is in a position to deal with the new season's tea, especially when some few thousands of packages can be put up for sale at one time. A series of little sales, on the other hand, disturbs the market without doing anybody any good.

A Madras paper recently expressed surprise that the Americans should find Indian coffee peculiar in flavour, and accounted for this suspicion in America on the ground that it is not real Indian coffee that they get to drink, but coffee that comes from the farther East, presumably Java. Which may be very true. Says a New York contemporary: "If Indian coffee of that reputed heavenly variety is not sold here and shall be obtainable for inspection at the St. Louis Exposition, a great service will have been done in educating us to something new and most desirable. Dollars are so plentiful with us now that we can afford the best and want the best; only we want to know where it may be found for good, should it please our palates."

The race of coffee substitute contrivers seem to thrive. We are told by the *Tea and Coffee Trade Journal*, of New York, that a new industry in Meherrin, Va., among the German settlers, is the cultivation of soja beans, to be used in the place of coffee. Up to a few years ago this bean was unknown in that section, and since it has been substituted for coffee its cultivation has largely increased. It is contended by those who have tried raising the beans that they are unsurpassed for feed. The German says he would much rather have them to make his coffee than the Rio grain. A result is that the coffee trade among this class of Germans has somewhat decreased.—*H. & C. Mail*.

### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Saturday, 23rd May, 1903.—Ninety days' Bank rate opened on Monday 18th instant at 12 $\frac{1}{2}$ , declined on Tuesday to 12 $\frac{1}{8}$ , and closed on Saturday at 12 $\frac{3}{8}$  to 12 $\frac{7}{16}$ .

The delay at the last moment in bringing out the loan and rumour of difficulties having supervened checked the rise for the moment and rates even declined a bit. The immediate effect of the loan appears, however, to have been largely discounted and as there must be still large amounts to be covered, it does not seem that the Bank will have much difficulty in keeping rates within control, so long as there is a deficiency of produce bills as may be

the case until August. Nor does there seem much danger of a speculative boom of exchange this year, such as often accompanies the opening of a new season, because, as our New York correspondent points out. Coffee is too low for speculative selling, and the visible supply too high for buying. Without sellers here, and buyers abroad, there can be few bills and no speculation, as the Banks are shy of anything except produce paper.

Of course, were the Bank of the Republic obliged to draw heavily against the present loan or some other asset, prejudicial as it would be to planting and other interests, a rise would be inevitable. There are means at the disposal of the Bank, however, by which all necessity of drawing could be avoided for some time to come, and the loan be transferred to this side, without drawing a penny. Government remittances amount to £400,000 a month; these might be made payable in currency instead of gold, and payments in Europe be effected out of the gold in deposit. Of course the market would be relieved to the same extent and there would be so much more offering here, but in small quantities and spread over the whole country day by day it would affect the market almost insensibly, as is actually the case with the taking; the knowledge that there would be no selling on the part of the Bank would effectually check speculation. It is evident, however, that should there be any great influx of capital, it would be very difficult and probably impossible to control rates, unless the Bank could count on very strong reserves which could be utilized for this purpose.

During the week ended May 22nd there was a slight spurt in shipments of Santos, the yield for the two ports being £223,000 against £130,000 the previous week and £355,000 last year; the consequence, probably, of the desire to ship as much as possible before the prohibitory duties on low grades take effect. Declared sales were larger, 140,000 as against 111,000 the previous week and 115,000 last year.

RIO DE JANEIRO, 23rd May, 1903.—Joint entries at Rio and Santos for the week ended May 22nd were 4,026 bags less than the preceding week and 70,83 less than the corresponding week's last year, of which they represent 65.1 per cent.

Crop entries on the same date were 3,159,545 bags less than last season's of which they represented 78.4 per cent.

Shipments (*embarkings*), however, were much more animated, being 71,484 bags greater than the previous week's but still 68,626 less than the corresponding week's last year.

Stocks consequently fell away a bit, and on the 22nd showed 29,859 bags less than the previous Friday and 409,452 bags less than on the corresponding date last year.

Sales were also more animated 29,000 more having been declared than for the previous week and 25,000 than last year.

The average New York quotation for No. 7, was the same, 5.12c. as last week, compared with 5.50c. last year, but in spite of a slight fall of exchange currency prices gave way again, the week's average working out at 3.845 as against 3.968 the previous week and 4.334 last year.

Messrs. Prado Chaves write to correct an error in our last number, in which we said that they had estimated the coming crop for Rio, Minas, and Espirito Santo at 3,000,000 bags. This statement was copied from another paper, we think from the *Bulletin de Havre*. We now, however, correct the statement from a copy of the circular issued by the *Société d'Importation* of Havre in which Messrs. Prado Chaves' opinions were originally quoted. As will be seen their estimate of exports of the three states Rio, Minas, and Espirito Santo *via* the port of Rio for the coming crop is 3,500,000 bags and not 3,000,000 as stated.

SANTOS, May 23rd, 1903.—Our market kept quiet, with little or no change in prices, and with nothing else of importance to report. New Coffee was offered more freely but qualities are, as yet, very irregular. Part of the New Washed Coffees that have appeared on the market are in reality good fancy qualities, but some are not very desirable. For nice qualities stiff prices are asked.

Exporters were paying 3\$000 to 4\$000 for *Superiors*, *Primes* being quoted 300 réis higher, and *Goods* 300 réis lower, whilst *Regulars* were taken in running lots at 3\$200 to 3\$400. Lots generally contain a large percentage of low Coffee. Low Coffees are in average demand, prices ranging from 2\$000 to 3\$000 according to quality; *Peaberry* is in demand at unaltered quotations; *Old Yellow* and *Washed* are slack.

Orders from Europe for *Superiors* ruled from 26s. 9d. to 27s. 6d., and for *Good Averages* 25s. 6d. to 26s.; *Primes*, soft, being sold at 29s.

Entries were steady and amounted to 84,000 bags, with *Passagens* the same. It is calculated that about 20 to 25 per cent. of the arrivals consist of new coffees.

Shipments were fair, amounting to 126,000 bags, and our stock decreased to 844,841 bags. Of these about 400,000 can be said to be in second hands, and the rest held by *Commissarios*.

Exchange fell to 12 7-16 yesterday afternoon, Coffee prices as yet showing no corresponding improvement.

The *paula* is unaltered at 380 réis.

A report of Messrs. Prado & Chaves published on the 21st April at Havre states that the plantations in Minas, Rio, and Espirito Santo are very badly cared for, and that *colonos* are leaving in large numbers. They calculate that only 5 per cent. of the plantations have received the regular 4 hoeings (*carpas*) 20 per cent. have had three hoeings, 35 per cent. two hoeings; almost abandoned 30 per cent. and entirely abandoned 20 per cent. The harvest of 1902 and 1903, they say, was really small, a great deal of the Coffee sent to market having been kept over from previous years. The 1903-04 harvest is early and will also help to swell the total of 1902-03. Messrs. Prado & Chaves estimate coffee exports of Minas, Rio de Janeiro and Espirito Santo at the port of Rio at 3½ millions bags.

At the Agricultural Congress held at Bello Horizonte it was pointed out that 1 kilogramme of No. 9 New York type contains 38.97 per cent. of *escolha* or refuse and 61.03 good coffee, whilst 1 kilogramme of No. 3 type contains 25 per cent. of *escolha* and 75 per cent. good coffee. By using a No. 6 grade would be produced a type yielding 68.01 per cent. good coffee and 34.99 per cent. of *escolha*. It was passed that the Committee recommended that prohibitive duties be put on the lowest grades to exclude *escolha*, commencing with 9 per cent. on No. 7; 12 per cent. on No. 8; 30 per cent. on No. 9; and 50 per cent. on *escolha*. This proposal, however, was rejected by the Congress, and things remain as they were.

At the General Meeting of the Sao Paulo Railway Company the Chairman, Mr. Megaw, stated that the coming S. Paulo crop would probably be about the same as this season some 8,000,000 bags.

Put to the vote, the recommendation of the Coffee Committee was negatived at the Minas Agricultural Congress, who decided against differential taxation of coffee or interference by Government in any way except to lend money to the planters and reduce taxation. The Minas planters seem to have more grit in them, in spite of their much smaller yield, than their S. Paulo brethren. With a production of little over 30 *arrobas* per 1,000 trees, Minas gets along, and has solved its labour problem for itself, whilst in S. Paulo with more than double their yield, they are always on the verge of ruin.

Sao Paulo.—Planters in the *Campo Alegre* district have determined to cut down prices for caring from 90\$000 to 100\$000, the actual price, to 60\$000 per 1,000 trees.

Coffee freight rates in Minas per ton-kilometre work out as follows:—Central Railway 243 réis, Leopoldina 450 réis. Minas and Rio 310 réis, Muzambinho 250 réis, Sapucahy 250 réis.

Planting Conditions in April.—According to the *Boletim da Agricultura*. The weather during the 26th was dry and cold, with frost in several localities on the 22nd and 23rd. Rain fell in very small quantities, the lack of moisture being, however, partly compensated by the abundance of dew.

Latest advices state that in most districts harvesting has already commenced.

Nothing further has transpired as regards the volume of the coming crop.

## CEREAL COFFEE.

Few persons in the United States have a larger daily mail than Mrs. S. T. Rorer, of the *Ladies' Home Journal*, President of the Philadelphia Cooking School. Recently many communications have been received by her regarding cereal coffee, and being curious to know what dietetic value she places on these substitutes, the *American Grocer* drew from her the following opinion:

"The American people are going mad on the subject of nourishment. The fact is we have no business to have our beverages rich in nutrition unless we take them as foods. We eat more in twenty-four hours than we should eat in two or three days; that is, the majority of people. Our beverages should be as free from nourishment as possible. If coffee is made in a percolating pot after the French or Vienna method, it contains a small amount of caffeine, but is free from fixed oil or the heavier part of the coffee bean. It

may be a cardiac stimulant and provoke indigestion when it is boiled and served with sugar and cream, but why should an article that has been tried and used for one generation after another, with perfect success, be condemned, and in such a specious and deceptive manner? I should object to the average coffee substitutes that are rich in nourishment. Water, I believe, is the beverage that should be used extensively by man. Water drinkers, as a rule, are long-lived and quite healthy. Observe children who take with their food chocolate and various sorts of cereal coffee instead of water; they are nervous, anemic, and very liable to take every disease that is floating around. Where people do not eat food for breakfast, that is, solid food, I have no doubt a cup of cereal coffee or chocolate is better than coffee, but where a breakfast is taken, as most American people do, let us, for pity's sake, take a beverage that does not contain nourishment. Weak coffee is abominable, especially if it contains sugar and cream; it is liable to cause fermentation; while coffee of good strength will frequently aid digestion by preventing unnatural fermentations."

While we entertain a high opinion of Mrs. Rorer as teacher of cookery and student of dietetics, we are not prepared to accept all of her conclusions.

As to beverages, every individual is a law unto himself, and therefore we should drink that beverage which best agrees with us, whether it be champagne, cocktails, cider, coffee, tea, milk, grape juice, or coffee substitute.

In "Fothergill's Manual of Dietetics" the statement is made that if the palate—the janitor of the stomach—be offended, the food, no matter what its real value, is useless. The palate must be consulted as well as the stomach. That will apply to beverages. Dietetic disturbance follows the use of any beverage which is displeasing to the palate.

The abuse of any beverage works physical harm, and, as some people abuse tea and coffee, they become tea and coffee drunkards, as others are made by the abuse of alcoholic liquor. And judging from the advertisements written in Battle Creek, Mich., we are liable to have a crop of drunkards addicted to the use of coffee substitutes.

Undoubtedly Mrs. Rorer is right in her statement that we eat too much, but those folk whose sole breakfast is a roll and cup of coffee like to believe that their morning drink is nutritious, as well as palatable, whether it is so or not.

In that admirable work by the late Theodore Child, entitled "Delicate Feasting," he says:

"Tea, coffee, and tobacco come under the heading to which scientific men have given the name of Paratriptics. The demand for them is based upon their power to prevent waste in the body, so that by their help and stimulus men can do more work, and endure more privation, with a smaller amount of actual food. Tea, coffee, and tobacco are not food, although temporarily and continuously they supplement it. The physiologist, Moleschott, calls them the 'savings banks' of the tissues."

Mrs. Rorer is right in preferring coffee to the average coffee substitutes, but we are puzzled to know why she intimates that the average coffee substitutes are rich in nourishment, and therefore objectionable as a beverage.

We were not aware that they were of that nature. As the result of the Maine Agricultural Experiment Station investigations, we were told that "the protein of a cup of Postum Cereal is contained in a dessert-spoonful of skimmed milk, and that skimmed milk is generally considered a pretty thin beverage; but it contains from three to twenty times as much solids as these so-called nutritious drinks." If this be true, they do the system less good than tea, coffee, or cold water.

While some physicians condemn coffee, others find it of great value. "Vogel has advocated the use of strong coffee with cream as a tonic and food in the debility which attends upon acute disease in children." Coffee certainly sustains the soldier on his weary marches, and relieves the fatigue incident to battle. It is a stimulant, a pleasing beverage, around which clusters much of sentiment, and that is a wonderful factor in seeking nourishment. We do not wonder that the American people have placed coffee first in the list of beverages consumed, so that nearly a billion pounds are necessary to meet annual requirements. And they are not going to surrender their favourite beverage for substitutes that cost two or three cents per pound, and through specious advertising are foisted on consumers at an enormous cost, as compared with their intrinsic value.

## "SPECKING OF CITRUS FRUIT."

Mr. Albert H. Benson writes in the *Queensland Agricultural Journal*:—Nearly every grower who has shipped fruit to the Southern markets has had the unpleasant experience of noting the following item on his account sales: "... cases lost by specks." Few growers, however knew the cause of specking or its remedy, hence I am writing the present short article in the hope that it may be of some assistance to our growers during the shipping season.

Specking is responsible for a considerable loss of fruit in transit, the loss varying somewhat throughout the shipping season, being usually much larger at the present beginning than at the end of the season.

The loss varies from as low as 1 or 2 per cent., to as high as 50 per cent. in exceptional cases; so that it will be seen that any means that will tend to diminish such loss will be of great assistance to the growers individually, and to the industry as a whole.

Besides the actual loss arising from specking, it is very often a source of friction between the grower and the agent to whom the fruit is consigned; as the grower, knowing that he has shipped what was apparently sound fruit when it left the orchard, is surprised to find that a greater or smaller proportion of the fruit is absolutely worthless on reaching its destination. The grower believing that he has sent nothing but sound fruit is somewhat inclined to distrust the statement of his agent as to the loss that actually occurs, with the result that, as I have already stated, there is a certain amount of friction.

Specking, or as it is known in California, "Orange and lemon rot," is according to Professor C. W. Woodworth, of the University of California, in a bulletin issued by him in 1902, the result of a mould fungus known as *Penicillium digitatum*, which is very superior in appearance to the ordinary bread or blue mould so well known by everyone. It, however, is quite distinct from common blue mould, which attacks many different substances, in that it attacks only citrus fruit.

The first indication of citrus fruits being attacked by this fungus is a softening and rotting of a portion of the skin of the fruit. The rotten spot soon increases in size, and is first covered with a downy white fungus, known commonly as white mould, and this gradually changes to a bluish-green colour, in which condition it is known as blue mould. The blue colour is due to the fruit of the fungus, and this fruit, when ripe, distributes countless minute spores, which are easily carried by the wind or other agencies, and thus spread the disease rapidly. The dust that flies off when a case of specky fruit is opened consists of millions of the spores of this fungus, and each of these spores, given favourable conditions for its development, will produce the disease on other fruit.

The conditions favourable to the germination of the spores are, first, moisture, and, secondly, heat. If the skin of the fruit is perfectly dry, no spores can germinate on it, but if the skin is injured the spores find ready entrance into the tissue of the punctured or bruised portion, where the natural moisture is sufficient to induce the growth of the fungus. Moisture lodging in the eye of the fruit, such as in the navel of a navel orange, forms a good means, of germination, or the skin of the fruit being kept in a moist state, owing to the extreme humidity of the air, is particularly liable to infection.

Knowing as we do that this fungus is confined to citrus fruit, and that once it makes its appearance its spread is very rapid under favourable conditions, gives us the fruit hint as to the means to be adopted in order to keep it in check, and that is, never leave any mouldy fruit on the ground or on the tree, but always gather it and destroy it, if possible, when in the white mould stage, as it has not then reached the reproductive stage. If this is carefully followed up early in the season, the ravages of the mould fungus will be kept much in check.

The second remedy is to see that the skin of the fruit is perfectly dry prior to packing, and in order to secure this I think I cannot do better than repeat the advice I gave when dealing with the question of citrus culture in the July number of the *Queensland Agricultural Journal* for 1900.

### HANDLING THE FRUIT.

Under the above heading, I will deal with the gathering, sweating, packing, and marketing of the fruit. In the first place, I wish

to impress upon every citrus-grower, the extreme importance of careful handling, and none requires greater care in gathering and packing if you wish to obtain satisfactory returns from your orchard. Handle like eggs, and not like road metal—a bruised fruit is a spoilt fruit and not only will it not keep, but it will tend to rot any sound fruit that are packed near it.

No citrus fruit should be pulled from the tree, but should be carefully cut. Pulling injures the fruit, and often prevents its keeping. Several kinds of clippers have been made for cutting the fruit, and one of the best kind is now obtainable in Brisbane at a reasonable price. It cuts close, and there is no chance of injury to the fruit.

When cut, the fruit should be placed in a basket or bag, and when same is full, it should be carefully emptied into a case, taking every possible care not to bruise the fruit while doing so. The case containing the fruit should be carried or carted to an open shed, where they should be stacked and allowed to remain without being touched for from four to six days before it is packed. This detention in the cases prior to packing is to permit the evaporation of the surplus moisture from the skin of the fruit which, instead of being rigid and brittle as it is when gathered, becomes tough and leathery and the fruit can be handled and packed without injury. This evaporation of the surplus moisture from the skin is termed sweating, and it is an essential operation in the case of all thin-skinned fruit that have either to be carted over rough roads, or that have to be exported to any southern or foreign markets. This period of detention between gathering and packing also enables all fly or moth infested, pricked or bruised fruits to be easily culled out when packing, as the injuries are then much more apparent than at the time of gathering.

In very moist and humid weather drying on trays may be necessary, and possibly artificial drying may be found advantageous.

The time occupied in "sweating" the fruit will also give an opportunity for any spores of the mould fungus that may have started growth to develop, and the fruit thus specked can be culled before packing. The stems of the balance of the fruit being dry, there is little chance of the mould fungus getting a hold. When speaking of preventive measures, Professor Woodworth recommends refrigeration, ventilation and wrapping. The first is out of the question here for our southern trade, as the steamers are not equipped with refrigerating chambers, nor would the fruit bear the extra expense entailed by refrigeration. Refrigeration prevents the growth of the fungus, but once the temperature is raised, and moisture is allowed to settle on the skin of the fruit, then the conditions are extremely favourable for the development of the mould fungus. Ventilation, according to the same authority, is chiefly calculated to prevent rot by carrying off the moisture that may accumulate on the fruit in the sweating process, whether in the packing house or the case—in other words, ventilation tends to dry the skin of the fruit. If the moisture is removed promptly so as not to allow time for the germination of the mould fungus, the fruit will not decay, but will remain sound and eventually dry up.

Wrapping in tissue paper is the best means of preventing specking. The paper will absorb any slight moisture that there may be on the skin of the fruit, and, further, should the fruit become one mass of blue mould, it will keep the spores from breaking loose and thus infecting every sound orange in the case that they may come in contact with. I am of opinion that during the months that specking is bad that it will pay to wrap all the fruit that is sent south—wrapping to, of course, follow the proper drying of the skin by sweating. The cost of wrapping is not excessive, and I am certain that the diminution of loss caused thereby will pay handsomely for the extra trouble and expense.

In the earlier part of this paper I recommended the gathering and destruction of all infested fruit in the orchard, and this should also be carried out in the packing-shed or elsewhere, as no spores should be allowed to escape that can be destroyed by the expenditure of a little care and forethought.

During the present season it is the writer's intention to carry out some experiments with a view of determining the possibility or otherwise of so treating the skin of the fruit, without injury to the fruit itself, as to render it impervious to the attack of the mould fungus, and should these experiments prove a success I will at once make them known so that they can be tested on a commercial scale.

## DISTRICT ASSOCIATIONS.

### SHEVAROY.

Proceedings of the Quarterly General Meeting of the Shevaroy Planters' Association, held in the Victoria Rooms, Yercaud, at 1 P.M., on Monday, the 6th July, 1903.

PRESENT:—Rev. M. Andersen, Messrs. B. Cayley, C. Dickens, E. Dickens, J. C. Large, C. G. Lechler, W. J. Lechler, S. M. Pritchard, C. Rahm, D. Rahm, Mr. R. Gompertz, *Honorary Secretary*.

1. Read and passed accounts shewing a balance in hand, on the 30th ultimo of Rs.437-9-3.

2. Read Circulars Nos. 39 and 40 from the Secretary, forwarding letters from the Chairman and Planting Member, advocating subscriptions to the St. Louis Exhibition.

Resolved, by 9 to 2, that this Association is willing to subscribe towards the expenses of the St. Louis Exhibition.

Also, by 10 to 1, that if at the U. P. A. S. I. Meeting, the Brazil delegate falls through, and it is resolved to support the St. Louis Exhibition, our delegate be empowered to transfer subscription already received for the Brazil delegate to the St. Louis Exhibition.

3. Read circular from Secretary, No. 45/03 of 28th ultimo.

Resolved, *nem. con.* That (this Association would like) the curing Firms, and all other Firms interested in tea and coffee in Southern India (to) be invited to become members of the U. P. A. S. I., but that there be no individual Membership of Planters.

4. The Draft Agenda paper of the coming Meeting of the U. P. A. S. I. was then read, item by item, and certain instructions for the delegate were resolved upon which are separately printed as their publication seems unnecessary.

5. A number of letters were read and recorded and the books and papers received during the month were laid upon the table.

ROBT. GOMPERTZ,  
*Honorary Secretary, S. P. A*

### COORG.

Minutes of an Extraordinary General Meeting of the Coorg Planters' Association held at the Bamboo Club House, Polli Betta, on Monday, 29th June, 1903. PRESENT:—

Messrs. R. A. Alexander (*Visitor*), W. F. A. Bracken (*Visitor*), A. Boponna, E. Clarke, W. Davies (for Mr. E. Meynell), Geo. Davies, J. W. Finlayson, H. G. Grant, A. H. Graham (for Mr. Sprott), F. W. Gerrard, J. Hume (for Mr. J. Chisholm), A. H. Jackson, R. Kaundiya, A. Lambert, J. Logan, E. L. Mahon, G. K. Martin, G. R. Moore, F. Macrae, H. Marriott, S. Marsland (*Visitor*), G. L. Newberry (*Visitor*), E. Richter, N. M. Scholfield (for Mr. Prater), H. T. Shaw (for Mr. Craig), R. D. Tipping, H. Tippetts (*Visitor*), A. J. Wright. *Proxies*: Messrs. Davy, C. G. Maclean and H. M. Mann.

Mr. Martin was voted to the Chair. Proposed by Mr. Logan, seconded by Mr. A. Lambert.

The notice calling the Meeting and the subject to be laid before the members present having been read out, the Chairman proceeded to read his proposed scheme for the re-construction of the Association. Mr. Logan also read a paper thereon and some further correspondence on the subject was laid before the Meeting. After some discussion it was resolved on the proposition of Mr. Logan, seconded by Mr. R. D. Tipping—that Mr. Martin's resolution as to going into voluntary liquidation was unnecessary and that the Association be carried on on the same lines as heretofore.

Resolved, that the Ballotting papers for the election of new Office-bearers for the current season be now opened. The following was the result of the ballot:

Mr. J. Logan, *President*, Mr. A. Lambert, *Honorary Secretary* and the following members on the Committee—

NORTH.	SOUTH.
Messrs. C. E. Murray-Aynsley.	Messrs. A. Boponna.
H. F. Davy.	H. G. Grant.
C. G. Maclean.	A. H. Jackson.
E. Meynell.	A. Lambert.
J. T. Morgan.	F. Macrae.
C. M. Nungappa.	H. G. Parsons.

Mr. Lambert having in a few words thanked the members for the honour conferred on him by his re-election to the post of Honorary Secretary declined to re-accept office, stating that owing to stress of work he had not time to undertake and carry out in as efficient a manner as he could wish, the somewhat onerous and exacting duties in connection with the Honorary Secretaryship of the C. P. A. and therefore he did not feel justified in again accepting office. Moreover he considered it advisable, and altogether in the interests of the Association, to have a new Secretary, and as the office had been in South Coorg hands for several years now, more especially one from the North Coorg members. Such being the case, and if Mr. Martin who stood next in the Ballot list would kindly accept office, the arrangement should prove a satisfactory one to one and all. Mr. Martin, after some consideration, consented to accept office.

Mr. Jackson proposed a hearty vote of thanks to the retiring Honorary Secretary for his past services, and thanked Mr. Martin also for accepting office.

After much deliberation and thoroughly going into the subject of ways and means, the following Resolution was unanimously agreed to. Proposed by Mr. Jackson, seconded by Mr. Grant—that the present liabilities be paid out of the subscriptions now due for the current season, and that a supplementary call of 10/- be made from each member for the same purpose. Members joining the Association on and after July 1st next not to be called upon to pay this extra donation.

Mr. Lambert then said he thought that seeing an erroneous and false impression had been created—perhaps not without just cause, and, apparently, disseminated not only throughout Coorg but elsewhere, owing to the wording of the Resolution proposed by Mr. Martin and seconded by himself, at the late Meeting held in Mercara and especially as to the clause “that the Association go into voluntary liquidation”—a few words of explanation might be judicious. Therefore he might add that in bringing forward this Resolution they did not think for a moment that the want of monetary support given to the Association arose out of any poverty, or inability, or even reluctance, to pay on the part of the members, but merely from lack of interest in the working and general welfare of that Institution, nor, indeed, did they contemplate even the collapse of the Coorg Planters' Association in the near future—though they considered it possible that a reconstruction of the same might have to be undertaken, and therefore in order to emphasise, and bring home clearly to the members this altogether unsatisfactory state of affairs, it seemed to them only right and proper that the actual position of the Association could not be too drastically and emphatically brought to their notice—more especially as this question of finance has been brought to the notice of the members, rather prominently, and from time to time, during the last two years or more—and that this said Resolution has had the desired effect, he thought the presence of so many members at the Meeting to-day, and the result of their deliberations should fully convince anyone who may have had preconceived notions on the subject hitherto.

The proceedings then terminated with the usual vote of thanks to the chair.

POLLI BETTA, {  
July 3rd, 1903. }

(Signed) A. LAMBERT  
for the *Honorary Secretary*, C. P. A.

## CEYLON ASSOCIATION IN LONDON.

MR. H. K. RUTHERFORD ELECTED PRESIDENT.

### THE FUTURE OF THE TEA INDUSTRY.

The fifteenth annual General Meeting of the Ceylon Association in London was held on June 15 at the London Chamber of Commerce, Eastcheap, E.C.

Sir Richard Cayley: It is a matter of great regret to all of us that Mr. Bois, the President, is unable to attend to-day, and in his place I move that Mr. H. K. Rutherford take the Chair.

Mr. R. A. Cameron seconded the proposition, and it was agreed to.

The Secretary having read the notice convening the Meeting.

The Chairman (Mr. H. K. Rutherford) said: In rising to propose the adoption of the reports of the Executive Committee and the Tea and Produce Committee and of the accounts, I may say this is not the first time you have asked me to take the Chair in the place of an absent President, but I do not think that on any previous occasion we have had so much reason to regret the circumstances which necessitate any one of us taking the Chair as we have to-day in the absence of our President. (Hear, hear.) I have just been handed a letter from Mr. Bois, which I think I may read to you. It is as follows:

“THE CLIFTONVILLE HOTEL,  
Margate, June 12, 1903.

### TO THE CHAIRMAN.

“DEAR SIR,—Will you kindly express to the members of the Association my very great regret at being unable to preside at the General Meeting. In vacating the office of President I should have wished to thank the members for the compliment they paid me in electing me on two successive occasions to the Presidential chair, and for the support they have afforded to me during my term of office.

“So many members of the Association have expressed a kindly sympathy for me in connection with my accident—a sympathy for which I sincerely thank them—that it may interest them to know that I have so far recovered as to be able to come to the seaside for change of air, and although still somewhat helpless, I am daily gaining strength, and hope in time to be able to again attend the Committee Meetings of the Association.

“With all good wishes for the prosperity of the Association, and congratulations to the new President,—I am, dear Sir, yours faithfully,

“HENRY BOIS.”

(Applause.) You have heard the letter read, gentlemen, and I am sure I only express the feelings of every member of this Association, and of the kindred Associations in Ceylon, with which Mr. Bois had been so long and honourably connected, when I say that we offer him our deepest sympathy in the circumstances, and in the result of the accident which has laid him by for such a long period of time, and which has deprived us of his valuable services. (Hear, hear.) I trust, though Mr. Bois necessarily has had to resign the presidency of the Association, that his absence will only be of a temporary character, and that when he is restored to health he will be able to resume his position at the head of this Association. The reports of the Executive Committee and Tea and Produce Committee, I think, fully explain to you the various subjects with which the Association has had to deal during the past year. It is highly gratifying to see that the numbers of our Association do not diminish. (Hear, hear.) It is a sign that the Association is valued by those who have interests in Ceylon. It is also satisfactory to know that we are financially sound. (Hear, hear.) With regard to the subjects which have been brought up during the year, I think the two most important matters were the proposed Tea Clearing House and the Ceylon Tea Cess Fund. With regard to the former, you held a Meeting some short time ago, when you passed a Resolution approving the proposals for the Tea Clearing House. Since then I do not know that the negotiations have progressed any further, but Mr. Bosanquet is here to-day, and I am sure he will be able to enlighten you as to whether anything fresh has transpired. He so ably laid the matter before you at the last Meeting that it is quite unnecessary for me to say anything further upon the subject. I would only state that since our Meeting the Indian Association has also had the matter under consideration, and has passed a Resolution approving of the formation of such a clearing house—very much in the same terms as ours—but with this most important proviso, namely, that no provision be made for extending the scope of the institution beyond that connected with the handling and delivery of tea. I did not happen to be at our Meeting to discuss the subject, but I am inclined to think, after what I have heard in conversation with members of this Association, that this is about the only form in which this Association could agree to join the proposed Tea Clearing House—that the Tea Clearing House, if formed, shall be purely and simply for the clearance of tea, and nothing else, and that it shall be out of the power of the Tea Clearing House to be used as an engine of combination between either of the parties to the detriment of any other. If we can form a Tea Clearing House protected in such a way as that, I, for one, do

not see why it should not be formed. In connection more or less with that subject, you remember that the two Associations agreed that it would be advisable to form a joint Association of tea producers, and I believe that was very nearly being carried out; but the Indian Association put the principles of co-operation to a practical test by asking us, when tea was being very largely over-produced, if we would join with them in closing our factories for a certain period of time during the year. To this we could not agree, and the Indian Association therefore came to the conclusion that the time was not ripe for forming a joint Association of the two bodies. Perhaps we are better as we are. Each Association in its own particular way can do a vast amount of good in the interests each represents, and when any very important subject comes before the two Associations in which they are jointly interested, I think it is a very simple matter for them to act in concert and give effect jointly to their wishes, as powerfully as if they had been working it as one joint Association. (Hear, hear.) With regard to the tea duty, I do not think there is much to be said. You know that the Government turned a deaf ear to the petition of the Indian and Ceylon Associations praying for a reduction of the duty on tea, and that Mr. Chaplin's appeal to the Government to retain the corn tax and lessen the import duty on tea has also failed. But as we know by this time, the Government are not very much influenced by petitions from their colonial possessions, and till the voice of the public is heard on this matter of the reduction of the duty on tea I do not think we are likely to have any reduction. But the time is undoubtedly approaching when the rise in the price of tea will be felt by the consumer—for the consumer will have to pay the increased price—and he will make his voice heard, and next year you will very probably have a reduction in the duty. Now as to the Ceylon tea cess. This is a subject which has always been fruitful in discussion, and upon which there have been varying opinions. I do not intend to review or revive the contentions of the parties with regard to the discussion, as the matter is now practically settled. I think it was a somewhat delicate and difficult problem to bring the up-country growers and the low-country growers and the Government into line on this important question. It cannot, I think, be seriously contended that the interests of all growers are identical. As long as we have proprietary interests solely connected with the growing of the finer teas up-country, with other interests in the production of common teas, it is inevitable that differences of opinion will exist as to the distribution and allocation of the tea cess. But I think the low-country planters have reason to be grateful to their fellow-planters in the up-country, as I believe not a few of them sacrificed a good deal for the common good of the whole industry. (Hear, hear.) I think I am right in saying that this Association has never tendered advice to the Thirty Committee in Ceylon unless that advice was asked for, and I believe the Thirty Committee are of opinion that as long as we do not interfere with them we are entitled to have a voice in their deliberations when any large or important question with regard to the tea cess fund is being brought up. (Applause.) I yield to no one in my appreciation of the good, hard and unselfish work of the Thirty Committee in Ceylon, but if we and they refuse to regard otherwise than with suspicion the influences that sometimes are set to work to bring the two Associations into a state of variance with one another, then I think we can work, as we ought to work, for the mutual support of the interests we represent. As I was in some degree personally responsible for the proposition that was sanctioned by the Government of Ceylon and endorsed by the Planters' Association in regard to the tea cess fund, I trust the settlement which has been arrived at, although there are differences of opinion regarding it, will meet with your approval, and that it will be found to be the best under the peculiar circumstances of the case. Now, I think these are practically all the subjects dealt with in this report, and as it is usual on this occasion for the Chairman to review the position of the tea industry, with your permission I will make a few remarks on that subject. For the last few years, I think, we have always talked in "mournful numbers" of the tea industry, but to-day we can speak in a happier tone. Happily we have been spared a prolonged continuance of the severe stress of the last three years, which, if it had prevailed much longer, would have undoubtedly brought about widespread misfortune. As it is, I am afraid a good number of tea proprietors and investors have suffered not a little during that

period, but it is now some consolation to them that there is some hope that their investments will, at any rate, return a fair interest on their money in the future. (Hear, hear.) The position since last we met in this room has materially altered, and the price of tea to-day represents, if carried on till the end of the year, an increased income to the Ceylon planters of £500,000 sterling. That has been achieved with a moderate rise in the price of tea, and if the price again goes up to what it was three or four years ago, the industry will benefit proportionately to a great extent. I think it is now fairly well established that India and Ceylon cannot hope to very much increase the output of tea unless under more favourable climatic conditions than they have had during the past few years. As practically all the tea lands which were planted some few years ago are now in bearing and considerable portions of land are going back in cultivation, and tea markets are extending in every direction, I think it is reasonable to come to the conclusion that the dark days of 1901, 1902, and 1903 have passed away, and that we are entering into an era of prosperity. I believe, however, we are on the brink of very important changes in the tea industry, and I think it is the duty of this Association and the Indian Association to most carefully study the tide of affairs and the altering conditions of the industry. Efforts are undoubtedly being made by an important section of the tea trade to frustrate any rise in the price of tea, and this section has gone so far recently as to import into this country the lower grades of China tea, brought from America and from the Continent of Europe, in order to lower the standard of tea in this country, so that the consumer may have it at the price he had it previously. There is also another section of the trade, however, acting in opposition to this policy, and whose endeavour it is to keep up the quality and the price of tea. That is the section which I trust this Association will lend their support to. (Hear, hear.) But if there is to be a determined effort on the part of the former section to introduce China tea to this country, then I think this Association will have to most carefully watch their efforts in this direction; and I throw out the suggestion for what it may be worth, that, if such efforts appear to be at all successful, it might be worth consideration whether the sums which we spend on the Continent of Europe in the propaganda of Ceylon tea with so little effect could not be brought here to fight this attempt to introduce China tea into the country. (Hear, hear.) Cheapness, apart from quality, appeals to the millions, and it would be rash for anyone here to say that the British public will never revert to China tea. When cheapness is the only consideration I think the masses would drink almost anything. (Laughter, and hear, hear.) Now, while I am on the subject of supply and demand, I would like to bring to your notice another factor, a factor which I do not think has been taken into account, but which I believe will be a most important factor in the near future in the Ceylon tea enterprise. As you are aware, during the last three years the tea proprietors of the low-country have been certainly making no profit, if they have not been working at a loss. On that account, as you will remember in the days of coffee, when they turned their attention to cinchona, they are now turning their attention to planting these tea estates with rubber. I was astonished to find it stated in the administrative report of the Kegalla district that no less than 4,000 acres of rubber had been interplanted among the tea in that district. That is only one district, and if we consider what is being done in other districts I would not like to say how much rubber has been planted, but I would not be at all astonished to learn that from ten to fifteen thousand acres of low-country estates have been interplanted with rubber. In the Kelani Valley, Kalutara, and minor low-country districts there are 60,000 acres of tea, planted in land all more or less suitable for the cultivation of Pará rubber, and producing about 25,000,000 lbs. of tea. It becomes a question that is worthy of consideration. What is going to happen? and if we take also into consideration the possibility of green tea being a permanent production, even if it does not increase beyond the 12,000,000 lbs. now produced, we are face to face with the fact that if this rubber succeeds better than tea the whole of that 25,000,000 lbs. may in time vanish altogether from the black tea output. Apart from the possibility of this state of affairs coming into existence or not, we are face to face now with the fact that the British-grown tea available for this country at the present time, after allowing for the demands of other countries, is falling below the ever-increasing consumption of the people of this country. As a corroboration of this statement, I

would refer you to that most excellent report of Messrs. W. and H. Thompson published last week—a review of the tea trade in which they deal with this question. Now, what would be the inevitable result of this? If there is a shortage of tea it must be found by some other country. Java is steadily increasing its output, but China alone can easily fill up this shortage, and whatever may be said to the contrary I think there is a risk of the consumer being forced to buy China tea if cheapness is his only consideration. Now, what is our position? There are remedies, though I almost dread to mention them. There are three remedies, and two of them could be put into immediate operation, the remedy of coarse plucking, which we must continue to avoid; the remedy of heavy manuring, and the third remedy, which would take some considerable time—I mean the opening up of fresh lands. No Association has power to prevent any of these alternatives being resorted to. But these considerations open up a very great field of thought which I am not prepared to enter into to-day, although I think they are very well worthy of consideration. The view I have presented to you may be a startling one, seeing only a year ago we were bemoaning over-production, and it may be thought that I am looking too far ahead, but you will agree with me that seeing we do not look upon this tea industry as being of an ephemeral character, but as one which we hope has a permanent existence before it; it is therefore the duty of this Association to study the signs of the times, and to watch everything connected with the industry, and sometimes, at any rate, take our eyes off the small details of the day-to-day work of our business, and take a wider view. I believe the time is approaching, if it has not absolutely arrived, when it is not so much the exploitation and expansion of new markets that we have to look to, but to hold the markets we have already, at so much trouble and expense, been able to secure; and I believe this can only be done by producing a quality of tea which consumers all the world over cannot do without. (Applause.) I move the adoption of the reports and accounts.

Mr. R. A. Bosanquet seconded the motion. He said he had listened with very much interest to the words which had fallen from Mr. Rutherford, and he wished to endorse everything he had said with regard to the absence of Mr. Bois. Having worked with Mr. Bois on many occasions in Ceylon it had given him even greater pleasure to have an old friend to work with again at this end, and he hoped the day might come when, if not in the Presidential chair, yet still holding office in the Association, he might be well to the fore, and again taking an active part in its work. (Hear, hear.) Mr. Bois carried with him the confidence of men both at home and in Ceylon, and it was a great thing, when work had to be done, that people should be working together in harmony, so that when they took a pull it might be a long pull and a pull altogether. With regard to the work done during the past year, a certain portion of it, as they knew, had fallen on his (the speaker's) shoulders solely because of the absence of Mr. Bois. Naturally it would have fallen to Mr. Bois as the senior member of the Tea Clearing House sub-Committee, and it was with great reluctance that he had taken upon himself, of necessity, the work which had devolved upon him. The result of it the members had laid before them at their last Meeting in that room, and he could only regret that on that occasion their Chairman, Mr. Rutherford, was not present to occupy the Chair. It would have been better for them and better for the Association, because what he had said that afternoon came a little late, and he (Mr. Bosanquet) had listened to him with a certain feeling of disappointment. He had thought as he went on his way in that work, laying as much as possible of what passed before Mr. Rutherford by correspondence, owing partly to that gentleman's absence from London, that Mr. Rutherford was very much of the same mind as he was himself. But he gathered to-day that Mr. Rutherford did not agree with the steps that had been taken, and thought that the work of the Executive Council of the Tea Clearing House should be limited to the old routine of clearing tea and documents. He must say that at the General Meeting, at which they passed the Resolution in favour of the new scheme as it had been drawn up, there was a lack of enthusiasm in that room in passing the Resolution which was most marked. He had realised it, and his feeling when the Meeting was over was that they had not taken a step in advance. He could not take the view of Mr. Rutherford with regard to the Executive Council of the Tea Clearing House and its work—not the work that it was immediately formed to do, but the

work that, if necessity arose, it might do. Every safeguard was prepared in the scheme to prevent any combination such as Mr. Rutherford suggested from taking place between any two factors, buyers, wharfingers or importers. It was clear that in the working of the Tea Clearing House the people who received the main benefit were the buyers. (Hear, hear.) The only wish that was expressed by the importers was that they should take a hand in the management of the Tea Clearing House to prevent a combination of the wharfingers and buyers such as had been prevalent for some years, and it was therefore thought advisable that the Executive Council of the Clearing House should have conferred upon it greater powers. He threw out the suggestion at the Association's meeting on this question that what they required was an Association of Indian and Ceylon importers, and he was glad that that suggestion seemed to meet with acceptance from a good number of those present. Well, he thought that might go forward in time. It was one of those things in regard to which one had to wait to see how the wind blew. Perhaps the time had not yet come, but that it would come he felt confident. They saw the need for it more every day. There were some points that arose on which they wanted to show a bold and united front; as business men they wanted to be able to tackle each question that came up affecting their pockets. There was one question which he did not touch upon at the recent Meeting, but it was almost like throwing down the battle gage in that room; he meant the question of freights. (Hear, hear.) There was a combination to raise freights. It began with a very soft-gloved hand, and those who owned the hand had put one thumb down. Rates had risen to 27s. 6d., and would probably go to 30s. before very long. But at present those who stood to lose by this were disunited; they presented no common front, and no body of business men in the trade were prepared to meet together for the purpose of opposing the combination. (Hear, hear.) He would like to see an Association of importers in which the principal importers could come together and say what they would do and what they would not do. If they were not ready to meet such a state of things, if they were content to sit still and say, "The prices of tea have gone up"—well, he was not content; he was a malcontent. (Hear, hear.) He considered that upon the statistical position the price of tea ought to be better than it is, and it was because of the lack of combination and union among them that they did not see the price of tea to-day at least one penny per lb. higher. (Hear, hear.) The Indian Tea Association had found themselves incapable of effective combination. But some of its members had formed a small Association of about ten or twelve importers—he could not give the exact number; but fortunately for him he had been able to get a little bit behind the scenes and had got to learn what they had been doing and how they had done it, and he wanted to say that they of the Ceylon Association owed to the Indians and their combination and firm front the present rise in tea. They did not owe it to themselves or to the statistical position, but to the firm front the Indians showed. And they had found that it paid them. (Hear, hear.) He hoped the Indian Association would do the same next year, and that the Ceylon importers would follow their example. The two trades of Ceylon and India were diverse in some respects, but they had one thing in common, and that was their pockets. He asked that the Ceylon Association should draw closer to the Indians. (Hear, hear.) He would lay great stress upon that. One of his Ceylon friends in England dropped a remark the other day which he meditated upon—as he would meditate upon the remarks which had fallen from Mr. Rutherford. This friend said, "India doesn't want Ceylon tied to its tail." But that was not a correct description of the position. They met on common ground for the common interest, and no one had suggested that Ceylon should be tied at the tail of India—(hear, hear)—and to say such a thing was like trying to draw a red herring across the track. They had a red herring last year, at a sub-Committee which met and did much work—and arrived at no result. The Indians drew the herring across the track by asking Ceylon importers to close their factories for three weeks. It was an absurd proposal, but the Indians were on the horns of a dilemma; they thought they would have an enormously big crop; they honestly believed it, but it did not come off. It was no good one party bringing forward an absolutely definite proposal and saying, "If you don't accept it we won't go with you." Let proposals be brought forward with a view of seeing if they were feasible. He would have liked to have

met the Indians half-way, and so, if it had been possible, have done something to meet the question, and, so to speak, scratch their backs and keep them in a good humour; but they had stuck to their guns with a proposal which, to lay before Ceylon men, was absolutely absurd. They knew the danger of coarse plucking. In one of his letters to Ceylon he had suggested that every day in the daily papers there should be the words, in black-leaded type, "Lest we forget." (Laughter.) He did not quite agree that the day was passed when they might see over-production. At any rate, they must realise that the trade had learned to live on much smaller stocks than in the old days. They lived much more from hand to mouth, both the planters and the trade in this country, and it was said that the trade were fifteen millions short of supplies. If they were, he must say they seemed exceedingly comfortable under it, and did not excite themselves at all; if they did the importers might see their prices rise 1d. in the lb. Let this be as it might, they must march with the times. They must not sit still and let things drift. That was what they had been inclined to do in the past, and he hoped that during the coming year they might be able by good management to draw nearer to India and its Association, and feel that they were working hand in hand with one common object—they were both importers, and as importers they could have the position in their own hands provided they showed a common front. (Applause.)

Mr. Sholto G. D. Skrine: I rise to support the motion for the adoption of the report, and, in doing so, first let me congratulate the Association upon what I consider to be the very sensible way in which it approached the difficult and contentious question of the raising of the tea cess. Feeling undoubtedly ran high in Ceylon, and this Association, which in my opinion represents the payers of the tea cess very much more completely than does the Planters' Association in Ceylon as at present constituted, was apparently looked upon out there as simply a sort of registration society of that Association's decisions, and when we ventured to differ ever so slightly the sign of independence was considered contumacious, and denounced accordingly. We may, however, let that pass, knowing as we all do that an Eastern climate is conducive to nervous irritation, and now that they have so wisely adopted our well-meant suggestions, we may draw a veil over the past and hope for calmer and wiser views in the future. I cannot resume my seat without expressing my extreme surprise, and, I might almost say, disappointment, at the trend of public opinion in Ceylon, where the leading men in our industry appear to me to be suffering from a very severe attack of what I can only term "cess fever," and to look upon the cess as being the one and only panacea for every ill that our industry may suffer from. (Laughter.) Far be it from me to run down the cess, though I am inclined to think its day of usefulness is almost over; but I should like to see a little more open-mindedness, and would gently remind my brother-planters that other means do exist for helping our industry, which is even now going through a crisis, and still requires fostering if it is ever really to weather the storm and again become prosperous. On all sides we hear of labour difficulties and excessive advances, and unquestionably this is one of the evils confronting us. Then why not do something before the evil becomes acute, as it promises to do before long? Surely some panacea other than the very extraordinary one of adding to the taxation of the industry you depend on might be thought of! But I fear other considerations come in, and I admit I almost tremble at my own temerity when I suggest to our leaders in Ceylon a line of action which will not be so agreeable to our rulers as the asking for increased taxation, while I myself am at a safe distance, and am in no way affected by the frown of the Governor or the absence from a seat at his hospitable table. Still, it does seem to me that now is the time, when our industry is struggling and the Island's revenues are redundant, to press for some alleviation in the taxation on the food of the coolie, and to call for the abolition of the unjust import duty on rice, and a reduction in the excessive rate of transport on the Government railway on the coolies' staple food. Mr. Balfour's argument against a tax on the food of the poor man in England surely holds good for the poorer man in Ceylon, and the fact that country-grown rice goes free of duty is even a stronger and more convincing argument. On the other point the Indian Government's action is an object-lesson to Ceylon, for the food of the poor is carried at specially low rates on the Government railways. Reduction on these two points would at

once cheapen our labour, and go a long way towards lightening the labour difficulties. No doubt it is easy for me to take this line in London, but it will require more courage for a man in Ceylon, and will probably mean for a public man the giving up of all hope of obtaining an honourable prefix to a commonplace name to be worn while resident in the Island to distinguish him from the common herd. (Laughter.) Still, strong men do exist, and plain Mr. Pitt, to say nothing of Mr. Gladstone and Mr. Chamberlain, are proofs that plain ministers are not to be despised; and do not we all remember that Brutus was an honorable man? (Laughter.) No, gentlemen, it is time the cess fever abated, and our leaders looked to other means to help us, and a strong and determined agitation on the lines suggested might do great things if only we could find the individual to set the ball a-rolling. The present is a unique opportunity for pressing these questions forward, but I fail to see signs of any action being taken. Our leaders appear to be more desirous of adding to our burdens rather than lightening them. We in London can do but little, but I am quite convinced that an agitation started in Ceylon to achieve the objects I have indicated would command the strongest support from this Association in London, and might easily mean the renewal of that brotherly love between us, the loss of which we have all of late so deeply deplored. (Laughter, and applause.)

Mr. J. M. Maitland Kirwan: I see it is stated here that the Committee have had under consideration the French import duty on tea. Has anything been done? It is an important question.

Mr. W. Martin Leake: I do not think any conclusion is come to yet. The proposal for increasing the duty has been postponed again and again, and for six months at a time.

The motion was carried unanimously.

The Chairman: I rise to propose that this Association accords Mr. Henry Bois a cordial vote of thanks for his work as President for the last two years. I have already made some remarks in reference to Mr. Bois, and these have been accentuated by Mr. Bosanquet. You all know how hard-working our retiring President has been, and how deep an interest he has taken in this Association, and I am sure we shall miss his able and ripe judgment from our councils here. (Hear, hear.) But I trust that when he returns he will be in perfect health, and thus enable him to fulfil his duties in the same able way as previously. (Hear, hear.)

Mr. W. Martin Leake (the Secretary): I am the person who has been brought more closely than anybody in connection with the retiring President, Mr. Bois. He is a very old friend of mine; I have known him forty years, and more, and I should like to say that nothing could have been more agreeable and pleasant than our working together these two years. (Hear, hear.) The quantity of work he has had to do I do not think anyone here can have any conception of, except, perhaps, Mr. Bosanquet. And not only in this matter of the Tea Clearing House has he given his time to the Association, but again and again he has had three or four Meetings a week with our Indian friends. I have the greatest pleasure in seconding this vote of thanks. (Hear, hear.)

The proposition was carried.

Mr. J. L. Shand: I cannot but express regret for the Resolution which has been entrusted to me, but the regret has been already so well spoken to by Mr. Rutherford, Mr. Bosanquet, and Mr. Leake, that I will only touch upon it. A sad necessity compels us this year to elect a new President. We had hoped we should have had the benefit of Mr. Bois's ripe experience for some years, but, unfortunately, owing to his very serious accident, we have lost his services, and I am sure the regret we all feel becomes real sorrow when we think of the time of trouble and trial he has had. I probably have the latest news of him—later than was given in the letter read by the Chairman—for I was with him yesterday, and am glad to say he was very cheerful and was bearing up as well as possible. (Hear, hear.) This is only the fifteenth year of this Association, but it is rather a strange thing that already the inception of the Association is veiled in mist. (Laughter.) In fact, so mythical has it become that the birthplace of Homer, the nationality of Gladstone, and the identity of the first tea-planter in Ceylon are very much on a par with it. (Laughter.) Mr. Rutherford claims to have an inspiration as to when it was founded; so has Mr. James Sinclair, so have I, and so, too, have other gentlemen in this room. However, it is respectable to have a mystery of this sort about our origin. (Laughter.) We will come now to the records of this Association, which our worthy

Secretary takes good care are correct, and which he is always able to put before us in proper form. There is one who stands out prominent in these records, and that is Mr. Rutherford. (Hear, hear.) He has been our Vice-Chairman, and he has worked hard with us on Committee for many years, and I am going to ask you to-day to show confidence in him by asking him to fill the position that Mr. Bois has vacated. (Hear, hear.) Mr. Rutherford, as you all know, has the interests of Ceylon thoroughly at heart, he works with zeal at anything he takes up, and I am perfectly certain the interests of the Ceylon tea industry could not be entrusted to better hands than his. (Applause.) We have had the cess and one or two other important matters before us, but there was one subject before us four years ago over which Mr. Rutherford and some others of us here incurred a certain amount of odium. I refer to the 1-lb. draft question. We were told we must not interfere in these things. (Hear, hear, and laughter.) Well, we had an anxious time, but if any gentleman will only compare the account sales he received four years ago before it was settled to weigh to the  $\frac{1}{2}$  lb. he will find how immensely he has benefited by that struggle in which we were engaged. I have just been able to prove to a gentleman in my office that in the course of these four years he has put into his pocket 500 chests of tea more than he would have had if it had not been agreed to weigh to the  $\frac{1}{2}$  lb. This is one result of what Mr. Rutherford did, one of the things he brought to a successful issue. (Hear, hear.) I want to refer to another point. This idea that seems to exist in some quarters in Ceylon that there is anything antagonistic between us and the Planters' Association is absolutely ridiculous. (Applause.) Our wishes are absolutely identical. I myself was cradled in the Planters' Association in Ceylon, and if any dynastic question should arise as to which Chairman should have to go, the Chairman of the Ceylon Association in London or the Chairman of the Planters' Association, I would do my best to get rid of the Chairman of this Association. (Laughter.) The idea that there is anything antagonistic between the two bodies is absolutely ridiculous—(applause)—and it is only, I believe, the irresponsible utterances of penny-a-line scribblers that fan this sort of thing. (Laughter.) Members of the Planters' Association do not all think alike, we here do not always think alike; but it does not follow that there is anything antagonistic between us, and it is entirely absurd to think anything of the kind exists. (Hear, hear.) I have much pleasure in proposing Mr. Rutherford as our President for the ensuing year. (Applause.)

Mr. Alex. Brooke: I second that proposition. Mr. Shand has put it so well that I need say very little—though I would not go with Mr. Shand in his remarks about the 1-lb. draft. (Laughter.) But I can say this: I do hope, and, indeed, I am quite sure, that under Mr. Rutherford's rule we shall have peace. (Hear, hear.) If a country is happy without a history, I am quite sure a trade is—(laughter)—and I do hope we shall have no cess fights; that our exertions will be directed towards reducing the burdens upon tea (as Mr. Skrine has pointed out, there is plenty of room there), and that we may see prosperity. I am sure we have got the best Chairman we could have in Mr. Rutherford. (Hear, hear.)

The proposition was unanimously carried.

The Chairman: I have to thank you very much indeed for the great honour you have done me in electing me President of this Association for the coming year. I know there are many men of ability in this Association, men who are zealous in its good work, who would be better fitted for the Chairman than I am—(oh, no)—and I trust that after this year you will be able to elect some other gentleman of your number should Mr. Bois not be able to resume his duties. I quite agree with what Mr. Brooke has said; the more peace we have in this Association the better. (Hear, hear.) It is not the duty of the Association to be ever agitating, but it is its duty to be always watchful; and as long as we are watchful over the interests of the colony and its industry, we shall be pursuing the best course. (Hear, hear.) As to the draft dispute, I can bear out what Mr. Shand says as to the result of the present system of weighing in comparison with the system in use before the dispute arose. I find my Company has saved very considerably indeed since the reform was effected. (Hear, hear.)

Sir Richard Cayley: We all agree that the real mainspring of the Association is the Secretary—(applause)—and it is the greatest pleasure to me to move the re-election of Mr. Wm. Martin Leake. He has been an old friend of mine for the last fifty years from the time of our college days, and although I had nothing to do with the

formation of this Association, I think I am one of the original members. It has always been my greatest pleasure to meet Mr. Leake here, and to see the very able and successful manner in which he performs all his duties. (Hear, hear.)

Mr. F. H. M. Corbet: I have great pleasure in seconding the Resolution. I cannot add anything to the extremely accurate way in which Sir Richard Cayley has described Mr. Leake's discharge of the duties, and upon my mind the same impression has been made.

The Chairman: You can very well do without a President, but you could never do without Mr. Leake, who has all along been the mainspring of this Association. (Hear, hear.) He has the whole of the affairs of the Association and everything that has happened, and that is likely to happen, well within his view. You could not get anyone to supply his place and do anything like the amount of work he does; and certainly no one in the Association would desire that anyone should supply his place. (Applause.)

The proposition was agreed to.

Mr. W. Martin Leake: I am very much obliged to you, gentlemen, for electing me once more. It comes to me with added pleasure this year in being proposed by my very old friend, Sir Richard Cayley. We rowed together—I rowed and he steered—in our college boat over fifty years ago. One interesting point raised by Mr. Shand was the origin of this Association. He says Mr. Rutherford started it, and that Mr. J. Sinclair also started it. Where do I come in? (Laughter; and Mr. Shand: "I started it too.") The fact of the matter is that over twenty years before this Association was started I was trying to start an Association of this kind. I wrote home to Mr. Rawdon Power, once Government agent in Kandy, and said we would make him agent in London for the Planters' Association, and he was to get up a Committee; he replied that he would do it if we would pay his cab fares. (Laughter.) We could not manage to do that, so it fell through. (Laughter.)

The Chairman proposed the re-election of the Executive Committee. This was agreed to, and on the proposition of Mr. J. Hamilton, Mr. R. A. Bosanquet was added to the committee. Excepting Mr. W. H. Anderson, Mr. J. Hamilton, Mr. W. Rollo, and Mr. P. G. Spence, who are no longer able to attend the Meetings, the Tea and Produce Committee was also elected.

On the proposition of Mr. R. A. Cameron, the Chairman was thanked for presiding and the Meeting then closed.

## INDIAN TEA ASSOCIATION (CALCUTTA).

The following is from an abstract of the proceedings of a Meeting of the General Committee held on the 23rd June. There were present: Messrs. T. McMorran (*Vice-Chairman*), A. C. Lawrie, R. R. Toynbee, T. Traill, and W. Warrington.

The Chairman, Mr. H. C. Begg, wrote regretting his inability to attend.

Mr. H. S. Ashton and Mr. Lockhart Smith were absent from Calcutta.

### CORRESPONDENCE WITH INDIAN TEA ASSOCIATION, LONDON.

Letters dated 29th May and 5th June from the Secretary, Indian Tea Association, London, having been circulated, were brought up for final consideration and disposal. The principal subject dealt with in the letters was—

*The American and Foreign Market Fund.*—In connection with a suggestion which had been put forward by the General Committee to allot a portion of the amount standing at credit of the above Fund, towards the cost of an exhibit of Indian Teas at the forthcoming Exposition at St. Louis, it was stated in the letter of 5th June that the liabilities entered into by the London Committee for advertising in America and in connection with work in Russia, Paris, and Rome, amounted to about £2,000, in addition to which there were other claims to be met which would absorb the greater part of the balance at credit of the London account.

Mr. Tye mentioned that several gentlemen connected with the sale of Indian Tea in the United States were expected in London at an early date, and that the Committee would discuss with them the question of the representation of Indian tea at the St. Louis

Exposition. The result of the discussion would be communicated in due course.

After discussion, the question of a recommendation to the London Committee, regarding the disposal of the balance at credit of the Calcutta account, approximately Rs.20,000, was held over pending the receipt of a communication which, it was understood, was being sent in by the Indian Tea Cess Committee, on the subject of the proposed exhibit at St. Louis.

#### SCIENTIFIC OFFICER'S FUND.

Read letter No. 952-26-2, dated 12th June, from the Secretary to the Government of India, Department of Revenue and Agriculture, stating that the Government of India were prepared to contribute Rs.5,000 annually for three years on condition that the results of the enquiry were published or printed and made available to Government and to all tea-planters in India.

The Secretary was instructed, in acknowledging receipt of the letter, to convey to Government the thanks of the Committee for the valuable assistance rendered. With regard to the publication of the results of the Scientific Officer's investigations, Government were to be informed that this course had been regularly pursued from the commencement, and that copies of the various reports would, as heretofore, be made available to Government and to tea-planters in India.

The total amount promised by the Government of India, the Government of Bengal, the Assam Administration, and the various Associations contributing to the fund fell short by Rs.5,700 of the amount required annually to carry out, in its entirety, the scheme propounded by Mr. Mann in 1902. It was thought, however, that by economising wherever possible, the balance could be made up from the General Fund of the Association. It was decided, therefore, to inform Mr. Mann that the Committee were prepared to give effect to his proposals.

#### PROPOSED PLANTERS' DEFENCE ASSOCIATION.

Read letter dated 13th June from the Secretary, Surma Valley Branch, forwarding a report of the proceedings of a Meeting of

planters recently held in Cachar to consider the advisability of forming, in connection with the Branch, a Planters' Defence Association.

The proceedings were ordered to be recorded pending the receipt of full details of the scheme. It was noted that the Resolution in favour of the establishment of the proposed Association had been carried by 29 votes to 13.

#### PREVENTION OF MALARIAL FEVER.

Read letter dated 9th June from the Inspector-General of Civil Hospitals, Bengal, forwarding copies of "Sanitary Instructions" issued by the Committee of the Liverpool School of Tropical Medicine, for observance in malarial places.

The letter was ordered to be acknowledged with thanks, and recorded. Many of the suggestions contained in the paper accompanying the letter were, the Committee considered, extremely useful and eminently worthy of adoption.

#### MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated June 19th, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

		Indian. Pkgs.	Ceylon. Pkgs.	Java. Pkgs.
1903-1904	...	50,930	61,789	5,948
1902-1903	...	64,860	86,758	6,138
22,708 pkgs. INDIAN	} Total 61,716 packages were offered in public auction this week.			
35,541 " CEYLON				
3,467 " JAVA				

Taking into consideration the very light stock of duty-paid tea held in the country, the figures below illustrate the strength of the statistical position.

**"All Sorts and Conditions of Men"**

USE

**ST. JACOBS OIL**

**FOR RHEUMATISM, Gout, Sciatica, Neuralgia, Cramp, Pleurisy, Lumbago, Sore Throat, Bronchitis, Soreness, Stiffness, Bruises, Toothache, Headache, Backache, Feetache, Pains in the Back, Pains in the Shoulders, Pains in the Limbs, and all bodily aches and pains,**

**IT ACTS LIKE MAGIC.**

SAFE, SURE, and NEVER FAILING. Price 1/1½ & 2/6.

**CONQUERS PAIN**

Duty payments for the season just closed doubtless represent actual consumption, while in the two previous seasons they were probably fictitious owing to clearances in anticipation of the Budget, while the lighter bonded stock of all tea held in the country is significant. It is also clear from the small quantities exported from India and Ceylon during the last few weeks that arrivals in the immediate future will be less than they were a year ago.

INDIAN.—The sale passed at about previous rates for medium and good teas, but some slight irregularity was noticeable in common descriptions. About 600 packages new season's teas were brought forward and sold at the following averages, viz:—"Balijan T Co.," 105 packages, 9 $\frac{3}{4}$ d; "Itakhoolie," 62 c., 9 $\frac{3}{4}$ d; "Suddia Rd. T Co.," 40 packages, 9 $\frac{1}{2}$ d; "Sealkotee," 115 packages, 8 $\frac{3}{4}$ d; "Budla Beta," 100 c., 8 $\frac{1}{4}$ d; "Mokalbari," 49 c., 8d; "Rhoni," 116 packages, 7d.

Exports to U. K. first half of June 2,600,000 lbs. against 3,150,000 lbs.; from 1st April 5,052,000 lbs., against 6,540,000 lbs. in 1902.

Week's av. of tea on Garden Account Season 1903-4, 588 pkgs., av. 8 $\cdot$ 56d. 1902-3, 393 pkgs., av. 6 $\cdot$ 30d.

Week's av. of tea on Garden Account Season 1902-3, 18,447 pkgs., av. 7 $\cdot$ 71d. 1901-2, 6 $\cdot$ 850 pkgs., av. 6 $\cdot$ 61d.

Garden Account 1st June, 1902, to date season 1902-3, 1,249,893 pkgs., av. 7 $\cdot$ 52d., season 1901-2, 1,329,070 pkgs., av. 7 $\cdot$ 62d.

CEYLON.—The heavy auction was mainly caused by accumulations during the holidays. The sale passed with fair spirit, although slightly easier rates were occasionally noticeable, especially for common and medium teas, fine descriptions ruling very firm. Private advice gives exports to U. K. first half of May 4,500,000 lbs., against 7,800,000 lbs. last year. Estimate for June 10,750,000 lbs.

Average for week 7 $\cdot$ 45d, against 6 $\cdot$ 54d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 459,526 pkgs., av. 7 $\cdot$ 66d. 1902, 525,617 pkgs., av. 6 $\cdot$ 92d.

JAVA.—Javas sold with fair spirit, but in sympathy with other kinds the tendency here and there was towards slightly easier rates.

### QUININE.

There has been little disposition to do business this week in view of the Amsterdam sale of bark to-day. Sales representing altogether about 30,000 oz. have, however, been made at from 10 $\frac{1}{2}$ d to 10 $\frac{3}{4}$ d per oz. for good German sulphate in bulk, being lower. December delivery has also been sold at 10 $\frac{1}{2}$ d.

### MOVEMENTS OF TEA IN UNITED KINGDOM FROM 1ST JUNE TO END OF MAY, AS SHOWN BY CUSTOM HOUSE RETURNS.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, JULY 18, 1903.

[No. 28.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 24th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### Munzerabad.

*July 7th.—Weather—*Rain very light. *Temperature high.* *Works—*Pitting and weeding. *Coffee—*doing well in the dry weather. *Health—*Very poor. *Labour—*Sufficient.

#### Munzerabad.

*July 14th.—Weather—*Monsoon starting again with increased violence, this burst began on the 8th. *Temperature—*Cool. *Works—*Supplying, weeding. *Health—*Better. *Labour—*Sufficient.

#### Coorg.

*POLLI BETTA, 15th July.—Weather—*The monsoon has gained greatly in strength since the 30th ultimo. During the past 24 hours the rainfall has been nearly 3 inches and the previous 24 hours it was 50 cents better. Good thing for the paddy fields, and not at all bad for the coffee as the ground will get thoroughly saturated. Coffee is looking very fine all over now the borer is out. Crop is nearly all full size. All are hard at work weeding. It is too wet to plant. *General health—*Good. No news of plague from Veerajapett.

### TEA PROSPECTS.

It is gratifying to be able to write more hopefully about Tea Prospects than concerning the probable future of Coffee. There does not seem to be room for doubt that the tactics adopted by planters in Ceylon and India have succeeded in respect to the curtailment of production and the consequent strengthening of values. Side by side with this reduction in supplies has come an increase in demand. To what extent this has resulted from more strenuous efforts to push sales in various markets, cannot be accurately determined. Opinions vary greatly with reference to this. One thing at least, is certain; viz. that larger sums have been spent in

the effort to stimulate consumption. Whether because of this outlay or not, consumption has increased; and reasonable men will be ready to assume that the outlay has not been made without return. Whether the return has been commensurate with the expenditure, is another matter. On this point we scarcely think that anything can be said with certainty until the new Cess has been experimented with for a few years. If, after that, further development of demand, proportionate to the additional outlay, is noted, there will be no necessity for hesitation in accepting the view that planters act wisely in spending liberally on measures that are best described as advertising and canvassing in a special manner for a very definite purpose. There will be unbelievers always, but we shall look forward with interest to annual statements of amounts expended and annual estimates of the good achieved by means of this outlay.

The Chairman of the British India Tea Company, Limited, spoke to the point at the recent annual general meeting of that Company. He remarked that there are many things now to show that prospects for the future are of an encouraging nature. "It is now admitted by all interested in tea-growing that the root of all our troubles of late was over-production of tea, brought about by undue extensions, resulting in supply exceeding demand—a condition of things which could only end in what has happened. For the first time, after several years, the total supply of last season's crop turned out to be  $12\frac{1}{2}$  millions less than the consumption in that year; but what is more important, during the last three to four years, practically no new extensions were put out. Besides this, the low prices . . . have been mainly the means of causing fresh markets to be opened out, and so increasing consumption, and great efforts are being made to still further develop new outlets for our produce. These are advantages which, perhaps, nothing but adversity would have led us to secure." In these last words there is a world of meaning. The converse of the statement holds as good as the statement itself. If low prices tend to the opening out of new markets, high prices must have just the opposite tendency. Therefore, the restriction of output in order to raise prices, must be regarded as adverse to the opening out of new markets and the expansion of trade in existing markets. That this effect is not yet apparent in statistics, is mainly due to the fact that the results of restriction of output have only lately begun to cause prices to rise. In

the face of depressed trade and poor quality of crops, these efforts availed for some time, only, to check a fall, or to prevent a more serious fall in rates than has actually occurred. For many years past there has been a more or less steady fall, which at last assumed a very serious aspect. This was the direct result of over-production, and it continued, in spite of restriction of production, until last season, when the lowest prices ever recorded for tea were quoted. In the chief producing districts in India there was unfavourable weather; and only when the influence that this must exercise on output was realised in Mincing Lane, did prices take a turn for the better.

For many years the tea industry has not entered upon any season under such favourable auspices as are visible now. America and Canada are taking increasing quantities of Indian tea; there is ground for the hope that Australasian demand is once more on the up-grade. Russia, Afghanistan, and Persia are good customers. Indian demand is being fostered and may yet become a very important factor. Everywhere, Indian tea is being more talked about, more written about, more advertised, and more appreciated. Many buyers who formerly bought 'Tea' now want a particular description of tea, and their taste leans more and more in the direction of Indian tea or of some blend in which Indian leaf occupies an important place. Quite recently the *Financial News*, "while fully allowing for the corrective effect of putting the brake on production," expressed itself as leaning to the opinion that "the most encouraging factor in the present situation is the noteworthy expansion which is taking place in consumption." Of the two influences, the latter is unquestionably to be preferred. It is the one most likely to benefit the tea-planter; it is the one best calculated to be *permanent*; and even if in some directions it tends to stimulate production, there will be no reason for complaint, no cause for anxiety, if planters proceed with caution. What they have to aim at is to stimulate the demand for tea to the very uttermost, and to gradually increase production so that it may be about level with demand. To fall short with production would be to bolster prices up to a level that might bring about a reaction in consumption. To increase production too rapidly could but have the effect of causing a reaction in prices. Cheapness is a great auxiliary to all efforts towards increased demand; and tea-planters have always to bear in mind, not only that they have rivals in China, Japan, and Java, but also that their product is not without strong competitors. Prospects are more favourable than they have been for years past, but the need for caution in the matter of production is still apparent, and is not likely to cease during the next few years.

#### COFFEE NOTES.

**Coffee Duty in France.**—Finance Minister Rouvier has informed a deputation representing the coffee interests that budget considerations compelled an increase in the duty on coffee by \$4. He added that the Franco-Brazilian treaty will not be denounced before June 30, in order that a new tariff may be put in force before the end of the year.

F. Metz & Co., Havre, say: "Let us presume that the duty would be increased 20 francs, then in the first place all kinds of mild coffee, which are relatively cheap, would pay duty. But people would hardly make up their minds to pay

duty in large blocks of Santos coffee, as it requires 80,000 francs to pay the duty on 1,000 bags coffee, and at present people do not know whether the bank would make advances on duty-paid coffee; then all sorts of difficulties would arise with the insurance companies. Besides, the duty-paid coffee will not be allowed to remain on the docks; it must be brought into another warehouse, and if the coffee is not sold quickly then there are at unchanged prices 6 to 7 francs additional expenses at the end of the year."

\* \* \*

**The U. S. Coffee Market.**—A new record figure in the coffee market for futures was made Monday, June 15, by the bidding of 3.60 for June and July, says the *Tea and Coffee Trade Journal* of 12th ultimo. Spot months have been 3.65.

The coffee market is quiet and, as a rule, at easier prices. The tendencies continue bearish. The fullness of the Brazil receipts indicate that the new crop has begun moving, and the interest hereafter will be to watch the degree of this fullness so as to obtain a line on the size of the 1903-04 crop. The market in Brazil is reported easier with no particular transaction following except such as may be based, as rumoured, on speculative selling as a hedge against purchases made on a lower basis. In spot invoices there has been an absence of orders and the market has ruled quiet. Closing quotations are 4½c. for Rio No. 8, 5½c. for Rio No. 7, 5¾c. for Rio No. 4, and 6c. for Santos No. 4. The jobbing demand is only moderate.

The market for futures is listless. The transactions are limited in volume. In Europe there is no more doing. July option is now down to 3.65 and December is 4.25. The distant months are selling at a premium of 25 points. All this is on the expectation that there will be a change of grade on the Exchange next November. To not a few this expectation is inexplicable.

Mild coffees are easy too. Arrivals continue large in volume. Still coffees of good roasting quality are much sought and not easily obtainable; when they are found stiff rates are asked for them. Good Cucuta is quoted 8 to 8½c. East Indias are dull.

\* \* \*

The coffee market is still crouching under a load that would have crushed it a few years ago, says the *Merchants' Review* of 12th ultimo. But so rapid has been the growth of consumption, owing to the low price produced by the glut, that the visible supply, although equal to much more than the consumptive supply necessary for a twelvemonth a few years ago, is now carried with a fair degree of steadiness. Fifteen years ago the world's requirements were only about two-thirds the total visible supply to-day, and yet the opening of the new crop year is only three weeks away. As the growing crop in Brazil is said to be enormous, it is easy to understand how hopeless it is to expect prices to materially advance, notwithstanding the remarkably low level of all coffee values. But grocers are used to big crops. Sugar growers for fifteen or twenty years have been dinning their complaints into the ears of whosoever would listen, the tea-men have been shouting ruin and the swarthy coffee-planters of Brazil have been swearing by all their little tin gods and saints that they could no longer live on the absurd returns from their plantations, and yet all hands have scratched through. Sugar has managed to resume its equilibrium, tea consumption has caught up to the increased rate of produc-

tion set by the Indian and Cinghalese planters, and now the coffee-men seem to be near the point where the low price will effectually chill the enthusiasm of the planter and cause a reduction of the production. It is worthy of note, however, that although sugar has increased in popularity by leaps and bounds, in Great Britain and Ireland as well as this country, and although coffee has gone from 5 or 6 lbs. to 12 or 13 lbs. *per capita* in the United States, tea has been stationary here and perhaps in several other countries, but there is no doubt as to its failure to gain new friends here. It has had the same obstacles as coffee to contend with. Indeed it is not possible that tea could have been manipulated as coffee has been by cheapeners of food supplies, and even the lowest grades of tea could not have tasted worse than that genuine berry, the "triale" of Brazil. What, then, has been the cause of the failure of tea? To return to the subject of the visible supply of coffee, on June 1st it amounted to 11,856,843 bags, compared with 12,248,278 bags on May 1st and 11,324,563 bags on June 1st, 1902. There is but cold comfort in those figures for the bull speculator. In Europe the supply (visible) aggregates 7,163,000 bags, which is equal to a full Brazilian crop in the early nineties. The invisible supply in Europe as well as America is probably very much larger than in the brave days of old when 6,000,000 bags were counted a generous Rio and Santos crop. If one only knew the extent of that invisible supply one might publish the figures and scare the bulls out of a year's growth.

Market slow and melting, says the *American Grocer* of June 13, except for high-grade and fancy mild coffee, which commands a premium above the Exchange basis. More attention is being paid to making fine blends than ever before, and this creates a demand for full-bodied, rich-flavoured coffee.

Brazil sorts dull and favour the buyer on grades above No. 7; steady for No. 7 and below on the basis of 5½c. Rio No. 3, 6½c; Santos No. 4, 5½c.

The sales of mild coffee, May 15 to 28, include: 17,685 bags Maracaibo; 4,418 bags Laguayra; 8,149 bags Savanilla; 5,346 bags Mexican; 2,084 bags Central American; 192 bags Jamaica; 185 bags Coro. The tendency is to lower prices on the general offering, simply because supply is excessive and far beyond legal requirements.

Total stock in United States June 1, 2,585,938 bags against 2,300,387 bags June 1, 1902. Brazil stock in the United States June 13, in store and afloat, 2,367,504 bags against 2,513,901 bags at the same time last year. Other than Brazilian, 394,950 bags, against 370,075 bags last year.

Brazil coffee in New York June 13, 1,924,041. Stock in New York in other coffees June 8, 289,955, in San Francisco, 96,396 bags and in New Orleans, 8,597 bags. Visible supply in the world of all coffees, June 1, 11,856,843 bags.

As the crop year draws to a close it is seen, says the *Merchants' Review* of 5th ultimo, that the supply of coffee shows no signs of shrinking to old-time proportions. The year opened with a world's visible supply of 11,261,331 bags, and yet the receipts at Brazil ports for the first eleven months have been equal to a year's consumption. On the first of

next July the "visible" promises to exceed the "visible" of a year previous by fully a million bags. The invisible stocks should be even larger than those of a year ago, and under these circumstances no one can wonder that prices are very low and still shrinking.

Now that the 1902-03 Brazil coffee crop is pretty sure to be not less than 12,250,000 bags, and so the quantity produced is a definite fact, it is, says the *Tea and Coffee Trade Journal* of 12th ultimo, interesting to review the prophecies of the coffee sages one year ago. Then, as now, there was guessing as to the crop, and if the next crop shall behave as impolitely in its extravagance, their will be a bumper crop and no help for it. The crop just now all in is one that created so much excitement because of a drouth, which all along was held to have done so much damage that even in July last it was thought to be preposterous to think that during 1902-03 there could be gathered in 9,000,000 bags. Indeed, the "Brazilian Review," claiming the best information, ventured at the utmost a guess of 9,250,000 bags, 6,250,000 bags Santos and 3,000,000 bags Rio. The general bear guess was a crop of 10,000,000 bags, and the most drastic, just to be sensational, dared the fling of 12,000,000 bags. As it has happened Herod is out-Heroded, and we get a crop of a quarter million bags in excess of the wildest guess. It is assumed that the crops of non-Brazilian coffees will figure up 4,250 000 bags, and so we will have a world's coffee crop of 16,500,000 bags for the year. It is probable that the increase of coffee consumption of the world will be the usual 500,000 bags, and this will bring the total consumption up to 16,000,000 bags, leaving a surplus of 500,000 bags to be added to the surplus of 4,000,000 bags accumulated one year ago. Now as to the next crop. Made conservative by the previous wrong guesses of nearly everybody, the outlook is for a 13,000,000 bag out-turn. It should seem that there has been no further extension of the Brazil crops; the coffee has paid so poorly, and there must have been some decrease in trees that have become superannuated, so to speak, or been destroyed. Besides there must have been a considerable diminution in the fructifying power of the trees due to the inferior care and fertilization that the loss of financial means must have thrust upon the planters. Then there too was the frost of last August which should have affected twenty per cent. of the trees. So giving guessing the widest latitude within conservatism the next Brazil crop should be around thirteen million bags, which again is too much for the world to handle unless a sweeping calamity shall strike the crop which will presently start growing.

Cuba has increased the duty on coffee from \$12 to \$18 per hundred kilos., purely as a protection measure.

**A Machine that Roasts Coffee by Electricity.**—A new coffee roasting machine, invented by Geo. C. Lester, of New York city, and operated by electricity for both power and heat, has aroused considerable interest among those who have seen it in operation, and who know and appreciate what such a machine may mean to the coffee roasting industry. Mr. Lester has taken out patents covering it in the United States and all Europe. Three machines have been built, the smallest of which is now in Germany on Exhibition. It roasts two pounds. One of the others is a fifty-pound

machine; the other roasts four hundred pounds and is therefore a two-bag roaster. The machine can be built to roast any quantity of coffee from one pound to ten bags and even more.

Many claims of superiority are asserted for this coffee-roasting device over others. Among them are that the shrinkage in roasting is only from 3 to 5 per cent. less and that the drink of the coffee is made far superior to that roasted on the old style machine using combustible fuel.

The machine is constructed so that the coffee is placed in a receptacle, or rotary drum, covered with perforated metal and surrounded with electric heaters so that contact between the coffee and the heaters is avoided. Moreover, as the electric heat is pure and unlike combustible fuel, the coffee does not come in contact with nor pass through any obnoxious fumes.

The heaters are connected up in the electric circuit from the generator, whereby one or more may be cut in or out of the circuit, thereby regulating the intensity of the heat; or, in other words, the heat may be increased or decreased instantly when necessary by the switchboard controlling the heaters.

The machine is compact and slightly in appearance, and takes up less room than the old style machine. It does not require any shafting, pulleys or belting, as the cooling or suction pipe tank for receiving the coffee after it is cooled, the fan for cooling and elevating, and the motor furnishing the power, are all compact and complete. The outside of the machine is covered with asbestos and canvas. The drum being air-tight, there is no chance for the aromas or flavours of the coffee beans to escape, and hence the beans retain all the original and essential qualities. A portion of the moisture that the bean contains in its green state is also retained, and this explains the saving of shrinkage.

It is understood that a company will be formed shortly to manufacture and place the machine on the market.—*Tea and Coffee Trade Journal*.

\* \* \*

Coffee when used to excess hampers the work of the digestive organs and causes congestion of the liver and obstinate constipation.

\* \* \*

Coffee-roasting is a process in which minutes, nay, seconds, are everything. An extra half minute of exposure to the heat has often ruined a roast. The man in charge must act quickly when the coffee is ready for turning out of the cylinder, otherwise his employer will be out of pocket. The matter of roasting has much to do with the flavor of coffee on the consumer's table.

\* \* \*

**Mat Coffee in New York.**—The stock of mat coffee in warehouse at New York is reported to be as follows:—

		June 1	
		1903	1902
		Mats.	Mats.
Padang ... ..	...	57,684	38,585
Praeger ... ..	...	300	300
Malang and Buitenzorg ...	...	2,000	2,000
Palembag and private growth ...	...	46,000	53,000
Macassar and Bonthyne ...	...	18,794	5,134
Total ...	...	124,778	99,019

Deliveries during May, 1903, were 5,660 mats, of which 1,213 mats were Padang. Deliveries during May, 1902, were 8,842 mats, of which 1,067 mats were Padang.

**Coffee in New York.**—A slow market, unchanged in its features from last week, says the *American Grocer* of 10th also. Fine roasting grades command a premium over the basis of Exchange quotations. Mild coffee in buyer's favour except on specially desirable roasting grades, some of which are scarce.

\* \* \*

The whole trend of sentiment in the coffee trade is bearish, says the *American Grocer* of June 3.

\* \* \*

Walter Ashlin, one of the greatest American coffee specialists, says: "There is a real scarcity of high-grade and fancy roasting Central American and other mild coffee. A very fancy Bogota would bring 16c; a fancy Maracaibo 12c. The range on very desirable roasting sorts for blends is from 10c. for a golden Santos up to 16c." A good deal of coffee designated Santos is really Rio, being grown in districts close to the old Rio plantations. High grade Rios are relatively the cheaper, because of the peculiar Rio flavour. Arnold Schramm, in speaking about mild coffee, says: "Tendency downward owing to larger supplies. Only the better grades of all kinds and very low grade coffee were in demand, buyers fearing to increase stocks owing to the general lack of trade."

#### TEA NOTES.

The recent shipment to London of 2,976 packages more of tea makes the total shipments for the year 58,416 packages, says the *Tea and Coffee Trade Journal* of 12th ultimo. This means that the total imports of the year to the United States have been reduced more than 3,400,000 lbs. Fortunately for the American market the tea exported was Congou, of which there has been such a plethora here, and while the large withdrawal has not altered the prices of the teas remaining, it has served to put the market in a healthier state. London, however, is not so satisfied. The increase in the price of Indias and Ceylons created a demand for cheap China teas that might be used in mixtures, but the blessing seems to have had other than best effects. It is reported that the New York supplies to England have materially interfered with the steady advance looked for in such teas as Chinas had sent direct and were available for the lower blends. And it is further said that the transaction has not been a profitable one. All this will be very interesting to the American market, which has been quite willing to part with the tea so little in request. Unless there is a decided further leap into higher prices, it is safe to conclude that the export of Congous from this side will not be for the present time continued.

\* \* \*

**More Tea for Porto Rico.**—Porto Rico does not drink much tea if any at all. However a beginning for larger things has been made and more and better tea is being sent to the island. Strange to say the tea is being sent from Pawtucket, R. I. from the warehouse of the Lyons Delany Company. Roman Catholic institutions managed by Americans seem to be blazing the way for tea.

\* \* \*

**American Tea.**—Tea picking at Pinehurst, South Carolina, has been progressing for some time. The tea plants are presenting a most healthy appearance so far this season and the flushes have been of luxuriant growth. Judging from the

gathering so far the output will be far in excess of the season of 1902 and the quality in a measure superior.

\* \* \*

**Tea in the U. S.**—Samples of the new first crop Formosas have arrived and gave satisfaction, says the *Merchants' Review* of 12th ultimo. Second crop Japans are said to be coming into market, and advices coming thence are firm in tone. The cables also say that fair settlements are makings of Pingsueys at firm prices, which show a 20 per cent. advance compared with last year. India and Ceylon advices are firm with prices in India much above last year's range. The local market is quiet and featureless. The new crop Formosas mentioned above are not the best of the season's output, the third picking being the best, the second the next best, and the first the poorest of all.

\* \* \*

Mandarin tea sells in China for \$10 to \$15 a pound, and is rarely exported from China.

\* \* \*

Tea leaves three inches long, tied with ribbon in small bunches, have been seen once or twice in grocery windows in the United States. As a rarity they would probably sell well, at least for a while.

\* \* \*

Japan teas always deceive the consumer who is not familiar with them. He thinks because they are so delicate in flavour they must be deficient in strength, whereas they really possess a greater strength than most of the teas grown in China, and have a correspondingly greater effect upon the nervous system.

\* \* \*

If there are any persons who doubt the superiority of the finest Formosa Oolong tea, let them, says the *Merchants' Review*, make a drawing of a really fine sample and notice how the aroma delights the nostrils, filling the apartment with a fragrance that resembles the perfume of the jessamine or, as some think, the primrose. This is an aroma peculiar to this kind of tea, and it is said that Formosa tea must be continually cultivated in new soil in order to retain this aroma.

\* \* \*

Pingsuey teas are called "bastard" teas in China, because their origin is open to suspicion, some authorities contending that they are derived from another plant than the tea plant.

\* \* \*

**The U. S. Tea Market.**—The tea market is slow, especially in spot lines, says the *Tea and Coffee Trade Journal* of 12th ultimo, but prices hold steady though lower than those ruling in the opening markets. This is, however, a comparison between old and new teas. For the teas in demand and on the spot prices are very firm. This is especially true of Country Greens and Pingsueys. Some of the new Formosas have arrived but reports vary as to the quality of them. More of the tea will have to be seen before a trustworthy general opinion can be entertained. The prices rule firm at the advanced rate. New Japans are coming in larger volume but the sales are few. The high prices for the tea seem prohibitive to buyers. While the incoming supplies are only fair at New York, they are very much larger at Chicago, which has become the distributing point of the country for the tea. The tea that has arrived is of the better grade, and all of it seems to be taken at the advanced prices. As there is no more of it to be had a decline in price need not be looked for. It is under-

stood that the market which has been so barren of the better grades is readily absorbing such stocks as arrive. Those who are well informed say that there will be no difficulty in getting Japan teas of the lower grades at lower prices. Other primal markets are reported strong, despite that agents are doing their best to bring offers to a lower basis.

Congous are very slow on this market but abroad are selling at good advances over last season's opening, more especially on medium and choicest grades.

Foochows are also quiet and spot prices easier.

Indias and Ceylons are arriving in greater numbers and steadily going into consumption; prices are unchanged although the foreign markets offer very inviting values in better grades. Greens from these countries are a little lower in price, probably from larger quantities to offer from.

\* \* \*

Japan teas are about 7 cents per pound higher than last season. Basket-fired are relatively higher than pan-fired, says the *American Grocer* of 10th ultimo.

\* \* \*

**China's 1902 Tea Season.**—The annual report of the Imperial Maritime Customs of China includes particulars of the exportations of tea from China direct to foreign countries for the year 1902. The grand total of the exports is 1,519,211 piculs or 202,455,881 pounds, against 1,157,211 piculs or 154,256,226 pounds in 1901, a substantial increase which is likewise exceptional, for the importations from China excluding the year 1898, when 1,930,795 piculs were exported, have been continually decreasing since the year 1895. In the last ten years the highest figures reached were 1,865,680 piculs (1895). Exports were lowest in 1901.

Of Congous, 506,885 piculs were exported in 1902, of which 114,364 piculs went to the United States direct, 77,065 to Great Britain and nearly all of the remainder to Russia. Hong Kong is represented with 42,078 piculs. Of Oolongs, 77,906 piculs were exported, of which the United States got direct 52,751 piculs. Souchongs were sent direct to the United States to the extent of only 8 piculs. They went in the main to the continent of Europe, Russia excepted, the total being represented by 18,867 piculs. The grand total was 26,072 piculs. The exports of scented capers were 10,055 piculs, almost entirely distributed from Hong Kong. The entire export of black tea amounted to 687,228 piculs or 101,615,490 pounds of which 168,501 piculs or 22,461,183 pounds were sent direct to the United States.

Of green tea the total export was 253,757 piculs or 33,936,808 pounds of which 126,196 piculs or 15,821,927 pounds were sent to the United States direct and 64,377 piculs to Russia. To the United States were sent 23,052 piculs of Young Hyson, 13,142 piculs of Hyson, 951 of Imperial, and 89,088 piculs of gunpowder. Russia took large quantities of the better grades, excelling the United States. The figures were 16,536 piculs young Hyson, and 41,677 piculs of Hyson.

Russia received almost the entire output of brick tea, being sent 477,597 piculs of black and 86,932 piculs of green. Russia also practically got the entire production of tablets—7,156 piculs.

Japan by direct export received only 1 picul of green tea, but was allowed to have 7,061 piculs of black tea. On the other hand India took only 877 piculs of black tea direct, but ordered 10,984 piculs of green tea, which, on the whole, is no

small bit of heresy for that country to perpetrate. Our Phillipine Islands figure in the list with only 177 piculs.

Russia leads all other countries as China's best tea customer. The grand total sent direct to that country was 882,893 piculs or 117,689,636 pounds, but second is the United States, with, however, only 294,697 piculs or 39,283,110 lbs., and third is Great Britain, with 116,317 piculs, and next Hong Kong, with 77,425 piculs.

\* \* \*

**Russian Tea Trade.**—A Consular report from Batoum says:—The Customs regulations for the importation of teas in transit through the Caucasus for the Trans-Caspian and Central Asian markets have now been extended to teas for the Persian markets, and the Russo-Chinese Bank has received permission from the Russian Government to import, through the port of Batoum, teas in transit for Persia, provided the bank deposits a guarantee at the Batoum Custom-house equivalent to the duty which is due on each parcel so proceeding in transit until the tea is exported into Persia through either the Julfa, Baku, Krasnovodsk, Askabad, or Dushak Custom-houses. When the Batoum Custom-house receives intimation that a consignment of tea has left the country, the deposit on such consignment is returned to the bank. This measure will doubtless, to a considerable extent, affect the Indo-Persian tea trade through the southern ports of Persia, seeing that tea destined for the northern Persian markets will have to travel a shorter distance overland and thus avoid the excessive charges of caravan transport.

\* \* \*

**The U. S. Tea Market.**—Mr. A. R. Robertson writes in the *Spice Mill*:—The tea market has to be reported in better condition than last month. Buying has been more active, although quantities are not large.

It would appear as if stocks were light, and while prices of Formosa tea are quoted a cent to two cents lower than a month ago, it is worthy of remembrance that no great selling is taking place; in fact, in comparison with eastern markets spot teas are "a good buy."

Formosa quotations from foreign markets give 18½ cents for cargo grades, and buying steady.

During next month, a better view will be had for the future, as Summer teas will again begin to make appearance.

Congou teas are offering 9½ cents to 10 cents c. i. f. New York for new season Government standards, while medium and finer grades show a heavy advance on opening prices of last year, estimated about 20 per cent.

This class of tea is one which does not respond to the firmer prices of last season, but is more than likely to interest buyers this year, as probably owing to higher prices for China greens, more of the leaf will be used for that purpose.

Japans keep firm at advance of opening market. Quality is reported very fine, and supply will not be more than can easily be taken care of.

Greens very strong, in price with small stock, and only hand to mouth buying.

India and Ceylon have had more attention the past month, and prices are very low for choice teas, while medium and lower grades are firm at advanced figures.

Calcutta market opened with prices corresponding to advance on London market.

India and Ceylon greens are quietly forging ahead and some fine teas are offered cheap.

Last season 39,418,628 pounds of tea were exported into the United States from Japan, of which 4,563,858 pounds went to New York by steamer or sail and railroad and 8,827,769 pounds *via* Suez Canal; 3,868,612 pounds were shipped to San Francisco; 17,544,930 pounds to Chicago (against 12,830,270 pounds during the preceding year); 4,363,884 pounds to Canada (against 6,480,964 pounds in preceding year), and 248,575 pounds to Europe, etc. The total exportations during the preceding year were 35,726,102 pounds. Countries outside of the United Kingdom took during the first three months of 1903 a larger quantity of both Indian and Ceylon tea than for the same time in 1902, but not much more than in 1901, but about 9,000,000 pounds more than in 1899. That is encouraging for British-grown tea.

During May only three packages of tea were rejected; there were passed 12,010 packages weighing 760,267 pounds. The tea supply of the United States averages higher grade than ever. With tea duty free, the consumption ought to get beyond 100,000,000 pounds annually.

\* \* \*

**Tea in Natal.**—To show what dimensions the tea industry has attained in Natal the *Grocers' Journal* states that the Hulett tea plantation in Natal is the largest of its kind in South Africa, in fact, in all Africa, for tea is not grown in any other part of the Continent. "I believe," says a writer in the *Magazine of Commerce*, "its greatest output for one day is 10,370 lbs. of tea, and the estimate for a recent season is 1,000,000 lbs. Its acreage is extensive, and, beside a large factory and quite a village of huts for the Indian employes, it also has a railway of its own—a 2-ft. gauge line—being the first light railway laid in Natal, and costing £20,000 to lay. The native labour mainly consists of coolies, of whom there are about 1,000."

\* \* \*

**Ceylon Green Tea.**—Yesterday's Green tea statement shows, says the *Ceylon Observer* of 7th instant, that during the second half of June a larger quantity of green tea earned the bonus than in any previous half month since the commencement of the bonus system. The figures were 881,959 lbs. and with 710,790 lbs. for the first half of the month this brings the June total of Green tea manufactured upon which bonus has been paid up to the record figures of 1,592,749 lbs. This is remarkably good and if July shows a similar result the 4 cents bonus will be exhausted at the end of the present month and the 3 cents era inaugurated. It looks as if after all the 12 million aimed at will be attained this year. It is not expected that the claims in July will be quite so heavy as in June. In the course of a comment on the exports from Calcutta for the month of May we see in the *Englishman* to hand to-day that only 102 lbs. of Green tea were exported for the month of May!

\* \* \*

**Calcutta Tea Sales.**—At the sales on 10th instant 17,000 packages were offered and 16,500 sold. There were strong and active demand and prices were steady except for common kinds, which were about a farthing lower. The feature of the sale was the strong demand from Bombay for suitable Pekoes at about two annas over London rates and from China for dust at four annas-and-a-half per pound.

\* \* \*

**U. S. Imports of Tea.**—April imports of tea for the entire United States were light, being 1,389,513 pounds, against 2,358,134

pounds in April, 1902, says the *American Grocer*. For the ten months ending April 30, they were, however, larger than for any entire year in the history of the tea trade, except 1897, reaching 102,332,678 pounds, against 71,727,431 pounds for same time in 1902; 84,532,132 pounds in 1901. The largest annual import on record is 112,907,548 pounds in 1897. The average annual net import for the five years, 1898-1902, was 77,322,599 pounds; for ten years, 1893-1902, it was 86,923,049. From 1893-98, it averaged 96,523,498 pounds, a period of duty-free tea.

A decline to an average yearly import for the five years of greatest prosperity this country ever experienced, of 77,322,599 pounds, subject to a duty of 10 cents per pound, is very significant of the effect of a tariff on consumption, especially when such rival articles as cocoa and coffee were admitted free of duty. The record shows an average annual decrease in imports during the five years, 1898-1902, of over 19,000,000 pounds, as compared with the previous five years of free tea.

It would be unfair to attribute this notable decrease in consumption altogether to a 10-cent duty, although the marked rise in imports during ten months following its removal so indicates. Tea has had to contend with very cheap coffee and with cocoa, the sales of which have been tremendously increased by advertising.

Publicity which results from extensive but judicious advertising must be regarded as a great commercial factor—an indispensable part of business economy. Aside from the advertising of those interested in British-grown tea, nothing has been done to stimulate the demand for tea. The time seems opportune for beginning a great campaign to draw public attention to the merit of the world's most fragrant leaf. It augurs well for the future that imports in 1903 have been so large.

### NOTES.

#### Colombo Tea Sales.

At the Colombo tea sales on the 8th instant a firm tone again prevailed for all kinds, particularly "leaf" teas, which showed a further advance in price.

#### Dutch Quinine.

The Amsterdam quinine-works have reduced their prices for Ed. II. by 1fl. per kilo., and Ed. III. by 1½fl. per kilo., their quotations now being, Ed. II. 2¼fl., and III. 25½fl., per kilo.

#### Java Quinine.

The result of the tender held on June 24 at Batavia is as follows:—Of 9,902 kilos. (Ed. II.) offered, 2,412 kilos. were sold, at an average of 15f. per kilo. (about equal 5¼ cents Amsterdam unit), against 17f. per kilo. paid at the previous tender. The next tender to be held at Batavia will take place on July 29.

#### Assam and Chittagong.

The first consignment of tea from Upper Assam for export from Chittagong arrived at that port on the 8th instant—only four days transit from Amgoorie over the North Cachar hills to Chittagong. The consignment has been despatched by the steamer *Buckingham*.

#### The St. Louis Exhibition.

Mr. R. Huyshe Eliot has been nominated by the "Thirty Committee" of Ceylon for the appointment of Assistant Commissioner for Ceylon at the World's Fair to be held at St. Louis in 1904; and that His Excellency the Governor has been pleased to appoint Mr. Paul E. Pieris, C.C.S., to be the other Assistant Commissioner.

#### The Tea Corporation, Ltd.

A special cablegram, dated 9th instant, to the *Times of Ceylon* says:—The meeting of debenture-holders of the Tea Corporation,

Limited, adopted the Receiver's reconstruction scheme; and the Chairman stated that if the shareholders did not adopt the scheme, the Receiver would apply to the Court for leave to sell the estates. However, at the shareholders' meeting to-day (Thursday) the scheme was rejected.

#### Otto of Rose.

This year's crop will be very early, and one of the largest on record as regards distillation, which is almost complete. The weather has been exceptionally fine for gathering the rose-leaves, the crop of which is exceedingly good in quality and quantity. Until the whole crop is collected and distilled it is impossible to name a price for the new oil, but it is almost certain the price will be very low.

#### Dandelion Coffee.

The official analyst of one of the grocers' associations in England recommends a greater use of dandelion coffee. He said that from personal use he could say that dandelion brought out the flavour of coffee much better than chicory. Again, many people found that they could not take cocoa because it was indigestible. He, himself, had found it so; but by using it with dandelion he had overcome the trouble, and so could recommend the dandelion for use in that direction. What was needed was careful cleansing and preparation of the roots; and, properly manufactured, he was persuaded that the dandelion would find its way into public favour.

#### Coffee v. Alcoholism.

A Western paper recently published the following: "A London doctor has come to the conclusion that coffee is the best cure for alcoholism. He says that a man who takes to drinking coffee and takes enough of it loses all appetite for liquors. The doctor cites those countries in which coffee is the most general beverage as being free from alcoholism. In late years some doctors have advised the discontinuance of coffee drinking, and there are now hundreds of poor mortals who drink nothing stronger than hot water or hot water with a few burnt cereals mixed in it; but if coffee can really cure alcoholism, let all the toppers take to coffee." But be sure and give them the very best coffee. Most of such folk drink their coffee without cream or sugar, and therefore flavour is more of a factor than with consumers who use both articles with their coffee.

#### London Tea Market.

Weekly special telegram dated 9th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is weak and that the market for medium liquoring Pekoes and Broken Pekoes is weak, while the market for common Pekoes and Broken Pekoes is weak. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (same as last week) and the average 7½d. (¾d. down). The average for the same period last year was 6d. Reuter reports that the tone of Ceylon tea generally irregular little enquiry for common qualities, Broken Pekoe steady. Pekoe Souchong quiet, Fair Pekoe Souchong is quoted at 5½d (¾d. below last week) and the average for the week is 7½d. (¾d. down). 21,000 packages of Ceylon tea were offered for sale and 19,000 disposed of. Indian tea:—Packages offered 14,000 and sold 13,000. Average price of Indian tea nominal. It is quite expected that as the better teas now going forward come into auction, London prices will rise.

**Rubber and Ramie in the  
Malay States.**

M. Donald Mackay informs the *Times of Ceylon* that much more has been done in rubber planting in

Selangor than in Perak. In fact, in the former State a great deal has been done; but the growth is not far enough advanced for much tapping, which has been confined to the few older trees there, the same as here. We have in our garden here two Pará trees, about 20 years old. They were tapped last year and yielded 27 lbs. clean rubber, which sold at something over 3s. per lb. in Liverpool, and 3½ lbs. scrap at 2s. 2d. The tapping of another estate in Perak realised over 4s. per lb. for best. I don't think there is any fear of disease in any of the rubber species. Gutta rambong (*Ficus elastica*) is very promising in this country—so far as growth is concerned. I have not got the figures and yield from it. I am not aware of any of the *Castilloa elastica* variety being in the Straits. There is only one estate in the Malay States where Ramie has had anything like a fair trial on a favourable situation. They got a Faurse machine at work, and sent home a lot of 'ribbons,' but the freight charged left no profit. With a sufficient rainfall, well distributed, and machinery to finish the ramie into 'filasse' on the estate, it will pay; but not otherwise.

**Cardamoms in Auction.**

The unprecedentedly large offerings of cardamoms which were brought

forward at the auctions to-day, says the *Chemist & Druggist* writing on the 25th ultimo, afforded a suitable opportunity for considering whether the existing arrangements, whereby they are sold together with the drugs, should be altered. Mr. Charles Umney, in bringing forward the question on behalf of the wholesale druggists, said there were no less than 770 packages, in 442 lots, offered that day, and although such large quantities might be advantageous to the brokers, still it was a waste of time to many of the wholesalers to sit there for, say, two hours and see them sold. Cardamoms were uninteresting to many of them, and he suggested that they should precede the drug-sale, more especially as they had a precedent in vanilla-auctions, which formerly went with drugs. He hoped the brokers would consider the matter in September or October when arranging the sales for the ensuing year, so that the present drug-sales might be modified in some way, and cardamoms form a distinct auction. Mr. R. N. Dalton (Messrs. Dalton &

Young), who occupied the rostrum at the time Mr. Umney rose, said his (Mr. Umney's) suggestion was a good one, and thought that some satisfactory arrangement could be carried out, which would be submitted to buyers later. A desultory discussion followed, during which various suggestions were made, but it is understood the brokers will talk the matter over, and submit a proposal.

**Amsterdam Cinchona-  
auctions.**

A meeting of Amsterdam cinchona-importers, convened by Messrs. D. M. & C. Watering, was held on June 12,

when some fifteen firms were represented. The object of the meeting was to come to an understanding between the various importers as to the quantity of bark to be offered from time to time at various auctions. The Chairman was Mr. J. Vorstelman, who stated that during a recent visit to Java he had conferred with some of the largest exporters of cinchona, and promised them he would endeavour to influence the importers to come to a working-arrangement. He also referred to the unfavourable condition of the auctions, by which it was possible at one time to offer, say, four thousand packages, and at another, ten or eleven thousand packages, regardless of the condition of the market. This was the chief point of discussion, and the Chairman expressed the opinion that an improvement would only be possible if, at each of the ten auctions held during the year, only one-tenth of the estimated harvest would be placed on the market. He, therefore, proposed that a circular be issued to the proprietors of the various plantations, asking each individual to fill up the estimate of his crop. These returns would be sent into a Committee at Amsterdam. It would then be possible to obtain an estimate of the whole harvest and allot one-tenth of it for each auction. The quantities that are first warehoused would be first offered for auction. Parcels left unsold would be offered at the next auction, in addition to the quantity to be sold under this arrangement. All parties to the scheme would agree not to sell either new or unsold parcels otherwise than by public auction. After a long discussion, a Committee was appointed, consisting of the firms of Messrs. D. M. & C. Watering, Tiedeman en van Kerchem, and A. Hendrichs & Co., who will draw up a circular-letter to be sent to the various Java planters, asking them for exact figures as to their individual production, with the object of regulating the auctions.

**GENERAL ARTICLES.****PRODUCE AND PLANTING.**

Although nothing practical in the interest of tea came of the debate in the House of Commons, it showed that the feeling in favour of a reduction of the duty is stronger than the division list indicates. If there is one article of universal consumption second in importance to bread alone to the working classes of England, it is tea, which has long ceased to be an article of luxury in the homes of the poor. Tea, and bread, and butter form the staple diet of the millions who can least afford to pay an unnecessary penny of taxation, and the mischievous effects of the 6d. duty have been proved to demonstration. Inconsistency in policy is found in the fact that the extra duty presses heavily upon India, and our great Asiatic dependency is surely entitled to be taken into consideration by a Government which professes ardent Imperialism and propounds preferential treatment to the Colonies as the highest form of political wisdom.

Official figures in America state that the amount of tea imported into the United States during the ten months ending April 30, 1903, is 102,332,678 lbs., against 71,727,431 lbs. during the same period one year ago. The imports during April were 1,389,513 lbs. The exports were 3,066,951 lbs. for the ten months ending April 30, inclusive of 1,731,340 lbs. exported during April.

Writing from Yokohama, May 21, with reference to Japan tea, Messrs. Smith, Baker & Co. say: "The tea market has been in full operation for three weeks, and prices have ranged from Yen 10.00 to 15.00 above the corresponding period of last season, somewhat to the surprise and much to the delight of the native grower, whose picul of tea is now exchangeable for eight piculs of rice; and every owner of a small tea garden is posing as a capitalist. This condition alone, added to favourable weather; should result in a large increase for export, not only over last season's supply, which was an avowed short crop due to frost, but over previous seasons when prices were Yen 20.00 lower; nevertheless statistics of arrivals do not, as yet, fully confirm such an inference."

Tobacco-growing in the Transvaal is a profitable industry. One man grew less than an acre and realised £270 for the crop. The Transvaal is a tobacco-growing country second to none in the world at this rate. Another grower cleared in six months a net profit of £150 per acre.—*H. & C. Mail.*

### COFFEE IN LONDON.

The shortness of supplies coming forward is beginning to be felt in a very marked manner, says the *Produce Markets' Review* of 20th ultimo, and the auctions have been exceptionally small for the time of year. The month of June is, however, always a period when the demand is slack, so that the small offerings have not as much effect as they would at other times. The absence of Cost Rica is particularly being felt, and holders are not at all anxious to sell except at prices above those recently ruling. Colombian has alone shown any increase, but the quality still continues too common for the general home trade, and has consisted solely of old Coffee that has been kept in the country for a long period owing to the revolution. Of other sorts, East India has shown a marked falling-off in quality, and it is evident that the end of the crop has been nearly reached.

### TEA IN LONDON.

INDIAN TEA.—There is little change in this market, says the *Produce Markets' Review* of 20th ultimo, and prices remain about on a par with those in the preceding week, with a steady demand. The duty payments up to the 51th instant were 1,800,000 lbs. heavier than for the same time last year, and as the imports for this month are not likely to exceed those of June 1902, a further shrinkage in the stock will probably be shown in the figures at the end of the month. The supply now coming forward at the public auctions shows a material diminution. The catalogues issued for Monday, comprising about 21,000 packages, contain the closing invoices from most of the gardens, and for the next few weeks the offerings will probably be on a comparatively small scale. This points to a

steady to firm market, and, although the buying continues of a hand-to-mouth character, the smaller supply will, no doubt, be readily absorbed. At the public sales 22,708 packages were submitted, including a few small invoices of new season's tea, which were of average quality for early arrivals and brought fairly satisfactory rates. For the past season's tea, the demand for the useful medium and fine grades predominates at quite last week's rates, but for the common grades the bidding was less active. Prices were irregular, and in some cases easier rates were accepted.

CEYLON TEAS.—The quantity advertised for public sale this week was on a considerably larger scale, and, in consequence, the auctions were divided into two days, namely, Tuesday and Wednesday. Notwithstanding the increased amount on offer, the demand was fully equal to the supply, and previous values were well sustained for nearly all descriptions. The lower grades of Whole Leaf showed no change, while the medium kinds were well supported at about former rates. In Broken Pekoes, the medium sorts were a little irregular, but the finest descriptions, owing to their scarcity, realised extreme prices. At the public sales 35,540 packages were brought forward, of which about 3,500 were withdrawn. The quantity advertised for next week shows a considerable falling-off.

CONGOU TEA.—Last Saturday the ss. *Himalaya* arrived with a small consignment of 1,000 boxes new season's Paklings; the quality is moderately good, and fair prices have been realised. The *Glenishiel* left Foochow on the 9th instant bound for London with the first of the new season's Moning and Kaisow. It is reported by cable that the quantity available for this market is about 15 per cent. less than last year, and that considerably higher rates have been paid in China. At the public auctions held in London last Wednesday 1,233 packages were offered.

OTHER CHINA TEAS.—A slightly easier tone was noticeable for all descriptions at the public sale of Green tea held on Thursday, but good medium Gunpowders are getting very scarce. Capers remain unchanged, but a fair business has been reported in Common Oolongs; the demand for the finer grades, however, continues dull.

### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

Exchange.—Saturday, 30th May, 1903.—Ninety days' Bank rate on London opened on Monday 25th at  $12\frac{7}{16}$ , rose to  $12\frac{1}{2}$  on Thursday, and closed this afternoon at  $12\frac{1}{2}$ .

The weakness following directly on the loan is attributed generally to liquidations, but is more probably the effect of a shortage of produce bills natural to this time of the year, added by prudent action on the part of the Bank of the Republic.

During the week just ended coffee exports amounted to only £208,000 as against £223,000 the previous week, and £433,000 last year. It is fortunate, we repeat, that the loan came when it did, otherwise, even with its vast resources, the Bank might have found some difficulty in supplying the market with bills. If declared sales are any indication, the position during the coming week ought to be more active, and bills more plentiful, sales having amounted to 154,000 bags as against 140,000 the previous week and 108,000 last year.

Besides coffee, the only active export is cotton, which is giving a good price and being shipped in increasing quantities.

The speculative market is quiet and being taken up for the present with liquidations, but may be expected to show signs of life as soon as it is over.

Coffee.—RIO DE JANEIRO, 30th May, 1903.—Joint entries at Rio and Santos during the week ended May 29th, were 17,000 bags more than the previous week's, but 7,712 less than the corresponding week's last year of which they represent 95.1 per cent.

The crop entries up to the 20th May were 3,197,177 bags less than last season's of which they represent 78.5 per cent.

Shipments (*embarques*) were smaller both at Rio and Santos, being 9,824 bags under the previous week's and 120,095 less than last year's. Stocks, consequently, fell off again, being 3,034 bags less than on the previous Friday and 300,107 less than on the corresponding Friday last year.

Declared sales were brisk, 14,000 bags more than the previous week's and 46,000 bags more than the corresponding week's last year.

So far nothing more is known of the regulations under which coffee is to be shipped from the 1st July next, but exporters are not likely to be caught napping, and arrangements are, we hear, already afoot to provide a considerable amount of extra tonnage, should it prove requisite. The failure to let the market know precisely what is going to be done is already prejudicing business and will be still more injurious should the large amount of low-grade coffee believed to lie at Santos be shipped hurriedly, just to avoid the tax. In the depressed state of the foreign markets, so large and violent an addition to existing stocks would probably be fatal to prices, which are already far below parity with ours.

It must be confessed that never have we entered on a new crop under more depressing circumstances. With the visible supply over 12,000,000 bags, wholesale and retail dealers all over supplied, and a fair if not large crop already in sight, it seems impossible for local prices to rise unless exchange were to fall, and of that there seems no prospect whatever at present.

Last year there were still a few sanguine speculators who, between them, managed to keep prices up above their natural level, but now they are full up and can carry no more. How, under such circumstances, the coming crop is to be marketed at all seems a conundrum, but in any case currency prices seem bound to give way. When they fall low enough to stop entries, prices will go up but not until then, as the firmness of exchange would counteract any small improvement that might occur in consuming markets.

As to the coming crop, no one seems inclined to venture an opinion. Whether it be ten, eleven or more millions really matters little so long as there be an immense surplus over from previous seasons and the possibility of immense crops always looming in the future. Even if prices were to rise to-morrow in consequence of some disaster to the growing crop, the advantage would be purely temporary and last only until another good crop came round again. *To cure by selection, absolutely ruinous prices must rule for five or six years, until in fact 25 or 30 per cent. of existing plantations have been abandoned and are lost beyond recovery!*

There is only one certain way to limit production and bring it to a permanent level with consumption, that is to cut down the trees, and thus ensure a certain decrease for three or four years at least.

Whatever plans and projects may be inculcated, there is no other system but will aggravate the disease while seeming to cure. Besides, exchange is inclined to rise and prices of coffee to fall. Unless, therefore, something is done to check production, not for a year or two, but definitely and until consumption increase, either planters must submit to ruinous prices for, perhaps, years, or the general interests must be sacrificed to keep exchange down and thus prevent prices from falling lower still. So long as planters have it in their own hands to extricate themselves from a position they are never tired of lamenting but refuse to do so, they cannot look for assistance or sympathy from the rest of the community, or expect that their interests shall take precedence of everything else.

A sharp frost has been experienced all over the interior, the thermometer, even at Petropolis, having fallen to 4 deg. C. and at Tijuca to 10 degs.

SANTOS, 30th May, 1903. - With record quotations in Europe (Havre, June 30 1/2, Hamburg 25 1/4) we have had a weaker market with a tendency to dulness. Foreign markets in expectation of larger receipts of new coffee, do not care to buy on a large scale at present prices, and it looks as if we should see lower prices yet. *Superiors* were sold at from 3\$000 to 3\$900; *Primes* 300 réis above, *Goods* 200 to 300 réis below, *Regulars* from 3\$000 to 3\$200, *Bourbons* are slack, so are *Old Yellows* and *Washed*. *Peabodys* show a slightly better demand and *Superior Peabody* were sold at from 4\$000 to 4\$200. Orders for *Superiors* ruled between 26s. 3d. and 27s. 3d., *Good Average* 1-3 to 1-6 lower. *Passagens* (90,000) Receipts (100,000\$) maintain their old level and shipments were fair 112,000\$. Our stock is practically unchanged 832,775 Receipts for next week are estimated at 500,000\$ to 600,000\$ but it is very difficult to get near the real figure to 12 9/16 without influency on coffee.

Exchange showed only small fluctuations (12 1/2 to 12 9/16).

Pauta remained 380 réis.

In the course of an interesting article on the coffee industry *Bradstreet's* in the issue of 18th April says:—

"Coffee is, now consumed by the people of the United States to the amount of 1,000,000,000 pounds annually. Since 1894 the

imports have more than doubled, and within the same period the *per capita* consumption has increased four pounds, the gain being greater than that made by any article used as a beverage. A division of this 1,000,000,000 pounds among the inhabitants of the country gives to each man, woman, and child about fourteen and one-half pounds," remarks the *Chicago Tribune*.

"For a family of five persons this would mean one pound each five days, or seventy-three pounds a year. A fair average price for coffee of good grade retail is 20 cents per pound, involving an annual expenditure for this bean, which delights the palate, aids digestion, and makes the user thankful for the pleasures of the table, to the amount of \$ 4.60. This would make the annual expenditure of the people of the United States for coffee alone exceed \$200,000,000.

"Imports for 1901 reached the grand total of 1,072,009,182 pounds. In 1902 there was a slight decrease, the amount being 955,283,919 pounds, making the annual average for the two years 1,013,646,550 pounds. The source of this supply, together with the percentage of the total import contributed by each country, is shown in the following table. The figures are official and were compiled from the Government records:

	Pounds.	Per cent.
Brazil .. .. .	764,658,963	80.1
Other countries, South America ..	63,824,056	6.7
Central America .. .. .	45,512,114	4.8
Mexico .. .. .	30,719,800	3.2
East Indies .. .. .	20,814,403	2.2
West Indies .. .. .	20,429,314	2.1
Other Asia and Oceanica .. .. .	5,003,563	...
United Kingdom .. .. .	1,778,461	...
Netherlands .. .. .	1,828,935	...
All other countries .. .. .	714,310	...
Total .. .. .	955,283,919	99.1

With regard to the new crop nothing definite has transpired, and none venture an opinion but are waiting to see how it is going to pan out. About 2,000 to 3,000 bags of new coffee may be expected daily, if the weather keeps fine.

It is wonderful what a lot of coffee two or three years old was kept up-country. There seems to be little, if any, left now, so that there will be no confusing past and current crops next year.

Planters complain of coffee being forwarded by the Central and Leopoldina railways in dirty coal-trucks, with the result that the coffee arrives in a damaged condition.

The daily papers state that Conde Figueredo has submitted a scheme for a new bank to advance money to planters on coffee, and undertake sale of same on commission. There seems no objection, though it is not quite clear how the State is to come into such an arrangement. Is the State to provide the capital and become, consequently, a responsible partner in the business?

Sao Paulo.—(*O Correio Paulistano*) states that the British Bank of South America has acquired three plantations in the Araraquara and Jaboicabal districts for 1,300,000\$. Can the Bank be going in for coffee planting, or is it for "Lord" Lipton?

## CACAO-GROWING IN THE PHILIPPINE ISLANDS.

The "Philippine Bureau of Agriculture" has published a bulletin on cacao culture in the Philippine Islands, a copy of which has been received at the War Department of the United States (Bureau of Insular Affairs). The following data covering the culture of this article of commerce in the Philippines is published as of interest to the cacao-growing countries of Latin-America.

The cacao grown in the Philippines is of such excellent quality that there is keen rivalry among buyers to procure it at an advance of quite 50 per cent. over the common export grades of the Java bean, notwithstanding the failure on the part of the local grower to "process" or cure the product in any way. In parts of Mindanao and Negros, despite ill treatment or no treatment, the plant exhibits a luxuriance of growth and wealth of productiveness that demonstrates its entire fitness to be considered a valuable crop in those regions.

The importance of cacao-growing in the Philippines can hardly be over-estimated, as recent statistics place the world's demand for

cacao (exclusive of local consumption) at 200,000,000 pounds, valued at more than \$30,000,000 gold. There is little danger of over-production and consequent low prices for many years to come. So far as known, the areas where cacao prospers in the great equatorial zone are small, and the opening and development of suitable regions has altogether failed to keep pace with the demand.

Cacao is cultivated nearly everywhere in the Archipelago. It is grown in several provinces in Luzon, in Mindanao, Jolo, Basilan, Panay, Negros, Cebu, Bohol, and Masbate, and its presence can be reasonably predicted upon all the larger islands anywhere under an elevation of 1,000 or possibly 1,200 meters. In most cacao-producing countries its cultivation has long since passed the experimental stage, and the practices that govern the management of a well-ordered cacao plantation are as clearly defined as are those of an orange grove in Florida or a vineyard in California.

### CACAO IN SAMOA.

Under date Samoa, June 22, Mr. Hugo Schmidt wrote to Mr. Joseph Holloway, of Wattegama, Ceylon:—My cacao from your place is bearing now abundantly, and most of the pods are sold for planting at the rate of 3 pods for 1 dollar. The other cacao trees raised from seed grown in Samoa are not giving so much satisfaction, and I take the liberty of asking you, with your more than forty years of experience, for advice as to what may be the reason that so many trees of three and four years old are getting black, dry branches, beginning to dry from their own tops. I have found muddy patches on the bark, these patches I have cut out, burned them and covered the cut surface with beeswax, but it does not show good result, I can't get rid of the fungus.

Some of these 'sick' trees are in rather sunny positions, others in shady. I must mention that in Samoa we cannot keep the grass out of the spaces between the cacao lines. Much shade is, in my opinion, doing them good, but the pods are scarce. My Liberian coffee is also starting to yield crops. My first prepared cocoa, of 3½ years old trees, has been valued in Hamburg over 80 marks f. o. b. Cacao planting is going on very rapidly here at present; a new German Company is soon starting 2,000 acres in cacao, and an English Company sanctioned by last mail is going to put 1,500 acres in cacao; both estates not far from me. Many Queensland men are settling here; only the labour question is still on the end point.

### THE LABOUR BILL.

The Madras Planters' Labour Bill was introduced in great hurry, says the *Hindu*. A standing rule of the Council was suspended for its introduction. While it was usual not to introduce a Bill until fifteen clear days from the date of its publication, an extraordinary exception was made in the case of this Bill. The departure in this case was resented at the time by all the elected non-official members. But they in turn were seriously accused of want of candour. "I am unable to regard the action taken by the Hon'ble Members opposite," said His Excellency, "as quite considerate or consonant with their position as the Counsellors, not the political opponents of Government." What was their action? They only insisted that instead of 10 days there should be, as the rules required, 15 days' interval between the date of publication and the date of introduction of the Bill. The Government's urgency was so great that they could not possibly wait for 5 days. There was no time to be lost. The Bill was introduced on the 15th December last, the Report of the Select Committee was submitted on the 30th January following and at the next meeting of the Council the Bill was passed into law. The assent of His Excellency the Governor and Governor-General followed in due course, and in a period of four months the Act was promulgated for general information. Now comes the Order of Government calling upon the District Magistrates of Malabar, the Nilgiris, South Canara, Salem, Madura, and some others districts to report after making such enquiries and consulting such local bodies and persons interested in the matter, whether it is desirable that the provisions of the Act should be brought into force in any areas within their respective districts. The enquiry may take considerable time before the real opinion of those interested could be ascertained in the localities concerned. The Government which grudged 5 days' time, even when the standing rules

required it, now take their own time. When the Government were hastening the introduction of the Bill by even going out of the way of their standing rules, influential Planters' Associations were petitioning by telegraph protesting against the Bill. To let alone the protests of the general public, the planters have since the passing of the Act protested more than ever. In course of time, the Government will realise the volume of the opposition to the Act from the standpoint of the planters. The Nilgiri planters have now joined the opposition. The Wynaad planters were the first to make their attitude clear; and we are sure to hear in course of time the views of the planters of the districts whose Magistrates are now consulted by Government. The Government passed a law in haste for a community. That community is now reluctant to avail itself of it. In some places, they do not want it at all. Consultation and reference proceed now very leisurely, unmindful of the initial haste and urgency.

### THE SUPPOSED NEW SUBSTITUTE FOR RUBBER.

On the head of the excitement that the allegations anent the *Landolphia Thalloni* must have caused, says the *Straits Times*, June 27th, the following notes anent the *Landolphias*, which have been kindly furnished to us by Mr. H. N. Ridley—the Director of the Botanic Gardens and the highest authority upon such matters in this part of the world—will prove of the greatest interest to all engaged in the cultivation of rubber. Mr. Ridley writes:—

As in the *Straits Times* of Thursday you ask for information on *Landolphias*, perhaps it may interest your readers if I give some account of these plants. The *Landolphias* are large woody climbers occurring in the forests of Africa and Madagascar, and are really hardly distinct from our *Willugbieas*, or Getah Grip, so abundant in the forests of the Malay peninsula. There are about thirty kinds of *Landolphias* known, of which we have plants of seven kinds in the Botanic Gardens, where they have been cultivated for many years.

Many grow well and flower constantly, producing small white sweet-scented flowers like those of our Getah Grips, and one kind has this year for the first time produced large pulpy orange-coloured sausage-shaped fruits.

As jungle rubbers supplying a source of revenue in heavily forested country, these rubber-vines are not to be despised, and the greater part of the Congo rubber, of which we have heard so much in connection with the Belgian Congo state, is derived from the *Landolphia*. But as cultivated plants these rubber-vines are very unsatisfactory. As your Hollander correspondent states, they only produce when cultivated in the open slender stems and branches, forming often quite a large sized bush but not much thicker than a pencil. The bark contains plenty of rubber it is true, but to get it out is too expensive to pay unless rubber attained a value which it is never likely to. I attempted once to extract it by cutting the branches into lengths, putting one end in the fire so that the heat forced out the latex at the other end, and catching it in a pan, but it was such a slow and unsatisfactory business that it was clear that it could never be of any practical value. The French in Cochin-China have manufactured some rubber from the *Willugbieas* there, by treating the bark of the vines collected in the woods by natives, with acid and extracting the rubber in that way, but with the slender twigs and stems of *Landolphias* and *Willugbieas* cultivated in the open, this would be costly, and could hardly be recommended. The only likely way to deal with this class of rubber plants is to grow them in partly cleared forests, leaving enough big trees to act as supports to the climbers, and this has been done, but the plants are not of very rapid growth, and the area of land required in proportion to the return which could be reasonably expected is too large to tempt planters. To these difficulties one must add the fact that these rubber-vines produce a quite inferior class of rubber, but it is only fair to say that the low price obtained by these rubbers is doubtless due to a large extent to careless collection, and adulteration with lower grade rubbers practised by the native rubber gatherers. I do not know of any *Landolphia* of Africa which produces a better rubber than the *Willugbeia firma*, of our forests. This is still plentiful all over the peninsula, and the rubber is collected by Sakais, and Malays but by no means to any large extent, as the profits on it are not large.

The discovery of a new kind of *Landolphia* therefore is not at all likely to materially effect the para-rubber planter, still less to revolutionize the rubber world unless it possesses much higher qualities than those of the other kinds. With a very large area of Tropical Africa unexplored botanically, one may very reasonably expect the discovery of half-a-dozen new kinds within the next few years.

In justice to the *Landolphias* one must admit that they certainly saved the situation for the past 20 or 30 years. Rubber which could hardly have been said to have been cultivated at all then, began to get very scarce, owing to the destruction of so many of the more accessible of the South American trees. When *Landolphias* were discovered to be very abundant over large areas in Africa, the forests containing them were exploited and the rubber brought into the markets in large quantities, to such an extent that the market got over-stocked, and at the same time the more accessible forests were depleted. Indeed already some large areas formerly producing rubber in considerable quantity are now worked out.

From the planter's point of view it is distinctly to his interest that these jungle rubbers should be discovered and worked out as quickly as possible, in order that he may get an open field for his product. *Landolphia Thalloni*, the root rubber to which you refer, is a little shrub about six inches tall. As a curiosity it is well worth introducing here, and I have no doubt that we shall soon have it. As a plant of practical utility it is hardly up to our requirements, as the rubber is difficult to extract clean, and fetches a very low price. It was discovered in 1899.

## INDIAN TEA.

After three years of continuous depression, says the *Financial News*, the Indian tea trade is showing welcome signs of returning activity, and both planters and merchants speak hopefully of the future. Everyone conversant with the records of tea-growing in India will remember that the very prosperous seasons of 1896 and 1897 led to a large extension in the area under cultivation, with the result that three years afterwards, when the shrubs planted in 1897 were in a condition to be plucked, the return from them, together with the crop from the old areas, was so large as to practically swamp the markets. The excessive outturn of 1900 was the proximate cause of all the troubles which have affected the trade since then, and until the glut was removed it is clear that little or no amelioration could be expected. Fortunately, a smaller crop in 1901 afforded some relief; while the succeeding short crop of 1902, due principally to unfavourable weather and want of labour, has so far checked production as to bring it again into normal relation with consumption. During the season just closed tea prices touched the lowest point yet recorded, and until symptoms of amelioration began to appear, a couple of months ago, a feeling of settled gloom pervaded the industry. The smallness of last year's crop came as a surprise to the trade in general, and the prospect of restricted production in future appears to be one of the most promising indications of that approaching period of steady prosperity which is confidently anticipated.

For our part, however, while fully allowing for the corrective effect of putting the brake on production, we lean to the opinion that the most encouraging factor in the present situation is the noteworthy expansion which is taking place in consumption. The increase in the demand for British-grown tea has of late been especially marked in the case of the United States and Canada; while the introduction of Russian demand is referred to locally as the feature of the past year. Altogether, it appears that the amount exported to the three countries mentioned during 1902 exceeded the figures of the previous year by 14,000,000 lbs. It is stated, with some satisfaction, that several shipments were made to Odessa, and as the quality of the Autumn crop was to the liking of the Russian consumers, some remarkably good averages were recorded for Doars tea in particular. The demand from Persia appears to have been well sustained, and, notwithstanding the import duty imposed by the Persian Government, an increasing quantity of Indian tea is passing into consumption. With regard to the market in the United Kingdom, it is held that, for the present, at any rate, but slow expansion can be expected. The non-

withdrawal of the additional tax of 2d. per pound which was imposed in 1900 by the late Chancellor of the Exchequer has naturally caused a good deal of resentment, and the tea merchants contend that the unreasonable action of the present Chancellor, in preferring corn to tea, will injuriously affect their interests. In this connection the recent remarks of the Chairman of one of the leading companies are worth noting. After pointing out that the extra 2d. on tea, which was imposed in 1900, was stated by the then Chancellor to be a special war tax, required to meet a temporary emergency, he went on to say: "The tea industry, therefore, has to face another year unrelieved from the burden of a 6d. duty; and an article which is practically a necessity in every household, and which is, to the extent of 92 per cent. of our imports, British-grown, remains subject to this excessive impost—an impost which is equal to nearly 100 per cent. *ad valorem* on the commoner qualities of tea. So far, the additional 2d. has been borne almost entirely by the producers; but, owing to the improved statistical position in tea, growers are now becoming able to obtain better prices for their produce, and the burden will, from now onwards, be transferred to the shoulders of the consumer." In regard to the broadening of consumption, it should be noted that a Bill was passed by the Legislative Council of India last session to provide for the levying of an export duty, at a rate not exceeding one-quarter of a pie per pound, for a period of five years, on all tea exported from India; and it is further provided that the proceeds of this duty—estimated at about £16,000 for the current year—will be handed over to a Committee, who will apply the money towards pushing the sale of Indian tea within the greater Dependency itself, as well as in foreign countries.

The healthy change which is taking place in the trade is reflected in the yearly reports of the various companies, now being issued, and the beneficial effects of the altered conditions have led to freer dealings in the shares of the Indian concerns, accompanied by rising prices. The return, at present quotations, is somewhat higher than is usual in this class of securities, and, in view of the brightening prospects of the industry generally, the shares of the leading companies would appear to offer reasonable attractions to people inclined to put their money into this class of investments. The following table gives the dividends for the last three years, the present price, and the approximate yield on the shares of six representative concerns:

Shares.	Dividends.			Present price.	Yield p.c.
	1900.	1901.	1902.		
£10 Alliance (Ceylon) ...	7	6	7	8 $\frac{3}{4}$ - 9 $\frac{1}{4}$	7 $\frac{1}{2}$
20 Assam ...	2 $\frac{1}{2}$	7 $\frac{1}{2}$	7	32 - 35	4
5 Brahmapootra ...	5	8	8	8 $\frac{1}{2}$ - 9 $\frac{1}{2}$	4 $\frac{1}{2}$
10 Doom Dooma ...	13	12	9	16 - 17	5
10 Indian of Cnchar ...	1	1	1 $\frac{1}{2}$	2 - 4	5
10 Sephinjuri Bheel ...	15	15	15	20 - 22	7 $\frac{1}{4}$

It has been estimated by competent authorities that the aggregate total of the share and debenture capital of the 170 tea companies registered in the United Kingdom amounts to about £19,000,000, and, as illustrating the fluctuation which has occurred from time to time in the market value of this large volume of capital, the following statement possesses more than ordinary interest:—

Face value of 170 companies	...	£19,000,000
Highest market value (July 1, 1897)	...	24,000,000
Market value twelve months ago	...	12,850,000
Lowest market value (September 1, 1902)	...	12,100,000
Present market value	...	14,950,000

In considering the future of the companies it is well to remember that of late years the practice of using suitable portions of the estates for cultivating other profitable products has been steadily increasing. One of the most successful of the Ceylon tea companies has invested a portion of its capital in cocoanut plantations, and some of the Indian Companies are inclined to take up on a fairly large scale the culture of sisal, which apparently is well suited to India. The cultivation of Pará rubber at present is very profitable, and it is worth noting that the Consolidated Tea and Lands Company contemplates further extensions in this direction. On the whole, then, it will be readily admitted that the position of the Indian tea companies is at present stronger and better than for some years past, and, with demand well ahead of supply and improving economic conditions at the source of production, it is reasonable to believe that the corner has been turned, and the long-wished-for period of prosperity is at length in sight.

## BIRD LIFE ON TEA ESTATES.

Writing to the Planters' Association of Ceylon, Messrs. Geo. Steuart & Co., of Colombo, say:—

We enclose copy of a memorandum which we are forwarding to managers and owners of estates with which we are connected on the subject of the comparative absence of bird life in tea districts in Ceylon, and the probable connection between that circumstance and the present prevalence of caterpillar and other pests on the bushes.

We trust your Association may approve the object in view, namely, to restore in some measure the balance of nature, and that your members will give their support to these and other recommendations that may be considered likely to bring about in time the desired end. We need hardly say that the more the remedies are made general the more they are likely to prove successful

(Suggestions for the Preservation of Bird Life on Tea Estates.)

1. The varying conditions of altitude, etc., of estates must be taken into consideration in carrying out any of these recommendations.

2. The object should be to encourage small-insectivorous birds as much as possible with a view to keeping down caterpillar and other pests on tea bushes.

3. All coolies on the estates should be given to understand what the object is, and that they or their children should not wantonly destroy nests of birds.

4. The following recommendations are made under the advice of Mr. Green, the Government Entomologist, and of Mr. Lewis, Conservator of Forests:—

5. That some ravines be allowed to grow up in lantana (according to elevation) and the so-called raspberry, to encourage the nesting of both insectivorous and frugivorous birds.

6. That the burning off of patna and grass land adjoining tea estates be absolutely put a stop to.

7. That where there are masses of rock, the growing of thunbergia and cissus be encouraged for the protection and nesting of shy birds.

8. That fields be divided into blocks by growing fruit-bearing shrubs such as the mulberry, duranta, and wild rhea in hedges, these blocks being also useful as landmarks for manuring operations and other field works.

9. That there should be several small breeding sanctuaries, for which ravines away from coolie lines appear to be suitable.

May 1st, 1903.

(Signed) GEORGE STEUART & Co.

## DISTRICT ASSOCIATIONS.

## WYNAAD.

Proceedings of a General Meeting held at Meppadi Club, Wednesday, July 8th, 1903. PRESENT:—Messrs. Armstrong, Behr, Mackinlay, Nicolls, Powell, Jr., Taylor, Trollope and B. Malcolm, *Honorary Secretary*.

Mr. W. Mackinlay in the Chair.

1. **Proceedings of last Meeting**—Taken as read.

2. **Roads.**—(a) Read letter to President, District Board, drawing his attention to the continued backward state of the work being done on the Chundale-Choladi section of the Calicut-Nilgiri road: also of the poor quality of the metal collected. Read President's, District Board, reply to the previous letter on the same subject.

The Honorary Secretary was instructed to point out that the District Board Engineer appears to have been misinformed—as from personal observation of members of this Association the quantity of metal collected is nothing like in proportion to what it should be. That the work of cleaning out the drains in the way done is a waste of money, there being no connection between the "wheel rut" drains and those at the sides of the road.

(b) It was decided to again address the Chief Engineer, Government of Madras, asking that this section of the road be taken over by the D. P. W.

3. **Postal and Money Orders.**—Read letter from the Postmaster-General, in reply to this Association's letter of June 4th, stating that he was unable to meet the wishes of the Association, that the Post Offices in S. Wynaad should continue to pay a percentage of the value of Money Orders in small silver coin.—Recorded.

Read Postmaster-General's continuation to his reply of 31st March, 1903, with reference to the late payment of Money Orders

at Meppadi, stating that the defaulting official had been suitably punished.

4. **Currency Notes.**—Read correspondence with the Collector of Malabar on the matter of cashing Currency Notes at the Local sub-Treasury.—The correspondence is being continued.

Read U. P. A. S. I. Circular No. 38/03, of June 10th, referring to a letter of Government of India, Finance and Commerce Department, No. 2686-A, of May 14th, 1903, re a proposal to withdraw in the case of Currency Notes for amounts exceeding Rs.5, issued from sub-circles, the existing privilege attached to them, under which they are payable not only at the office of issue, but also at the Presidency town of the Presidency in which the office of issue is situate. *Resolved*, that in the opinion of this Association, so far as in the interests of this district are concerned, it is desirable that all "Madras Presidency" Currency Notes (including sub-circle Notes) should be cashable at all Treasuries or sub-Treasuries in the Presidency.

5. **Pepper Vine Disease.**—Read Mr. Barber's report on the Pepper Vine disease. *Resolved*, that this be printed and circulated to members. Also that this Association does pass a cordial vote of thanks to Mr. Barber for his interesting and instructive report.

Read letter from Mr. Winterbotham.—Recorded.

6. **U. P. A. S. I.—Delegate to Bangalore.**—Proposed by Mr. B. Malcolm and seconded by Mr. Trollope, that Mr. G. Romilly be elected to represent this district at the next General Meeting.—Carried.

A vote of thanks to the Chair terminated the proceedings.

Papers on the table—

Indian Gardening & Planting.

Planting Opinion.

Proceedings, Coorg Planters' Association.

Do. Nilgiri Planters' Association, June 8th, 1903.

Supplement to Detailed Report, I. T. A. Committee.

Commercial Circular No. 2 of 1902-03.

I. T. A. Circulars.

(Signed) W. MACKINLAY,

*Chairman.*

( „ ) BERNARD MALCOLM,

*Honorary Secretary.*

## ANAMALLAI PLANTERS' ASSOCIATION.

Minutes of a General Meeting held at Paralai on Saturday, July 11th, 1903. PRESENT:—Messrs. G. L. Duncan, C. R. T. Congreve, P. W. E. Watts, G. A. Marsh, E. G. Windle, I. E. Scott, and R. Pincent.

It was proposed by Mr. Duncan and seconded by Mr. Watts that Mr. Windle take the Chair.—Carried.

The proceedings of the last Meeting were read and confirmed.

The Honorary Secretary notified, that from all with whom he had communicated regarding membership, he had received a favourable reply.

Rules and bye-laws were then discussed in Committee. Mr. Windle proposed that the rules as drafted in Committee be adopted and circulated.

The Honorary Secretary notified that he had written to Mr. Hodgson on the subject of representation of this Association in the U. P. A. S. I. and read a letter from Mr. Hodgson kindly agreeing to act as delegate.

Proposed by Mr. Watts and seconded by Mr. Duncan, that this Association join the U. P. A. S. I. and that Mr. Hodgson's offer be accepted with thanks.

Instructions to delegate to U. P. A. S. I.

**Labour Act.**—Proposed by Mr. Duncan and seconded by Mr. Marsh, that the Act is unsuitable to the labour conditions obtaining on the Anamallais.—Carried unanimously.

**Permission of Assessments.**—*Resolved*, that the Association strongly support the Nilgiri P. A. resolution.

**Delegate to Brazil.**—*Resolved*, that the Association does not see its way to support the proposal of a delegate to Brazil.

**Compulsory Coffee Cess.**—As the opinion of several proprietors was not known it was resolved, that instructions on this point should be forwarded as soon as possible.

**Agenda.**—It was resolved, that further points be discussed at a Committee Meeting.

**The Ghaut road.**—Correspondence read. The Association is glad to note that repairs are sufficiently advanced to allow carts to get through and trust that the work may speedily be completed.

**Address to H. E. The Governor.**—It was resolved, that an address be prepared for presentation to H. E. The Governor in view of his contemplated visit in October.

**Election of Secretary and Committee.**—Mr. Marsh was elected Honorary Secretary and Messrs. Watts, Duncan, Congreve, and Windle as a Committee.

Copies of the following were laid on the table—

Proceedings of last Meeting.

Copies of letters to Collector and Chief Engineer.

The rules of the various Planters' Associations in Southern India.

The Madras Labour Act.

Minutes of Annual General Meeting of the Kanan Devan Planters' Association.

General correspondence.

The proceedings terminated with a cordial vote of thanks to the Chairman.

(Signed) E. G. WINDLE,

Chairman.

( " ) G. A. MARSH,

Honorary Secretary.

## INDIAN TEA ASSOCIATION.

### COMMITTEE MEETING.

The following is from an abstract of the proceedings of a Meeting of the General Committee held on the 7th July :—

There were present: Messrs. T. McMorran (*Vice-Chairman*), A. C. Lawrie, Lockhart Smith, R. R. Toynbee, T. Traill and W. Warrington.

**Correspondence with the Indian Tea Association, London.**—Letters dated 12th and 19th June from the Secretary, Indian Tea Association, London, were brought up for final consideration and disposal. The principal matters dealt with were:—

(a) **The market position.**—At a Meeting of importers held on the 8th June to consider the market position, the following Resolutions were passed:—

(1) That the balance of crop unsold be offered in three equal quantities so as to dispose of the balance remaining in Importers and Producers hands by the end of June.

(2) That no new season's tea be offered for sale before 1st July.

A copy of a circular issued by the London Committee regarding the latter was forwarded for information.

It was hoped that the efforts which had been made by the London Committee to induce Importers out to offer new season's teas for sale before the 1st July had met with the success which they deserved.

(b) **Manufacture of "Oolong" Teas.**—In continuation of their former remarks under this head, noted in the proceedings of the Meeting held on 9th June, the London Committee suggested, for the consideration of the Tea Cess Committee, that it might be advisable to take steps to get over from Formosa, two Chinamen, experts in the manufacture of these teas, with a view to instruct the Managers of any gardens in Assam and Darjeeling which might be prepared to undertake the manufacture of teas of this class.

The suggestion had been passed on to the Teas Cess Committee, as desired.

**Statistics relating to Tea Cultivation.**—In the proceedings of the Meeting held on 5th May reference was made to a letter dated 2nd May from the Director-General of Statistics, in which the hope was expressed that statistics showing the new additions to the tea area and abandonments of old tea lands might be introduced into the report on the Production of Tea in India for 1903.

The General Committee had now before them a further letter from the Director-General of Statistics, dated 22nd May, forwarding copy of the form prescribed for the collection and tabulation of statistics of the production of tea, with additions designed to show the new additions to the tea area and abandonments of old tea lands. The Committee were asked whether they considered the proposed changes suitable, or would wish to suggest any improvement.

The revised form had been carefully considered in circulation and two or three slight alterations were suggested. The Secretary was instructed to advise the Director-General accordingly.

**Scientific Officer's Fund.—Surma Valley Subscriptions.**—At a Meeting of the Surma Valley Branch held on the 8th December, 1902, the following Resolution had been adopted, viz.:—

That this Meeting is unanimously of the opinion that the Surma Valley should contribute towards the support of the Association's Scientific Officer, and his proposed increase in establishment to the extent of Rs.150 per month to be raised by a cess of 4 pies per acre under cultivation. The Committee resolved that the Calcutta Surma Valley sub-Committee should approach the several Agents and Proprietors, with regard to the matter, and on the receipt of an acknowledgment of their willingness to contribute the amount that the local Secretary be authorized to collect and pay the same.

In connection therewith, the Directors of the Longai Valley and Derby Tea Companies represented through their Agents, Messrs. Octavius Steel & Co., that in their opinion a fairer method of proportioning the cess would be to base it on an average between outturn and area. An expression of opinion was asked for in regard to the suggestion.

It was decided to forward a copy of Messrs. Octavius Steel & Co.'s communication to the Surma Valley Branch for consideration. It was thought that the original proposal could not be altered during the current year, as most of the gardens which had agreed to subscribe on the acreage basis had already paid the amount of the cess.

## THE INDIAN TEA ASSOCIATION (LONDON).

### ANNUAL REPORT.

The following is from the annual report :—

#### THE INDIAN TEA CROP OF 1902.

In accordance with the Resolution passed in February, 1902, no estimate of last year's crop was published. The total quantity of tea exported from Northern India was 173,988,444 lbs. besides about 1,000,000 lbs. sent to Bombay by rail (probably for the Persian Gulf), against 173,736,083 lbs. in 1901 and 186,064,269 lbs., in 1900. The exports from Southern India were 6,664,275 lbs., against 5,254,199 lbs. and 4,895,216 lbs. in the two previous seasons. A continuance of the system of more careful plucking generally adopted in the previous year, and to a greater extent unfavourable weather experienced in most of the tea districts towards the close of the plucking season, led to a smaller crop than was generally expected. In the appendix a statement will be found showing the distribution of the entire Indian crop during the last five years (furnished by Messrs. Gow, Wilson & Stanton).

#### LEVY.

No voluntary levy was made last year, and the balance of funds collected during the previous year was utilised for the following purposes:—1. The bounty on green tea. 2. Advertisement of Indian tea in the United States and Canada. 3. To promote and increase the consumption of Indian tea in India. 4. For financial assistance towards tea rooms and depôts on the Continent.

#### GREEN TEA.

As stated in the last report, it was decided to offer a bounty of 1½ annas per lb. on 400,000 lbs. of green tea to be manufactured in 1902. The Baraora (Sylhet) Tea Company, Limited, undertook to manufacture one-half of this quantity, the other half being taken up in Calcutta. It was afterwards decided by the Calcutta Committee to offer a bounty of 9 pies (three farthings) on a further quantity of 320,000 lbs., making 720,000 lbs. in all. This was all taken up and the bounty on it paid. With a view to encourage the manufacture of a much larger quantity of green tea in the current season, it was decided in September last to offer a bonus of one halfpenny per lb. on a minimum quantity of 3,000,000 lbs. in season 1903, conditional on the necessary funds being available from the cess, and subject to the confirmation of the Cess Committee. At the same time an offer made by the Baraora (Sylhet) Tea Company, Limited, to manufacture 1,500,000 lbs. of green tea for two successive years was accepted on these terms, and on October 2, 1902, a circular was issued inviting offers to manufacture green tea, a copy of which will be found in the appendix. The Committee are pleased to say that in response to this circular a maximum quantity of 3,790,000 lbs. (including the Baraora contribution) was offered on the terms proposed, but owing to the delay in the appointment

of the Cess Committee, and consequently in the confirmation of the arrangements, 900,000 lbs. of this tea has since been withdrawn. The Committee have pleasure in reporting the receipt of a telegram from Calcutta, stating that the Cess Committee had decided to offer a bonus of  $\frac{1}{2}$ d. per lb. on 4 million lbs., to be made in the current season. It may be mentioned that the quantity of green tea made by Ceylon in 1902 was 3,987,939 lbs., and it is estimated that from 10 to 12 million lbs. will be manufactured in that island in 1903.

## AMERICA.

The joint advertising of Indian and Ceylon teas through the public Press in the United States and Canada has been continued, and the Committee have reason to be pleased, on the whole, with the results that have been obtained. The total quantity of British-grown tea imported by North America and Canada last year amounted to 26 million lbs., of which 14 million lbs. were the production of Ceylon and 12 million lbs. of India. The removal by the American Government on January 1 last of the war tax of 10 cents (equivalent to 5d.) per lb. on tea, which was imposed in 1898 towards meeting the cost of the war with Spain, has naturally led to a considerable increase in the demand for tea, and deliveries have been on a much larger scale than usual. There is now some ground for hoping that the consumption of tea as a beverage in competition with coffee in the United States will show more elasticity than has been the case during the last few years. The low price of coffee, of course, induces a large consumption of that article by Americans. The *American Grocer* of May 20 quotes the following statement as to the quantity of Indian and Ceylon tea taken by countries outside the United Kingdom during the last five years:—"North America is credited with having taken 14,223,619 lbs. of Ceylon and 12,136,587 lbs. of Indian tea in 1902, against 7,636,995 lbs. of Ceylon and 5,971,701 lbs. of Indian in 1898. The total was 26,360,206 lbs. in 1902, against 13,608,696 lbs. in 1898—a gain of 12,751,510 lbs., or

nearly 100 per cent. This is a very encouraging growth, more manifest in the Dominion of Canada than in the United States."

## THE CONTINENT.

As announced in last year's report, the Committee continued to give financial assistance during the year to the Indian Tea Rooms in Paris at 48, Faubourg St. Honoré. As the attendance and sale of tea remained disappointing, and did not appear to offer much prospect of improvement, the Committee decided to discontinue their support, and Mr. Skerrett Rogers has since transferred the business to a M. Moullet, who will continue the sale of tea on his own account. Mr. Rogers will continue to carry on his business in dry tea at his dépôt in the Rue D'Alger. India tea in cup is being sold at new premises called the Empire Tea Rooms in the Rue des Mathurins, Paris, which have been opened by Mlle. Jeanne Delphy, formerly an employé of Mr. Rogers. Some assistance has been given towards making the new tea rooms known by way of advertising. In view of the satisfactory report received on the work done by Miss Babington in the English tea rooms in Rome, the Committee (one of whose number recently visited Rome and reported favourably on Miss Babington's work) agree to continue to give her financial aid for a further period.

## ST. LOUIS PURCHASE EXPOSITION, 1904.

The question of making a contribution to this exhibition is now under consideration, in communication with the General Committee in Calcutta. The committee are not in favour of spending money on a large scale at St. Louis, believing from experience that their funds can be more usefully applied in other directions. At the same time the exhibition will afford an excellent opportunity for the display of Indian tea, both black and green, and it is felt that at this juncture the opportunity might well be taken advantage of to endeavour to stimulate what promises to be one of our best markets for green tea. One or two large firms who are interested

## Dyspeptics,

Nervous, debilitated, weak, languid, half-dead people will find fresh life, energy and strength in Mother Seigel's Syrup, because it does the only thing which can give permanent relief—helps you to digest your food. Food is a strength-maker and health-maker, but it must be digested. Discomfort after meals, pains in the chest and shoulders, headaches, palpitation, flatulence, loss of appetite, these are sure signs of indigestion and are cured by

# SEIGEL'S SYRUP

"For many years I suffered greatly from obstinate indigestion and constipation, accompanied with giddiness and pains in the head. A friend strongly advised me to try Seigel's Syrup, and perseverance in its use restored me to health and strength." So says Mr. T. J. Hastings, of Bombowlie, Tumut, N.S.W., in a solemn Declaration recently made before a Justice of Peace. Such testimony leaves no room for doubt.

**will cure you.**

in pushing the sale of Indian tea in America will be represented at the exhibition, and much might be done to excite popular interest on the subject by means of samples of the different classes of tea, maps of the various localities, photographs of tea gardens illustrative of the methods of cultivation and manufacture, statistics showing the growth of consumption of British-grown tea in England and elsewhere, accompanied by the distribution of samples and pamphlets explaining how to infuse the tea. The Committee are informed that all the arrangements for the Ceylon exhibit will be made by, and at the cost of, the Ceylon Government, which is expected to spend from £15,000 to £20,000. It is a matter of some regret that the Government of India do not see their way to render assistance to the Indian industry on a similar scale.

#### SALE OF TEA IN INDIA.

From the latest report of the commissioners of the Indian Tea Expansion Commission, embracing eighteen months' operations to January 31, 1903, it is noted that the work of the commission is leading to an increased consumption of Indian teas in India. The number of pice packets sold in the first six months amounted to 390,977, in the second six months to 907,089, and in the third to 1,239,807, making a total of 2,537,873 packets. The number of cups of tea sold in the first six months was 85,535, in the second six months 217,375, and in the third 305,715—a total of 608,625. Brewed tea in cups is offered in the streets, at depôts, stalls, and railway platforms, demonstrations are made at fairs and melas, while the method of brewing tea is explained, travelling agents are employed, and newspaper advertisements and pamphlets are availed of. Tea is thus being brought within the reach of over 2,000 towns and villages, and in course of time a more rapidly-increasing demand for Indian tea may be established.

#### TEA CESS.

The Committee are pleased to record that the substantial measure of support obtained both in this country and in India to the memorial presented to His Excellency the Viceroy, in the absence of any serious opposition to the proposal, induced Lord Curzon to sanction legislation providing for the collection of a small cess, amounting to one-fourth of a pie per lb., equal to about 2d. per chest of 96 lbs.

An Act has accordingly been passed entitled "The Indian Tea Cess Act, 1903." A Committee has been formed in Calcutta to manage the fund.

#### BRITISH IMPORT DUTY.

In conjunction with the Ceylon Association, the Buyers' Association, and the Brokers' Association, your Committee drew up and forwarded to the Chancellor of the Exchequer in January last a memorial praying for a reduction in the duty of 2d. per lb., being the extra duty imposed in 1900 towards the expenses of the war. The statements made by the late Chancellor of the Exchequer, Sir Michael Hicks-Beach, in his reply to the deputation which waited on him last year with reference to the increased duty on tea, and elsewhere, led your Committee to hope that on the termination of the war in South Africa some relief would be given in the Budget lately introduced, especially as the 2d. extra tax had been in existence for three years, and one year had elapsed since the termination of the war. Unfortunately, Mr. Ritchie, the new Chancellor of the Exchequer, decided to remit the shilling registration duty on corn in preference to reducing the tea duty, and on the night of the introduction of the Budget a Resolution was passed renewing the tea duty of 6d. a lb.

Opposition has been raised to Mr. Ritchie's proposals by a large section of the Unionist party, led by Mr. Henry Chaplin, M.P. A Resolution in support of Mr. Chaplin's action was passed at a meeting of the General Committee held on May 5 in the following terms:—"That this Committee unanimously approves of Mr. Chaplin's action in condemning the proposal of the Chancellor of the Exchequer to abolish the registration duty on corn, and heartily approves of his proposal to substitute in lieu thereof the remission of the war tax of 2d. per lb. imposed on tea in 1900." A copy of this was sent to Mr. Henry Chaplin, M.P., and to Sir H. S. King, M.P., with a request that he would give the same his support. A similar Resolution was adopted by the Ceylon Association in London. Subsequently an important deputation waited upon the Prime Minister and Mr. Ritchie at Westminster on May 15, supported by representatives of both Houses of Parliament, the principal Chambers of Agriculture throughout the country, this Association, and the Ceylon Association in London, with the object of urging the withdrawal of the proposed remission of the corn duty

and the reduction in its place of the duty on tea by 2d. a lb. Mr. Balfour, your Committee regret to say, showed himself unsympathetic in the matter.

#### TEA CLEARING HOUSE AND GUN WHARF.

In consequence of the agitation which arose last Autumn owing to the dispute which followed the opening of Gun Wharf as a tea warehouse, action was taken, in conjunction with the Ceylon Committee, to bring about the separation of the Tea Clearing House proper from the control of warehouse-keepers. A scheme has been drawn up by a sub-Committee appointed for the purpose for establishing a new Tea Clearing House under the joint control of the three sections of the trade, viz., importers, wharfingers, and buyers. A meeting of members of the Association was held on May 13 at the London Chamber of Commerce, when the question was discussed at some length, and the following Resolution was carried:—

"That this meeting approves of the proposal that the Tea Clearing House should be reconstituted under the joint control of importers, wharfingers, and buyers, and authorises the General Committee to draw up a scheme to carry this into effect, and that it be an instruction to the General Committee that no provision be made for extending the scope of the Tea Clearing House beyond that connected with the handling and delivering of tea."

#### REGULATION OF SALES.

In October last, in consequence of the collapse in prices, caused by the abstention of a large section of the buyers, it became necessary for the Committee to take action, and arrangements were made to restrict offerings at public sales to such quantities as the buying trade could conveniently cope with, so as to ensure a more healthy condition of the market. The arrangements for the regulation of sales thus begun were continued to the close of the season, and frequent meetings of importers have been held, sometimes every week and sometimes once a fortnight, in order to regulate the quantity to be offered in the intervals. These meetings have been well attended, and their effect upon the market has been on the whole beneficial. Supplies have not been unduly pressed forward, and there has been, in consequence, a steadier tone and a gradual though slow improvement in prices. Copies of the circulars issued on this subject will be found in the appendix.

#### COARSE TEA.

The following Resolution was passed unanimously at a large meeting of importers held on February 23 last:—"This meeting of importers views with serious concern the disastrous results that would follow a large crop in 1903, and strongly urges on all producers to impress on their managers the necessity of continuing the finer system of plucking generally followed in the past season, so as to avoid the production of a large quantity of coarse tea." The Resolution was subsequently unanimously adopted by the Committee, and a circular, dated March 10, 1903, was issued to all importers and growers of Indian tea in this country. Copies were also forwarded to Calcutta for distribution on that side.

### MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated June 26th, 1903, says:—*

#### QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1903-1904 ... ..	71,854	84,142	7,488
1902-1903 ... ..	75,723	113,984	8,357
20,924 pkgs. INDIAN	Total 44,817 packages were offered in public auction this week.		
22,353 " CEYLON			
1,540 " JAVA			

During the first quarter of 1903, the quantity of Indian and Ceylon tea sent to America showed a satisfactory increase over the corresponding quarter of 1902. This was mainly owing to the export of Ceylon Green tea.

	1903.	1902.	1901.	1900.
Lbs. ... ..	5,910,700	4,711,907	4,812,773	3,894,707
		1899.	1898.	1897.
Lbs. ... ..		2,904,937	3,155,099	4,460,943

A considerable quantity of tea was re-exported from America to the United Kingdom during the early part of this year, but as far

as can be ascertained not much of it was Indian or Ceylon, the greater part being China tea of very inferior quality.

#### INDIAN TEA EXPORTED TO THE UNITED STATES AND CANADA.

	1903.	1902.	1901.	1900.
Re-exports from U. K. ...	525,118	975,854	1,045,803	480,872

#### CEYLON TEA EXPORTED TO THE UNITED STATES AND CANADA.

	1903.	1902.	1901.
Re-exports from U. K....	1,361,545	1,235,592	1,040,813
Transshipments <i>via</i> U. K. ...	373,182	782,510	695,097
Direct exports <i>via</i> China ...	68,795	<i>abt.</i> 100,000	145,000
Direct exports from Colombo	2,605,129	511,001	639,026
Total lbs. ...	4,408,651	2,629,103	2,519,936

	1900.	1899.	1898.	1897.
Re-exports from U. K. ...	604,810	798,247	840,790	975,081
Transshipments <i>via</i> U. K. ...	343,193	104,033	432,360	682,515
Direct exports <i>via</i> China ...	1,500	200,000	241,495	100,769
Direct exports from Colombo	1,597,653	353,719	294,638	<i>nil.</i>
Total lbs. ...	2,547,156	1,455,999	1,809,283	1,758,365

The Exports from Colombo include 1,173,573 lbs. of Green Tea for 1903, and 40,814 lbs. for 1902.

INDIAN.—Auctions have recently slackened off considerably, only 20,924 packages being brought forward this week, while for next week the quantity is still smaller, amounting to only 16,492 packages. This makes the number of closing invoices printed to the end of June 395, against 383 to corresponding date last season. No material change took place in the market, but buying appeared more general with strong bidding for all grades. The following New Seasons invoices were brought forward this week:—Assam Frontier Coy.'s gardens "Hapjan," 44 c, 10<sup>3</sup>/<sub>4</sub>d; "Khobong," 57 c, 7<sup>3</sup>/<sub>4</sub>d; and "Talup," 37 c, 8d; "Castleton," 49 c, 7<sup>3</sup>/<sub>4</sub>d; "Rungmook," 74 pkgs., 9<sup>1</sup>/<sub>4</sub>d; "Singtom T Co.," 100 packages, 8<sup>1</sup>/<sub>2</sub>d.

Week's av. of tea on Garden Acct. Season 1903-4, 361 pkgs., av. 8<sup>1</sup>/<sub>2</sub>d. 1902-3, 1,181 pkgs., av. 7<sup>3</sup>/<sub>4</sub>d.

Week's av. of tea on Garden Acct. Season 1902-3, 16,714 pkgs., av. 7<sup>3</sup>/<sub>4</sub>d. 1901-2, 2,201 pkgs., av. 6<sup>2</sup>/<sub>3</sub>d.

Garden Account 1st June, 1902, to date season 1902-3, 1,266,607 pkgs., av. 7<sup>5</sup>/<sub>3</sub>d, season 1901-2, 1,328,271 pkgs., av. 7<sup>6</sup>/<sub>2</sub>d

CEYLON.—The small auction naturally brought in better competition than the heavy supplies of last week. This resulted in generally steady rates. For next week 31,128 packages are advertised. The quality, as frequently happens about this time, is not equal to what it was some little while back.

Average for week 7<sup>3</sup>/<sub>2</sub>d, against 6<sup>2</sup>/<sub>1</sub>d in 1902.

Ceylon tea sold on Garden Account 1st January to date, 479,164 pkgs., av. 7<sup>6</sup>/<sub>5</sub>d. 1902, 552,511 pkgs., av. 6<sup>8</sup>/<sub>9</sub>d.

JAVA.—Javas, in sympathy with other grades, sold steadily at late quotations.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta 1/4<sup>3</sup>/<sub>8</sub>. Colombo 1/4<sup>7</sup>/<sub>32</sub>.

#### QUININE.

As a result of the 15 per cent. decline in bark at Amsterdam last week, makers have reduced prices by 1d per oz., and now quote 1s for German sulphate in 1,000-oz. lots. Howard's price has also been reduced 1d to 1s 1d, and for 1,000-oz. lots in vials to 1s 3d. Whiffens have also lowered their price to 1s; and P. and G. (French)

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN  
RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price 1/1<sup>1</sup>/<sub>2</sub> & 2/6.

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

make is quoted 11½d. American makers follow the reduction) quoting 23c. Prices of quinine salts have also been revised, and the following are the values for some of the more important in 100-oz. tins: Hydrochloride, Hydrobromide, and salicylate, all 1s 5d; citrate, 1s 5½d; phosphate, 1s 7; bisulphate, 1s 0½d; tannate, 5¼d to 9½d; and valerianate, 1s 8d. In second hands the market for sulphate has ruled quiet, with small spot sales at 10½d; but for good brands of recent make 10½d is wanted.

CARDAMOMS.

Under the influence of the unprecedentedly large offerings (770 packages) the market was demoralised and with a slow demand, about one-third were sold at irregular, but about 1d to 2d lower prices on fine qualities, and 2d to 3d on the medium grades. The following prices were paid: Ceylon-Mysore, bold pale picked, 1s 11d to 2s; medium and bold pale, 1s 8d to 1s 11d; bold medium pale, 1s 1d to 1s 6d; small and medium pale, 9d to 10d; bold dull, 1s 1d; small pale, 8½d; peas, 7½d to 9d; brown split and pickings, 7½d to 8½d; bold splits, 9d to 9½d; medium splits, 8d to 8½d per lb. Seed sold at from 1s to 1s 2d per lb. Ceylon-Malabar, fair small to

medium brown, without reserve, 8d, to 8½d, and leaner ditto, 7d. Good medium round yellowish Mangalores were held at 2s 3d to 2s 4d per lb. The exports from Ceylon from January 1 to June 1 amounted to—

CINCHONA.

AMSTERDAM, June 18th.—At the auctions of Java cinchona held here to-day 10,890 bales and 556 cases were offered (containing 47,403 kilos. quinine sulphate), of which 9,365 packages sold at an average unit of 6·20c. per ½ kilo., against 7·25c. per ½ kilo. paid at the auctions on May 7. The approximate quantities of quinine purchased by the principal buyers were as follows: English and American factories, 9,818 kilos.; the Brunswick factories, 8,581 kilos.; the Mannheim and Amsterdam factories, 8,017 kilos.; the Frankfort and Stuttgart factories, 6·591 kilos.; and various buyers, 6,782 kilos. The prices paid for the manufacturing-bark ranged from 3c. to 68½c. per ½ kilo., and druggists' bark from 9½c. to 52½c. per ½ kilo.

### SPIKE DISEASE IN SANDAL TREE.

RAI BAHADUR M. MUTHANNAH, Offg. Conservator of Forests, Mysore, has offered some sensible remarks on the "spike" disease that has affected many Sandal trees in Mysore and Coorg. Dr. BUTLER, Cryptogamic Botanist to the Government of India, and Mr. BARBER, Government Botanist, Madras, have both made a brief investigation of this disease. To some extent their reports agree, but they are most in accord in this, that both are inconclusive. Mr. MUTHANNAH's is the same; yet he arrives at certain opinions which he summarises under the head of "conclusions." These will interest many of our readers, but before stating them we propose to touch upon one or two points in the more detailed portion of Mr. MUTHANNAH's remarks. The most notable is the statement that no cure for the disease has yet been discovered. Again, Mr. MUTHANNAH states that his first impression was that the prevalence of the disease was associated with lantana, and that the latter, far from being injurious when young, was really beneficial, its injurious influences being only felt at a later stage. Further investigations in the Mysore Province show that lantana has no effect on the healthy growth of sandal. Some of the healthiest trees have been found in heavy lantana jungles. But, it has not been shown that the disease is markedly prevalent in any tract at a distance from lantana. Then,

again, in some diseased saplings the larvæ of the moth *Zenzera Coffea*—"The Red Borer"—have been found; so that a question is raised whether the disease is, or is not, the result of the ravages of an insect pest? Mr. MUTHANNAH does not think that it is, but the Agricultural Chemist, Mysore, has been instructed to investigate this point.

After a careful study, extending over fifteen days, of the diverse conditions under which sandal is found to grow in the tracts inspected, Mr. MUTHANNAH has arrived at conclusions which are deserving of consideration. In effect, what he states is that "spike" is not a specific or definite disease. The narrow, diminutive, and bristle-like leaves formed in the so-called spike trees are, he says, not peculiar to any specific form of disease, but are commonly found in all trees dying from old age; or injury to the roots, by fires or hurt; or suppression or strangulation by climbers; or fungoid, parasitic or epiphytic growth. It is also remarked that spiked trees are always met with only in heavy lantana thickets, which are liable to be annually or periodically burnt. Poor or shallow soil containing a great admixture of "Kankur" or resting upon a substratum of "Kankur" is said to induce permanent decay of the root system and consequently of the tree. Areas liable to be submerged and water-logged soils are inimical to the growth of sandal. It is observed that sandal would sooner or later be exterminated in tracts containing dense growth of lantana, owing to the liability of the latter to be burnt down by fire. It is thus suggested that the lantana *per se* is not inimical, but that the danger lies in the fires that are utilised for the purpose of destroying lantana. The sandal, it is remarked, is a sensitive plant and a surface feeder, so that it is very susceptible to the effects of fire. Mr. MUTHANNAH adds that "spike" is neither a contagious nor an infectious disease, otherwise it would be difficult to explain why it is confined to particular localities or occurs only in scattered patches and amongst scattered trees in the midst of healthy ones. We cannot quite follow this line of reasoning; yet we hesitate to dismiss the remark as a *non sequitur*. It is further stated that trees standing in the midst of thick scrubby growth or under the shelter of light crowned trees and in the rich soils of gardens enjoy a total immunity from the disease, and that "sandal has always an unhealthy look where the vegetation associated with is unhealthy; and where the latter is healthy and vigorous, diseased trees are never met with."

These last remarks are perhaps the most important of all. As regards remedial measures, Mr. MUTHANNAH asserts that it is beyond doubt that when once a tree shows signs of spiked leaves in an advanced stage, it never recovers. It has, therefore, been considered advisable to uproot such trees. For this purpose, the following operations are to be carried out by forest rangers and others: careful exploration of the sandal tracts in the Mysore and Hunsur taluks, their exact position to be shown in the Taluk maps, with symbols to indicate healthy and diseased trees as well as density. The preparation of a descriptive account of each tract, stating the conditions of soil and vegetation in which healthy and diseased trees are met with. The uprooting of all dead and diseased trees in the two taluks, and of any that may be noticed in the adjoining taluks within 5 or 6 miles in the borders. The burning of all *débris* and unmarketable portions of the trees is the site. This last is an operation that should obviously be carried out with extreme caution, lest healthy trees should be adversely affected. On the whole, however, it will be recognised that Mr. MUTHANNAH's suggestions are practical and sound. They would probably be rendered more efficacious if planters upon whose estates sandal grows were invited by Government to report upon the condition of the trees, and even to co-operate in the good work of exterminating those that are diseased.

#### COFFEE NOTES.

**Possible Increase in French Tariff on Coffee.**—The *Tea and Coffee Trade Journal* of 23rd ultimo remarks:—Advices from Havre, more in detail, report that the French government proposes to increase the duty on coffee probably to the old rate of 156 francs per 100 kilos. and possibly more. Deputations have been sent to protest, but owing to the arrangement with Brazil any increase must be subject to preliminary negotiations, which will necessarily take time. These negotiations are said to be in progress, and the general opinion is that the duty will undoubtedly be raised, but will not be applied without giving time to dealers to pay the present tariff rate of 136 francs per 100 kilos. on as much of their stock as they can afford. In any event, the effect can only be local and temporary. The object of the Government is, of course, to obtain money. A six months' notice of modification of treaty is required. Havre may witness the following results as effects of the possible increase: The near months may advance a little owing to covering against spots, but there is no reason for an advance of distant months. And if the differences should grow smaller the "reporteurs" would immediately sell near months against purchases of distant and deliver their coffee, which in turn would immediately cause a decline of the near months.

The Ponce branch of the Porto Rico Chamber of Commerce has sent a memorial to every member of Congress, the general character of which can be determined from this extract:

"We sincerely think, gentlemen, that such protection, be it in one way or another, must come as an act of justice. If, under the Stars and Stripes, as we firmly believe, there is no room for discriminating preferences, we are of opinion that the Porto Rico coffee-grower has the same right as the California wine-grower, the Alabama rice-planter and the Louisiana and Porto Rico sugar planters, to a seat at that

banquet which the protective tariff offers, at the present time, to all producers and manufacturers of the country."

The shipments of coffee from Porto Rico to the United States in the ten months ending April last, footed up 6,175,726 pounds, valued at \$704,378. There has been a remarkable increase over the same period concluded in 1901, when only 184,053 pounds were shipped. Two years ago the entire importations into the United States were only 30,000 pounds. It is understood that the coffee has found its way chiefly into the Middle West and the South and that a grade averaging 11 cents, invoice, is used.

**Boston's Coffee Distinction.**—Boston has created more innovations in the purchase of coffees than any other city in the United States, or in the world, says the *Boston Herald*, and it stands to-day accredited with the reputation of being the best market for fine coffee in the United States. This has been brought about by the usual Yankee propensity for delving into the bottom of facts, and to-day more true experts are found in Boston than the rest of the country produces, and it is no exaggeration to say that they secure the cream of all the fine goods that come into the country.

**Bear View on Current Coffee Conditions.**—The interior continues to draw from the large invisible supplies and there is little or no disposition on the part of dealers to enter the market until some better idea can be formed of the prices which will be established when receipts become large. It has been said that values having reached such a low level could not be further compressed, but with overwhelming stocks everywhere at the commencement of another big crop in Brazil, it is quite evident that prices will go lower on merit, and then not be necessarily cheap. It may be regarded as a most favourable and healthy feature when prices decline in a natural way, because only by such means will the fact of over-production be corrected. Planters have not yet been reduced to such an extremity as to abandon the industry, and we are assured by reliable authorities that it is remunerative to the farmers to gather the product at ruling values, and furthermore that whatever is grown will be marketed.

**Coffee Trees 100 years Old still Bearing.**—Coffee shrubs planted in the Campinas district, Sao Paulo, Brazil, one hundred years ago are still bearing. The type of coffee produced is "Bourbon." Coffee trees usually become commercially worthless after living twenty years, but the Campinas district is very fertile and the coffee plantations in it are magnificent. The better position and superior care given the trees account for their longevity and extra fine crops.

The Minas, Brazil, Agricultural Congress has recommended differential duties for coffee exported from that state in addition to the current 9 per cent. on the following scale: 50 per cent. on unclassified (escolba); 30 per cent. on No. 9 New York type and 12 per cent. on No. 8; all above that to pay the current 9 per cent.

The President of the Republic of Brazil is a coffee-planter.

**The U. S. Coffee Market.**—Except in the option market, prices in the main are unchanged in coffee, which is quiet,

says the *Tea and Coffee Trade Journal* of 23rd ultimo. In options, there is considerable liquidation on July account, and this fact, with swelling fullness of the Santos receipts, has operated to weaken still further the quotations in futures, especially in the nearly months, June and July, which were quoted last week at 3.50 bid, a new record. There were no sales at these figures, however, but some July sold at 3.55. It would seem that the option market could sink no lower than three and one-half cents. At all events the worst predictions are being fulfilled.

In actual coffee no such prices can be had. Rio No. 7, the Exchange basis, is at 5½c. This is because Nos. 2 and 3 grades are so plentiful and the lower grades relatively scarce. There is some prospect that the lower ones will be presently much assisted with shipments. The premium is worth the while, and besides they are said to be being rushed in Brazil to anticipate the exactions of the new law restricting the export of the lower grades of coffee. Firm offers from Brazil continue above the parity of prices ruling locally. The spot market for invoices is very quiet at quotations for Rio No. 8 at 4½c., Rio No. 7 at 5½c., Rio No. 4 at 5½c., and Santos No. 4 at 5¼ to 6c. Jobbing is limited.

In mild coffees the tendency is a sagging one owing to the large supplies at hand and the moderate demand in the market. Some importers are forcing sales. Good Cucuta is 8 to 8½c. East India growths are unchanged and quiet.

**The May Coffee Movement in the U. S.**—Last month's coffee movement is notable, says the *American Grocer* of 17th ultimo, for bringing about a reduction in the world's visible supply of 391,435 bags; deliveries were up to the monthly average for the year; increased receipts at Rio and Santos; slight increase in stocks in the United States and a reduction in Europe.

The total visible supply of the world on June 1 was 11,856,843 bags, against 12,248,278 bags May 1, 1903, and 11,324,563 bags June 1, 1902. Highest visible, 13,233,284 bags, November 1, 1902. On June 1, 1901, it was 7,192,321 bags, showing an increase in three years of 4,664,522 bags.

The receipts at Rio for the first eleven months of the trade year 1902-03 were 3,762,000 bags; at Santos, 7,920,000 bags; at both ports, 11,682,000 bags, against 14,771,000 bags in 1901-02; 10,361,000 bags in 1900-01. During three previous semi-annual crop years the receipts for this period

averaged 95.7 per cent. of the total crop. On this basis the total receipts for the year should be about 12,200,000 bags.

The following statement shows the May movement in detail :

Stocks, May 1, 1903—		Bags.	Bags.
United States	...	2,531,917	
Europe	...	7,369,861—	9,901,778

Total deliveries, year ending June 30, 1901	...	14,329,925
Average deliveries monthly, year 1901-02	...	1,293,055
Average deliveries, eleven months, 1902-03	...	1,348,506

The May sales of options were 372,500 bags. The lowest price for No. 7 Rio was 3.70 cents for May and June, the highest, 4.95 cents for March.

Of the total deliveries in the United States, 420,339 bags were Brazil and 121,503 bags of all other sorts. About 77½ per cent. of the total deliveries were of Brazil sorts and 22½ per cent. of all other kinds. This shows a loss of 7½ per cent. in the proportion sustained by Brazil to all other coffee sold as compared with April. The receipts of mild coffee were 160,386 bags out of total receipts of 595,863, or 26¾ per cent. The receipts at New York of all sorts of coffee are behind last year's record by 962,449 bags.

The prospects are that the total crops for the next trade year beginning July 1 will be larger than for the year soon to close, thus assuring a continuance of low prices.

We should take into consideration, however, that the deliveries this year are likely to exceed 16,000,000 bags, being the greatest movement on record and showing an increase in consumption since June 30, 1896, of 5,000,000 bags. If a like gain is made during the next five years the world's crops must reach a yearly average of over 21,000,000 bags to have supply and demand about balance. Will they do that?

The Brazil crop of 1901-02 exceeded 15,000,000 bags; the world's crops, 18,750,000 bags. If there is a check placed upon the starting of new plantations it will require the product of the area now planted in Brazil and other countries, but not in bearing to keep the supply for the next five years so well adjusted to requirements that prices will rule low. On the other hand, a general shrinkage in the crops for one season would send coffee becoming with over 16,000,000 bags

needed to meet a year's consumption. A stop to planting would bring about a steady reduction in the huge visible supply, now a menace to the market, and start coffee upward, and in two or three years bring about such a condition as would make coffee-growing a profitable industry without the aid of such questionable schemes as have been advocated by Brazil.

Coffee is not in such a terrible plight as some bears pretend to believe. Consumption counts as almost as great a factor as production, which shows a gain in seven years of about 58 per cent., while the former shows an increase for the same time of 45½ per cent., with the prospects of the gain continuing. Here is a difference of 12½ per cent. between supply and demand to overcome, so that the coffeepplanters have only to exercise patience for two or three years to again be on the money-making side, if they are not already there, provided no new plantations are started. If this should be the rule in coffee-growing countries, there would in two or three years be a rise in coffee quite as pronounced as that which occurred from 1886 to 1888.

\* \* \*

According to the *American Grocer*, the Government of Brazil will not enforce the new tax law designed to improve the position of coffee.

\* \* \*

**Coffee in New York.**—Deliveries are running ahead of last year at this time, says the *American Grocer* of 17th ultimo. A review of last month's movement will be found in this issue. The consumption for the year ending June 30 will be the heaviest on record. On the Exchange the market for options is weak and lower. June, 3·60@3·65c. On the street, spot steady on the basis of 5½c. for No. 7 Rio; 6½c. for No. 3; Santos No. 4, 6c.

P. C. Meehan & Co. report—

Market weak; sales made are at reduced prices. Trade demand very light. Buyers anticipating further decline in prices, owing to increasing stocks and receipts. Transactions May 28 to June 12, in mild sorts, include 13,662 bags Maracaibo, 10,123 bags Savanilla, 6,036 bags La Guayra, 4,219 bags Mexican, 2,564 bags Central American, 93 bags Jamaica.

\* \* \*

**Java and Java Coffees.**—Mr. Alfred Adelsdorfer writes in the *Spice Mill*:—To compare good Java coffees with coffees grown in any other country is like comparing fine old French wine with ordinary table claret. Java coffees stand by themselves and there is no other coffee that can imitate their delicate old musty flavour; this is what Java coffee has peculiar to itself.

The Dutch, who at one time compelled all the planters to market their entire products through their Government, paying them a specified price per picule, now receive only a small proportion of the Java and Sumatra crops, the bulk of the plantations being owned or leased by private individuals who sell their crops in the open market.

The blight which reached Ceylon about the year 1876 attacked the Java plantations in 1879 and ruined, one by one, most of the large plantations. Some of them were replanted with Liberian or African coffee trees, which plant thrives equally well in damp and dry climates and even in poor soil. This plant seems to be proof against the blight which abolished the Ceylon and Java coffees plantations at about

the same time. The Premier regencies as well as the Pasourouan tract in Java still produce coffees but they run blightly and are not very desirable. The really fine Java coffees are grown on the Island of Sumatra and the centre of the coffee production there is Padang on the west coast. The Government auctions are held at Padang four times a year; in 1903 the dates set being as follows: March 31st, June 30th, September 30th, and December 31st.

The fine virgin soil and climate just suited to produce fine flavoured coffee, combine to make the coffees from these districts by far the finest.

Mandheling coffee is the finest grown and has a flavour peculiar to itself which cannot be duplicated in any other coffee. Ankola coffee is the next finest, then come the Ayer Bangis, then the interior coffees, etc. The last named, while they have been somewhat affected by blight are still very fine in the cup. Besides these Government coffees there are private estates all over Java and Sumatra producing fine coffees. Quite a few of the estates wash their coffees by modern methods.

In the south of Sumatra there is a large territory which grows some very good Java coffees and they are produced there in a large way, the crops being quite extensive. These coffees are known as Corintiie, Bankolen, Kroe, Lahat, and Palembang. They grade in quality in the order named. The first named is an especially good blender. Kroe is also largely used, as it has a taste like a Mandheling, but is not nearly so delicate.

South-west of the Island of Java are a great many small islands. There are all near the equator, and, having a good soil, are adapted to the production of coffees. These are all sold as Java coffees.

In the southern part of the Celebes, shipped from Makasser, are some very fair coffees, including Patjoh, Bonjie, etc. From the Island of Timor, the most westerly island from Java, comes the Timor coffee which is sold as a cheap grade of Java. From the Island of Bali a very low grade is shipped to Singapore. Singapore also receives large quantities of so-called Palembang coffees many of which are grown on some of the small islands in the Banda and Celebes seas.

In the extreme north-western portion of the Celebes very fine coffees are grown and shipped from the port of Menado; these are called Menado Javas by the trade and are, for the most part, shipped to Europe.

The business of selecting Java coffees and grading them is complicated and very difficult, and, as many merchants and roasters buy by appearance only, there has been more deception in this item than in any other branch of the coffee trade. However, some of the largest firms in the United States, who aim to give their customers the best, use in their best blends, good grades of Java and Mocha coffees exclusively. Many make a mistake by trying to substitute for these goods in their fine blends.

The purchasing of Java coffee is a matter of confidence, but fortunately there are still some reliable merchants who import and job Java coffees and give customers the kind of coffees as sold.

\* \* \*

Coffee usually loses about one-half per cent. in an ocean voyage, but gains in quality if the ventilation is satisfactory. When the ventilation is bad the coffee gains about one-half per cent. in weight and loses in quality.

**Coffee.**—Messrs. G. Duuring & Zoon report:—The Trading Company in its sale of June 23rd, containing 24,000 bags Java and 2,939 bags Santos, realized full values, quite up to those paid in the May sale, home trade being the principal buyer. Good ordinary Java sold at an average of 26cts. The prices realized for Santos (very old Coffee) did not give equal satisfaction.

Next Trading Company's sale to be held September 8th and only one more this year.

First hand business was quite insignificant, not calling for any special remark. The crop in Java seems to be late and in many districts smaller than last year's.

Second hand dealings were slow, being interfered with by the fall in terminal markets, which the trade tried to use as a basis for purchases, but to no avail, as actual coffee is held for more money, especially the better grades; besides it is to be noticed, that the range of values between lower and better descriptions tends to get wider; Brazilian holders refused to follow terminal markets in their downward tendency and have been successful in carrying through previous values not only for the full volume of receipts, but even for more (the United States being the principal buyers). Stocks in Rio and Santos exhibit a further reduction of 243,000 bags. Quotations for spot are only  $\frac{1}{2}$ cts. lower for the month.

Arrivals were moderate, only 19,400 bags from Java and 58,800 bags from Santos. Deliveries of the latter amount to 77,800 bags, reducing our stock by another 19,000 bags.

In the speculative market a dull tone has pervaded, several bulls, disappointed by the rejection of the bill, proposing to eliminate twenty per cent. of the coming crop, preferred to realize losses, instead of continuing to carry over previous engagements. Sellers predominated and values gave way 1-cts. to  $1\frac{1}{2}$ cts. but subsequently recovered  $\frac{3}{4}$ cts. Present quotations  $14\frac{7}{8}$ cts. per September,  $15\frac{1}{4}$ cts. per December,  $15\frac{5}{8}$ cts. per March, and  $15\frac{3}{4}$ cts. per May. Dealings amounted to 72,500 bags or 457,500 bags since 1st January. June contracts 7,000 bags, tenders 5,500 bags.

The present crop in Rio and Santos has amounted to about 3,966,000 bags and 8,313,000 bags, being, not only in excess of original estimates, but also slightly in excess of requirements, production and consumption not quite holding the balance. Advices concerning the prospects of the 1903-04 Brazil crops are not quite in accord. We should feel inclined to calculate with 5 million bags Rio and  $7\frac{1}{2}$  million bags Santos, until more reliable informations are coming to hand. This does not indicate decreasing stocks for next crop year. Estimates of the 1904-05 crop, is a new feature in sight, which may tell on values later on. Anyhow it is of paramount importance to curtail production in Brazil, to which fazendeiros are not likely to submit, unless compelled by values at which it does not any more pay to grow Coffee. For the time being, any improvement in values means encouraging production.

The bill eliminating 20 per cent. of next crop has been rejected. Whether started unintentionally or with the purpose of stimulating buyers to more action, the projected bill did not succeed to incite the trade to emerge from the policy of caution adopted hitherto. It is now proposed to tax ordinary grades in Santos 300 réis per 100 Kg. more than the higher descriptions, but this neither can be taken in full earnest, as it would simply encourage shippers to mix different qualities, in order to ship Coffee at the lower export duty. The higher descriptions being most in request and the lower being neglected, Brazilian holders would incur the full loss, by getting less money for their Coffee.

The *Haiti* crop is reported to be an early and a promising one, whilst the outlook in *Venezuela* is gloomy, judging by exports which have been in the first three months 38,500 bags, against 55,700 bags, 72,800 bags and 127,800 bags.

The commercial treaty between *France* and *Venezuela* being voted, Coffee from the latter country is now again to be entered into *France* at the minimum tariff. The French Government projects to raise the minimum duty on Coffee from fr.136, to fr.156 per 100 Kg.

Stocks were again smaller in May, showing a reduction of 12,650 tons in Europe, chiefly owing to the full volume of deliveries, whilst visible supply was 16,370 tons less. A further decrease is expected this month.

A Sioux City shoe dealer, to attract customers to his particular corner, advertised coffee at 5 cents per pound. This enraged the regular wholesale dealers to the extent of cutting off his supply of coffee, and he then resorted to the retailer for the needful. The

result of this move was an injunction, and the shoe man had to fall back on the imitation article, hot on draught.

Total stock in United States June 1, 2,585,938 bags against 2,300,387 bags June 1, 1902. Brazil stock in the United States June 20, in store and afloat, 2,362,344 bags against 2,541,481 bags at the same time last year. Other than Brazilian, 389,557 bags, against 318,405 bags last year.

Brazil coffee in New York June 20, 1,898,089. Stock in New York in other coffees June 15, 290,474, in San Francisco, 91,844 bags, and in New Orleans, 7,239 bags. Visible supply in the world of all coffees, June 1, 11,856,843 bags.

## TEA NOTES.

**The U. S. Tea Market.**—The tea market is a waiting one, says the *Tea and Coffee Trade Journal* of 23rd ultimo. What trading is noticed is hand to mouth in character. Nor is there any special features in the market to report for new teas. The sales so far as New York is concerned are few and far between. The high prices tend to discourage buyers and they are delaying purchasing until their present stocks press for replenishing. As these throughout the country are rather heavy, buyers, so far as stock sentiment is concerned, can afford to wait a long time.

There is a division of opinion as to what will occur. Some hold that when the trade sees no decline in the price of teas it will want to buy, and when once this begins, there will be a rush to effect purchases, and the market will go booming. This is where the importers will want it, and to effect which all they will have to do is to play a waiting game of their own. On the other hand, it is held that while active trading may be expected to begin at the end of next month, it will not rise to inordinate proportions. The stocks in the country are too large. It will be recalled that early in the year this journal said that the prospects were that the country would start July 1 with 80,000,000 pounds of tea within its borders and nothing has since happened to cause us to alter these figures. This is the stock on hand the new crop teas will come in to supplement.

News from Hankow says that the Russians have taken the second crop of Congou teas on the basis of  $9\frac{1}{2}$  to 10c. for United States government standards. This means that none of this tea will come to the United States, and it would seem that comparatively little of this year's crop will reach America. Of course desired grades will always be imported. Prices for such Congous as are here remain unchanged and are lower than the quotations ruling in the East. It is becoming apparent that the old crop teas will have to do the United States. This should help to reduce the great surplus of the tea here. The Russian buying should effect in no small way the demand which assumed such large proportions last year, for India and Ceylon teas. These were bought because they were very cheap. Now ruling higher than the Congous it would seem that a considerable part of the Russian trade would be lost to the British teas whose market is thus somewhat restricted. In this manner does one tea react on another. The prices everywhere tend upward and too far. Some quarters express fear that they will cause over-production that presently the tea world will be in the same fix that the coffee world is in.

Japans remain high and at the prices now ruling are unsaleable so far as New York is concerned. Canada reports however considerable trading in this tea.

Formosas are also too high to attract orders. The reports current that some of the new crop has been sold a fraction above fourteen cents are incorrect. Mixed teas have been sold at that figure.

Indias and Ceylons are firm and under notice with some buying. The Shanghai markets are firmer. One-half of the Foochow recently rejected here have been shipped to England.

**Colombo Tea Sales.**—On the 15th instant a steady tone prevailed for common to medium teas and prices were firm all round. Good and flavory sorts were well competed for, and any improvement in quality brought with it a corresponding advance in price. Good medium kinds were somewhat irregular. The green tea market remains very firm.—We received this morning a sample of tea with which one of the brokers' catalogue opened, with the comment that it would give us "some idea of the absolute 'muck' sometimes placed on the market and which should be condemned by the Chamber of Commerce." The stuff might have come out of a quarry and a coir mill.

**Indian Tea Exports.**—The following figures of tea exports, taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association :—The quantity of tea entered for export to United Kingdom for the first half of July, 1903, was : Calcutta, 7,388,105 lbs. ; Chittagong, 2,139,287 lbs. The quantity entered during the corresponding period of last year was : Calcutta, 6,966,781 lbs. ; Chittagong, 1,058,900 lbs. The total amount from the 1st April, 1903, to date was : Calcutta 16,745,491 lbs. ; Chittagong, 2,763,103 lbs. The total amount exported from the 1st April to the 15th July last year was 20,598,533 lbs.

**London Tea Market.**—Weekly special telegram dated 16th instant from Messrs. Gow, Wilson & Stanton to Colombo reports that the market generally is steady and that the market for medium liquoring Pekoes and Broken Pekoes is steady, while the market for common Pekoes and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (same as last week) and the average 6¾d. (¼d. down). The average for the same period last year was 6d. Reuter reports that the tone of Ceylon tea common qualities easier, others firm. Fair Pekoe Souchong is quoted at 5½d. (same as last week) and the average for the week is 7d. (½d. down). 23,000 packages of Ceylon tea were offered for sale and 21,000 disposed of. **INDIAN TEA** :—Packages offered 8,000 and sold 7,000. Average price of Indian tea nominal.

**Formosa Oolongs.**—The *Times of Ceylon's* London correspondent cables :—Mr. Larkin, of Toronto, but who is now in London, urges Ceylon to manufacture Formosa Oolongs. If Ceylon planters will not undertake this new departure soon, Mr. Larkin states that he will be compelled to start a Formosa Oolong packet trade to supplement his existing business.

**The Calcutta Tea Market.**—At the tea sale on 17th instant 29,550 packages were sold. The market was somewhat irregular for common and medium kinds, which were one to three pies lower. There was keen competition for fine

teas, and the prices realised were higher than any this season, several Darjeeling invoices fetching from Re.1 to Re.1 9 annas per lb. A large quantity was taken for outside markets, the Russian, Bombay, and Persian Gulf buyers operating freely.

486 packages of greens were offered, and prices were unchanged.

**Ceylon Green Tea Grant, 1903.**—Comparative statement showing number of lbs. as under noted monthly during 1902 and 1903, respectively, up to June 30th of each year :—

	1902.	1903.
	No. of lbs. on which payment was made monthly as under.	Brokers' Certificates issued as under. (lbs.)
	lbs.	lbs.
January	152,873	730,051
February	139,124	755,932
March	170,050	862,220
April	284,137	912,405
May	299,671	985,155
June	368,536	1,426,163
	1,414,391	5,671,926
Increase ...		4,257,535 lbs.

Tea in bonded warehouse in New York on May 31 last was 1,706,684 pounds against 27,079,558 pounds one year ago, when the tea duty was still in force. Tea in bonded warehouse in New York May 31, amounted to 1,706,684 pounds. One year ago, under stress of the duty tax, the quantity was 27,079,558 pounds.

## NOTES.

### Florida Oranges.

It is said that this year's crop of Florida oranges will be worth about \$2,700,000, and will exceed the crop of last year by about 1,000,000 boxes.

### Coffee Substitutes.

The nutritive value of coffee substitutes, like coffee itself, depend more for their food value upon the cream and sugar used than upon their own soluble constituents. So says the Maine Agricultural Station.

### Java Cinchona.

The N. V. Nederlandsche Veem at Amsterdam reports the shipments from Java to Europe as follows :

June.			
Year.	Amst lbs.	Year.	Amst. lbs.
1903 ...	1,219,000	1897 ...	824,000
1902 ...	1,200,000	1896 ...	716,000
1901 ...	1,048,000	1895 ...	889,000
1900 ...	866,000	1894 ...	455,000
1899 ...	1,126,000	1893 ...	816,000
1898 ...	1,033,000

1898 ...	4,917,000		

### Crop Prospects in Mexico.

The crops in Mexico promise exceedingly well this year. With the exception of a few portions of Tlaxcala, Queretaro, Guanajuato, Durango, and Sonora, the corn, wheat, beans, rice, and coffee are in unusually fine condition. The vanilla

product in the Pantala district, State of Vera Cruz, was so abundant this year that the farmers have had to employ women and children in harvest time, as there were not enough peons, and the crop was too precious to allow it to go to waste. In the Laguna cotton belt, where the great irrigations works were established some years ago, and which lies in the States of Durango, Chihuahua, and Coahuila, the planters expect the biggest crop ever raised, and they are opening up large tracts of new lands. In view of the success attained in cotton growing in that northern portion of the republic, that product is now being planted out in the Yaqui country. Heniquen and coffee are being sent out from Mexico as never before and bringing the best prices ever commanded.

#### Pepper.

Messrs. G. Duuring & Zoon's report for June says:—Fluctuations were manifold during the month under review. Absence of spot demand and the selling of a few bull contracts coincided to depress values to the extent of 1ct. These selling orders being executed, a reaction was not long in setting in and a few shipping orders sufficed to raise values to their previous basis, sellers scarce and buying difficult. Present quotations are closing almost unaltered for the month; 32½cts. per July, 32¾cts. per August, 32½cts. per September, 32½cts. October, 32¾cts. per November, 32½cts. per December-January and 33cts. per February-March. Terme market active, dealings 13,000 bags or 145,000 bags since 1st January. June contracts and tenders 3,000 bags. Shipments from the Straits and all other producing countries have been very moderate indeed and are fully confirming the shortage of present crops. Stocks in Europe meanwhile are reduced beyond precedent and demand can not be met, without affecting values.

Stocks of all kinds on the principal markets of Europe:

	June 1st	1903.	1902.	1901.

#### Tea v. Coffee.

Bulk tea may, says the *Merchants' Review*, be responsible for the defeat of tea in the race for supremacy with coffee. Coffee does not suffer from handling in bulk as tea does, the latter being far more delicate than coffee and its flavour and fragrance much more evanescent. One shudders to think of what tea may have to bear in stores where it is bought in bulk. We have seen clerks in grocery stores go from the mackerel kett to a case of oranges, then to the cheese counter, handling the article in each department, and then with the mackerel orange-cheese odour upon his hands weigh a pound of "mixed" tea and do the mixing with his paws. Even in stores where the proprietor is careful never to touch the leaf with the naked hand, one or more of the clerks may neglect the precaution, when the boss is absent. There is no tea grown which would not be irretrievably injured by coming in contact with a warm and moist human hand, even though the hand be clean. Think, then, of the consequences when the hand

is the hand of a careless clerk and is redolent of a score of things that would destroy tea fragrance and flavour in a jiffy. We believe that the wholesale grocers would help their own sales if they sent out no tea without printed words of warning as to the handling and general treatment of tea in distributive channels.

### GENERAL ARTICLES.

#### PRODUCE AND PLANTING.

There is no break in the flow of speeches and letters on the proposed fiscal changes. A correspondent, writing to the *Westminster Gazette* in defence of Free Trade, says:—"We never taxed China tea to promote Indian, yet Indian tea culture has grown quite naturally to huge proportions and ousts China from many a market." It may be flattering to the energy and enterprise of Indian and Ceylon tea-growers to be reminded that they have ousted China tea from "many a market," notwithstanding the fact that China tea comes to this country on equal terms with Indian and Ceylon, but planters would no doubt have smothered their feelings of pride had it been otherwise in the early days of the struggle. Even now, were they given a preference over China, it would not cool their ardour, nor cause them to abate their energy.

A "Puzzled Colonist" writes to the *Financial Times* as follows:—"Mr. Chamberlain, in the course of the debate on Preferential Tariffs, is reported to have said: 'The United States is not likely to give something for nothing, and it would be something if they gave advantages to colonies without receiving in return preference over their greatest competitor.' It would be interesting to learn what the United States receive from India and Ceylon in return for the preference shown to those great tea-producing countries by admitting their produce absolutely free of any customs duty, while in this country a tax of 6d. a lb. is placed on an industry which is fairly staggering under it. I am a shareholder in the British Indian Tea Company, Limited, and from the report for 1902, which has lately been issued, it appears that last season's crop was 968,000 lbs., which produced £22,206 16s. 6d., or a fraction over 5½d. per lb. The outlay on the crop was £22,178 17s. 4d. leaving as profit on a whole year's work £28. The Government, however, levies a tax on this crop of £24,200 before it reaches the consumer—that is to say, more than 100 per cent. on the sale value of the produce, and yet we are told that the Government is anxious to strengthen the link which binds the colonies and dependencies to the Mother-Country. Mr. Ritchie is lauded for preferring to remit the ls. registration duty on corn, which no one felt, rather than to take the war tax of 2d. off tea, which is recognised to be one of the absolute necessities of life to the working classes. Our American cousins, in fact, gave us fairer treatment than our own country."

According to the annual report of the Imperial Maritime Customs of China, the grand total of the exports of tea for the year 1902 was 1,519,211 piculs or 202,455,881 lbs., against 1,157,211 piculs or 154,256,226 lbs. in 1901, a substantial increase which is likewise exceptional, for the importations from China, excluding the year 1898, when 1,930,795 piculs were exported, have been continually decreasing since the year 1895. In the last ten years the highest figures reached were 1,865,680 piculs (1895). Exports were lowest in 1901. The following are the details of distribution:—Of Congous, 506,885 piculs were exported in 1902, of which 114,364 piculs went to the United States direct, 77,065 to Great Britain, and nearly all of the remainder to Russia. Hong Kong is represented with 42,078 piculs. Of Oolongs, 77,906 piculs were exported, of which the United States got direct 52,751 piculs. Souchongs were sent direct to the United States to the extent of only 8 piculs. They went in the main to the continent of Europe, Russia excepted, the total being represented by 18,867 piculs. The grand total was 26,072 piculs. The exports of Scented Capers were 10,055 piculs, almost entirely distributed from Hong Kong. The entire export of black tea amounted to 687,228 piculs or 101,615,490 lbs., of which 168,501 piculs or 22,461,183 lbs. were sent direct to the United States.

Of green tea the total export was 253,757 piculs, or 33,936,808 lbs., of which 126,196 piculs, or 15,821,927 lbs. were sent to the United States direct, and 64,377 piculs to Russia. To the United States were sent 23,052 piculs of Young Hyson, 13,142 piculs of Hyson, 951 of Imperial, and 89,088 piculs of Gunpowder. Russia took large quantities of the better grades, excelling the United States. The figures were 16,536 piculs Young Hyson, and 41,677 piculs of Hyson. Russia received almost the entire output of brick tea, being sent 477,597 piculs of black and 86,932 piculs of green. Russia also practically got the entire production of tablets—7,156 piculs. Japan by direct export received only 1 picul of green tea, but was allowed to have 7,061 piculs of black tea. On the other hand, India took only 877 piculs of black tea direct, but ordered 10,984 piculs of green tea, which, on the whole, is no small bit of heresy for that country to perpetrate. The Philippine Islands figure in the list with only 177 piculs. Russia leads all other countries as China's best tea customer. The grand total sent direct to that country was 882,893 piculs or 117,689,636 lbs., but second is the United States, with, however, only 294,697 piculs or 39,283,110 lbs., and third is Great Britain, with 116,317 piculs, and next Hong Kong with 77,425 piculs.

At the recent Annual Meeting of the London Chamber of Commerce, Lord Brassey presiding, it was reported that Mr. Robert Wales, who had held office as Chairman of the Coffee and Cocoa Trade Section for thirteen years, had retired from that post in July last, and a very cordial vote of thanks was accorded him for his services. Mr. F. G. Ivey and Mr. H. Epps had been elected Chairman and Deputy Chairman respectively. In regard to coffee production in India, it was agreed to communicate with the United Planters' Association of Southern India, with a view to obtaining from that body periodical reports as to the production and export from that country. It was also decided to endeavour to obtain consular and other reports, statistics of production and export, in the chief markets, for circulation to members of the section, especially in reference to Ceylon, Costa Rica, Guatemala, Nicaragua, Colombia, Mexico, and Salvador. Further representations were also made to the Foreign Office with regard to the French duty on colonial produce.

### BRAZILIAN NOTES.

(From the *Brazilian Review*.)

**Exchange.**—Ninety days' Bank rate opened on Monday 1st at  $12\frac{1}{2}$ , and closed this evening, weak, at  $12\frac{1}{4}$  to  $12\frac{3}{8}$ .

That the Bank of the Republic has the rate, at present, entirely under control is shown by the fact, that directly the Bank stops selling and seems inclined to cover, the rate gives way and *vice versa*. Indeed, the precautions Government is taking precludes any hope of a boom, whilst the resources at its disposal in London prevent any chance of a slump. The issue of internal bonds for payment of expropriation connected with the Port and the Avenue, will make it unnecessary to draw except sparingly, and very properly leave the bulk of the loan for payment of the Port-Works proper. The rise from  $11\frac{1}{2}$  to  $12\frac{1}{2}$  at a time when bills were certainly not more than sufficient to meet current expenditure, discounted the effects of the little immediate drawing likely to take place, if as, we believe, the Government intends to let the rate drop to its natural level, and hold it there.

Exports it is true, are at present, very low; coffee shipments during the week just ended being only £203,000 as against £208,000 the previous week, and £260,000 last year; but the season is an early one, and by July entries will probably be considerable. There will, no doubt, be little eagerness to sell at present quotations, and, therefore, little or no speculation, but as soon as coffee begins to arrive in large quantities it will have to be sold, whatever prices may be ruling, and thus raise the supply of bills. Without the loan or some similar operation, a slump at this season would, as we have pointed out for months, have been certain. Fortunately the Bank has now ample resources to tide over until the new crop, and after that, will have no difficulty in holding the rate steady.

A speculation for the rise on either coffee or exchange stimulated by a loan or sale of the Sorocabana might, it is true, upset the most careful preparations; but of the first there seems not the faintest chance at present, whilst the tightness of money on the London market, which seems only more accentuated since the

Transvaal Loan, forbids any very sanguine anticipations in the latter respect. As soon as the rate has been allowed to find its natural level, we look, for steady rates throughout the year, as in 1902. In point of fact, the present rate is far higher than is justified by the economic situation, and if it were to fall to  $11\frac{1}{2}$  and or even under, it would only be a return to the more normal conditions previous to the speculation for a rise that has been, on one pretext and another, incubating since the beginning of the year.

**Coffee.**—RIO DE JANEIRO, *Saturday, 6th June, 1903.*—Joint entries at Rio and Santos during the week ended 5th June, were 11,103 bags less than the previous week's and 49,669 under the corresponding week's last year, of which they represent 74.8 per cent.

For the crop, entries to 5th June were 3,213,846 bags less than on the corresponding date last year, of which they represent 78.6 per cent.

Shipments during the week ended 6th June were 84 bags more than the previous week's, but 25,076 less than last year.

Stocks, consequently, fell off and on the 6th instant, were 14,221 bags less than on the preceding Friday, and 288,221 less than on the corresponding day, Friday, of last year.

Declared sales were 15,000 bags less than the previous week's, and 21,000 more than last year. The visible supply of the world has fallen off from 726,100 tons on the 1st April, to 709,700 tons on May 1st, as against 676,000 tons on the corresponding date of last year, deliveries in Europe and the United States being 84,300 tons as against 84,000 tons in April.

New York prices for No. 7 spot were unaltered all the week at 5.12c. against 5.40c. last year. Local prices were somewhat weaker, the average for the week being 2\$881 for 10 kilos., as against 3\$845 for the previous week and 4\$198 last year.

SANTOS, *6th June, 1903.*—Owing to the very appreciable decrease in the world's visible supply, (New York Exchange 391,000 bags, and Duuring & Zoon 16,400 tons decrease) our market was steadier and occasionally even firm, but opens, to-day, weaker again.

For soft coffees we have a very fair demand; *Soft Superiors* were fetching over 4\$000 to 4\$100. Orders from Europe within reasonable limits are practically executed, and there are a fair number of sailing vessels loading or expecting to load shortly.

*Primes* are sold at from 4\$200 to 4\$300, *Superiors* 300 réis and *Goods* at from 500 to 600 réis below *Regulars* fetched from 3\$100 to 3\$300. *Low Coffees* are somewhat slacker, since Government announced that the law fixing the export-duty of 300 réis per kilo. on low coffees will not come into force in July, owing to the refusal of Minas and Rio to come into line with S. Paulo in the matter. *Washed Coffees* only in very desirable selections are in demand, best qualities fetching about 6\$000; *Old Yellows* are slack; *Peaberrys* and *Primes* scarcely up to 4\$700; *Superior Peabodys* were sold up to 4\$200, lower qualities being abundant, and, therefore, slow.

Orders from Europe ruled between 26s. 6d. and 27s. 6d. for *Superiors* and 1s. 3d. to 1s. 6d. lower for *Good Average*.

*Entries* (92,500) and *passagens* (89,500\$) are smaller for the time being, in spite of the early crop. Shipments are also small and our stock did not change much, being 831,743 bags.

Exchange declined and business was done at  $12\frac{3}{4}$ , which, however, assisted coffee prices only to a small degree. *Pauta* went down to 370 réis.

In consequence of the refusal of the Governments of Minas and Rio to put differential duties on lower grades of coffee, the Government of the State of S. Paulo has determined not to put the Coffee Law into execution. Better to recognize and withdraw from a false position, even at the last moment. But with a little provision, the Government of S. Paulo might have been spared this humiliation, and have saved the market from the disturbance to which such legislation was bound to give rise. It was confidently predicted from the first that the measure would never be put into execution, being only intended as a manoeuvre to keep planters quiet during elections. If so, no doubt, it succeeded for the time being, but when called to account, we doubt, the last state of that Government will be a good deal worse than the first. Meanwhile, the price of coffee has already declined, and very lively times may be expected when the S. Paulo Legislature meets in July.

The determination of the planters of São Carlos de Pinhal to reduce the wages and other rates of *Colonos* is already giving rise to discontent, to which the *Fanfulla*, the organ of the Italian colony at S. Paulo has given expression in an article in which the measure is criticised from the *colono's* point of view. The *Fanfulla*

admits that the reduction of wages is the easiest way for planters out of their difficulties, but seems to doubt whether *colonos* will consent to labour in season and out-of-season, in the rain and sun and cold for so miserable a pittance.

Writing to *O Correio*, Dr. Candido Lacerda replies that planters have only taken this step when there was no alternative, and have borne all the burden of falling prices without *colonos* suffering. So far, *colonos* have, no doubt, done well and made money, whilst their employers have been impoverished day by day. If, however, wages have not been reduced, it is not because the planters refrained from doing so from any sentimental motive; as, if they have not risen it is not because the *colonos* have failed to impose the best conditions obtainable. The rate of wages is entirely a matter of supply and demand. If labour is abundant, planters can reduce wages, if not, they will have to pay as usual or lose their crops. It is possible that, for a season, wages might be successfully cut down, if the measure were general. But if wages were to fall low enough to make other employment here or elsewhere attractive, labour would leave the plantations. The whole subject is one for sensible treatment, in which there is no room for sentiment. If, as Sr. Lacerda says, *colonos* are making such a good thing out of it, though they may grumble, they will suffer some reduction of wages without abandoning the plantations. If, however, they can get better pay elsewhere, they will not stop. As a rule, the demand for labour here is always in excess of the supply, and planters have had to give way. Now, however, it is possible that this may alter, and that the impossibility of paying high wages with current prices of coffee will so reduce the demand that *colonos* will be glad to accept any terms for the time being.

But if the measure is not general there will be a mere local dislocation, which may leave planters who try the experiment without any labour at all.

### COFFEE IN LONDON.

\* The improvement in the terminal market noticed at the close of last week has not only continued, says the *Produce Markets' Review* of 27th ultimo, but prices have further advanced 6d., making the quotations 1s. above the lowest point. Even now, rates here are fully 1s. below the prices in Santos, so that in the absence of speculative selling there is every reason to expect a further improvement, and at the present low level of prices there are very few who care to take the "Bear" side. The better tone in the terminal market has also been felt with actual coffee, and at the auctions, which have again been small for the time of year, the demand has been good, and prices are mostly dearer. Export descriptions, of which the greater part consisted, have been of very low quality, and, though generally difficult of sale, were nearly all disposed of at rates that would have been impossible a month ago. The absence of fine Costa Rica is being felt, and there is some enquiry privately; the bold sizes, which have been relatively low all through the season, are most enquired for and should be dearer during the next month or two.

### TEA IN LONDON.

INDIAN TEA.—Although there has been an improvement in the demand, says the *Produce Markets' Review* of 27th ultimo, values show no change of importance, notwithstanding the smaller quantity brought forward at auction. At the Calcutta sales prices were about 1½d. higher than in the early public sales last year, and there does not appear to be any probability of easier rates at present, as the supplies are not coming forward very freely. From the later reports of the crop the prospects are improving owing to more favourable weather, and plucking, therefore, is likely to be more liberally resorted to, which will lead to an increased supply for this market. The reports of the quality are, on the whole, favourable, the teas from the Dooar gardens being described as "good, useful" and superior to the early arrivals of last season, while Darjeelings and Assams are well up to those of last year, and Sylhet and Cachars are about an average. At the public sales 20,924 packages were offered, the bulk of which passed the hammer. For the finer grades the bidding was active, and the reduced quantities brought forward sold at firm rates; other kinds met with but a moderate demand, and an easier tendency prevailed.

CEYLON TEAS.—The offerings this week have been on a considerably reduced scale, and the auctions on Tuesday passed off with a good demand for most descriptions. Common Leaf showed no change, very little being obtainable under 6½d., while the medium grades sold at the slightly lower level recently established. Broken Pekoes over 9d. were in more request, and in many cases brought firm to dearer rates, but the lower grades continued to sell cheaply, and were occasionally a fraction lower. Choicest kinds, of which the supply has been very limited, are much wanted, and the few parcels offered realised high prices. At the public sales 22,350 packages were brought forward, of which about 2,800 were withdrawn.

CONGOU TEA.—At the public auctions held on Wednesday some 571 packages were offered. Business in all descriptions has been quiet, and only a few transactions have been reported in the lower kinds.

OTHER CHINA TEAS.—Business continues quiet for all descriptions. Capers are now in very small compass, and, consequently, prices for this grade show a firm tendency. It is not likely that an easier tone will prevail this season, and until the new season's crop is offered, a steady market is anticipated. Good Medium Gunpowders are getting very scarce, but no quotable change can be reported.

### RHEA.

#### INDIAN-GROWN RHEA FIBRE.

In the March number of the *Anglo-Indian Review* we mentioned that a parcel of rhea fibre which had been grown in India and decorticated on the field by the Bengal Rhea Syndicate with a Faure machine was being sent to England, and that it would be unbaled, ungummed, softened, and spun in the presence of our representative. This, to all practical purposes, has been done, and we have pleasure in giving our report:—

1. The grass was in four bales of varying qualities. The bales were excellently packed and pressed, but owing to the great length of the fibrous strips there was a certain amount of doubling back, which should, if possible, be avoided. The grass had been carefully dried, and there were no signs of fermentation.

2. In appearance the Indian Faure-treated fibre is unlike China grass, being harder and rougher, and it has none of that scent of fresh hay which is one of the characteristics of the grass from China. On the other hand, the grass was quite clean.

3. In the ungumming, China grass of fair average quality loses 25 per cent. of its weight; the loss in the case of the Indian grass was 30 per cent.

4. In a comb which extracted 33 per cent. of noils from China grass, 45 per cent. were taken out in the case of the Indian grass.

5. In spinning it was found that the faults which had been made apparent in the comb were telling their own tale, for the fibre being rather brittle and stubborn it was impossible to spin it into fine counts though for the coarser counts it did fairly well.

Generally, the sample of Indian fibre above reported upon is not equal to good China grass. It is coarse in filament and somewhat rough to the touch, and until it is shown that the fibre contained in it is adapted to textile purposes, manufacturers will possibly be chary of purchasing in the open market. It seems almost certain that the faults referred to are due to mistakes in cultivation and to the fact that the stems were cut too late. We understand also that the scraping was not so good as some previous work done by the Faure machine. On the other hand, in spite of its brittleness, the fibre is strong and lustrous, and should command a ready sale as soon as the lack of knowledge on the part of the planter has been corrected.

Further samples should at once be sent over to be reported upon, for we are informed by the manufacturers, whose works we visited, that not only would they be purchasers of Indian-grown fibre in preference to the Chinese if the right grass can be produced and exported at a fair price, but that in the meantime they will be very pleased to give planters every information in their power to enable them to turn out a marketable commodity.

#### RHEA—THE NEW FABRIC.

The Bengal Rhea Syndicate some time ago sent a small quantity of the fibre to Europe and have received back a shipment of goods made from it. A Calcutta contemporary writes enthusiastically of the articles ranging from fine white rhea cord up to a suit of clothes made out of rhea cloth. We are told that it is undeniably a mar-

vellous selection; the most delicately coloured and finely worked ladies' shawls, gentlemen's guernseys and other underclothing, cellular shirts, velvets of different kinds and colours, tray cloths, ladies' trimmings, finely worked laces, incandescent gas mantles, and even fancy imitation straw, the latter commodity being extremely pretty and cleverly manufactured.

The texture of the articles is fine, and closely resembling in many cases silk, somewhat heavier, perhaps, but delightfully cool.

At present only the manufacture of fine kinds of clothing has been attempted, the Syndicate not being able to send large quantities of rhea to Europe, but they have 5,000 acres under rhea cultivation, and in about two years, the manager, Mr. Ballarin, said they hoped to bring the goods into the market in large quantities.

The present price of rhea is about the same as American cotton. It is stated that it never rots, the natives using it for nets, and it is supposed to be the strongest fibre in existence.—*Sell's C. I.*

## HISTORY OF THE INTRODUCTION OF PARÁ RUBBER INTO THE MALAY PENINSULA.

(*Agricultural Bulletin.*)

As there has been a good deal of confusion as to the history of the introduction of this plant into the East, the following history may be of some interest. In a letter dated April 17th, 1878, from Sir William Thiselton Dyer, the Secretary to Sir Joseph Hooker at Kew Gardens, he writes "On 4th June, 1863, we received from Mr. Markham some hundreds of seeds obtained from Mr. Jas. Collins. Of these seeds less than a dozen germinated, and six of the plants so obtained were taken by Dr. King, Superintendent of the Botanic Gardens, Calcutta, in the same year to India. The climate of Calcutta did not prove very favourable to the Heveas which required the conditions of growth met with in hot and moist tropical forests. It was therefore decided on consultation with Mr. Markham that, in the event of more Heveas being raised and sent out from Kew, they should be received at the Botanic Gardens, Ceylon, which should then be regarded as the depôt for supplying young plants to such parts of India as were suited for its growth. On June 14th, 1876, we received from Mr. Wickham about 70,000 seeds of which about 4 per cent. germinated. On August 9th we despatched 1,919 plants raised from these seeds in Wardian cases in charge of a gardener. Of the whole consignment 90 per cent. reached Dr. Thwaites in excellent condition. On August 11th, 50 plants were sent to the Botanic Gardens, Singapore. Owing to that delay in payment of freight these plants all perished. On June 11th, 1877, 22 plants were sent to the Botanic Gardens, Singapore. In October of this year Mr. Murton, Superintendent of the Gardens, Singapore, planted himself 9 Heveas and 1 Castilloa at the back of the residency in Kwala Kangsar. Mr. Low reports, "They were brought here in October last by Mr. Murton and planted at the back of the residency and are growing very well. They were quite small when they arrived here, but the Castilloa is now (July 26th, 1878) 5 feet high with branches of equal length and the Heveas vary from 4 to 8 feet and are growing vigorously." In a subsequent report dated February 3rd, 1879, Mr. Low writes "the Heveas are now 12 to 14 feet high. They take to the country immensely. The Castilloa is a large tree 10 feet high with branches 5 feet long."

At the same time that these were planted some Pará Castilloa, and Ceará rubbers were also planted at Durian Sabatang, (Teluk Anson), but it appears they were washed away by a flood shortly after.

In a later letter from Sir Hugh Low to the Royal Gardens, Kew, dated December 11th, 1879, he writes. "As I am writing I should like to mention that the Hevea Braziliensis, which, having, received from Kew through Singapore, I planted at Kwala Kangsar in Perak, grew magnificently and fruited, I believe, two or three years before those of Ceylon. I distributed the seeds to various places in the neighbourhood, and they are now to be found in Mr. Hills' Coffee Gardens in various parts of the Peninsula and in several places in Perak. When Mr. Swettenham was at Home in the Summer I enquired of him as to their condition, and found they were not thought to be of any value as some Dyaks had tapped some of the largest trees and found that scarcely any juice exuded from them." This unfortunate statement seems to have deterred Perak planters from paying any attention to Pará rubber for some time. Sir Hugh Low obtained some seed from somewhere in 1882, and gave it to Mr. Wray

who planted it at Kwala Kangsar. This may have come from the old trees there, for Sir Hugh Low sent seed (50) from Perak to the Singapore Gardens. The same year seeds were distributed from the Singapore Gardens, the first recorded being sent to the Bishop of Sarawak. This entirely disposes of the statements by Mr. Wray and others that the first seeds or plants introduced into Perak were introduced by Sir Hugh Low in 1882. In fact almost every plant of Pará rubber in the Malay Peninsula was derived from the Botanic Gardens, Singapore, and these directly or indirectly through Ceylon from the Royal Gardens, Kew. In 1877, Mr. Murton had planted the young trees received from Kew as above mentioned in the upper Garden to a more suitable locality in the new Economic Gardens. In his report for 1881 Mr. Cantley writes "the tallest Hevea (in the gardens) is now 25 feet tall and 14 inches round the base." These trees commenced to fruit in 1882. Seed were later received in large quantities from Ceylon, and when the Kwala Kangsa trees began to fruit Sir Hugh Low sent seeds from them back to the Singapore Gardens for distribution. Although the plant grew so well, planters could not be induced to take it up, and, owing apparently to a report that it produced no rubber, the few people interested in rubber turned their attention to Castilloa and Ceará rubber. But practically, with the exception of Mr. T. H. Hill's estate, there were no plantations of Pará rubber till Tan Chay Guan commenced to plant in Malacca. In 1897, however, the high price of rubber and the low price of coffee stimulated the interest of planters, and a rush was made for the seeds. At the same time planters in all parts of the tropics sent for seeds and plants, and attempted to grow the plant everywhere with varying success. In many countries it seems to have proved a failure, the climate being unsuitable. In the Malay Peninsula it appears to have been more successful than in almost any other country both in rapidity of growth and production of rubber, and the only thing to be regretted is that planters did not take up the cultivation ten years ago.—*Straits Times*, July 1.

## SOUTHERN INDIAN TEA ESTATES COMPANY, LIMITED.

The eighth Annual General Meeting of the Southern India Tea Estates, Limited, was held on Monday, June 29th, at the offices of the Company, 4, Lloyd's Avenue, Fenchurch Street.

The Secretary (Mr. A. J. Rouse) having read the notice convening the Meeting and the auditor's certificate, and the report and accounts being taken as read, the Chairman (Mr. W. Forbes Laurie) addressed the Meeting as follows:—

GENTLEMEN,—I suppose we may in the usual manner consider the report as read. When we last met together I told you that we would consider later in the year, and if the market allowed, a dividend should be paid to ordinary shareholders. Unfortunately there was not such an improvement as we hoped for, but there was sufficient to pay  $2\frac{1}{2}$  per cent. on ordinary share capital. This, although actually paid out of this year's accounts, I consider as belonging to last year's engagements. It was not a large dividend I admit, but I would remind you that it was quite up to the average paid for the season on the total ordinary share capital of the British tea industry. During the last six months there has been a decided improvement in tea prices, which I trust may continue. At the same time you were informed that I saw every reason to expect a higher yield for the season under review, which, as the report shows, has been realised. Tea prices have averaged a little less than the previous year owing to a serious fall in the middle of the season. Since then prices have, as I have before said, improved considerably. The cost of production shows, what seems to me, the satisfactory figure of  $3\frac{1}{2}$ d. per pound, f.o.b., against nearly 4d. last year. Our capital value is by no means exorbitant, being about £31 the acre with efficient factories and ample labour. With anything like reasonable prices we should do well. We can produce cheaply and all we ask is a reasonable market. I have said that the dividends we are now paying on ordinary shares are quite up to the average paid on the whole of the British tea industry, and in that way only do I consider it to be satisfactory. Fifty years ago the simple process of supply and demand would promptly have regulated the price, and would do so still if markets were to the old conception natural, but everyone connected now with trade and commerce know that unity of action can defeat natural process.

and no doubt we have in the year under review benefited by the Indian producers regulating market supplies, but not yet to the degree that we have suffered, and the large buyers have benefited by their more united action, so systematically carried out in their wise discretion. Roughly speaking, the last season's result shows a shorter production in the aggregate of British-grown teas by 10,000,000 lbs., and an increased consumption outside Great Britain of another 10,000,000 lbs. That is, I may say, a falling-off of 20,000,000 lbs. sold to consumers at home. The rise of our prices was, however, only contemporary with the period when teas were being judiciously withheld from the market, and since then, if anything, a slight reactionary movement has set in. Doubtless other causes may have influenced, yet I would draw this coincidence to the attention of producers generally. This improvement of itself, although not early enough to benefit this season fully, is a satisfactory condition as far as it has gone, and as extensions are not being largely carried out, it is of great encouragement for the future. Indeed, prospects have undoubtedly improved, and practically over-production appears to be gradually becoming an evil of the past.

After a brief discussion the Chairman moved the adoption of the report and accounts, which was carried unanimously. Mr. Laurie then proposed the payment of 3 per cent. dividend on the ordinary shares, which was seconded by Mr. T. C. Owen, and carried.

Mr. T. C. Owen proposed the re-election of Mr. W. Forbes Laurie as director, seconded by Mr. A. Valentine Holland and carried unanimously.

The re-election of Mr. J. D. Stewart Bogle as auditor to the Company for the ensuing year was proposed by Mr. Bertram F. White and seconded by Mr. A. J. Rouse.

Mr. T. C. Owen proposed that an expression of the Meeting's satisfaction be conveyed to the manager and his staff in India, at the efficient working of the estates and the resultant cheap production of the tea, which reflected great credit on those concerned. This was seconded by Mr. A. Valentine Holland and carried.

A vote of thanks to the Chairman, proposed by Mr. Bertram F. White, terminated the Meeting.

## BLACK AND WHITE PEPPER.

The statistical position of the article pepper in its widest sense is undoubtedly strong, says the *Grocer*, but is seriously deficient in detail, and we notice that the official accounts still adhere to their old (and it is quite time it was worn out) methods of embodying all the importations of pepper under a single heading. Thus, in the last issue of the Board of Trade printed documents, the receipts of pepper of all kinds into the United Kingdom during the first five months of the year are given in one total, which, however, comprises only 6,876,268 lbs., against 10,072,640 lbs. in the same period of 1902, and 5,422,739 lbs. in 1901. The diminution in the supply here shown appears very striking, even after allowing for the exceptionally heavy quantity imported last year, which was nearly 4,650,000 lbs. above that in the year before. What proportion of the supplies of pepper consists of one sort of pepper and what of another is a question which, in the interests of the spice trade, might well be answered, for as an item of information the bare amount (officially stated as if it related simply to one particular description of pepper and no other) is next to useless as a guide to future operations, and requires amplifying to render its meaning fully intelligible to either speculators or dealers.

In the private returns furnished by the docks and wharves at this port there is, it is satisfactory to say, some attempt at separating the different growths of pepper from each other, and the landings of black are clearly distinguished from those of white. In both cases the quantities warehoused this year have been a great deal lighter than in the previous one, the total arrivals of black during the past twenty-three weeks having been restricted to 1,010 tons, against 1,340 tons; while those of white have fallen off to 785 tons, or little more than half the amount received in 1902. Stocks have in consequence been pulled down rapidly and extensively, that of black pepper having sunk to 1,180 tons by the 6th instant, as contrasted with 2,365 tons; and the stock of white pepper dwindling to 970 tons, as compared with 1,650 tons in the preceding year. Through this severe abridgment of the general

available supply, the deliveries of peppercorns have been much curtailed, being represented by only 1,170 tons black, against 1,485 tons, and 825 tons white, as opposed to 1,310 tons in the first twenty-three weeks of last year. The marked decrease in the year's aggregate imports of pepper, as officially given, is also partly accounted for by the paltry consignments of chillies, or, as termed by some persons, "pod pepper," which in London have been confined to 510 packages, in comparison with 4,170 packages in 1902, and naturally only a small quantity is now left on hand.

The comparative scarcity of black as well as white pepper being thus proved beyond a doubt, it is not surprising that the value has been gradually hardening for months past, and that not only in the "terminal" markets here and abroad, where the speculative element mostly predominates, but in landed parcels ready for immediate use by the home trade, business has been done with greater facility than heretofore. Advances in the prices established in the London market have been extremely slow, and it is only on comparing them with those ruling at this time last June that the full extent of the rise is seen. Quotations then were—for Singapore black pepper on the spot 5½d. to 5¾d., and for white of common and fair quality 9¼d. to 9½d. per lb. Last week the current and respective rates for Singapore pepper were 6¼d. to 6½d., and 10d. to 10½d., showing a rally of 1d. per lb. from what may be regarded as the lowest point, and though some weakness has recently shown itself, opinions continue rather in favour of a further improvement.

## A VISIT TO A TEA GARDEN.

BY AN EXPERT.

As we have so many advertisements in our columns with reference to tea, it may be of interest to many of our readers to hear a little about the manufacture of tea in general and Lipton's tea in particular.

The writer had the pleasure of visiting during his travels the little island of Ceylon, upon which, for 50 weeks out of the 52, the hot tropical sun shines almost incessantly and where, in the low country, the tropical foliage, consisting of palm trees and tree ferns, is most beautiful, but the climate is most trying to the American traveller. Leaving, however, Colombo, which is the capital of Ceylon, we travel by railroad about 80 miles right into the heart of the mountain region, and there we alight at a railroad station 16 miles from Sir Thomas Lipton's delightful tea gardens, upon which are employed no less than 15,000 coolies. The name of this estate is called the Dambatenne Tea Gardens, which consist of a great number of tea estates, each under the supervision of a British tea-planter.

Arriving on the tea gardens for the first time, one is struck very forcibly by the inquisitiveness of the natives, especially the little children, who, clothed in the "latest Spring fashions adopted by nature," wonder what peculiar individual the "big white master" is that is visiting their gardens. These coolies are very docile and hardworking. Their skins are very shiny and black in appearance, and the men, though very strong and wiry, are excessively thin. The tea-pluckers consist of men, women and children, children as young as 8 years of age earning their daily bread, or, I should say, their daily curry and rice.

We watch the leaf being carefully picked by these expert tea-pluckers and follow it to the factory, where the tea is brought to be cured for shipment all over the world. We stood at the factory and saw some hundreds of men, women and children with baskets on their backs bringing in the leaf they had plucked during the afternoon, each basket of leaf weighing from 6 to 8 lbs. The tea is received by the European superintendent, who has it weighed and sent up to the second floor, where the tea withers and becomes pliable prior to being put into the machine rollers to be bruised and rolled into the shape that we see it in when it arrives in this country.

It is a most interesting sight, and, through the courtesy of Sir Thomas Lipton, we were shown the tea being rolled and then sorted, and afterwards put on to "fermenting tables" and finally put into the sirocco and dried. The tea was then sifted into the different grades, suitable to the different countries, and put into tea boxes.

Throughout the entire manufacture Lipton's teas are untouched by hand, and even in the packing we saw boxes standing on plat-

forms which were quivering and shaking so that the tea as it was thrown into these boxes settled down and was tightly packed without any unnatural pressure and risk of breaking the leaf. The boxes containing the tea were then put into bullock wagons, and three days afterwards, when we reached the railroad station, we saw these bullocks being unwillingly driven up the hill to the railroad goods receiving depôt.

Amongst the many things that were seen and learned on the estate there was one I promised. Sir Thomas Lipton's superintendent I would not forget, and that was the four following simple rules for making good tea:

- I. Buy Lipton's tea.
- II. Put one teaspoonful for each person into a dry, warm earthenware teapot.
- III. Put cold water into a dry, empty kettle.
- IV. Pour the water on the tea immediately the water boils (do not let it overboil), and allow the tea to brew for five minutes, and you will have the perfection of tea.

Should the tea not be required to be consumed at the end of the five minutes, pour off into an empty teapot and fresh-boiled water can be added to the original teapot, when more tea can be brewed.

Lipton's teas have been proved to be economical, pure and popular. Over one million packages are consumed weekly. It is claimed that every minute of the day someone in different parts of the world is drinking Lipton's tea.

H. H. D., New York.

## AGRICULTURAL PRODUCTS OF NICARAGUA.

### (1902) CACAO IN NICARAGUA.

Consul Chester Donaldson writes from Managua: The crop was about an average one (which is less than is used for home consumption), but as usual was of excellent quality, bringing a higher price in the markets here than any of the imported chocolates. Although the farfamed plantation of Menier—situated near Granada, Nicaragua—is supposed to furnish that well-known chocolate manufacturer with his superior quality of raw materials, it is understood that all his crop is sold right here in the country for at least 20 centavos (about 4 cents gold) per pound more than he has to pay for the same article imported from South America. The price of Nicaraguan cacao (raw in the bean) in the markets of this country to-day is 1.60 pesos (about 25 cents gold) per pound.

It would be impossible to make an accurate estimate of the quantity of chocolate used every year in this country, as none is exported, a small quantity is imported, and there are no statistics of the amount grown here; but it is an article used in every well-to-do household in the country at least twice a day, in hot chocolate drinks and cold "frescos" (chocolate ground with parched corn and shaken up with cold water and sugar), so that one might make a rough estimate that about 500,000 pounds are consumed.

Cacao planting is one of the most attractive and lucrative industries in the Tropics, but, owing to the delicate nature of the tree and the great care necessary to preserve it, few of the natives wish to trouble themselves with it, but prefer corn and plantains, which are much easier to cultivate. Nearly all the cacao plantations are owned by foreigners, and although the tree grows more luxuriantly on the Atlantic coast and along the river valleys on that side, it also grows in all altitudes from the sea-level to 2,000 feet. One cacao tree, not over six years old, on top of Catarina Hill (1,700 feet above sea-level), to my personal knowledge has already produced three crops of over four pounds each; thus it is easy to calculate what an acre of such trees would produce annually. According to custom, these trees are planted four yards apart, in rows three yards apart, or about 400 trees to the acre. Calculating an output of four pounds each, or 1,600 pounds of fruit, this at 25 cents per pound would give an annual return of \$400 per acre, which nets the planter at least \$350. The trees thrive best in a moist soil, and, like coffee, must be shaded. Thus, when clearing land for cacao, all the largest trees of the forest are left for shade, while only the underbush is cut and burned. The clearing costs about \$6 gold per manzana (1.72 acres) and has to be repeated at least twice every year. The picking and preparing for market is much more easily performed than with coffee, as it grows in large pods containing from 15 to 25 beans each, on trees from ten to twelve feet high.

## DISTRICT ASSOCIATIONS.

### NELLIAMPATHY.

Proceedings of a Meeting of the Nelliampathy Planters Association, held at the Public Room, on Monday, 13th July, 1903. PRESENT:—Messrs. H. M. Hall, A. Barnes, A. Jones, G. Murray, Wm. Hendry, and C. Hall (*Honorary Secretary*).

Mr. Hendry was voted to the Chair.

Proceedings of last Meeting were taken as read.

**Hospital.**—Read Diwan's letter of the 3rd instant *re* Hospital and the Honorary Secretary was instructed to write accepting the Diwan's offer of a Dispensary with an Apothecary and Compounder; the Planters guaranteeing to pay their proportion towards upkeep.

**U. P. A. S. I.**—*Resolved*, that owing to bad times the Association cannot see its way to send a delegate this year to Bangalore.

Read Draft Agenda paper of the coming Meeting of the U. P. A. S. I., also Circulars Nos. 35, 39 and 40 *re* St. Louis Exhibition and other correspondence.

A vote of thanks to the Chairman terminated the proceedings.

(Signed) WM. HENDRY,  
*Chairman.*

( „ ) C. HALL,  
*Hony. Secretary.*

## THE INDIAN TEA ASSOCIATION.

### ANNUAL MEETING.

The twenty-third Annual Meeting of the members of this Association was held at the London Chamber of Commerce, 10, Eastcheap, London, E.C., on Monday, June 29th. Mr. G. Henderson, the retiring Vice-Chairman, presiding.

Mr. Ernest Tye (the Secretary) read the notice convening the Meeting.

The Chairman said: It is customary for the retiring Vice-President, in presenting the annual report of the General Committee to make a few remarks on the most important questions that have come before us during the year. In the first place, I think we may congratulate ourselves on the improved position in which we now stand as compared with this time last year. It is true that we have not yet seen that general rise in average prices to which the more sanguine of us looked forward about Christmas, but it is recognised by all who have studied the question that the industry has at last emerged from the difficulties under which it has been labouring in the past three years, and that we have now before us a fair prospect of success and prosperity for some years to come. In the first place, the surplus production of past years has been worked off, and we start the current season with a clean sheet as regards stock. Then, secondly, the shipments to America, Russia, and other outside markets have shown a most satisfactory increase. Including re-exports from London, and taking India and Ceylon together, because by doing so we get the truest idea of progress made in these outside markets, they have risen from 70 millions in 1899, 89 millions in 1900, 90½ millions in 1901, to 105½ millions in 1902. This increase we are not likely to lose, though the rise in prices may prevent further immediate expansion on the same scale. Then, thirdly, we may look for a considerable relief from the manufacture of green tea taking the place of black, both in India and Ceylon, though I regret to say that, as regards India, the delays and uncertainty—unavoidable, no doubt—connected with the payment of the bounty have rather tended to discourage some who were willing to make greens. Lastly, we have the decision of the large blenders to discontinue selling the cheap ls. canister. That I look on as one of the most satisfactory features in the past season, because not only will it help to raise the standard of taste among tea-drinkers, and accustom them to higher prices, but it will do

more than anything else to check coarse plucking and the production of the commonest class of tea. Against these favourable factors the only dark spot in our future is the shortness of labour, and that is undoubtedly a most serious difficulty, but I am, on the whole, inclined to think that it has perhaps been exaggerated, and that it will in time right itself.

I will now refer briefly to one or two of the principal questions dealt with in the report. The most important of these is the cess, and I would like to say, in passing, that it is due mainly to the personal exertions and influence of my predecessor that this has been carried through. Had it not been for Mr. Bryans's indomitable perseverance and energy, we should never have had the cess at all. The Bill passed the Legislative Council in Calcutta in March last, and a very representative Committee of Management has been appointed, and is now at work. As you are aware, there has been a great deal of dissatisfaction on this side with the composition of the Committee which is to manage the fund, and with the share, or, rather, the absence of any share, in the control which has been allowed to companies and producers in this country. While we in London were mainly instrumental in obtaining the cess, and include practically three-quarters of the production, all the representation we have on the managing body of twenty members is the privilege of nominating (which apparently does not mean electing) two out of seven members to be elected by the Tea Association in Calcutta—a concession which, of course, amounts to practically nothing at all. It is true that some firms and companies here have representatives in Calcutta and in the tea districts who may be, and some of whom have been, elected to serve on the Cess Committee, and we have in this way means of making our views heard; but such indirect representation is not subject to instruction or control either by this Committee or by producers generally here, and as representing London it has no real force at the back of it. On the other hand, it is liable to be influenced by local views and feelings, and as we have found, on several occasions in the past year, Calcutta views and ours are not always identical. No doubt the Indian Government had good reasons for holding that the management of the Cess fund should be in India, where it would be under their own supervision and control; but some means might have been devised for having London views properly represented on the management without in any way lessening the powers of control, which we quite admit should remain in the hands of the Government. In making these remarks I am speaking of course only of the principle on which the Committee is chosen. Probably had we had the selection of the Committee in our own hands we should have chosen the present members, and I have no fear that we shall in practice have any reason to complain of want of consideration of our views.

We received by last mail the proceedings of the first Meeting of the Committee and from these we learn that it has been decided to grant a bonus of  $\frac{1}{2}$ d. per lb. on 4,000,000 lbs. of green tea, and to allot Rs.50,000 to the St. Louis Exhibition. Both of these decisions are in full accord with the views of the General Committee here, and will go far to allay the feeling of apprehension that the opinions held on this side as to the working of the fund would not meet with proper recognition in Calcutta. My own view is that at the present moment there is no object to which the Cess funds could be devoted with more benefit than to green tea. I think the bonus should be given freely and liberally to all who make green tea of the requisite standard of quality, and if it is found that the  $\frac{1}{2}$ d. a lb. bonus does not offer sufficient inducement, as is quite likely may happen, I would be prepared, if necessary, to double it. The next question I will refer to is the regulation of London sales, which has been carried on from November last with more or less success. No doubt the system of regulation is imperfect, and it is not very creditable to our power of co-operation that from 25 to 30 per cent. of the producers remained outside it. There are two great difficulties in the way of regulating: (1) There are those producers who will not agree to any arrangement at all, and (2) there are the Calcutta buyers. These two classes get the benefit of our action without any of the risk or expense, and every effort should be made to get a larger proportion of both, but especially of garden proprietors, inside the fold. While I am not in favour of any attempt at regulating sales in the early part of the season, I am of opinion that the system of Meetings of importers inaugurated last year should be maintained, because even if no action is taken it is highly desirable that the sellers should continue to present a united front to the market.

Some importers seem to think that regulation is a mistake. To these I would like to quote from the remarks made by one of the leading Ceylon planters at their Annual Meeting a short time ago. He said: "They of the Ceylon Association owed to the Indians and their combination and firm front the present rise in tea. They did not owe it to themselves or to the statistical position, but to the firm front the Indians showed. And they had found that it had paid them. He hoped the Indian Association would do the same next year, and that the Ceylon importers would follow their example." In which hope, I, for one, fervently join. Then I would like to mention the Warehouse and Clearing House dispute, which, last Autumn, gave rise to so much heart-burning both here and in Calcutta. The question was discussed before the Association so fully at a recent Meeting that I do not propose to go into it again further than to refer to the question of warehouse rates. These form a permanent source of dissatisfaction and trouble, and if they could be definitely settled on a fair and amicable basis it would conduce to pleasanter working all round. We do not wish to have a war of rates, and it is still less our wish that the warehouses should work at rates which do not allow them an adequate return on their capital. That only means in the end bad and unsatisfactory work. One of the principal wharfingers has not once, but several times, offered to submit his books to any unbiased authority to prove that the present rates are not excessive. I think, now that the Clearing House question has been settled, advantage might be taken of this offer, and my opinion is that if the question were thoroughly gone into it would be found that, under the present rules and system of working, the warehouse contention as to rates is probably right. But I am very hopeful that an examination of the system of handling the teas in warehouses would show us means of so reducing the expenses and improving the methods of working that a considerable saving might be possible both to ourselves and warehouses. I commend this matter to the new Committee. There are a number of other questions of great importance and interest touched on in the report to which I would like to refer, but I have already taken up too much of your time. I cannot, however, close this part of my remarks without referring to the loss which the Association has sustained in the death of Mr. W. H. Verner, who was at the time of his death a member of the General Committee. Mr. Verner was a man of wide experience and ripe knowledge, and the broad general view he was always able to take on all matters which came before us was of the utmost value in our deliberations. Since the report was printed we have further to deplore the loss of a former member of the Committee, Mr. James Riddell. Mr. Riddell was one of the pioneers of Assam, and his selection to preside at the recent dinner to Mr. Buckingham showed the esteem in which he was held by his fellow-planters.

In concluding, I would like to say a few words on matters outside the printed report. It seems to me that the future is practically in our own hands. We have, for the present, got rid of what, after all, has been at the bottom of all our troubles, *viz.*: excess of supply over demand. But we cannot flatter ourselves that we are entirely out of the wood, or that we can afford to run any risks, and it will be necessary for us, on the one hand, to be on our guard against the temptation to resort to coarse plucking, and on the other, to continue unremitting in our efforts to improve the present demand from outside markets and to find new ones. Then I would urge on all the necessity for closer working together. We have lately, I think, seen a more general and successful attempt to pull together, but the spirit of union and the willingness to give and take in the general interest need careful fostering to enable us to hold our own against the buyers and to maintain our hold on the market. I think also that more might be done in the way of co-operation and consultation with the Ceylon Committee than we now do. It is surprising, seeing the rivalry between us, how little our interests clash with theirs, and at how many points these interests are identical. I would go further—though in this I am afraid few of you agree with me—and I would say that, in my opinion, it would be to our great advantage if there were more interchange of views with the buyers. I am not now advocating an Exchange, but I cannot see why we should be afraid of them, and there are many questions of common interest where a free expression of opinion on both sides could only lead to our common benefit. I now beg to move: "That the proceedings of the General and Special Committees during the year be confirmed, that the

report be adopted, and that the accounts, as audited, be passed as correct."

Mr. C. C. McLeod (Vice-President) said: Mr. Chairman and Gentlemen: I beg to second the adoption of the report and accounts now before you, and in supporting the remarks you have just listened to from the Chair, I would like to add a few words on one or two points that have not been specially mentioned. I fully endorse all that has been said by our Chairman, and share with him the view that we are on the eve of more prosperous times in tea. You are all familiar with the circumstances that have brought this desirable change about, but it behoves us to be careful that we do not miss any reasonable opportunity of strengthening our position as importers and producers. There is no doubt that the firm attitude adopted by Indian producers has been instrumental in a marked degree in attaining the position they now hold, and, as our Chairman has shown you, the strong front they showed at a critical period has brought them out victorious. This feature has been recognised by our Ceylon friends, and I think it is desirable that we should endeavour to come into closer touch with them, for, while it is admitted that in some minor ways our interests are not always identical, the fact remains that we are both, on broad grounds, vendors of an article that, at the present moment, is competing, and successfully competing, with a similar product which has held the sway of the world's markets for generations. That we have been able not only to hold our own, but to successfully oust our rivals, placed at a considerable advantage, is a matter of congratulation. I would suggest to this most representative body of Indian tea producers that it is a matter of common interest with Ceylon that we should join hands in some practical form and thereby be the more able to meet our adversaries in whatever shape or form they may appear against us. Adversity in our industry has taught us many valuable lessons, but none more clearly than that "unity is strength." We have many difficulties to face yet, but if we hold together there can be but one end to it, and that is success. We have all the elements in our favour, and if we look to our general interests, and forget what I might call our imaginary personal interests, we must win in the end. With Lord Curzon's valuable and timely aid, the cess is now an accomplished fact. If it does nothing else, it carries a policy of equity in its tail and distributes the burden of exploiting markets and pushing the interests of the industry on all Indian tea growers instead of the burden falling only on the more enterprising section as of yore. The initial outlay of giving a bonus on green tea is by far the most practicable solution of the curtailment of excess supplies of black that could be made, and we all trust the Cess Committee will not only continue it, but increase it, if necessary, so as to induce the pioneers of what may become an important factor to continue to make green even if the price of black should advance to what will show a greater margin of profit, which is by no means improbable. The regulating of our sales has proved itself so advantageous that, so far as London is concerned, I need not dwell upon it, but I would like to urge my views, expressed on this subject a short time ago at a Meeting of importers, on the advantages that would undoubtedly accrue to us by not rushing large quantities on the Calcutta markets in September and October to compete with the large supplies that must necessarily fall to be sold here in November and December. If we sell largely in Calcutta in September and October we cannot expect strong markets here in November and December, when dealers and blenders are receiving large consignments of Calcutta-bought teas. Calcutta can find buyers for her offerings as easily in later months as in the earlier ones, and I would ask producers who sell there to provide against excessive offerings, especially during the months named. They may rest assured that buyers who go out for the season will remain while there is any volume of tea to sell, and I am of opinion that if sales in Calcutta were regulated so as to finish selling in April instead of January, the benefit to growers would be substantial. In this connection it may be important to observe that river and rail transit, have been so materially accelerated that the crop is pushed forward earlier every year, and that the full benefit of smaller supplies is consequently not realised by consumers in the sense that it ought to be, until our crop is nearly all sold, to the great disadvantage of the producer. This question of ocean freights has not been touched upon by our Chairman, and I would venture to remark that our arrangement for the carriage of tea from Calcutta to London is, from a business point of view, the most unbusiness-like arrangement that exists in the trade of the universe. I do not deny that

our product is not expeditiously carried or well handled, but I do assert that we are knowingly subjected to an arrangement whereby our rate of freight is calculated upon an utterly wrong, and to us an unjust, basis, and that we are fettered by an unheard-of stipulation of "two years' notice," which we do not appear to have the pluck or even common prudence to put an end to. We have heard a great deal lately about "Fiscal Policy," and I saw in a daily paper a few days ago that our Prime Minister, in reply to a question on the subject, answered that: "India has never been excluded from any consideration of the fiscal policy of this country and its effects, and that the general policy is not likely to be departed from by this Government." This, gentlemen, is somewhat reassuring, but to put the products of India generally and tea in particular, on anything like an equal footing with our competitors in China and Japan, a radical reform would be necessary. Mr. Rutherford, of Ceylon, sounded a warning note on the subject of a higher range of prices endangering our holding of markets in the United Kingdom and elsewhere against China and Japan, and if our Government are incapable of focussing the disadvantage we are placed in at the present time the note of warning may not be a day too soon. Any fiscal system that would benefit India and Ceylon tea would require to start by putting us back to the same platform of competition. At present, in virtue of legislation that had the protest of sound business men in close touch with the industries of the country, they have placed Indian products generally at a serious disadvantage against silver-using countries, and tea in particular, at a discount of 33 per cent. to China and Japan. A reduction of the duty by at least 2d. per pound on Indian and Ceylon only, leaving the duty as it is on foreign-grown tea, would merely put us on an equal footing with the countries mentioned, and would appear the most obvious measure of fairness and equity conceivable. If British-grown sugar has received relief in the West Indies, why should not British-grown tea be similarly protected in the East Indies? Our thanks are due to those who championed our just cause in the House of Commons, and it is a matter of sincere regret that the Chancellor of the Exchequer could not see that instead of the corn tax being paid by the consumer, and the extra tax on tea by the producer, the very opposite must be the practical outcome of it under the altered circumstances. The consumer will now have to pay at least 1½d. more for his tea, in proof of which blenders have been forced to raise the price of the shilling canister to 1s. 2d. On the other hand, the repeal of the corn tax will only benefit the foreigner. We have also a mighty grievance in the matter of labour, where red tape has bound us hand and foot at the most critical period in the history of the industry, while the matter of water-borne traffic from the tea districts is evidently beneath the notice of the Government altogether, and is left entirely to private enterprise. India, however, is a great country, and our only hope remains that the tide of prosperity attendant on a disappearance of famine and favourable climatic influence will burst the flood gates of what seems to be uncalled-for legislation, and carry that legislation back to the place from whence it came, there to be hanged by the neck until it dies.

Mr. A. Bryans said everybody did not profess to be pleased with the regulation, but he agreed with the Chairman that regulation had saved the situation last year. He could name several people who had not regulated, but what had been their results. It would be seen by their reports that they had not got the best of it. It was unity that paid. During the past year the Association had combined in a way they had never done before, and, on the whole, it had paid them. They must not forget that next year's crop might be a big one, and, if so, they must arrange accordingly so as not to knock down the price. Mr. McLeod had raised the interesting point of the Calcutta sale, and if he might say so, without being insulting, the figures in the Calcutta brokers' circulars were very misleading. He did not know whether those present read a letter which appeared in the *Home and Colonial Mail* last Friday week. It was a very interesting letter. He did not know who wrote it, but it brought out the point he wanted to bring out. People must not be led away by the Calcutta circulars, which tried to lead them to believe that larger quantities of tea were being sold to foreign markets than was actually the case. It was said that 63 per cent. of the tea sold in Calcutta went to foreign markets, but that was absolutely incorrect. They sold about 48 million pounds of tea in Calcutta last year, and nothing like 63 per cent. of that went to

foreign markets; it would be more correct to say about 20 millions did. He said it was very necessary that this foreign demand should be supplied, but argued that it would be foolish to supply the London dealers' requirements in Calcutta, and that they should supply their wants on this side. That was the best policy. With regard to the 1s. canister, thank goodness that was gone. He wished the 1s. 2d. canister had gone with it. If the new Committee would join with Ceylon and take some steps to encourage the taste for better tea, he believed it would be for the benefit for everyone. (Hear, hear.)

Mr. Robert Hart drew attention to some very interesting remarks recently made by Mr. Rutherford regarding rubber planting. Even if this was going to be a great success it would not have any effect upon the quantity of tea produced, for, say, three, four, or five years. The Chairman had referred to the possibility of a large crop this year, and he should not be surprised if this should turn out to be correct. He hoped they would not forget the lesson they had had during the last few years, and that they would not fall into the mistake of plucking coarse tea.

Mr. R. B. Magor thought he might say a word for the absent dealer, who was really entitled to their thanks. He contended that they ought to be brought into closer communication with the dealers. There was no reason why they should look upon them as absolute enemies. The dealer sold common tea because it commanded the largest trade. If it could be proved to him that he could make a better price out of finer tea he would certainly do so.

The Resolution was carried unanimously.

The Chairman proposed that Sir Henry Seymour King, M.P., be re-elected Chairman of the Association, and that Mr. C. C. McLeod and Mr. F. A. Roberts be the Vice-Chairmen. He said Sir Henry King had again consented to act, and he was of the greatest possible assistance to them in all matters coming before Parliament.

Mr. J. N. Stuart seconded the proposition, which was carried unanimously.

Mr. F. A. Roberts suitably replied.

It was agreed that the following gentlemen should form the General Committee for the coming year, viz.: Messrs. John Alston, A. Bryans, G. W. Christison, Jas. S. Fraser, J. S. Hulbert, Robt. Hart, J. A. H. Jackson, Robt. Lyell, Sinclair Macleay, G. F. Moore, A. J. MacLaughlin, J. N. Stuart, and A. G. Stanton.

Messrs. McAuliffe, Davis, and Hope were re-elected auditors, and thanks accorded for their services.

A vote of thanks was accorded Mr. G. Henderson, the retiring Vice-Chairman.

Mr. Henderson, in reply, said he had done his best, and he thought Mr. McLeod's name ought to be included in the vote, because he had done his full share of work not only at home but also in Calcutta, where he was able to remove some misconceptions that had arisen with respect to the work here. (Hear, hear.)

The Meeting then terminated.

## MARKET REPORT.

*Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated July 3rd, 1903, says:—*

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1903-1904 ... ..	88,346	115,470	9,300
1902-1903 ... ..	84,019	123,690	8,357
16,492 pkgs. INDIAN			
31,328 " CEYLON			
1,812 " JAVA			
Total 49,632 packages were offered in public auction this week.			

Now that practically the whole of last season's Indian crop has been sold, and that the quantity of new tea shipped from Calcutta is much less than at this time last year, while Ceylon exports are also short, it is evident that supplies in the immediate future will be more moderate.

# "All Sorts and Conditions of Men"

USE

# ST. JACOBS OIL

FOR RHEUMATISM, Gout, Sciatica, Neuralgia, Cramp, Pleurisy, Lumbago, Sore Throat, Bronchitis, Soreness, Stiffness, Bruises, Toothache, Headache, Backache, Feetache, Pains in the Back, Pains in the Shoulders, Pains in the Limbs, and all bodily aches and pains,

**IT ACTS LIKE MAGIC.**

SAFE, SURE, and NEVER FAILING. Price 1/1½ & 2/6.

# CONQUERS PAIN

The heavy deliveries of last month have caused a considerable reduction in stocks, which in the not improbable event of clearances continuing upon a similar scale must be still further reduced. Hence the position is gradually becoming more healthy, while the over-supply of the last few years appears now to be pretty well worked off.

INDIAN.—The auction was much smaller, only 16,492 packages being brought forward against 20,924 last week, the whole being old season's tea except about 700 packages. Next week the sale again shows considerable diminution, comprising only 14,112 packages, of which over 6,000 are new teas.

The market showed little change except for commonest descriptions which were again slightly easier. Some low quotations have recently been made owing to the number of red and stalky teas coming on the market. The following New Season's invoices were brought forward this week:—"Mim T Co.," 90 c, 10d; "Rungmook," 142 pkgs., 8½d; "Selimbong," 110½ c, 8½d; "Chubwa T Co. C.," 189 pkgs, 7½d.; "Chubwa T Co. Nonoi," 110 pkgs.; 7d; "East. Ass. Co. Balijan," 48 c, 7½; "Behubor T Co.," 42 c, 7d.

The official telegram gives exports to U. K. for the second half of June as 4,890,000 lbs., against 6,030,000 lbs. same period last year, making the total from 1st April to 30th June 9,942,000 lbs., against 12,570,000 lbs. in 1902.

Week's av. of tea on Garden Acct. Season 1903-4, 642 pkgs., av. 8·60d. 1902-3, 1,430 pkgs., av. 6·92d.

Week's av. of tea on Garden Acct. Season 1902-3, 14,924 pkgs., av. 7·10d. 1901-2, 2,342 pkgs., av. 5·84d.

Garden Account 1st June, 1902, to date season 1902-3, 1,281,531 pkgs., av. 7·52d, season 1901-2, 1,330,613 pkgs., av. 7·62d

CEYLON.—With a comparatively heavy auction competition was less general, and prices must be quoted somewhat lower, except for

fine and finest descriptions; the lower quotations are partly accounted for by a slight falling off in the quality, but in addition to this the tendency was to easier rates for inferior grades. The official wire gives exports to U. K. during June as 11,250,000 lbs. against 13,000,000 lbs. last year, making the total from 1st January 53,000,000 lbs., against 57,500,000 lbs. in 1902. The estimate for July is given as 10 to 10½ millions, against 10¾ millions shipped in that month last year.

Average for week 7·25d, against 6·00d in 1902.

Ceylon tea sold on Garden Account 1st January to date 508,383 pkgs., av. 7·63d. 1902, 561,921 pkgs., av. 6·87d.

JAVAS passed with fair spirit, except for the poorer teas which showed a fall of about a ¼d.

### QUININE.

QUININE is a very dull market, a few small sales being reported during the week at 10½d per oz. for spot, but at the close there are sellers at 10d.

### VANILLA.

There was a small sale of vanilla on Wednesday, when out of 45 odd tins offered about 260 tins sold. Medium and long lengths were mostly withdrawn and bought in, while ordinary foxy and picking sold at full prices to 6d dearer.

The following prices were paid: *Seychelles*, 7 to 8 inches, 11s 6d to 8 inches, 9s 6d; 5½ to 7 inches, 7s 9d to 8s 3d; 3 to 6½ inches, 7s 6d to 8s 6d; good split, 4 to 7½ inches, 5s to 7s 6d; common and foxy, 4s 6d to 5s 3d. *Mauritius*, fair to good, 9 to 9½ inches, 24s; 7 to 8 inches, 14s to 16s 6d; 7 to 7½ inches, 13s; 6 to 6½ inches, 8s 6d to 11s; 4 to 6 inches, 7s 9d to 8s 3d; 3 to 6½ inches, 7s 6d to 8s 6d good split, 7 to 8½ inches, 9s to 11s 6d; 6 to 7 inches, 7s 6d to 8s 3d; 4 to 6 inches, 6s 6d to 7s. *Ceylon*, 5½ to 7 inches, 4s 6d to 5s 3d; to 6 inches, 3s to 4s 6d per lb.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 7th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

### THE COMING PLANTERS' CONFERENCE.

ONCE a year delegates from the various District Planters' Associations in Southern India assemble together in Bangalore at the annual general meeting of the U. P. A. S. I. The meeting this year opens on Monday next, and may be referred to for convenience as the Planters' Conference. The business before the meeting will be to the full as important as that which has had to be transacted in recent years. Among the subjects to be discussed are some old friends and a few new; and it is expected that one or two more of the latter will be added to the draft Agenda Paper recently circulated by the Secretary. Besides this, fresh interest attaches to at least two of the subjects that have come up for consideration for some years past. In regard to the Labour Law, for instance, the position has changed greatly. Former years witnessed the steady putting forward of representations in favour of the introduction of a law governing certain of the relations between Employer and Labourer on planters' estates in the Madras Presidency; the expectation being that when once such a law had been passed, similar enactments would be promptly introduced in the Native States of Mysore, Travancore, and Cochin. This year planters have to face the fact that the Madras Government have passed a Planters' Labour Law, though effect has not yet been given to this in any of the planting districts. Conditions have, in fact, changed so greatly that in several districts a strong objection to the application of the new law has been manifested; and it is just possible that in regard to

some of these districts the Act will remain a dead letter. That is one of the subjects to be discussed at the Conference this year. The Act is the most favourable that the Madras Government were free to pass; yet there are in it points that make its application to some districts a very doubtful boon. Then, again, Mr. CHAMBERLAIN's recent remarks have given quite new force to the representations made by the U. P. A. S. I. some few years ago with reference to the subject of Differential (or Preferential) Duties. When the planters first moved in this matter, they were unquestionably ahead of the times; and even now Mr. CHAMBERLAIN is by many thought to be so. What he has lately said, however, is likely to cause planters to take up the question of British Fiscal Policy with renewed interest.

Some of the new questions raised may be regarded as of importance only in certain districts, but among other matters the Association is called upon to express an opinion in regard to the proposed change of policy respecting the liability of the Government of India to provide for the encashment of currency notes (of value exceeding Rs.5) at more than one centre. To planters this is a matter of special interest, and we have no doubt that it will be fully discussed before a decision is arrived at. Then, too, the question of sending a delegate to Brazil to investigate Coffee cultivation there will come up (again) as well as the important question of exhibiting South Indian Teas and Coffee at the Louisiana Purchase Exposition next year. Our views in regard to both these matters are well known. We do not propose to restate our arguments, for it seems only fair to allow the delegates who will assemble at Bangalore to think things out for themselves, and to hold the balance, to the best of their judgment, fairly as between what it is desirable to do and what the financial position of the Association and the planting communities will permit. That there is no want of "go" among planters, is certain; but in the coffee industry more particularly "hard times" have been experienced for a long time past, and we

cannot be surprised if planters generally are more keen than they were formerly upon cutting their coat according to the quantity of material available.

The chief interest of the meeting will, in fact, centre in the subject of finances. There have been some alarming symptoms during the last few months. For a time, dissolution seemed to be imminent in the case of two of the leading District Associations. There is no longer cause for fear on this account, we believe; but there is some reason to dread a reduction of the subscriptions upon which the efficiency of the U. P. A. S. I. largely depends. The accounts for last year will probably be scrutinized with exceptional interest; but still more important will be the consideration of Ways and Means for the future. The U. P. A. S. I. has never laid itself open to charges of extravagance, yet it is possible that economy will have to be practised more strictly than ever. If this be so, a point will soon be reached at which efficiency will be jeopardised. At the present juncture there is special need for a strong, an efficient, and a pushing Association. It is to be hoped, therefore, that financial limitations will not have to be made so narrow as to cripple the energy of the U. P. A. S. I. or to prevent it from carrying on duties that appear to increase in scope and in importance every year. We are well aware that there are planters who raise the question: "What good has the U. P. A. S. I. done?" but we believe that these are, without exception, men who have not attended its meetings, who have not followed its proceedings closely, and who are not therefore in a position to arrive at a fair judgment. The more the U. P. A. S. I. is supported, the greater will its influence become, the more effective its work. We shall watch, therefore, with special interest the course of proceedings during the coming Conference, and we shall do so in the hope and belief that the Association will once again emerge strong and vigorous from one of those crises that have been all too frequent in its career of a decade or so.

#### U. P. A. S. I. SECTION.

(UNDER THE CONTROL OF THE SECRETARY, U. P. A. S. I.)

#### TEA AND COFFEE IN INDIA.

The following paper showing the production of Tea and Coffee in India has been issued by the Director-General of Statistics:—

##### TEA.

*Area.*—The area under tea at the end of 1902 extended over 525,252 acres, nearly two-thirds (64·6 per cent.) being in the valleys of the Brahmaputra and Surma, which contain as much as 339,640 acres, namely, 207,358 in Assam (the Brahmaputra valley) and 132,282 in Cachar and Sylhet (the Surma valley). In Bengal the area under tea is 135,158 acres, 25·7 per cent. of the whole. The cultivation of tea is, therefore, to the extent of nine-tenths, limited to the two

provinces of Assam and Bengal. Under the discouragement of the low prices obtained for tea placed on the markets in excess of consuming capacity, endeavours have been made to restrict cultivation and production, and to supply the consumer with tea of better quality in smaller quantity. The statistics collected do not show separately the areas under tea which have been abandoned as unprofitable and the lands newly planted with tea. But the net addition to the tea area, which has been diminishing rapidly in the last three years, was reduced in 1902 to the nominal figure of 485 acres. The addition to the area under mature plants was, however, 16,273 acres owing to recent extensions coming into full bearing, and with this transfer the newly-planted areas were reduced to 34,779, or less than 7 per cent. of the total planted area.

In Assam reports were received from 782 estates, with an area under tea of 339,640 acres, the average area of an estate being about 434 acres. In Bengal 309 acres was the average for 438 estates, and in Travancore the average for 80 estates was 311 acres. In other localities the average area of an estate is much smaller; 122 acres in Madras, 116 acres in the United Provinces, and only about three acres in the Punjab, where natives grow tea in a very small way. These figures refer only to tea-bearing areas.

*Production.*—The quantity of tea produced has increased in nearly double the ratio of increase in the area under cultivation; for, while the area has increased since 1885 by 85 per cent., the increase in production has been 163 per cent. The diminished production of the last two years is due less to the voluntary limitation of plucking than to unfavourable climatic influences and shortness of labour, and perhaps, also to deterioration of the plants through imperfect cultivation.

The actual production in 1902 is reported to have been about 188½ million pounds, which is about 43 per cent. larger than the reported production of 132 million pounds ten years previously, in 1893.

*Capital employed.*—According to the returns of the registrars of Indian joint-stock companies and the published accounts of the companies registered in London, the capital engaged in the production of tea amounts to over seventeen crores (Rs.17,39,25,097), namely—Companies registered in India, Rs.3,51,02,662, Companies registered in London, £9,254,829 = 13,88,22,435. Thus between 79 and 80 per cent. of the capital belongs to shareholders in companies whose head offices are in London. Divided by the area actually under tea this capital stands at about Rs.330 (£22 per acre). There is, however, a further unknown sum engaged in the industry representing the capital of individual owners, while the acreage by which the known capital is divided includes areas worked by such private owners. The capital value per acre is therefore somewhat, but probably only slightly, understated.

*Persons employed.*—The number of persons employed in the industry in 1902 is returned at 497,484 (permanently) and 86,998 (temporarily), or altogether a little more than half a million (584,482 persons), which would work out to about 1·11 persons to the acre. The figures are unreliable, but they are less inaccurate than in previous years.

*Exports and Consumption.*—The tea produced in India is exported, mainly to the United Kingdom, to the extent of nearly 97½ per cent. of the average production. Very nearly eight million pounds were left in India on the average, about

4½ millions Indian and 3½ millions foreign, the bulk of the foreign tea being Chinese, though a substantial quantity consists of Ceylon tea.

*Prices.*—The production of tea in India and Ceylon has increased so much more rapidly than the consumption in the United Kingdom, which is the principal market for these teas, that there has been a heavy fall in price, and in 1902 prices at the London sales were unduly depressed by the anticipations of a large output being thrown on an over-weighted market until at the close of the season, with the assurance of only a moderate crop, prices revived. The prospects for the future are much brighter owing to the limitation of output to which reference has been made, and the development of new markets which should be greatly assisted by the judicious application of the funds obtained from the cess of a quarter-of-a-pie per pound charged from the 1st April, 1903, on all tea exported from India.

#### COFFEE.

*Area.*—At the end of 1902 there were 219,293 acres of land under coffee, all, with the exception of 373 acres, in Southern India. The production of coffee is restricted for the most part to a limited area in the elevated region above the south-western coast, the coffee lands of Mysore, Coorg, and the Madras districts of Malabar, and the Nilgiris, comprising 87 per cent. of the whole area under the plant in India. More than half of the whole coffee-producing area is in Mysore, where there were 114,660 acres in 1902, while in Coorg there were 62,381, and in the Nilgiris and Malabar 12,408 acres. Some coffee is grown in other districts in Madras, principally in Madura, Salem, and Coimbatore, and in Travancore and Cochin. It is grown also, but on a very restricted scale, in Burma, Assam, and Bombay.

*Production, Exports, and Consumption.*—The fall in prices in recent years, caused by the competition of Brazilian coffee, now the dominating factor in the markets of the world, has been a great discouragement to coffee growing in Southern India. Adverse climatic conditions also, from time to time, have combined with disease to restrict the output.

The average production in the last five years was slightly over 21½ million pounds, contrasted with an average of about 32½ million pounds in the preceding five years. These figures are, however, based on very unreliable information, and the indications given by the trade accounts of the quantities exported from India (and practically the whole production is exported) suggest that they are incomplete. Thus during the last five years the average yearly excess of the exports over the recorded production is nearly 8 million lbs.; while in the preceding five years the average yearly excess of the reported production over the exports was 11·4 million lbs. During these ten years the exports have ranged from 32·58 million lbs. to 23·61 million lbs., a difference of 8·97 million lbs.; but in the same period the reported production has varied from 40·14 million lbs. to 15·58 million lbs., a difference of 24·56 million lbs. It seems not unlikely, arguing from the analogy of recent years, that the production for 1902 approached in all 40,000,000 lbs. It certainly considerably exceeded the production of any year since 1895.

*Persons employed.*—There were 28,148 persons permanently, and 62,515 temporarily employed on the coffee estates in 1902, altogether 90,663 persons, which is equal to very nearly one person to about two-and-a-half acres.

*Prices.*—There is no local market for coffee, and therefore no Indian quotation of price. The over-supply of the cheap Brazilian coffee in the consuming markets continue to affect the prices of Indian as of all other coffee, but owing to anticipations of a smaller supply there was an improvement in the price of Indian coffee during 1902.

#### COFFEE NOTES.

Tabasco coffee, unlike the sauce of the same name, is one of the mildest kinds. Tabasco is a State in Mexico.

Caffeine, which exists in the coffee bean in the shape of caffeic acid, has an astringent tendency, but this is modified in the roasting and also by the aperient properties of the caffeine or essential oil.

Cucuta coffee, a grade of Maracaibo, is often sold as Java; but, on the other hand, a great deal of coffee not grown in the district is sold as Cucuta. The name has long been popular in this market. Bogota coffee seems to be succeeding to some of the former popularity of the Cucuta kind.

*The U. S. Coffee Market.*—The coffee market is more active, says the *Tea and Coffee Trade Journal* of 30th June, and also firmer in both actual and speculative lines. In the former quotations are a shade higher, while in options prices have reacted upward some 30 points. Outside buying for investment and the belief that the Brazil crops will not turn out so large as expected are the causes for the turn for higher values in options. It is now entertained that such coffee as is being shipped is new crop entirely, whereas one year ago an immense quantity of old crop went over into the next season's shipments. So then the drouth of 1901 had a material effect, it is argued, and why not also similar damage by the August frosts of 1902 on the 1902-03 crops? But be that as it may the present Brazil crop will go on record as a 12,300,000-bag crop at the least, and this is more than the most visionary bear dared predict. It will leave the July 1 visible supply the largest on record. Prices in futures have been very low, and the reaction is as natural as expected and occurred at the earliest favouring breeze from investment interests.

In actual coffee, low grades are scarce and therefore there is good excuse for firmer conditions to last until the grades are in larger supply, which is expected. It remains to be seen how far trade up-country will forbear buying because of the advance. This so far is too fine a shade to bring about any marked effect. Good roasting coffees are always in demand and the supply is not any too large. Considerable business has been transacted with Brazil whose prices were reached by the upward advance. Soon after they too advanced stopping further extensive ordering. The confidence of Brazil with the consequent parity in its favour is one of the sustaining forces of the market. In spot invoices the market has been quiet. Closing quotations are 5c. for Rio No. 8, 5½c. for Rio No. 7, 5¾c. to 5¾c. for Rio No. 4, and 6c. to 6½c. for Santos No. 4. Jobbing has been moderate.

Mild grades are easy for most kinds. Full stocks incite pressure to sell but demand is light. Good Cucuta closed at 8c. East Indias are quiet.

Sales during the last week were 149,000 bags.

The Dutch sale on June 23, 1903, went off at about brokers' valuation. Market steady. Good Ordinary Java 26c.

The clearances of Java coffee by the Dutch Trading Company in Holland during June embraced 10,640 bags, against only 7,550 bags last year, and 6,810 bags in 1901; thus giving a total of 76,300 bags delivered for the past six months, as contrasted with 56,250 bags and 65,580 bags Coffee in the two preceding years.

**Coffee.**—Messrs. Leonard Jacobson & Zonen, Rotterdam, give the following comparative prices of Java coffee in Dutch cents (2.5 Dutch cents are equal to one United States cent or  $\frac{1}{2}$ d.):

1810	105—115c.
1815	45—50—40c.
1820	70—78.5c.
1825	38.5—50—35—37.5c.
1830	23—21—23.5c.
1835	30—39—36.5c.
1840	32—25.5—29.5c.
1845	21.5—27.5—21.5c.
1850	34—37.5—24.5—30.5c.
1855	29—32.5—32—34c.
1860	38.5—40—39c.
1865	45.5—43.5—46—44.5—45.75—45c.
1870	32.5—35.5—31.5—33.5—32—35c.
1875	55.5—53—64—58c.
1880	48—39.25—41—38.5—40—37—38.5c.
1885	28—24—26.5—24.5—26.75—25.5c.
1890	54.5—58—52.75—59.5—58—58.75—58c.
1895	51—54.5—52.25—55.75—53c.
1896	53—50.5—52—50—52—50c.
1897	50.5—51—35.5—38c.
1898	38—35—33—38.25—32.5—33c.
1899	33—26.5—27.75—25.75—34.5.
1900	34.5—39—34.25—36—34.5—37—31c.
1901	31—31.5—30.5—32—31—38c.
1902	38—32—37.5—34.5—35—34c.

**Guesses on 1902-03 Coffee Crop and Realizations.**—Now that the 1902-03 coffee crop, Brazil, is found in round figures to be 12,250,000 bags, estimates made last year at this time on the probable outturn make interesting reviewing. The most bearish venture predicted an ultimate maximum of only \$12,000,000 bags, and the bulls were of course for, very far off in their arithmetic. Henry Nordlinger & Co., July 16, said:

"It is conceded that the Brazilian bumper crop of 1901-02 has done considerable damage to the trees, we cannot very well have such big crops again for years to come. It is our firm belief that the present Rio and Santos crop will turn out to be a small one, not exceeding 8 million bags, and inasmuch as the receipts of all other kinds (exclusive of Rio and Santos) in Europe and the United States, which were about  $5\frac{1}{2}$  million bags per annum a few years ago, have fallen off to about  $4\frac{1}{4}$  million bags, and are estimated for 1902-03 at less than 4 million bags, we have a total world's production for 1902-03 of 12 million bags maximum."

On August 13, they said further:

"The latest reports to hand still speak of the Santos crop as being about 50 per cent. of last year's, which would mean about 5 million bags, and estimates given by conservative firms of the Rio crop vary from  $2\frac{3}{4}$  to 3 million bags. Against this we hear repeatedly of estimates given out by bears that the crop will turn out fully 11 million bags, some speak even of 12 millions; but we cannot understand their reasoning, which seems to be based on the single hypothesis, that last year's crop was millions of bags larger than the highest estimates received from usually reliable people, there-

fore they take it for granted that these conservative firms are err again in like manner this year. This is all there is to the argument. We ignore their prognostications with regard to 1903-04 crop, which has not begun flowering yet."

**Porto Rico Coffee Used at the White House.**—Our Porto Rican coffee is used by the White House family, witness the following to the Governor of Porto Rico:

WHITE HOUSE, June 22

MY DEAR GOV. HUNT,—I write to tell you how much I have enjoyed the Porto Rican coffee. Our whole family has taken to it and we use no other. Your interest in all pertaining to Porto Rico and its products is so great that I thought you might like to be informed of this fact.

Sincerely yours,

THEODORE ROOSEVELT.

**Porto Rico and Coffee Protection.**—With irrefragable logic protection is demanded for coffee. It is stated that under protection the Porto Rican coffee crop would bear the same ratio to National consumption of that article as Louisiana sugar does to the entire number of tons used "by our continental" consumers. The breakfast table is endangered, but if coffee from other lands than Porto Rico is to be dutiable no barriers should be longer interposed to giving every man 40 acres and a mule.—*Pittsburg Post*.

This island Porto Rico was some time since admitted within the tariff laws of the United States, and under these laws, enacted before the annexation, coffee is free of duty. Coffee-growing is a considerable industry there, and it wants protection; and how can we deny protection, holding such views as we do regarding beneficence, without forfeiting the claim of governing our dependencies benevolently? The Ponce branch of the Porto Rico chamber of commerce has prepared a memorial to the United States Congress asking special tariff protection for the coffee-grower and we do not see how the request can be denied. But to make protection effective coffee must be taxed all along our protective line, in which case the people of the United States would be forced to pay more for coffee.—*Springfield, Mass., Republican*.

## TEA NOTES.

**The Position of Tea.**—The London correspondent of the *Times of Ceylon* writes:—

Other things being equal, one would naturally expect that the season of the year, when there was so little Indian tea, and when Ceylon had the market for British-grown teas practically to herself, would be the time when the best prices were obtained. As a matter of fact, of course, the exact opposite is the case. It may be that, in the days before Ceylon tea came on the scene, buyers of British-grown tea got out of the way of laying in stocks at this season, and the Summer time is not the season when most tea is drunk. But, undoubtedly, the chief reason for the usual Summer drop in prices is the poor quality of Ceylon shipments at that time combined with large sales. I am well aware that this is due to climatic reasons, and is unavoidable; but it is a fact that has to be reckoned with for all that. There is no us crying "peace" when there is no peace, and we cannot get away from the fact that recent shipments from Ceylon have been of very poor quality—thin, washy teas with nothing to recommend them. I do not know that they have been worse than usual, but they have certainly, with few exceptions, been very poor. That being so, it is not to be expected that buyers will do more than purchase from hand to mouth. That they have gone on buying as steadily as they have done is a token of the inherent strength of the market, and all really good teas have been eagerly competed for. A buyer is not keen to give, say,  $7\frac{1}{2}$ d. for a tea if he has reason to believe that the

quotation next week will be 7½d., and, perhaps, the week after 7d., thus making his stock appear dear.

I am led to make these remarks because I notice in my Ceylon correspondence a note of disappointment as to the course of prices—disappointment which, in my opinion, there is no justification for. The position is absolutely sound, and there is nothing keeping prices except the poor quality of the tea. It is generally thought in Mincing Lane that when the June teas, usually of greatly-improved quality, arrive, there will be a smart upward movement. I would go further than this and say that a rise of three farthings a pound in the teas sold from January to June is quite as much as is desirable in the permanent interests of the enterprise. What we want is a steady rise—not a big one followed by a slump. There is another point which may be touched on here. So far the rise has chiefly benefited the owners of common and medium teas, but the best opinion points to the prospect of all teas sharing eventually in a better market. We are all apt to view things through spectacles tinted by our own interests, and I think most of the complaints and the fears expressed as to diminished consumption, the re-shipments from America, etc., have come from those chiefly interested in high-grown teas. Fortunately, perhaps, for the readers of this column, my modest interests in tea are so widely spread that it is a matter of indifference to me what particular class of tea goes up. I only look at the good of the enterprise as a whole, and claim to view things with impartiality. No doubt, if Ceylon and India were ill-advised enough to start coarse-plucking now, it would be to the benefit—temporarily at any rate—of owners of high-grown tea. But this would be the worst possible thing that could happen for the island as a whole, and for that reason I look upon suggestions coming from these quarters with a certain amount of suspicion. In connection with recent re-shipments from America, a communication has been sent by the Ceylon Association to the Customs, calling attention to two facts. First, that 13,000 packages of Oolong tea have been recently condemned at New York under the Pure Tea Act; and, secondly, that 6,000 packages of this tea are believed to be now on their way to this country. The Customs have acknowledged receipt of the letter and will no doubt be on their guard. The name of the shippers is known; but it is not considered advisable to publish it in the meantime.

**Root Disease in Tea.**—The latest Peradeniya circular by Mr. J. B. Carruthers, the Government Mycologist, is on the *Rosellinia radiciperda*. He first dealt with the subject in his annual report of 1901. The subject is a difficult one, as the disease does not extend above ground—not higher than the “collar” at any rate; yet planters might help Mr. Carruthers much by carefully noting the effects of the inexpensive measures which he recommends. The low-country planter has our congratulations over the fact that there is a pest from which the low country is at present free!

**Colombo Tea Sale.**—A good tone prevailed throughout the sale on 22nd ultimo and prices were firm, but with some irregularity, particularly in Pekoe. Dust continues to rise in price and showed a considerable advance again to-day. Green teas were in demand at previous rates.

**China Tea.**—Some interesting information as to the present condition of the China tea trade is given in a report just issued by the Foreign Office. Although last year, as compared with

the previous one, the quality of Chinese tea showed some improvement, there seems a consensus of opinion amongst experts that the teas from all districts, except Ichang, have fallen off deplorably in quality and style during the last twenty years. The Chinese will take no advice, and refuse to listen to any suggestions regarding change in cultivation and manufacture. Strong representations made in the Spring of last year induced the Chinese Government to reduce the export duty to one-half, but it still remains too high, being at least 12½ per cent. on common teas; and as likin and other internal taxes were not interfered with, although in some districts they almost equalled the export duty, this half-hearted step towards putting China teas on a level with untaxed competitors will not be of much benefit to the trade. The transport of some 3,000,000 lbs. by the Siberian Railway was a new departure, which might lead to important developments if the Chinese could be induced to pay more attention to quality. The total export of all kinds of tea from China last year was about 31 per cent. higher than in 1901, but the shipments to Great Britain showed no improvement. The United States took 168,501 piculs of black tea, as against 96,820 piculs in the previous year, and 126,196 piculs of green tea, as against 86,747 piculs. This is explained by the fact that the war tax of 10 gold cents per pound was to be removed on January 1, 1903, and stocks had been reduced to a minimum to escape the expense of bonding. Moreover, it is anticipated that lower prices in consequence of the removal of the duty will increase the demand. Black tea *via* Kiakhta rose from 17,705 to 66,464 piculs, presumably because the route was safe again after the late disturbances. The export of brick tea showed a considerable advance, black brick having improved from 244,565 to 483,105 piculs, and green brick from 48,957 to 86,932 piculs. Congou tea consumed east of Irkutsk was formerly free from duty, which has now been imposed; the consequence has been that its place is being taken by brick tea, of which a finer quality is now demanded. Ceylon dust, which is blacker in colour than China dust, is imported to improve the quality and appearance of the bricks.

**The U. S. Tea Market.**—Tea is in its midsummer dulness, says the *Tea and Coffee Trade Journal* of 30th June, so far as local conditions are concerned, and therefore a flat and uninteresting market is reported. More inquiry, however, than is the rule at this season of the year is heard, which would seem to indicate that the consuming trade has pretty well exhausted direct supplies, and is about to replenish.

In a good many respects, especially in the essentials, the present tea season is like to that of last year. Then there was a high market in the East, but buyers were disposed to hold off in the hope of a retreat on the part of Orientals. But the Orientals prevailed, and there was what might be called a stampede on the part of buyers to effect purchases. The question now is, will the market have in this respect also a repetition of last year's events. Some are positive that this will occur, while others are just as assertive in the negative. It is hard to say which way the cat will jump.

Meantime while prices locally are unchanged, though a trifle easier for Formosas, in the East they remain strong. There seems to be not a little buying at the full market values, especially in Japans, and it should stand to reason that buyers who wish to sell again will hold off very long before parting with teas so dearly bought. Canada so far has taken astonishingly little of this tea, and the United

States more than usual, so there ought to be no famine in it—not by a good deal. It is to be noticed too, that China black teas are showing a decided falling off in their importations to the United States, many probably being made into greens. This should improve conditions of such blacks as are here, and notably for Congous, the first and second crops of which the Russians have taken. The less will come to America. From Formosa comes reports of firmer figures for low grades.

Cable advices from Colombo report an advance of one farthing to half-penny for Ceylon greens. Thus is confirmed the opinion that Ceylon greens would not be made so extensively as predicted. The rise in Ceylon blacks has made their manufacture more desirable from the point of view of profit, and this at the expense of the greens. It has been determined also not to extend the bounty beyond 7,000,000 pounds as proposed. The manufacture thus arrested, the price of the greens has hardened. Indian blacks are expected to firm up as the season advances.

**Japan Tea Exports.**—According to a circular from Japan the exports of Japan tea to Canada to June 1 fall short of those for 1902 to an enormous extent and still more so compared with those for 1901. Exports from Yokohama and Kobe up to June 1 to Canada were only 28,825 pounds against 130,618 for the same period in 1902, and 413,716 for the same period in 1901. On the other hand, the total shipments to North America exceed those of 1902, being 3,628,167 pounds against 1,841,773 but are less than those of 1901, which were 4,653,592 pounds.

**New Tea Company.**—BORHAT TEA COMPANY LIMITED (77,827). Registered June 25. Capital, £15,000 in £1 shares. Object, to acquire, on the terms of an agreement between A. G. Adams, H. S. Cholmeley, E. Todd-Naylor, and R. Shields (vendors), and H. Munday, the lands and tea gardens thereon known as Jamguri and Borhât, in Mouzahs Abhaipur and Ghilladhary, district of Sibsagar, Assam, and any other lands or tea estates in British India or elsewhere, and to carry on the business of cultivators of and dealers in tea, coffee, and other produce, etc. No initial public issue. The first directors (to number not less than two nor more than five) are to be appointed by the signatories. Qualification, one share. Remuneration as fixed by the Company.

June deliveries in England amounted to 11,769,450 lbs., against 9,271,800 lbs. in 1902; the landings 1,728,450 lbs., against 1,724,850 lbs.; and the stock now stands at 31,784,800 lbs., as compared with 36,610,100 lbs. a year ago. Shipments from Calcutta to the United Kingdom from April 1 to June 30 total 9,942,000 lbs., against 12,570,000 lbs. in the same period of the preceding year.

A feature of the London monthly returns is that the figures of Indian and Ceylon Black and Green Tea are now both given separately, instead of being lumped together as formerly. Indian imports of Green amounted during June to 18,216 lbs., while there were no deliveries, but the stock comprises 28,379 lbs. Ceylon imports reached 91,296 lbs., deliveries 23,796 lbs., and the stock is returned as 292,124 lbs.

The average net weights of Indian Black Tea are now taken at boxes 21 lbs., half-chests 57 lbs., chests 101 lbs.; and of Ceylon, boxes 20 lbs., half-chests 60 lbs., and chests 96 lbs.

The past month's landings of Tea in London do not differ much from those in June, 1902, the total having been 12,159,100 lbs., against 11,859,600 lbs.; but the deliveries generally were of an enlarged amount, comprising 21,320,550 lbs., in opposition to 19,381,850 lbs. last year; and the aggregate stock on the 30th ultimo was worked down to 65,883,100 lbs., or 8,629,800 lbs. below that of a twelvemonth ago.

The tea crop of Java for the year 1901-02 was 17,370,000 pounds, against 16,731,000 pounds in 1900-01; 14,625,000 pounds 1899-1900.

**London Tea Market.**—Weekly special telegram dated 23rd ultimo from Messrs. Gow, Wilson & Stanton & Co. Colombo reports that the market generally is steady and that the market for medium liquoring Pekoes and Broken Pekoes is steady, while the market for common Pekoes and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (¼d. down) and the average 7d. (¼d. up). The average for the same period last year was 6½. Reuters reports that the tone of Ceylon tea generally is steady. Fair Pekoe Souchong is quoted at 5½d. (same as last week) and the average for the week is 7d. (same as last week). 23,000 packages of Ceylon tea were offered for sale and 21,000 disposed of. Indian tea:—Packages offered 12,000 and sold 10,000. Average price of Indian tea 7½d.

**Calcutta Tea Sale.**—At the tea auction on 24th ultimo 1,814 packages were sold. There was an exceptionally strong market for all grades. Common kinds were firmer, stand-out teas realizing high prices. The invoice from Rungtee Rungliot, Darjeeling, averaged one rupee six annas three pies. This is a record for a full and representative invoice. Several other gardens realized from one rupee to one rupee nine annas six pies, the highest being realized by Rungtee Rungliot for Broken Pekoe, viz., one rupee twelve annas six pies. Buyers for outside markets were very active. There were several good invoices of green teas, a break of Manna-barrie greens averaging seven annas one pie.

**Japan Tea.**—Writing from Yokohama, June 11, Messrs. Smith Baker & Co. say:

"First crop teas have come and gone so far as choicest grades are concerned and we are on the eve of arrivals from second crop. Considering the early reports of 'favourable weather,' 'increased cultivation,' 'superior quality' and twenty to twenty-five per cent advance in price, the crop did not come forward in such overwhelming quantities as might have been expected, nor has the quality caused any general or wide-spread rejoicing among buyers."

"Compared with last season total receipts seem very large, but looking back to year before last (1901) the increase over that year is only about a million pounds, and 1901 was not conspicuous as an over-producer of any grade, and the "out of bond" cost in America that year was as much as it is now. It begins to look as though jobbers and distributors would have to buy as sparingly as they did in 1901 not to overdraw the supply of choice first crop teas."

"Reports concerning second crop are conflicting. Some of the gardens have been picked so close for the first crop they will not produce again until the usual time of third crop in August. This argues for a moderate second crop. It is the second and third crops that the native dealers are looking to for their supplies for home consumption, as up to the present time they could not afford to buy first crop teas at the prices current for export and they have seen every source of supply swept clean of all good teas."

"Total Arrivals: At both ports, 165,895 pcls. against 112,823 pcls. same time last year, and 154,023 pcls. in 1901.

"Total Settlements: At both ports, 153,658 pcls. against 103,145 pcls. same time last year, and 140,610 pcls. in 1901."

Exports to June 11:

From Yokohama and Hiogo.	Current Season.	1902-03.
To New York, Eastern Middle, & Southern Cities and Canada ...	6,725,012	3,349,268
To San Francisco ...	1,334,593	336,599
To Europe, etc ...	24,902	14,666
Total ...	8,084,507	3,700,533

\* \* \*

**China Tea.**—Messrs. Wisner & Co.'s circular from Shanghai, June 5, says:

"*Black Teas.*—Latest written advices from Hankow report a good business as passing at steady rates. Arrivals to date are 60,000 half-chests short compared with the same number of days last season.

"*Green Teas.*—Pingsueys: First musters of the new crop were shown on the 3rd instant; to date 6,700 boxes have been offered and all have found ready buyers at prices showing an advance of about 25 per cent. over last season's opening rates. We do not consider the quality of the teas so far offered as equal to last season's; the dry leaf and infusions are both inferior, while the cup quality is decidedly poor.

"*Country Teas.*—A few lines of Soeyoan have been offered; they are of fine quality.

"Exports to June 1 to Great Britain; black, 2,433,429 lbs.; against 2,898,999 lbs. one year ago; to U. S., black, 50,378 lbs. against 634,752 lbs. last year; to Canada, black, 108,132 lbs., none last year. Exports to Continent of Europe have been 169,612 lbs. against 390,804 lbs. one year ago."

\* \* \*

**Tea Conditions at New York.**—Speaking on general tea conditions locally, A. R. Robertson said recently:—

"The general position in the tea market shows more encouragement for holders than might generally be supposed. Some endeavours have been made here to cut quotations for Formosas and black teas, yet in the East advices are that teas are much higher than they can be obtained for on the spot. Why there should be any cutting remains to be seen. But if demand is any factor spot teas are again firmer, as the inquiry from out-of-town jobbers has not only showed a very marked increase during the past week, but is also far reaching; i.e., buyers for odd lots are coming forward from many sections, and this will undoubtedly continue to be so with the result that Summer business ought to be larger than usual. I do not look forward for any break in prices for months to come.

"Green teas are especially strong and old Japans may be quoted a trifle easier. Ceylon greens are attracting attention and prices of young Hysons are low for quality, making them especially worthy of attention. Congous are still quiet, although advices from Hankow intimate a somewhat considerable shortage this year in the exports for the United States. We look to see these advance. India and Ceylon blacks have had more inquiry recently at better prices."

\* \* \*

The view held by Mr. Otani, a well-known tea merchant at Yokohama, as to what course our tea manufacturers ought to take in view of the overwhelming competition of the cheap Ceylon green tea in the United States and Canada, may be worthy of reproduction here. Mr. Otani says, according to the *Tokyo Asahi*, that even those of our people who are interested in the tea trade are constrained to admit the fact that our tea can by no means withstand the competition of the Ceylon tea in point of price, and wishes to suggest a plan which may relieve the situation. Let our manufacturers, he suggests, make use only of the tea leaves of the first-period picking in the manufacture of green tea, and use the leaves of the later picking for the production of black tea. Mr. Otani thinks that the future before the latter kind of tea is great and expects that England and other countries in Europe may in time become our customers.—*Japan Times*, June 27th.

## NOTES.

### Food Supply in time of War.

At the invitation of the Royal Commission sitting to inquire into this question, Mr. Alderman A. Hinton, J.P., Chairman of the General Purposes Committee of the Federation, gave evidence at the Foreign Office. Lord Balfour of Burleigh, who was in the Chair, conducted the Examination. Mr. Hinton stated in reference to Tea and Coffee:—The average stocks of these articles in the hands of retailers was about one month's consumption, and in bond and the hands of wholesalers about five months' consumption, but would, he estimated, last much longer than six months in the event of enhanced prices of food generally and consequent reduced purchasing power of the people.

### Indian Labour in Mauritius.

At the last ordinary General Meeting of the Crédit Foncier of Mauritius, Limited, Lord Stanmore, G.C.M.G. (Chairman of the Company), remarked:—Mauritius had last year the misfortune of passing through the very worst crisis ever remembered there. The cattle plague, of whose terrible ravages you have already heard, finally deprived most estates of the bulk, if not of the whole, of their draught animals, and that at the time when these were most wanted, for the crop which was then being gathered in. This catastrophe strikingly showed how admirable a labour force Mauritius possesses in its Indian coolies. They cheerfully and readily undertook work ordinarily done only by oxen and mules, and without stipulating for advantages

which, had they demanded them, it would have been impossible to refuse. Notwithstanding their efficient help, however, it was found impossible to finish the crop in proper time.

#### London Clearing House.

The Conference held a Meeting recently, and there was a full attendance; but, as was anticipated, little came of it. There is indeed very little common ground on which the various representatives can meet. The Indians are willing to join in a C.H., but it must strictly confine itself to clearing tea. The buyers, as voiced by Mr. Lecky, consider that the least important part of the matter. Ceylon producers do not quite know what they want, but they have passed a Resolution in favour of a larger scheme than the Indians will commit themselves to. The wharfingers are anxious to get something settled, for the date for collecting subscriptions has come round, and they cannot well ask people to subscribe to an institution which is nominally dead. Matters being in this state, it is not surprising that on Wednesday the deliberations did not lead to much. After a good deal of talk the Meeting separated, and will meet again next week. By that time it is possible the Indian Association may have held another Meeting and further considered the subject.

### LETTERS TO THE EDITOR.

#### ALOE CULTIVATION.

PUNDALUR, 27th July, 1903.

To

THE EDITOR,  
*Planting Opinion*,  
Madras.

DEAR SIR,—I enclose a cutting *re* aloe-fibre cultivation in Yucatan, as fibre cultivation has again come to the front the enclosed is again an actuality and will doubtless greatly interest your readers.

Yours faithfully,  
H. ATZENWILER.

(INCLOSURE.)

#### THE CULTIVATION OF ALOE-FIBRE.

The hemp farmers in Yucatan seem to be making such rapid fortunes, according to the report of the Special Commissioner from the Government of New Providence, that it will not be surprising if capitalists in India turn their attention at last to a long neglected industry, and utilise some of the large tracts of waste land which exist all over the country, and are practically at anybody's disposal at merely nominal rents, for the cultivation of the *Americana Mexicana* or *Agave sisilana*, a plant in respect to its fibrous properties identical with the common Indian hedge aloe.

With regard to the commercial aspect of the industry in Yucatan, the Special Commissioner says that the farmers no longer live on their hemp plantations, but in the city of Merida, driving their carriage and pair, their incomes generally the past year or so having gone up 200 per cent., and house property, especially, to a fabulous extent for investments; and that the hemp brings them a return of 11½ cents per pound at a cost of 2½ cents. Before the industry fairly started, Yucatan grew cotton and raised cattle, supplying Cuba with considerable quantities of dried or jerked meat. Three years ago locusts destroyed all vegetation, with the exception of the aloe, and cattle died off or had to be killed, and now they import cattle into the State for food. The first shipment of hemp was 900 bales, and in 1889 it had risen to 213,882 bales, valued at \$6,641,257.69. There are in Yucatan about 200 hemp farms of all sizes, the largest running thirty machines and employing 500 hands, and several others of twenty wheels or more,

and Mr. George Preston, the Special Commissioner, says that "many farmers' daily incomes are 500 to 2,000 dollars clear profit."

As the plant flourishes in most parts of this country, it seems strange that hitherto no thoroughly earnest attempt has been made to cultivate it as a commercial undertaking, anything in this direction having been merely of an experimental nature and confined to very small areas under probably unsuitable conditions. These experiments seem to have been abandoned for the most part before the plant had had a fair trial, one reason being, perhaps, the want of suitable machinery for the economic extraction of the fibre, the simple methods of steeping, scraping, or macerating by hand, proving tedious and commercially unprofitable. But now that the scraping wheels have proved so successful in Yucatan, most probably the only serious obstacle in the way of aloe plantations in India being remunerative ceases to exist. Mr. Preston describes the class of soil required in very few words:—"There is no necessity for hunting about the bush. Any land that is shallow, impoverished, and will grow nothing else, suits it. It is an air plant, requiring the ground only to hold it up. None but an insane person would dream of planting the agave in pineapple or any other useful land, with so much idle or waste land everywhere." Since the Yucatan hemp has increased in value some of the farmers have been overcutting, and much of the hemp has been in consequence despatched to the market with an extra green cast in it. But no grower who wants to make the most of his property, whether he extracted the fibre himself or sold the leaves by weight to the mill, would be so blind to his own interests as to cut leaves, unless matured, two feet long: that at four feet long would yield double. The average length of the leaves is four feet, the weight being 1½ lbs., of which 5 per cent. is fibre, and the cutter removes the prickles from the sides as well as the one on the tip; others conveying them to the mill in carts for sale. The machines used are Death and Ellwood's scraping wheels, worked by Marshall's portable engines, and each wheel cleans the leaves at the rate of 20 per minute. Two men feed the wheel as fast as their hands can move, standing between it and a rack containing the leaves, and one boy supplies the rack, while others carry away the fibre to the drying ground. No skilled labour is required, and there is no water used either for steeping the leaves or for washing the fibre, which after exposure to the sun for two hours is fit for baling. The working hours at the Yucatan farms are from 6 A.M. to 2 P.M., or earlier if the 8,000 leaves per wheel piece-work are cleaned, the fibre being baled at once, the wheel men lending a hand in gathering it from the drying ground and baling it. It is sent to Merida, and sold the same day. The yield per acre, Mr. Preston says, is 19 tons of leaves per annum, and 100 acres are required per wheel to keep a mill constantly at work. A moderate mill being of about six wheels, 600 acres would be the extent of the farm, and the produce from this, 570 tons of fibre per annum, represents a clear profit to the owner, of \$114,912.00. One can quite understand his being able to drive his carriage and pair, and also to invest to any extent in house or any other property.—*Englishman*.

### GENERAL ARTICLES.

#### PRODUCE AND PLANTING.

The prospect of tea cultivation in Jamaica, to which we have already referred in these columns, is causing eager expectancy in that island. Mr. Dawson, the planter with Indian experience, who has visited the island on behalf of Sir Alfred Jones, has, we understand, reported favourably on the outlook for tea, and the Jamaica papers regard his favourable report as a "message of hope for the island." Tea was cultivated experimentally in the Blue Mountain district more than twenty years since, but recently Mr. H. E. Cox Custos, of St. Ann's, has grown tea on a more extended scale, and fuller possibilities are looked for if Sir Alfred Jones and other capitalists interest themselves in tea growing.

The authorities in New York are more particular than those in London about the standard of the tea entering the port, but possibly the members of the tea trade in New York would prefer a less exacting tea examiner. The *Tea and Coffee Trade Journal* has the following:—"A shipment on Saturday by steamship to London

was 6,000 packages of Foochow tea, part of 13,000 packages rejected some time ago by the tea examiner in New York and approved by the Board of Appraisers. It is presumed that the remainder of the rejected teas will follow. There is no standard law in England except the restrictions that all teas asking entry shall be fit for consumption. It is believed that the rejected teas will pass this scrutiny. Another shipment of tea to London not heretofore recorded was one of 1,185 packages. Exclusive of the shipment of last Saturday, the quantity of tea exported from New York since January 1 last is 55,636 packages, and since October 1, 1902, 58,836 packages. It is believed that the incident of the rejection of the Foochow teas is now closed."

According to the *Herald* of that city, Boston has created more innovations in the purchase of coffees than any other city in the United States, or in the world, and it stands to-day accredited with the reputation of being the best market for fine coffee in the United States. This has been brought about by the usual Yankee propensity for delving into the bottom of facts, and to-day more true experts are found in Boston than the rest of the country produces, and it is no exaggeration to say that they secure the cream of all the fine goods that come into the country.

At the invitation of the Royal Commission sitting to inquire into this question, Mr. Alderman A. Hinton, J.P., Chairman of the General Purposes Committee of the Grocers' Federation, gave evidence last week at the Foreign Office. Lord Balfour of Burleigh, who was in the Chair, conducted the Examination. Mr. Hinton stated in reference to tea and coffee that the average stocks of these articles in the hands of retailers was about one month's consumption, and in bond and the hands of wholesalers about five months' consumption, but would, he estimated, last much longer than six months in the event of enhanced prices of food generally and consequent reduced purchasing power of the people.

The Brazilian coffee crop of the year ended the 30th ultimo is in excess of the expectations entertained in regard to it twelve months ago, and the quantity compares favourably with the crop of former years, excepting, of course, that of 1901-2, when production was on an enormous scale, and passed all previous totals. In the season just ended the Rio and Santos receipts amounted to 12,325,000 bags, or more than five million bags above the original estimate. This, however, is less by nearly 3,172,000 bags than the production of the previous season, when the total reached 15,500,000 bags, but as compared with 1901-2 it is an increase of 1,425,000 bags. The result of last season's yield is to add 34,550 tons to the world's visible supply. What the present season will yield it is, of course, difficult to forecast. Last August frost was reported to have seriously damaged the coming crop; nevertheless, in March this year the State Congress of Sao Paulo passed a law authorising the destruction of 20 per cent. of the crop (low grades) in order to improve the position of the planters who had got into difficulties owing to over-production. But even with this reduction the Santos yield on this season's basis is in excess of requirements.

## CHOCOLATE AND COCOA IN TURKEY.

The French Chamber of Commerce at Constantinople recently published a report on the chocolate and cocoa trade in the Ottoman Empire. The report states that although 50 years ago chocolate was practically unknown in Turkey, there now exists a very fair demand for the article, which is not only brought in from abroad, but is likewise manufactured at some works which have been erected at Constantinople. It is estimated that in ten years' time the sale of this article will become double what it is now. The gross weight of the cocoa and chocolate which entered the port of Constantinople during 1901 was 110,556 kilos., and in 1902 the entries had risen to 125,012 kilos.

Formerly, the entire chocolate trade was in French hands, and France still has the largest share of the business in this article. About 60,000 kilos. of French chocolate were sold at Constantinople during 1902. This was the highest total ever reached, and consisted chiefly of the best qualities. There is, no doubt, plenty of room for expansion in this branch. The French brands which have the largest sale are:—Firstly, Menier, probably the first to come to this market. In addition to the limited and somewhat decreasing

trade in the best qualities, this firm sells its chocolate tablets of 125 to 250 grammes packed in yellow paper. The grocers retail this chocolate at from 17 to 18 piastres the kilo. It costs them 2.75 frs. the kilo., less 10 per cent. discount, delivered free to Marseilles, and they have to pay when ordering. These severe cash terms have done much to give Menier's rivals an advantage, as they offer a credit of 30 days, which, after all, is not excessive. Menier's ought to appoint a good local agent, if possible, a Frenchman, and if they advertised more largely and catered for the cheaper class of custom, their business here would undoubtedly increase. The chocolate of the Compagnie Coloniale is excellent, but works out too dear, from 3½ to 4½ frs. the kilo. This restricts sales, although it is to be seen at four or five of the best shops. The Compagnie Coloniale are making also a cheaper quality which they call "Planteur," very much liked, and which has a ready sale owing to its moderate price. This particular chocolate is the one which sells most of any other, it is packed in blue paper, each tablet, which weighs 125 grammes, being divided into six, eight or ten bars. It also sells in packets of 3 and 5 kilos. Every packet contains one of the firm's picture cards, a practice which helps to popularize the article. The Compagnie Coloniale is well represented locally. It has lately reduced its price for "Planteur" from 2.40 to 2.20 frs. per kilo., free on railway in Paris. The Company allows a credit of 30 days, which, although not much, as far as the firm itself is concerned, means a great deal to its clients. To stimulate sales, certain allowances are made at the end of each year on the total purchases made during the twelve-month, viz.: 1 per cent. for 1,000 kilos.; 2 per cent. for 2,000 to 3,000; and 3 per cent. for anything over 5,000 kilos. This is a system which works excellently for this class of goods. "Planteur" chocolate is retailed by the grocers at 14 to 16 piastres the kilo. The small eating chocolates of this company have a very poor sale, as they work out rather dearer than the other brands.

The firm of Felix Potin & Co. has rapidly gained a good position in this market with its chocolate. The article is invoiced at 2 frs. the kilo., and is sold in 3 to 5 kilo. packets of tablets weighing 125 to 250 grammes. The labels are white, and goods are delivered c.i.f. Constantinople. Every tablet of this brand has one of the firm's cards, on which are three or four used foreign postage stamps. This ingenious form of advertising has created a big demand for the chocolate among the school children, who are the chief consumers. As retailers sell this quality at 14 piastres the kilo., they make a good profit on it and push the brand. Messrs. Potin import also small bars of 20 to 30 grammes, packed in cardboard boxes for children, and bars of 40, 50, and 60 grammes, sold in packets of 40, 50, and 60 bars at 1½ to 2 frs. a packet.

There has been a new brand on the market during the last few years, that of Guerin-Boutron of Paris, which has met with a good sale owing to its superior quality, its low price, and the fact that it is represented by Mr. E. Lannessans. Smaller quantities are also sold of the chocolat Lombard, the chocolat Louit freres, and the "Docks Parisiens" brands.

After the French, Italian chocolates have the largest sale, and the annual total is estimated at 25,000 kilos. Italy owes her trade in this market to low prices, viz., 1½ frs. per kilo. c.i.f. Constantinople, and to the fact that the Turkish population is not yet educated to distinguish good from inferior chocolate, and consequently purchase the kind which the dealers push most owing to the larger profit derived from its sale. The Italian manufacturers supply chocolate in a profusion of shapes and fanciful designs representing watches, coins, animals, etc., but they are inferior in every respect to similar goods of Swiss origin. There are two Italian marks sold here, viz., Moriondo and Gariglio, and M. Talmone.

Dutch makers have succeeded in imitating the French in all but the quality, the appearance of the packing, wrappers, etc., being similar, and the result has been a very fair trade for Holland. Imports of the article from that country during 1902 are roughly estimated at about 15,000 kilos. Bendsorp's chocolate in tablets or bars sells at 1.45 to 1.85 frs. the kilo. c.i.f. Constantinople, 5 per cent. discount being allowed for cash payment. This firm's round sticks in decorated tins are also selling well, as are their chocolate creams, which are invoiced at 2.70 frs. the kilo., less 5 per cent. Messrs. Van Houten sell a little chocolate also here, although their speciality is cocoa. English chocolate is represented by Lipton and Cadbury. The latter firm owes its footing to its numerous specialities, which can be retailed at a penny and a halfpenny each.

The total annual importation of British chocolate is about 12,000 kilos.

The Swiss do a small fancy trade in better-class goods. In all about 5,000 kilos. per annum. The brand most sold is that of Suchard, and then come those of Maestranzi and J. J. Favarger.

A few years ago Mr. F. Mullatier, a Frenchman and member of this Chamber of Commerce, commenced to manufacture chocolate at Constantinople, and his chocolate creams, almonds, etc., have met with a good sale.

As regards the cocoa trade, the total importation does not exceed 3,000 to 4,000 kilos. a year, and the article not having been long on the market, the trade is in its infancy. Mr. Mullatier purchases a certain quantity abroad, and the Dutch makers, Van Houten, Bendsorp & Co., and Driessen, all do a small trade. Suchard's Swiss cocoas are also represented. The British, as usual, sell their cocoas by their complicated weights, and have an exceedingly limited sale. The sale of German and French cocoas is also practically nil.—*British Trade Journal*.

## RUBBER PLANTING ON THE ISTHMUS OF TEHUANTEPEC.

(As seen by the Editor of the *India Rubber World*.)

The site of the plantation 'La Ventura' five years ago was virgin forest. At that time Mr. James C. Harvey and his son Clarence purchased for themselves and their associates (a private corporation) 1,000 acres of land and prepared to develop it along the most practical lines. When the senior of the two first came to Mexico it was with the idea of planting coffee, but after months of study and a personal inspection of most of the Isthmus country he decided that India-rubber offered the best opportunity for profit, and therefore has turned the larger part of his land into a plantation of *Castilloa elastica*. I am enlarging upon this a trifle because, to my certain knowledge, the gentleman under consideration is not only an expert horticulturist and botanist, but has studied tropical agriculture in Central and South America, and in the East Indies and West Indies, and beyond this he and his associates offered no stock for sale, but went into the business to make money out of their own investment of capital, energy, and knowledge. Such a plantation must, without fail, give the visitor the best possible view of the practical end of the business. There are, of course, many such private estates in the tropics, but it happened that this was the one that I knew most of and to visit which I had a most cordial invitation.

Here I was, therefore, installed in the palm-thatched house, with its earthen floor and bamboo walls, that for five years had been the home of these hardy pioneers. The domicile was situated at one end of a long ridge, on each side of which, with a rare eye to effect, were planted gorgeous flowering and foliage plants, and trees valuable for fruit and for ornament. Very modestly the presiding genius showed me sixty-five different species of palms, probably the largest collection in the Americas. Not only were there palms native to the tropical parts of America but there were specimens from Java, Ceylon, New Guinea, Queensland, the Fiji Islands, New South Wales, and a score of other remote places. These were gathered, not as part of the planting proposition, but from a plant lover's interest alone, which they seemed to appreciate by growing luxuriantly.

Then too, I must not forget the collection of orchids that hung from the bamboo lattice outside of the house, and clung to the trees on all sides; nor the orange, lemon, lime, grape-fruit, banana, and plantain trees, a notable part of the garden equipment. I looked with the interest also on the vanilla vines, the cacao plantation, and the twenty-five varieties of pineapples, but my chief thought was rubber and so, I soon found, was his. I do not wish to make my planter friend blush but when I found the work he was doing, how widely he was consulted by planters both in Mexico and in distant tropical lands, I was more than ever impressed with my wonderful luck in thus 'striking oil' when first I began to bore. So I asked questions and questions, and questions, and took notes most copiously all the time.

### YIELD OF LATEX.

One of the first points that I wanted settled was whether here or elsewhere, there were *Castilloa* trees either wild or cultivated that did not yield latex. So we both started out to find one such tree

by cutting the outer bark—indeed during all of the trip I cut trees by the hundred just to prove this point—but found none except in one instance, which will be related later. I was much interested also to note the differences in the latex as it issued forth. In some instances the tree would send forth a perfect shower of milk-white drops, which coagulated rather slowly, while another near by would exude a thicker fluid that began to coagulate almost immediately. The natives claim that this latter tree is simply so rich in rubber that it retards the flow and that after a little tapping it corrects itself and the latex becomes more fluid.

The younger trees all gave out abundant latex, but those that were less than four years old gave a milk that seemed immature; that is, it did not coagulate into dry hard rubber but remained quite sticky. I noted also a curious thing in connection with this, which was that in the younger trees the latex began to mature first near the base of the tree, while up toward the branches it still remained of the sticky sort. But we found no trees in this district that did not yield latex abundantly.

### GROWTH OF CASTILLOA.

At "La Ventura" I was able to institute some exceedingly interesting comparisons between the growth of the rubber tree under favourable and unfavourable conditions. In both cases the trees were *Castilloas* planted from selected seed. In the first instance they were planted in the open, about 9 feet apart, on rolling land which had good grainage. Measuring the circumference of the trunks a foot above the ground, I got a fair average of 23.3 inches, and an estimated average height of 22 feet. The banner *Castilloa* was a seedling planted in the open that measured 32 inches in circumference and 25 feet high. All of these trees had every appearance of health and vigor and gave forth milk abundantly. From the records shown me, they were a trifle over four years old. In the second instance, grown in partial shade, such as produced fine cacao, with the land more level and not well drained, the trees being planted at exactly the same time, and from the same lot of seed, I got an average of 4.6 inches for circumference a foot above the ground, and an average height of 6 feet. Anyone would not seem to need a more graphic illustration than this of the necessity for observing proper conditions in planting and further, as a warning against planting in badly-drained land or in the shade.

The *Castilloa* orchard, through which I tramped many times, had in it about 240,000 trees from one to four years of age. All of them were planted from the seed, except a small percentage taken from nursery stock to make up for the occasional failure of a seedling.

One result of my early observation, and one that grew with each day's experience, was the conviction that a knowledge of climate, rainfall, soils, drainage, etc., is an absolute necessity from the beginning in the selection of suitable sites for rubber plantations. In other words, the expert tropical agriculturist, well equipped with common sense, is most likely to be the one who starts right. For example, one plans to plant the *Castilloa*. It is a soft wood tree, a tree that from its physical formation is not built to stand high winds, that with its long taproot must have a deep, rich soil and well drained withal. It is a deciduous tree, which means that at a certain time each year it encourages the presence of the sun's rays on its trunk and limbs. The prospective planter should, therefore, pick out land that is covered with a growth of soft rather than hard wood trees, as the latter points to gravelly soil instead of clayey loam. It should be rolling land, or at least land that is naturally well drained. It should be soil that will give the tree plenty of moisture during the dry season and yet that will not be soggy during the wet. For a running rule there should be at least four feet or drainage soil. In the clearing of the land, if there are not natural wind breaks, a certain amount of forest should be left standing to act as such. Referring again to the long taproot of the *Castilloa*, it is said that as the tree grows older it often disappears, its place being taken by large laterals.

### VISITS TO ESTATES.

Our first visit was to 'Ixtal.' By that time I was getting to be somewhat of a connoisseur in rubber trees, and so, after the noon breakfast, was glad to accompany Mr. Adams on a tour of inspection. Here were some 250 acres planted to rubber, the oldest being four years, the total number of trees being about 150,000. The land was very similar to that at 'La Ventura' and the growth about the same, although in a part of the plantation the trees seemed to be a little taller. Latex flowed from them all abundantly and my guide said that he had never found one that did not show plenty of milk.

In discussing this question Mr. Adams told of an Austrian scientist who had been in that region and who claimed that there were three native *Castilloa* species, only one of which was a rubber producer. They all looked alike, so he said, and the difference in them could only be detected by a careful examination of the cellular structure of the leaf. He said further that he uprooted 80 per cent. of his own first year's planting because he did not know this. When he finally did get the right tree big enough to tap it bled so freely that he was obliged to stop the cuts with clay else it would have bled to death. We were able to assure Mr. Adams that this was not credible, to which he agreed.

Our next journey was to 'La Junta,' the largest plantation in that district. The estate contains some 5,000 acres, of which one half is already cleared, most of it planted to rubber. The trees are from 7 to 9 feet apart, and looked as if they were in prime condition. The orchard numbers about 750,000 rubber trees. The oldest of these will be two years old next July, and average 2.5 inches in diameter, a foot from the ground, and about 7 feet in height. For help there are from 200 to 400 men, one half of whom are natives. Perhaps here more than anywhere else has been tried the experiment of importing labour, and not depending entirely upon the native, who is not at all times entirely reliable.

I looked and inquired particularly for any enemy of the *Castilloa*, but found trace of none, and heard only of an ant that attacks the tree where it has been wounded at times, but that only rarely. Of the few trees thus attacked, nearly all had thrown out woody excrescences that were not only protecting the inner tissues, but seemed actually to be crowding the devourers out. So rare is it that a tree is thus attacked that the planters take no precaution against it.

### THE TEA CORPORATION.

Shareholders in the Tea Corporation are asking themselves, in view of the various reconstruction schemes placed before them, what next? The latest idea is to make an issue of Second Debentures, amounting to £15,000, and the accrued dividends on the Preference shares are to be satisfied by an allotment of Ordinary shares. Commenting on this latest proposal, the *Financial Times* says:—

"The new scheme differs from that of the Directors 'in that no bonus or fully-paid shares are now distributable.' From the shareholders' point of view, therefore, there is still less inducement than before to assent to reconstruction on the lines suggested. The liquidator adds that the plan is the best he can arrange in the altered circumstances, and that it appears to be the only alternative to a sale of the property, 'the result of which, in my opinion, would leave nothing whatever for the shareholders.' Whether the Committee appointed in March to co-operate with and assist the liquidator in the reconstruction concurs with these remarks does not transpire, and, as the body to which we refer represented not only the shareholders' Committee and the general body of proprietors, but also the Board, it would have been of interest to see a supplementary report commenting on the statements we have quoted.

"But we would draw our readers' attention to the remarkable difference of opinion between the liquidator and the Committee, as disclosed by the retort of the latter to the proposals of the former. The Committee does not hint at any scaling down of capital, nor at anything in the nature of a call. On the contrary, it suggests: (1) The discharge of the indebtedness of the Company by means of an issue of second debentures to an amount not exceeding £15,000; (2) the gradual reduction of the debentures, both first and second; (3) the division of the Ordinary shares of £5 into five shares of £1; and (4) the payment of eighteen months' dividend on the Preference by the allotment of Ordinary shares, all further claim in respect of arrears being waived. The fixed charges, it estimates, would come to about £7,450 per annum—an amount less than has been mentioned by the liquidator as the present earning power. But it goes farther, and contends that the advance in the price of tea and the satisfactory output of plumbago, etc., warrant hopes of a dividend even on the Ordinary shares if the business in London and in Ceylon be carefully and economically managed. This scheme, which stands out in such striking contrast

to the other, will, it is announced, be underwritten, and the proprietors must make up their minds for themselves which of the two courses they regard as the more attractive. One consideration, however, we may commend to their attention. They are asked by the scheme formulated by the Directors and modified by the liquidator to sanction a heavy reduction in the face value of their holdings, and at the same time to put their hands in their pockets for a large amount of money. Neither operation is a pleasant one, and so divergent are the views as to the profit-earning capacity of the properties that there is at least a chance that neither is necessary, though this may sound too good to be true. But it may be recalled that the report for the period to the end of 1901 was dated July 8, 1902. Why should not the full details of the working for 1902 be laid before the shareholders before they are asked to commit themselves to so drastic a line of action? The creditors would surely stay their hands, even if a few weeks' delay were caused thereby, though we do not see why there should be any delay at all. As it is, the proprietors are asked to take a leap in the dark, and they would, we think, be well advised if they firmly declined the invitation."

### THE TEA PEST QUESTION.

A Gampola planter sends a Ceylon paper a copy of the circular issued by the Pests sub-Committee of the Pussellawa P. A., together with his replies to the questions asked; and suggests that its publication may aid in the awaking of interest in a subject the profound importance of which he feels many planters have not yet sufficiently realised; and to encourage them to supply similarly full information. He is convinced that the mild legislation proposed by Mr. Green is absolutely necessary, not only on account of the numerous native holdings to be found in Gampola, but because even some European planters do not look beyond the boundaries of their own estates. The shot-hole borer is the most serious pest in the Pussellawa district, which seems to be its "home." The circular—with its questions and answers—is as follows:—

#### TEA PESTS AND BLIGHTS.

The Superintendent, ——— Estate.

DEAR SIR,—With a view to assisting Mr. E. E. Green in his efforts to aid planters in combating the spread of above, we, the undersigned, having been appointed a sub-Committee of the Pussellawa Planters' Association to enquire into the existence and spread of pests in general, beg to ask you to supply us with information on the subject.

We annex a list of questions and would ask you to fill in answers to same with as much accuracy and detail as possible. Please understand that, of course, all information now given will be considered absolutely private and confidential.—We are, yours faithfully, (Signed) A. L. FRENCH (*Chairman*), G. C. BLISS, GEO. BENZIE, J. M. DUNCAN, FRED. WERNHAM (*Honorary Secretary*).

*Shot-hole Borer.*—When first observed?—About six or seven years ago. Has it increased?—Yes, very much. Area now affected?—It is to be found now more or less over the whole estate. If any, what are the preventive measures taken—with what results? General remarks embodying any information you consider might be of interest or use.—I have tried every remedy and treatment I can think of or have had suggested to me: painting bushes with  $\frac{1}{2}$  dozen or more sorts of washes, tar, etc.; leaving unpruned belts; acetylene lamps; burning all prunings at once; collar-pruning and burning, etc. I am now satisfied that burying prunings with slag systematically over all affected areas is the only practically effectual way of combating this pest. The good results on this estate have been remarkable. I am confident that, except over very badly-affected areas, where treatment of any sort has been long neglected, systematic burying of prunings will eventuate, if not in exterminating, at any rate in reducing the damage done by this most serious pest to an almost disregardable minimum. Burning all prunings at once, as soon as cut, would of course be equally, or even more, effective in destroying these insects, but I advocate the burying in preference, because of the unquestionable benefit to tea (in this district at least) of this treatment. The borer taps the rising sap and so materially reduces the leaf-growth and yield of the bush. Burying prunings not only certainly destroys a number of the insects (I think the large majority), but so stimulates the bush as to encourage it to produce more leaf from the untapped

branches and so reduce to a minimum the loss of yield. In short, high cultivation, combined with practical methods for the certain destruction of large numbers of the "borer" is the only successful method of combating this pest. Over very badly-affected areas where no treatment has been tried, perhaps the drastic and expensive one of collar-pruning, sweeping up and burning at once, had better be resorted to.

*N.B.*—Burying prunings, to my certain knowledge, destroys all the young grubs, even if many of the developed insects escape. So that, given a systematic continuance of this treatment, good results must follow.

I am personally of opinion that legislation on some such lines as suggested by Mr. Green—(power to enforce the burning or burying of prunings over badly-affected areas would be most effectual)—has now become absolutely necessary. I have some knowledge of the affected state of many native holdings in this district.

*Grey Blight.*—When first observed?—1899. Has it increased?—Yes; in 1900 it was very prevalent and had seriously affected about 200 acres; but in 1901 it had practically gone, and has not since been at all serious. If any, what are the preventive measures taken?—In 1900 the prunings from all the affected area were burnt. With what results?—The pest has practically disappeared, but I do not attribute this to the remedy adopted, though it doubtless did some good.

*Brown Blight.*—(Same answers as to Grey Blight.)

*Terria.*—Not found up to July, 1903.

*Helopeltis.*—When first observed?—Very slightly at intervals during the last 6 or 7 years. Has it increased?—It is doing noticeable damage over small areas this year (1903). Area now affected?—Can't say; but it is not yet at all serious either in damage done or area affected. If any, what are the preventive measures taken?—Am now (July, 1903) paying small sums for the insects caught and brought in.

*Red Spider.*—When first observed?—Always noticeable in patches at end of dry weather. Has it increased?—No. Area now affected?—Nil. If any, what are the preventive measures taken?—No measures taken. I have never considered this a serious pest. With the advent of rain and increased sap rising the red appearance rapidly disappears.

*Bag-worm Caddies-worm.*—When first observed?—In 1895 over a small area of inferior jât tea. Has it increased?—No. I have not seen it to matter for the last few years. Area now affected?—Nil. If any, what are the preventive measures taken?—As soon as noticed, boys are put on to collect them. I have had brought in as much as a quarter bottle full by each cooly. If not collected at once, they increase and do a great deal of damage. With what results?—Taken in hand at early stage little damage is done, and my experience has been that after 2 or 3 years they are not to be found; but this is distinctly a pest not to be disregarded.

## RUBBER CULTIVATION IN THE CONGO FREE STATE.

During the last few years a number of rubber plantations have been established in the Congo Free State. An interesting description of one of the largest of these has recently been given by M. Bemelmans in the *Revue des Culture Coloniales*, No. 116. All the principal rubber trees have been introduced upon an extensive scale in this plantation; and, as the experience gained may be of value in other cases, a short account of the experiments is here given.

*Manihot Glaziovii* (Ceará rubber tree).—The seeds of this plant possess a very hard coat, which protects them from damage during transit, but renders germination slow and uncertain. Several methods for obviating the latter difficulty have been suggested, and, after trials of these, the plan of cutting off the end of the seed was adopted as being the most suitable. This process is very expeditious, as four boys can prepare from 6,000 to 8,000 seeds per day, and from 30 to 60 per cent. of the seeds so treated germinate within ten days. The seeds are sown very superficially, at the rate of 500 to a bed 5 metres by 1.5 metres, and this should be screened from the sun for a fortnight or three weeks. At the end of two or three months the seedlings have attained a height of from  $\frac{3}{4}$  to 1 metre, and are then planted out at intervals of 3 metres in every direction; it is desirable to remove some of their leaves at the same time. The plant stands transplanting very well, and the losses never greater

than 10 per cent. are replaced during the first fortnight. One advantage of planting the trees widely apart is that they then offer less resistance to the wind a point of some importance as the roots are very superficial, and the young trees are easily blown down. At first the ground requires attention once a month, and in these operations great care must be taken to avoid injuring the surface roots. The tree attains a height of about 3 metres in the first year, and at the end of the second it is 5 metres high and  $\frac{1}{2}$  metre in circumference. Longitudinal incisions made in two-year-old trees gave 20 to 30 grams of a thick latex, and the rubber from this was valued at 6 fr. to 7.50 fr. per kilog. according to the method of coagulation employed. At the end of the first year *Manihot Glaziovii* produces seeds, three of which occur in each fruit, and the easiest method of collection is to pick the capsules before they dehisce. In view of the abundant supply of seeds and the facility with which plants can be raised from them, propagation by slips is almost superfluous, but can readily be accomplished by selecting a sufficiently large piece from the well-seasoned wood.

*Hevea brasiliensis* (Pará rubber tree).—The seeds of this species are much more difficult to transport without damage, and experiments with them have not given very good results: but 5,000 seedlings have been successfully imported in Wardian cases. On their arrival the plants were placed in nurseries, where they were gradually exposed to the full light of the sun, and when about  $\frac{1}{2}$  metre high they were planted out at intervals of 3 metres. The seedlings do not stand transplanting so well as the Ceará plants and they require a more substantial and deeper soil with more moisture. When first planted out they require to be sheltered and in this particular case it was found necessary to protect them from goats and antelopes, which are very fond of the bark. Experiments conducted on land inundated for three months in the year have not given good results in general, though individual trees have shown considerable development under these conditions. The tree attains a height of 2 metres in the first year, and 5 metres in the second, and only branches during the third year at a height of 7 or 8 metres. Its stem remains very slender for a considerable time; and although this tree at first withstands the wind better than the Ceará tree, it often falls later. To prevent this it is expedient to pollard at a height of 1 metre about the fourteenth or fifteenth month. *Hevea brasiliensis* does not produce seeds at an early stage, and is propagated by layering on slips; the latter method is preferable, and the slip which should be as large as possible is taken from well-seasoned wood.

*Castilloa elastica* (Central American rubber tree).—Plants of this species have been raised from seed, and also imported as seedlings in Wardian cases, the latter being found the more satisfactory method. In cultivation the same general precautions are necessary as for *Hevea*; the growth is a little slower, but the general development is more proportional, and it may be noted that the plant does not stand pruning well. Propagation by slips has been found impracticable; but layering has given very good results. The trees have been planted in an avenue, 12 metres wide, at a distance of 5 metres from each other.

*Funtumia elastica* (Lagos rubber tree).—For a long time this tree was confounded with a similar species growing abundantly in many parts of the Congo Free State. Of the latter species, the belief that it was the true plant large numbers were propagated. The latex from this is known locally as M'Bole and has been found to yield rubber of very inferior quality. The mistake has now been remedied and specimens of the true *Funtumia elastica* have been introduced. They grow more slowly than the other rubber trees already mentioned, and at the end of six months had not been removed from the nurseries.

*Uccella esculenta*.—This rubber vine indigenous to Borneo has been successfully raised from seeds which can be transported without damage. The germination was slow, the cotyledons and the first pair of leaves being put forth with great difficulty after which, however, the young plants began to grow rapidly. At this moment they were transferred to the bases of large trees in the forest where in three months they attained a height of more than a metre, and have continued to grow well.

In addition to the above rubber trees, specimens of the plan-yielding *Balata* (a gutta-percha substitute) have also been successfully raised from seeds. The latter resemble peach stones in appearance, and require to be cut like those of the Ceará rubber tree in order to facilitate germination, which was most readily

induced by placing them in moist moss, and protecting them from the attacks of rodents and termites. Treated in this way 28 per cent. of the seeds developed. At first sight of germination, the seeds were transferred to small pots made of bamboo framework, and in another two months they had rejected their coat and put forth the cotyledons. After the production of the second or third leaf the seedlings were planted out, without being removed from the pots, as the roots are very sensitive and suffer when transplanted. The whole operation requires considerable care, and for several months the young plants need frequent waterings and shelter from the sun.

It will be seen from this summary of the report that the plantation has not yet arrived at the stage at which a definite opinion can be expressed on the value of the different trees, based upon the yield and quality of their rubber; but the information given will prove useful to those interested in similar undertakings.—*India-Rubber Journal*.

## DISTRICT ASSOCIATIONS.

### INDIAN TEA ASSOCIATION.

#### ANNUAL MEETING OF ASSAM BRANCH.

The Annual Meeting of the Assam Branch of the Indian Tea Association was held at Moriani on Saturday July 18, about sixty planters being present. Mr. James Buckingham, C.I.E., in the chair.

**Tea Cess.**—The most important innovation of the year, said the Chairman, was the passing of the Tea Cess bill through the Legislative Council, on the Committee for which Messrs. Fitzgerald and Buckingham have been appointed as members for the Assam Valley. With regard to the disposal of the money, Mr. Buckingham stated that he has strongly urged the devotion of part of the sum available to the exploration of the South African market, but he had just received a telegram from the Chairman in Calcutta stating that no cess funds would be available in 1903 for this purpose, but it was being considered for 1904. Mr. Fitzgerald then proposed a Resolution that was carried that the Tea Cess Committee be urged that as soon as funds are available some should be devoted to the exploitation of tea in South Africa.

**Home Markets.**—As to the markets in England, a Resolution was passed thanking the London Association for their successful efforts, which have resulted in the breaking up of the Clearing House Ring in London and had thus led to the reduction in the necessary London sale expenses.

**Experimental Farm.**—In an energetic discussion which arose on this point it was stated with approval that the scheme proposed by Mr. Chamney a year ago had been declared to be far too extensive for the funds available, and that the matter would have to be carried out on a far less extended scale, by means of subsidies to planters willing to co-operate. Various members present expressed their willingness to give attention to the cultivation and exploitation of certain new crops. Mr. Buckingham referred to the uniformly unsuccessful efforts with rhea fibre in Assam, and sketched the history of attempts at coffee cultivation. General approval was expressed of the scheme drafted by the Scientific Officer, but it was considered that even the annual cost of Rs.10,000 which he considered essential might be still further reduced. Of this, the Government of India had promised to place Rs.6,000 per annum at the disposal of the fund, and it was suggested that the Branch might, in addition, offer Rs.2,000 per annum.

**Scientific Officer.**—The congratulations of the Association were expressed to Mr. H. H. Mann at the successful results he had obtained up to date and best wishes were given to him for a pleasant furlough in England. It was considered that the whole cost of his department should be borne by Government as in other countries, but appreciation was expressed at the Government's increased support. On a motion by Mr. Henderson, it was resolved that the Central Association be asked to allow Mr. Mann to spend a considerable time at an early date in the investigation of Red Rust, one of the most serious and increasing blights of tea. In the course of a lengthy reply, Mr. Mann expressed his willingness to spend several months in the investigation proposed by Mr.

Henderson in the early months of next year (1904). He also dealt with his recent researches on the ferment of the tea leaf which he stated would shortly be published, and several other matters of planting interest.

**Other Matters.**—Discussions then ensued on the working of Act XIII of 1859 in Assam, on the working of Act VI of 1901, in which great satisfaction was expressed at the extension of Chapter V, section 90 to the Assam Valley; on the opening of through traffic to Chittagong and the saving on freight of tea thereby obtained and various other matters.

The Meeting closed with votes of thanks to the Scientific Officer, to the Secretary, and to Mr. Fitzgerald who had acted as Chairman during Mr. Buckingham's absence in 1902, while quite an ovation greeted the motion for the reappointment of Mr. Buckingham to the Chairmanship of the Branch.

## CENTRAL TRAVANCORE.

Minutes of Quarterly General Meeting held on Saturday, 11th July, 1903, at Fairfield Bungalow. **PRESENT:**—Mr. F. M. Parker (*Chairman*), Hon'ble Mr. G. L. Acworth, Messrs. F. Bisset, R. H. Goldie, H. M. Knight, B. Laurie, E. Latter (*Honorary Secretary*), D. McArthur, Hon'ble V. B. Wilbraham.

Minutes of last Meeting were taken as read.

**Post Office at Periyar Crossing.**—Read Postmaster-General's letter of 7th May and resolved that the terms offered are prohibitory, viz., free quarters to be provided and monthly deficiency (if any) paid up.

**Roads and Bridges.**—In reply to Honorary Secretary's letters of 25th April and 22nd June complaining of the condition of some of these in the district, Chief Engineer replied on 6th July that Divisional Officer had been ordered to take necessary action.

**Tea Cess Committee and Bounty on Green Teas.**—Circulars and rules in connection with this had been already distributed to members.

**Louisiana Purchase Exposition.**—U. P. A. S. I. circulars read and approved.

**U. P. A. S. I.** circular letters since last Meeting read and laid on the table.

**Cotton Wood for Tea Chests.**—Conservator of Forests' letter of 22nd June with conditions on which this may be cut on permit read and noted.

**New Chuckram coins.**—Read Honorary Secretary's letter of 22nd June asking that these be given in exchange for old coins at the local Treasury, and Dewan's reply of 2nd July.

**Land-Tax.**—The deputation to British Resident having reported the result of their interview, the following Resolution proposed by Mr. H. M. Knight and seconded by Mr. F. M. Parker was carried *nem. con.*:

"That owing to the continued depression in the Planting Industry the Honorary Secretary be requested to address H. H. Government with a view to securing a reduction of the Land-Tax; and that a copy of this Resolution be sent to South Travancore Association with a view to co-operation."

**Dispensaries.**—Mr. Knight reported result of this interview with Acting Durbar Physician and it was decided—

1. To continue subsidy to Medical Officer for the present.
2. To have two dispensaries—in place of the one at Granby—one at Arnakal and one at Pambanar—for which Government will make only one grant—the Estates served by these dispensaries to contribute at a rate not exceeding 5 annas per acre.

The Honorary Secretary was instructed to ask the Durbar Physician to sanction fortnightly visits by Medical Officer to dispensaries in place of weekly visits as at present.

**U. P. A. S. I. Annual Meeting.**—*Delegate to Bangalore.* On the motion of Hon'ble Mr. Acworth, Mr. F. M. Parker was unanimously elected to represent the Association and Rs.150 voted towards his travelling expenses. The *Agenda Paper* was read and instructions given on certain items to the delegate.

**Labour Law.**—Proposed by Hon'ble Mr. G. L. Acworth and seconded by Hon'ble V. B. Wilbraham—

"That H. H. Government be requested to pass a Labour Act on the same lines as that recently passed by the Government of Fort

St. George and to proclaim Peermaad district under the Act at the earliest moment."—Carried *nem. con.*

**Tea Cess and S. India Exploitation.**—Hon'ble Mr. G. L. Acworth explained what had happened at Tea Cess Committee Meeting at Calcutta and how support had been obtained for the scheme now under Messrs. Parry & Co.'s management. A vote of thanks was tendered to Mr. Acworth for his successful representation of our interests.

With a vote of thanks to the Chairman the Meeting ended.  
Papers laid on the table—

Planting Opinion.

Indian Planting & Gardening.

Travancore Government Gazette.

I. T. A. Circulars.

U. P. A. S. I. Circulars.

Agricultural Ledgers, Nos. 2 and 3 of 1903.

Pests and Blights of Tea Plant (Watt & Mann).

Advt. of "Hydro-Extractor."

E. LATTEK,  
Honorary Secretary.

PEERMAAD.

## COORG.

Minutes of a Quarterly General Meeting of the Coorg Planters' Association, held at the Bamboo Club, on Wednesday, July 15th, 1903. **PRESENT:**—Messrs. C. Appiah, A. B. Chengappa, E. Clarke, W. Davies, Geo. Davies, J. W. Finlayson, F. W. Gerrard, H. G. Grant, A. H. Jackson, J. Logan (*President*), A. Lambert, E. L. Mahon, F. Macrae, C. G. Maclean (*Proxy*), H. T. Shaw, N. M. Scholfield, and R. D. Tipping.

The President occupied the Chair.

The Honorary Secretary, Mr. G. K. Martin, being unable to attend, Mr. Lambert consented to act for him.

The President having spoken a few words relating to his election to office, the business before the Meeting was at once proceeded with.

**Delegate to the U. P. A. S. I.**—It was decided that either the President or the Honorary Secretary should go. The latter, not being present, to be asked to kindly undertake the duty. Failing which, the President consented to attend.

Mr. Lambert read through the Agenda paper of the forthcoming U. P. A. Meeting, remarking on the various subjects, when necessary.

Our Delegate is to receive instructions to vote according to the consensus of opinion of the Meeting on several subjects and in regard to the remainder, and when he may see fit to vote, he is to use his own discretion.

**With reference to the amount of subscription to be paid to the U. P. A. S. I. for the future.**—After some discussion, a proposition and amendment thereto were brought forward, with the result that the latter was carried. Our Delegate will be instructed to act accordingly. It was resolved, that our Delegate be empowered to suggest at the forthcoming U. P. A. Meeting, the advisability of approaching Government with a view to the appointment of a Commission to thoroughly enquire into the position of the Coffee enterprise in S. India, owing to its present critical condition, as such an enquiry might, in the opinion of this Association, be likely to lead to some practical and beneficial results.

Proposed by Mr. Mahon, seconded by Mr. Lambert, that Dr. Lehmann be written to and asked to kindly try and visit Coorg again during the course of this year, and that if he consents to do so, the Mysore Government be approached with a view to procuring the loan of his services.—Carried unanimously.

**New Members.**—The following gentlemen were duly elected members of the C. P. A.:—

Mr. J. A. Graham—proposed by Mr. Martin, seconded by Mr. Lambert; Mr. W. Davies—proposed by Mr. Grant, seconded by Mr. Mahon; Mr. L. Newcome—proposed by Mr. Martin, seconded by Mr. Lambert; Mr. J. W. Finlayson—proposed by Mr. Macrae, seconded by Mr. Tipping.

The usual vote of thanks terminated the Meeting.

POLLIT BETTA, }  
July 15th, 1903. }

A. LAMBERT,  
for Honorary Secretary, C. P. A.

## A LAND OF PROMISE.

In the not very remote past when Europeans looked to South Africa only for ostrich feathers and sunshine, it was a common practice for English doctors to order hopeless cases of pulmonary disease to this country. "When there is no hope at home try the Cape of Good Hope;" "Keep below deck until you reach Madeira," etc. How painfully familiar such phrases sound. Often the prescription succeeded; more often it failed. It is within the knowledge of everybody that the late Cecil Rhodes came here to find health, not fortune, and succeeded in gaining both. But his experience was not the common one. The cemeteries of South Africa are dotted with almost as many graves of Englishmen who came here in quest of health as of those who were slain in battle or died of diseases incident to warfare.

It is a fact, established beyond possibility of dispute, that no climate the world can offer is sufficient in itself to arrest the progress of consumption, though unquestionably it is a very important aid to other treatment.

But what should that other treatment be?

No question was ever more debated, or is still further from settlement. We will not attempt to answer it, but allow Mr. Charles Rodgers, of East London, to give a brief account of two illnesses from which he has suffered, which throws considerable light upon the matter.

Writing on February 9th, 1903, Mr. Rodgers observes:—"I feel it my duty to bring to public notice the benefit I have received by using Mother Seigel's Curative Syrup. Five years ago I was stricken down with rheumatic fever, and was attended by three different doctors; but their united efforts did me little or no good, and my condition was for a long time very precarious. It was then that a friend advised me to try Seigel's Syrup, and I resolved to accept his advice. I was delighted to find myself very soon able to walk about as usual, and after taking only three bottles of the medicine I was capable of resuming my business.

"In July, 1900, I experienced another and a more serious trouble. It was found that I was suffering from a very weak chest. A doctor whom I consulted told me plainly that he feared I was consumptive, and ordered me to come to South Africa. I entertained no doubt that I was far gone in consumption, having all the signs of that disease, but especially an extremely weak chest and an ever-present feeling of weakness and languor.

"Without being advised to do so, but with the recollection of the good that it had done me two years before in curing me of another complaint, I had the happy inspiration to try Mother Seigel's Curative Syrup. The result exceeded my most sanguine expectations, and it was not long before I was as strong and healthy as any man could wish to be. I strongly recommend the use of that medicine to all who suffer as I did, and for the sake of humanity would like my case to be known far and wide."

Promise and performance are not quite the same thing, as many have discovered to their cost; but the people who have built high hopes upon that from which Mr. Rodgers received so much benefit were never yet known to be disappointed.

## MARKET REPORT.

Messrs. Gow, Wilson & Stanton's Indian, Ceylon, and Java Tea Report, dated July 10th, 1903, says:—

QUANTITY BROUGHT TO AUCTION IN LONDON FROM 1ST JUNE TO DATE.

	Indian.	Ceylon.	Java.
	Pkgs.	Pkgs.	Pkgs.
1903-1904 ... ..	102,709	136,363	10,932
1902-1903 ... ..	100,778	155,701	8,809
14,363 pkgs. INDIAN } 20,893 " CEYLON } 1,632 " JAVA }	Total 36,888 packages were offered in public auction this week.		

Had it not been for the rise in the value of common tea towards the close of last year, the average price for the season would have been most disappointing; even now it is below that of 1901-2, and only about  $\frac{1}{4}$ d per lb. above that of the previous season, which was the lowest quotation ever recorded.

Average Price of Indian Tea sold on Garden Account.

1902-3.		1901-2.		1900-1.	
Pkgs.	Price.	Pkgs.	Price.	Pkgs.	Price.
1,293,688	7.52d	1,331,718	7.62d	1,376,680	7.24d
1899-00.		1898-9.		1897-8.	
Pkgs.	Price.	Pkgs.	Price.	Pkgs.	Price.
1,313,554	8.23d	1,143,396	8.78d	1,136,837	8.64d

From the following table it will be seen that the average price for every important district was less than the previous season.

Prospects for the present year seem to be brighter if only coarse plucking is avoided, the statistical position showing the trade to be in a stronger position than has been the case for many years past.

Average Prices obtained by each District are shown in the following table:—

	1902-1903.		1901-2.		1900-1.	
	Pkgs.	Price.	Pkgs.	Price.	Pkgs.	Price.
Assam ...	596,398	8.55	630,330	8.70	637,454	8.53
Cachar and Sylhet ...	333,724	6.20	332,042	6.22	372,856	5.70
Chittagong...	2,947	6.00	3,771	6.11	6,608	6.21
Chota Nagpore ...	1,925	5.42	1,920	5.27	2,676	4.68
Darjeeling ...	73,796	9.69	75,504	9.86	83,976	10.01
Dooars ...	189,028	6.53	202,919	6.62	194,273	5.69
Neilgherry ...	6,806	6.53	6,407	6.70	5,304	6.09
Terai ...	12,230	6.27	12,769	6.55	15,782	6.02
Travancore...	59,605	6.14	53,527	6.29	48,078	5.31
Kangra Valley	17,229	6.08	12,529	6.46	9,673	5.31
Kumaon

INDIAN.—A fair supply of New Season's tea was included in this week's auction, prices showing about previous values. So far nothing of very choice quality has been brought forward, and it is too early yet to form a definite estimate of the quality of the new crop. A few more closing invoices of last Season's teas were sold, competition for the poorer grades being rather languid.

Week's av. of New Season's tea sold on Garden Acct. 1903, 5,914 pkgs., av. 6.89d. 1902, 6,045 pkgs., av. 6.03d.

New Season's tea sold on Garden Acct. 1st June to date 1903, 7,672 pkgs., av. 7.62d. 1902, 14,011 pkgs., av. 6.38d.

CEYLON.—The bidding was somewhat lacking in animation, and although teas for price and fine teas sold well, medium grades were again easier. Quality continues unattractive, the lower quotations being partly due to this cause.

Average for week 7.11d, against 6.00d in 1902.

Ceylon tea sold on Garden Acct. 1st January to date, 528,187 pkgs., av. 7.61d. 1902, 592,821 pkgs., av. 6.83d.

JAVA.—Javas passed without material change, common teas, if anything, showing a slightly easier market, while anything with fairly good liquor sold well. The teas were all of direct import and nine estates were represented.

Bank Rate 3 per cent. Exchange on London three months' sight:—Calcutta  $1/4\frac{3}{4}$ . Colombo  $1/4\frac{7}{8}$ .

### CINCHONA.

There were only four catalogues at the monthly auction on Tuesday, representing 715 packages of bark. The demand was good, and the bulk was disposed of at steady prices, the average unit being  $1\frac{1}{4}$ d. This is a slight improvement on the last Amsterdam sale, which showed a parity of  $1\frac{1}{8}$ d.

The following table shows the quantity of bark offered and sold:

	Packages Offered.	Packages Sold.
East Indian cinchona ...	519	401
Ceylon cinchona ...	146	60
Java cinchona...	50	50
	715	511

# ST JACOBS OIL

Was in the olden times largely used by the monks of St. Germain for the same complaints as it is used to-day. It was found most effectual then for Gout, Rheumatism, Neuralgia, Soreness, and general bodily aches and pains. It was the custom then among these good monks to carry the oil about with them, as here described, for the relief of pain among the poor and needy, and although in those days St. Jacob's Oil was put up in rather a crude state, it was found the most useful of all remedies to conquer pain. To-day, by the aid of pharmacy and science, St. Jacobs Oil is far more efficacious than in the old days. To-day St. Jacobs Oil is a highly condensed, scientific, pharmaceutical preparation. It has the largest sale of any medicine in the world.

## CURES

RHEUMATISM, NEURALGIA, GOUT,  
SPRAINS, SORENESS, SCIATICA,  
LUMBAGO, HEADACHE, BACKACHE,

And all Aches and Pains usually treated by outward application.

IT HAS NO EQUAL ON EARTH AS A PAIN RELIEVER.

It acts like magic. It is peculiar to itself, different from any other remedy. Price  $1/1\frac{1}{2}$  &  $2/6$ .

Mr. H. F. MARLOW, 82, Coldbath Buildings, London, E.C., writes:—"I unfortunately dislocated my knee joint about three years ago, and after attending St. Bartholomew's Hospital, and being prescribed for by several private doctors, I was still in great pain. One day a friend of mine who had used St. Jacobs Oil advised me to try it, and I am glad to say that after suffering terribly for over eighteen months, on the first application of St. Jacobs Oil the pain disappeared, and I have not had any return of it since."

# CONQUERS PAIN.

The following approximate quantities represent the purchases made by the principal buyers:

The Brunswick factory	...	Lbs.	40,815
The Frankfurt-on-Main and Stuttgart factories	...	27,300	
The Mannheim and Amsterdam factories	...	16,975	
Messrs. Howards & Sons	...	14,820	
The Imperial Quinine factory	...	1,850	
Druggists, Brokers, etc.	...	22,380	
Total quantity sold	...	124,140	
Bought in or withdrawn	...	40,040	
Total quantity offered	...	164,180	

The following prices were paid:

EAST INDIAN.—Succirubra, quills and chips, ordinary, 2½d; branch, 2d; root, 2½d to 3½d; renewed stem chips and shavings, 3½d to 3¾d. Officinalis, stem chips and shavings, 2¾d to 5½d; renewed, 2¼d to 6d; broken quill, 5½d; branch, 2d; root, 4¼d to 6d. Ledgeriana, natural stem ships, 2¾d to 5½d; branch, 1¾d; root, 5½d per lb.

CEYLON.—Bright Succirubra quillings and chips, 3½d to 3¾d per lb.

JAVA.—Ledgeriana, branch, 5½; hybrid branch, 4¼d per lb. The auction that was to be held at Amsterdam on July 23 would consist of 6,647 bales and 331 cases, weighing 611,293 kilos., Java bark.

Twelve bales of Cartagena of recent import sold cheaply at 1½d per lb., and 3 bales hard flat native Calisaya-bark sold at 1s 5d for sound and 1s for second-class country damaged.

QUININE.

A higher tendency has developed during the week, and the market closes at higher rates. Several sales were made early in the week at 10¾d per oz. for spot, and since then 20,000 oz. at 10½d per oz. for August delivery. There are now buyers of December delivery at 11d.

CARDAMOMS.

Lower, 96 packages being sold partly without reserve. Medium to bold palish plump Mysore sold at 1s 8d, brown bold 1s 1d to 1s 2d, the bold from the same parcel being held for 2s. Small thin Mysore, 2 cases, sold at 10d, brown at 8½d, split at same price, and fair to good seeds at 1s to 1s 1d per lb. Medium brown Mangalores sold at 11d; small, 6½d to 8d; splits, 9d; seeds, 11d. Small to medium Malabars, brown, sold at 7½d to 8d, without reserve.

## A WEEKLY JOURNAL.

WRITTEN BY PLANTERS FOR PLANTERS.

VOL. VIII.]

MADRAS, SATURDAY, AUGUST 8, 1903.

[No. 31.]

### SEASON REPORTS.

#### TO OUR SEASON REPORTERS.

Please post your next reports to reach Madras on Friday, the 14th instant. Season reports should be sent direct to the Printers, Messrs. HIGGINBOTHAM & Co.

#### THE U. P. A. S. I. MEETING.

A REPORT of the proceedings at the 1903 Meeting of the U. P. A. S. I. is given in our present issue. We cannot, however, review these proceedings fully to-day. Every year, in fact, the impression deepens that as the speeches of various delegates are studied more closely, and as the resolutions passed receive consideration day after day, their interest becomes greater. On the present occasion there had been a probability that the very keystone of the constitution of the Association would have to be disturbed. Happily, however, the discussion that occurred in Committee caused a removal of some of the difficulties that threatened the prosperity of the U. P. A., and a way was seen to deal with others without resort to drastic measures. The constitution of the Association continues unchanged, therefore; and the subject was not entered in the final agenda paper laid before the meeting. Sufficient is said in the Secretary's Report to show that there is not adequate provision in the form of current income to meet the demands of normal expenditure. Some minor economies are to be introduced, and if the Coffee industry revives and as the Tea industry progresses there may be a nearer approach to financial equilibrium. As regards Reserves the Association is more fortunately situated; and a liberal vote has been made in aid of the endeavour to bring Indian Coffee prominently before the American public through the medium of the Louisiana Purchase Exposition. This is a source of peculiar satisfaction to us. We have steadily advocated utilising the exceptional opportunity that will be afforded by the Exhibition at St. Louis. Not very long ago it appeared as

if a large number of planters had not been convinced by the arguments of those who thought that a strenuous attempt should be made to exploit the American coffee market. Now, the grant of Rs.10,000 has been voted, and we shall be greatly disappointed if the various Governments and District Associations interested do not raise this amount to Rs.25,000, a sum that should admit of a really representative display. In this connection there are just two points upon which we would lay stress. The first is the Hon'ble Mr. ACWORTH's opinion that the opening up of the United States to Indian (and Ceylon?) Tea dates from the Chicago Exhibition. The second point is that which was strongly urged by Mr. H. P. HODGSON, *viz.* that an Exhibition is but a means to an end. Planters' work, if it is to be successful, must not end with the supply of exhibits. The Exhibition should be utilised to *create* a demand, and arrangements must also be made to meet that demand, if and when it is created. If this be borne in mind, the money to be spent on the St. Louis Exhibition should subsequently prove to have been well spent.

The chief interest of the proceedings centred in the discussion of the Madras Planters' Labour Act, I. of 1903. Much of this discussion was conducted in Committee, but the most important arguments were afterwards summed up in the remarks of various speakers in open meeting. The resolution thanking the Government was supported by the delegates of every Association. There were several delegates from Associations that did not fully approve of the measure; but the general feeling was that the Madras Government had done a great deal to further the wishes of planters and that it was but fair that the Act should have a trial. If, as is expected in regard to various districts, this trial causes material faults or defects to be exposed, the planters interested will have something practical to go upon when again approaching the Government and urging that amendments be introduced. The discussion may be described as exhaustive. It was not an attempt to scrutinise the Act

section by section, to pick holes, or to suggest improvements. Rather was it a declaration on the part of almost every planting district, through its particular spokesman, of conditions in each district that had to be taken into consideration. There was a consensus of opinion that Act XIII. of 1859 ought to be retained as an alternative to the new Act, and this was given expression to in the resolution on the subject. It is well understood that Government decline to allow this method of picking and choosing between the old Act and the new; so the U. P. A. S. I. has accepted the inevitable and has decided to use its influence with District Associations to get them to give the Act a trial. More than this could scarcely be done. As a matter of fact, now that the Act has been passed, it becomes a matter for discussion by District Planting Association rather than by the United Association.

It appears to us that an equally wise line of action has been decided upon in regard to the great question of the day, that of an inquiry into the Fiscal Policy of the Empire. Planters support the movement in favour of such an inquiry. We believe it may be said of them as a body that they hope that this inquiry will tend to changes in the direction that has been indicated in Mr. CHAMBERLAIN'S recent speeches; and they urge, rightly, that India is, and must always be regarded as, an integral part of the British Empire, and that in any inquiry of the kind under reference India's interests must be considered side by side with those of other units of Empire. There is little also in the way of details that we need comment upon at present. Judged by the tone of the debates, the quality of the speeches, the earnestness of the speakers, the meeting takes high rank among meetings of the U. P. A. S. I.; and that is saying a great deal in its praise. There is always a certain amount of desultory discussion in the Committee stages of these proceedings, but it is marvellous how the chaff is sifted out, and how planters eventually arrive at some sort of a practical agreement as to what they want and how to try to get it, or what they ought to do, and how to do it. At few meetings of similar magnitude and importance is there a greater display of tact, conciliatory disposition, sound common-sense, and even eloquence. From its early years to now the Association has been fortunate in its selection of Chairmen and "Planting Members," and this has contributed no little to its smooth and progressive working.

#### COFFEE NOTES.

**The Coffee Market.**—A holiday quiet prevailed in the market last week, says the *Tea and Coffee Trade Journal* of July 7th. In the option market prices weakened and are near to the lowest prices from which there was no mean advance a fortnight ago. In actual coffee, prices remain as a rule unchanged from the slight advance recently noted. The world's visible supply increased 45,000 bags rather than decreased, making a total for July in excess of 11,900 bags, the largest on record for a July 1, the beginning of the new

crop year. Therein lies the cause of the weakening market. In actual coffee the lower grades remain temporarily scarce.

Brazil markets hold firm and, as usual, are higher than New York. There is no pressure to sell anywhere. Quotations for spot invoices are: 5c. for Rio No. 8, 5½c. for Rio No. 7, 5½ to 5¾c. for Rio No. 4, and 5½ to 6½c. for Santos No. 4. The jobbing business is reported light.

In mild coffee, while good roasting coffee is always in demand, and commands a good figure, prices are slightly easier, owing to heavy receipts and spiritless demand. Good Cucuta is 8c. East India kinds are quiet and unchanged.

Total stock in United States July 1, 2,461,664 bags, against 2,438,514 bags July 1, 1902. Brazil stock in the United States July 3, in store and afloat, 2,383,028 bags against 2,499,787 bags at the same time last year. Other than Brazilian, 413,897 bags, against 311,713 bags last year.

Brazil coffee in New York July 3, 1,846,981. Stock in New York in other coffees, July 1, 311,198, in San Francisco, 94,087 bags, and in New Orleans, 8,664 bags. Visible supply in the world of all coffees, July 1, 11,900,173 bags.

\* \* \*

**French Coffee Duties.**—Regarding the proposed increased in the tariff on coffee by France, M. Rouvier, Minister of Commerce, after hearing a protest by a deputation of Havre, Marseilles, and Bordeaux coffee men, replied that budget considerations had compelled him to raise the duty by 20f., and said that he would ask for the denunciation of the Franco-Brazilian Treaty before June 30, in order that the new tariff might be applied before the end of the year.

\* \* \*

The fall of Coffee prices is exemplified by the following statement:—In 1810 Java coffee prices were in Holland 46 cents (American money) a pound. In 1902 13½ cents a pound. The lowest price on record was in 1830, 8.4c. a pound.

\* \* \*

The receipts of coffee at New Orleans for the year ended June 30 were 883,355 bags, an increase of 70,681 bags compared with receipts one year ago. The city takes great pride in this showing as may be seen from the following comment of the *New Orleans Picayune*:

"In addition to Brazilian coffee, this port also imports considerable Mexican and Central American coffee. While we are yet a long way behind New York, we have far outstripped every other port, and there is no reason to give up hoping that eventually we will take first place as a coffee importing port."

\* \* \*

The following rules for the fixing of official quotations of Coffee, and concerning dealings at "1½d. prices," have been agreed upon between the trade and the L. P. C. H. company, to come into force on the 1st instant:—1. That the mean price shall be taken where the difference between buyers and sellers is more than 1½d., leaning to sellers' price where the difference between buyers and sellers is more than 3d. 2. That the sellers' price shall fix the quotation where the difference between buyers and sellers is only 1½d., thus acknowledging a 1½d. price as an official quotation for purposes of margins only. 3. That business done at the "call" shall not necessarily, of itself, fix the quotation: for example, if only 250 bags December are done at 25s. 6d., and several buyers thereat, the Chairman shall have the power to make the quotation 25s. 7½d. 4. That the Chairman shall fix the quotations in the above manner, but any dispute as to a quotation given by the Chairman shall be decided by a show of hands at the "call." 5. That a 1½d. price for 250 bags

Coffee shall not be acknowledged (*i.e.*, 1½d., 4½d., 7½d., or 10½d.), and that quantities dealt in at a 1½d. price shall be divisible by 500.

\* \* \*

Another coffee crop has been garnered and a new one started rolling up its millions of bags, says the *Tea and Coffee Trade Journal* of 7th ultimo. The present one just closed will probably be found to have yielded nearly 17,000,000 bags, which is about 1,000,000 bags more than the world is prepared to consume. Brazil is definitely known to have yielded 12,324,000 bags, a figure much larger than the boldest dared to predict last year. And what tale will she tell next year? From the manner in which the Brazilians continue growing coffee despite the very low prices, it would seem that the price has not yet sunk below profit and cost, and such being the case coffee will be offered in excessive production, and from the manner in which the planters are making ready to ship the crop now gathered an aggregation fully as large or nearly so as the 1902 bumper crop will be presented to the world. Fifteen million bags Brazilian are entirely too much for us one and all, but inasmuch as the Brazilians consent to be so painstakingly generous, what else is to be done but to take what is offered so cheaply and be happy? It is in ill wind that blows nobody good.

\* \* \*

The cheapening of the price of coffee in late years has caused the discontinuance of much of the former adulteration of ground coffee, but another thing has helped, namely, the growing practice of the purchase of the article in the whole bean or else in a freshly-ground state, the retailer grinding the coffee at the time of purchase. The old-time mixture was made up somewhat as follows: 2½ lbs. roasted coffee, 4 lbs. roasted peas, 2 lbs. roasted rye, 1 lb. roasted chicory, ½ lb. other ingredients, making ten pounds of so-called ground coffee. This was harmless, even wholesome, but it must have left an impression upon the palate of something wanting.

\* \* \*

The 1903-04 crop of coffee promises to be one of the largest ever harvested. That insures low prices and growing consumption. We look forward, says the *American Grocer*, to "deliveries of 20,000,000 bags yearly inside of three years."

\* \* \*

Brazil has abandoned its new scheme of taxation of low-grade coffee. No Government has ever yet been able to set aside the law of supply and demand, says a New York paper. It is stronger than legislative enactment. The silver men discovered that fact.

\* \* \*

The people as well as the trade are not so much governed by sentiment in relation to Java coffee as they were formerly, says the *American Grocer*. The popular notion, not many years since, was that Java coffee was unapproachable for body and flavour. Now they have learned that Mexico, Central America, Venezuela, and the Sao Paulo district in Brazil produce some of the finest coffee ever grown. The magic of the names Java and Mocha is less potent than in years ago.

\* \* \*

**Excessive Apparent Consumption of Coffee.**—A Bremen firm, Fink & Weindig, have something to say on this subject, to wit:

"In regard to the heavy consumption we desire to say that the so-called deliveries in 1901-1903 have been very large. The average

deliveries during 1896-1900, according to Duuring's statistics, were 815,000 tons per year; that is, about 68,000 tons per month. Admitting an increase in consumption of 10 per cent., we arrive at an average of 75,000 tons. That is counting fully; now, in spite of this the registered deliveries have been from July 1, 1901, to end of June, 1902, 945,000 tons, and from July 1, 1902, to end of June, 1903, 983,000 tons, making a total for twenty-four months of 1,928,000 tons, or 80,000 tons per month!

"Is it possible that consumption has increased since 1896-1901, *i.e.*, within three or five years, 12,000 tons per month? It seems to us that 7,000 tons would be enough. Now, there were delivered within twenty-four months (1901-1903) at least 120,000 tons, or about 2,000,000 bags too much. That is to say, the coffee has been transferred, after discharge from the vessels, direct to the interior. America has her warehouses in the different large cities. Hamburg has shipped northward, to Sweden, Russia the Baltic and to the interior of the Continent. The result is that the consumers, the merchants or the dealers in the interior, must have handsome stocks. These invisible stocks must play an important part at a given moment. The consumption is large, but not as large as people would like it to be, and the position still seems charged enough not to engage in the article and to continue to be on our guard. If one wishes to obtain the new crop at such low prices as to leave a margin upward, that moment is as yet not in the air."

\* \* \*

**The Making of Coffee.**—The world "do move," says an American paper. Here is a seventeenth century recipe for making coffee:

"To make the drink that is now much used, called coffee. The coffee berries are to be bought at any druggist's, about seven shillings the pound. Take what quantity you please, and over a charcoal fire, in an old fryingpan, keep them always stirring until they be quite black, and when you crack one with your teeth that it is black within as it is without, yet if you exceed, then do not waste the Oyl; and if less, then will it not deliver its Oyl; and if you should continue fire till it be white, it will then make no coffee, but only give you its salt. Beat and force through a lawn sieve. Take clear water, and boil one-third of it away, and it is fit for use. Take one quart of this prepared water, put in it one ounce of your prepared coffee, and boil it gently one hour, and it is fit for your use; drink one-quarter of a pint as hot as you can sip it. It doth abate the fury and sharpness of the Acrimony, which is the gender of the Diseases called Cronical."

\* \* \*

The arrivals of coffee in the United States during the twelve months ended July 1, were 6,871,027 bags, of which 5,616,984 bags were Brazilian and 1,254,093 mild, against total arrivals during the same period concluded in 1902 of 7,905,815 bags.

The deliveries of coffee in the United States in the twelve months were 6,847,877 bags of which 5,695,970 bags were Brazilian and 1,151,907 bags mild, against a total of 6,663,569 bags one year ago. Arrivals exceed deliveries by 24,150 bags. It would thus appear that at least the United States manages to consume as much coffee as in the years previous. Indeed deliveries compared with one year ago increased 152,000 bags, and it would seem that somewhat of the surplus stock imported one year ago has been encroached upon. The excess of arrivals over deliveries one year ago was 1,242,000 bags. The total arrivals of coffee in United States and Europe last year were 19,013,367 bags and total deliveries 15,516,663 bags.

\* \* \*

News from Maracaibo is that supplies of coffee are now moving more freely than heretofore in the interim and that shipments of 150,000 bags may presently be expected.

\* \* \*

Just to contradict the alleged injuriousness of coffee drinking, T. M. Procter, of Essex, Mass., has written a letter to acclaim coffee's values for longevity and prolonged good health. He began, he says, drinking coffee when he was 10 years old and his 83rd year still finds him drinking it. He sometimes drinks three cups a day.

\* \* \*

The Millwaukee Coffee Company has procured from the Governor of Vera Cruz a concession exempting from taxation a coffee mill to be inaugurated soon at Jalapa, the capital of the State.

The very unusual and highly valuable testimonial of President Roosevelt in praise of Porto Rico coffee is probably the result of the visit in the Winter of the President's daughter to the West Indian Island. It will be remembered that Miss Roosevelt was entertained as might be the daughter of a royal house, and no doubt the young lady was as surprised as was the mainland by the heartiness of the welcome and its elaborate extent. Fruit seems to be the conversion of the White House to the use of the coffee grown on the island, which no doubt Miss Roosevelt drank under the most delicious auspices. In token of appreciation, as soon as the conversion became complete, we have now the publication of the fact at the hands of the President himself. He knows that coffee is no inconsiderable part of the prosperity of the island, and to help it out of the slough of despond into which it has fallen by reason of the heartless elements of weather and war, he recommends the American people to use Porto Rico coffee. What is good enough to be drunk at the White House should be good enough for the American people, who quadriennially place a ruler there, is the argument. The testimonial is really priceless, and if the Porto Rico coffee-growers do not promulgate it for all that there is in it, they are unable to understand the knocking of fortune, which apparently is ready to be so liberal that the coffee shall become a household word and article of use, and to the extent that it shall be a surprise to suggest further that the coffee be protected by a tariff. That, moreover, would embarrass the administration, and since the President has given the example of noblesse oblige the Porto Ricans should be as punctilious in their regards and thanks.

While the brokers quote the market dull, without "animation," the coffee deliveries for the year in the States beat all records.

The Police have arrested a couple of coffee speculators, whose office is at 79, Fulton Street, Brooklyn. These two men, James A. O'Brien and A. S. Biles, are charged with swindling a Virginian out of \$1,779. They advertised a "wonderful" process for making superior coffee out of the lower grades, and the Virginian bit. He sent on his money and neither saw it nor heard of the advertisers until a few days ago, when he came to New York and found the two men at 79, Fulton Street, Brooklyn, where they were running a coffee store. Other complaints have been received against the accused. Bags in the store supposed to contain coffee were found to be actually filled with sawdust.

### TEA NOTES.

**London Tea Market.**—Cabling to Colombo on 30th ultimo Messrs. Gow, Wilson & Stanton report that the market generally is steady and that the market for medium liquoring Pekoes and Broken Pekoes is steady, while the market for common Pekoes and Broken Pekoes is steady. The price of fair liquoring Ceylon Pekoe Souchong is 6½d. (same as last week) and the average 6⅞d. (⅛d. down). The average for the same period last year was 6¼. Reuter reports that the tone of Ceylon tea, common and fine qualities, is very firm. Medium to fair medium dull. Fair Pekoe Souchong is quoted at 5½d. (same as last week) and the average for the week is 7d. (same as last week). 32,000 packages of Ceylon tea were offered for sale and 29,000 disposed of. Indian tea:—Packages offered 12,000 and sold 11,000. Average price of Indian tea 7¾d. (⅛d. higher than last week).

**Tea Samples for the U. S.**—Assistant Secretary Armstrong has instructed collectors of customs that as tea is now on the free list no objections will be interposed to the importation by mail without examination sample packages of tea weighing up to 12 ounces. Hitherto these packages have been limited in weight to three ounces.

The Indian and Ceylon tea interests are pushing packet teas in the United States, the sale of which is increasing. Besides the English and Canadian tea packers are the local jobbers, who are putting up blends under proprietary labels, and competing for trade against the extensively advertised tea of London firms. In many stores demonstration booths are maintained, and good tea is served free.

**American Taste.**—Judging from the past, says the *Merchants' Review*, it will be a long while before India and Ceylon teas become as popular here as the Chinas and Japans. The latter suit the American taste.

**Ceylon Oolong.**—There appears, remarks the *Merchants' Review*, to be some doubt as to whether Mr. Larkin, the Salada tea packer, was right in recommending the packing of a Ceylon Oolong tea in the hope of winning a greater share of the American trade, the object being to introduce the Ceylon Oolong as a substitute for Formosa Oolong. It is objected that the market here for the Formosa Oolong is not extensive enough to warrant a trial of Mr. Larkin's suggestion, at least that is the inference we draw from an article in the *Tea and Coffee Trade Journal*, but we believe that American consumers would prefer the Formosa Oolong if they could get it. What chance have they to make a choice? They must buy what the grocer offers, for he is the arbiter. This suggestion of Mr. Larkin's is a valuable one, provided it is possible to imitate the real Formosa leaf on Ceylon plantations. It may be possible to do so, for all grades of China tea are made from the same plant, and the wide variations in flavour are due chiefly to the differences in the processes of curing. Note, for instance, the difference between the flavour of English breakfast tea (Congou or Souchong) and that of Oolong, although all three teas belong to the black leaf variety. Compare also the flavour of red leaf Congou and that of green Pingsuey. If these differences can be produced by curing alone, why cannot the qualities of China tea be closely copied by the Ceylon growers? The Ceylon Oolongs would sell freely enough, provided the resemblance were not an imaginary one.

**Tea in the United States.**—The United States is perhaps the best customer for Japanese tea, and yet we take less from the Japanese than from the Chinese, says the *Merchants' Review*. During the eleven months of the fiscal year, when the gross tea imports of this country aggregated 104,266,416 pounds, against only 73,246,228 pounds in the same eleven months of 1902 and 85,783,747 pounds in corresponding period of 1901, the imports from China were 54,732,000 pounds and from Japan 35,359,000 pounds, whereas the East Indies sent us only 6,290,000 pounds and the United Kingdom 5,494,000 pounds. These two quantities should be combined in order to show the gross imports of Ceylon and India tea, and the resulting total shows a remarkable increase of the trade in those teas. We would suggest that an average of 87,795,493 pounds imported during eleven months of 1901, 1902, and 1903 furnishes a very good supply for the American market, and as over 104,000,000 pounds have arrived between July 1, 1902, and May 30, 1903, there is no reason to fear a shortage of tea during the remainder of the calendar year.

The average import value of tea per pound during the past eleven months was 14.15c., as compared with 12.42c. per lb.

in the full fiscal year 1902, 12·18c. in 1901, 12·45c. in 1900, 13·05c. in 1899, and 14·16c. in 1898. The rise in price means increased profits for the growers, rather than a rise in quality.

\* \* \*

**Colombo Tea Sales.**—On 29th ultimo prices were steady for teas up to about 38 cents, but buyers showed less inclination to buy medium kinds, and prices for these were irregular, with an easier tendency, particularly for Broken Pekoes. The best invoices were well competed for at firm rates. Green teas showed a fractional decline.

\* \* \*

**The U. S. Tea Market.**—The tea market locally is quiet and in prices unchanged, says the *Tea and Coffee Trade Journal* of July 7. In the East the markets continue provokingly high. The consequence here is that very few buying orders arrive, and general dullness prevails. Furthermore, in many instances sellers in the country to consumers are well supplied, and inclined in consequence to hold off from new teas until prices should ease, if that is to happen. Rather than buy, they will draw on their stock chest by chest, and the diminution being gradual, the realization of a depleted stock will come suddenly. Then, as many think, will occur a general rush in the sellers' favour, which remains to be seen.

More Congous may go out, for there is again inquiry from London at New York. London will take any kind of cheap tea. In the East Congous are still 10 at the lowest for United States government standard.

New high-grade Japans are nearly all sold, if not entirely so, and at high figures as during the last year. Contemplation rests on the common grades always most in demand, and it is the belief that these will rule lower. As the export of Japan teas this season will be in excess of 40,000,000 lbs. it would seem that there will be enough to go around at reasonable rates; the quantity itself should hold prices down, and a further factor is the Ceylon greens, which intend competing with the Japans, and may this year to the extent of 7,000,000 pounds. There will also be 4,000,000 lbs. India greens. As there has been an extension of the tea subsidy equal to 75 per cent. of that allowed for the first 7,000,000 they may be a much larger output by Ceylon greens. Much will depend on the more profitable attraction of Ceylon blacks' prices to the growers.

New India and Ceylon blacks are generally reported less in quantity than one year ago, and so there is in not a few lines firming up in prices.

\* \* \*

The imports of tea into the U. S. during May were 1,933,737 pounds for eleven months ending May, 104,266,416 pounds; for eleven months ending May, 104,266,416 and 85,783,747 pounds in 1901. The Chinese Empire furnished 53 per cent. of the total; Japan, 33½ per cent. Imports from the East Indies and the United Kingdom and British North America were 13,716,260 pounds, against 7,846,190 pounds in 1902. A good increase that for British-grown tea.

\* \* \*

Settlements of tea at Yokohama to May 31 were 81,328 piculs; at Kobe to May 29, 37,365 piculs; total, 118,693 piculs, against 66,158 piculs last season. The bulk of tea was of grades commanding 40 to 49 yen per picul; lowest price paid, 23 yen; highest, 60 yen.

Japan tea market very firm in the American market. It is reported by cable to New York that the second crop will be much below that of last season.

\* \* \*

The total quantity of tea exported from New York since January 1 up to July 1st is 60,988 packages, mostly Congous.

\* \* \*

The tea-producing capacity, at Natal, is limited to an area of 3,000 acres, and the labour is imported from India at a great expense. The import duty of 6d. per lb. protects the colonial tea.

\* \* \*

New crop tea at New York range from 25 to 40c. for Japan, 16 to 40c. for Formosa, and 14 to 35c. for Congou.

\* \* \*

Great Britain and Russia prefer Congous to other Chinese teas. The United States prefers Japan teas to ordinary China teas, and uses but little Congou leaf. The great consumption of tea outside of the producing countries is among the English-speaking nations:

## NOTES.

### The Development of Mexico.

The American Tropical Planters' Company of Chicago has been incorporated in Delaware to develop lands in Mexico, marketing crops of coffee, vanilla, cocoa, and tropical plants, capital \$100,000.

### Pepper in Trinidad.

During 1902-03 Black Pepper (*piper nigrum*) grew freely at St. Clair, Trinidad, and for the first time produced a small quantity of berries. It has fruited regularly for some years in the older botanical garden in that island.

### Scientific Investigation in Mysore.

Dr. Butler, Cryptogamic Botanist to the Government of India, and Mr. Lefroy, Entomologist to the same Government, are expected to visit Mysore Province very shortly.

### Singapore Rubbers.

Samples of rubber from the Botanic Gardens, Singapore, have been valued at from 4s. to 4s. 1d. per 10, pancake form, and from 3s. to 3s. 3d. scrap. The quality is said to be very good. Some other rubber from the Straits Settlements, Pará variety, has been valued at 4s. 3d. to 4s. 5d.

### Another Rubber-Producer.

A new rubber-producing creeper, called *Rhynchodia Wallichii*, has been discovered in the Pegu district by Mr. Hearsey, Divisional Forest Officer, Shwegyin. This creeper is found growing abundantly on low land in light forests on both sides of the railway line in the Nyaunglebin sub-division, but is liable to destruction by *potta* soldiers.

### Rubber and Tea.

An experienced planter just back from a visit to Kalutara tells the *Times of Ceylon* that two years ago planters made the mistake of planting rubber trees among fine tea. They were then taking a hopeless view of tea, but in four years' time they will have to toss up to see which they will cut out—the bushes or the trees! Our visitor admits that there is plenty of land in the low country suitable for rubber where the tea is poor, and that there is plenty of suitable soil right up to Ratnapura and beyond. He found the Kalutara estates he saw free from shot-hole borer—and, of course, of tortrix, Grey blight was to be found, not in patches, but only on single bushes here and there.

**From the United States.**

The coffee trade of the country increases steadily, and the tea trade doesn't, says the *American Grocer*. Coffee is better in quality than in former years, and tea isn't. There, as we believe, is the true explanation. You can't get away from quality in the grocery business. The word is as omnipresent and overpowering as the word "propuppy" in the Northern Farmer poem of Tennyson. Men may sneer at quality, but they can't afford to ignore it and stay in the grocery business. Tea is cheaper than it was, say, ten years ago. So is coffee, but whereas superior coffee is now to be had by the average consumer—coffee that was formerly drunk only by the rich—the average tea-drinker gets no better tea than in former years, and the epicurean tea-drinker finds the very choicest teas no longer abundant.

**Banana Coffee.**

The banana coffee is the richest, most aromatic substitute for the real thing which the writer has ever seen, says the *American Grocer*. The manufacturer is a fruit evaporator of British Guiana, named A. F. Spawn. This is how the idea of making banana coffee was born. A coffee tester and expert in New York was inspecting samples of Mr. A. F. Spawn's evaporated fruits and vegetables, in which was a package of evaporated bananas. With his sensitive smell he detected a rich, natural coffee flavour from the evaporated bananas, and remarked it. This was a tip for Mr. Spawn, and at once he made some experiments, which astonished him, giving the coffee a most delicious flavour. He did not stop there, as he was fully convinced from experiment that he could produce from bananas a perfect substitute for coffee, and has without doubt succeeded. The *Review* has tried the banana coffee and likes it.

**Cacao in the Philippines.**

The importance of cacao growing in the Philippines can hardly be over-estimated, as recent statistics place the world's demand for cacao, exclusive of local consumption, at 200,000,000 pounds valued at more than \$30,000,000 gold. This forms one of the chief articles of commerce in the islands, and is cultivated in nearly every part of the Archipelago. It is grown in several parts of Luzon, Mindanao, Jolo, Basilan, Panay, Negros, Cebu, Bohol, and Masbate, and its presence can be reasonably predicted upon all the larger islands anywhere under an elevation of 1,000 or possibly 1,200 meters. In most of the cacao producing countries its cultivation has long since passed the experimental stage, and the practices that govern the management of a well-ordered cacao plantation are as clearly defined as those of an orange grove or a vineyard in California. There is little danger of over-production, and consequent low prices for several years to come. So far as is known, the areas where cacao prospers in the great equatorial zone are small and the opening and development of suitable regions has altogether failed to keep pace with the demand for the product. The cacao grown in the Philippines is of such excellent quality that there is keen rivalry among buyers to procure it at an advance of quite fifty per cent. over the common export grades of the Java bean, notwithstanding the failure on the part of the local growers to "process" or cure the product in any way. In parts of Mindanao and Negros, despite ill-treatment, the plant shows a luxuriance of growth and wealth of productiveness that demonstrates its entire fitness to be considered a valuable crop in these regions.

**THE U. P. A. S. I.****ANNUAL MEETING.**

(Chiefly from the *Madras Mail*.)

The Annual General Meeting of the United Planters' Association of Southern India, Incorporated, opened at the Resident's Court, Bangalore, on Monday, the 3rd instant, at 2-30 P.M., Mr. J. A. Harris, Chairman of the Association, presided. The Hon'ble Mr. G. Acworth, "Planting Member" of the Legislative Council of Fort St. George was present, as also were the following

**DELEGATES :**

Annamalais	...	Mr. H. P. Hodgson.
Central Travancore	...	Mr. F. M. Parker.
Coorg	...	Mr. G. K. Martin.
Kanan Devan	...	Mr. E. E. Williams.
Nelliampathis	...	[No delegate.]
Nilgiris	...	Mr. H. P. Hodgson.
	...	Mr. C. H. Brock.
North Mysore	...	Mr. O. Scot-Skirving.
	...	Mr. L. King Church.
South Mysore	...	Mr. F. Norton.
Shevaroy	...	Mr. R. Gompertz.
Travancore Cardamom Hills	...	Mr. F. M. Parker.
Wynaad	...	Mr. Geo. Romilly.

At a Committee Meeting held at 10 A.M. the same day, the following list of

**AGENDA**

was adopted :

1. Annual Report and Statement of Accounts.
2. Chairman's Address.
3. Work of Planting Member.
4. Currency Notes.
5. Finance.
6. Louisiana Purchase Exposition, 1904.
7. Voting Powers of Executive Committee.
8. Legislation—
  - (a) Labour Law.
  - (b) Tea Cess Act.
9. Duties—
  - (a) British Duties on Tea, Coffee, etc.; and Differential Duties.
  - (b) Ceylon Import Duty on Tea.
  - (c) Indian Import Duty on Tea.
  - (d) Duties on Pepper, etc., imported into France.
  - (e) Duty on Flowers of Sulphur.
  - (f) Travancore Export Duty on Coffee.
10. Coffee—
  - (a) Markets (including sale in India) and Proposed Coffee Cess.
  - (b) Paris Shop and Advertisement of Coffee.
  - (c) Adulteration.
  - (d) Delegate to Brazil.
  - (e) Quality and Curing.
  - (f) Proposed Commission of Enquiry.
11. Tea—
  - (a) Markets (including sale in India).
  - (b) Green Tea.
12. Agricultural Matters—
  - (a) Products.
  - (b) Fertilisers.
  - (c) Standardization of Fertilisers.
  - (d) Cultivation.
13. Railway and Steamer Freights—
 

Enhanced Coffee Rates on the S. M. R.
14. Roads and Communications.
15. Proposed Harbour on the West Coast.
16. Remission of Assessment on Coffee Land.
17. Weights and Measures in India.
18. Labour Recruiting.
19. Election of Planting Member.
20. Election of Office-bearers (including Secretary) for 1903-04.

# FIRST DAY, August 3.

## THE ANNUAL REPORT,

read and revised in Committee, was taken as read in open meeting and was adopted. It read as follows:—

Towards the close of the year the newly-formed Annamalai Planters' Association was elected a Member of the Association. Mr. J. C. Sanderson alone has represented South Indian Planters' interests with the London Chamber of Commerce. The Hon'ble Mr. G. L. Acworth's term of office as "Planting Member" of the Legislative Council of Fort St. George will expire before the next Annual Meeting, so a fresh election has become necessary.

Official intimation has been received of the gracious acceptance by His Majesty the King-Emperor of the address presented by the Association on the occasion of the Coronation of His Majesty.

In accordance with the plan adopted last year, reference will first be made to the subjects that have previously come under the notice of the Association, any that have been brought forward this year being dealt with later.

**Madras Labour Law.**—During the year the Madras Planters' Labour Law of 1903 has been passed. The Planting Member, cordially supported by the Hon'ble Sir George Arbuthnot, succeeded in getting certain amendments made in the draft bill, on lines suggested by different Associations, but he was not able to induce the Government to adopt all his suggestions. The Act, as it now stands, has been widely criticised, but it has not yet been applied to any of the planting districts.

**The Indian Tea Cess** has passed into the practical stage. The Association is represented on the Executive Committee entrusted with the administration of the funds; the Madras Chamber of Commerce has also elected a representative on that body; and the interests of the planting community in the South may now be said to be in the charge of Mr. A. D. Jackson and the Hon'ble Mr. G. L. Acworth.

**Indian Tea for India.**—A further report on the working of the Indian Tea Markets Expansion Commission has been published during the year by Messrs. Andrew Yule & Co., the Commissioners. A scheme of a similar kind has been started in Southern India, through the agency of Messrs. Parry & Co., Madras, and is now understood to be making good headway with the propagation of a taste for Indian tea among the population. The above schemes are in no way hostile to each other, and private enterprise has also been stimulated to give considerable attention to the development of "home" consumption of Indian Tea.

**Sale of Indian Coffee in India.**—Various inquiries have been instituted in regard to this important matter, but the Special Committee appointed to deal with it were not able to make a practical start. The suggestion that a Voluntary Cess of Rs.5 per ton should be levied in order to raise necessary funds received only half-hearted support, and on the 12th March, 1903, the members of the Special Committee reported as follows:—

"The Sub-Committee hoped to have been able to place a scheme before District Associations, in time for some steps to be taken this season, but it has taken so much longer than was expected to find out reliable Firms who were willing to undertake the business, also their terms, that it has been impossible to do so. It has now been definitely ascertained that several good firms are willing to undertake the sale of our inferior grades of coffee, but as nothing can be done without funds, and as far as can be gathered from the reports of District Associations, these are not likely to be forthcoming, and the season being far advanced, the Sub-Committee have reluctantly come to the conclusion that any scheme had better remain in abeyance until the next Annual Meeting, when, if it is determined to go on with the matter, the information gathered will be of use, and will certainly save a lot of time.

"As nothing further can be done at present, the Sub-Committee therefore beg to tender their resignation."

**Adulteration of Coffee.**—In accordance with the Resolution passed at the Annual Meeting of 1902, various Chambers of Commerce in India were communicated with. The replies received from them do not encourage the hope that any material support will be received from these bodies.

**Imperial Differential Duties.**—This question has assumed new importance in consequence of the recent utterances of the Colonial Secretary with regard to his idea that a fiscal policy of Imperial

Preference is essential to the welfare of the United Kingdom and the Empire.

An opportunity for discussion will present itself at the Meeting.  
**French Import Tariff.**—It has been officially announced that a satisfactory agreement has been entered into between the French and H. M.'s Government with respect to the duties levied in France on British Indian products imported into that country.

**British Import Duty on Tea.**—A reduction of the present duty has been urged in Parliament without success, but the Home Government's refusal is only final as regards the current financial year, and the tea duty must be taken into consideration once more whenever the suggested revision of British fiscal policy is discussed in Parliament.

**Louisiana Purchase Exposition, 1904.**—It has been suggested that South Indian Coffee as well as Tea should be exhibited at the great Exhibition that is to be opened at St. Louis in August next, and that the most economical way of arranging this will be found in co-operation with the Indian Tea Association.

**Delegate to Brazil.**—From the replies received from the Government of India and the Government of His Highness the Maharaja of Mysore to the requests made for assistance in respect to this matter, it is obvious that a definite scheme must be drawn up, and that planters must give some idea of the extent to which they are prepared to subscribe towards the cost of sending a delegate to Brazil and other important coffee-producing centres to investigate and report upon coffee-cultivation there.

**Indian Import Duty on Seeds.**—The necessary action was taken with reference to the Resolution carried last year, but the Association was informed by the Government of Madras that, as there are administrative objections to the differential treatment of one article for tariff purposes according to the object for which it is intended to be used, His Excellency the Governor-General in Council was not prepared to exempt from customs duty seeds declared to be intended for agricultural or experimental purposes. The Government of India, it was intimated, had further observed that the aggregate value of the seeds so imported is insignificant, and that the relief that would be afforded by exempting them from duty would be too small to justify any departure from what is considered to be a sound customs principle.

**Need of Scientific Assistance.**—With Reference to the resolution on this subject, it was arranged that the Vice-Chairman (Mr. E. G. Windle) should avail himself of an opportunity to make a personal representation to H. E. the Governor of Madras. Effect was promptly given to this arrangement, and in September last the Vice-Chairman reported that the matter had already received sympathetic attention from the Madras Government. Besides applying for an Agricultural Chemist they had also asked for an Entomological Assistant to Mr. Barber, the Government Botanist.

**Pepper Vine Disease.**—In connection with the above it may be said that the Government Botanist, Madras, was duly deputed to investigate the Pepper Vine Disease in the Wynaad and that his report on the subject was issued during the year.

**Cardamoms.**—Some statistics of Imports and Exports of Cardamoms were obtained and circulated. They were also published in *Planting Opinion* and will be republished in the Book of Proceedings, 1903.

**Currency Notes.**—The Government of India have raised an important question with reference to the use of currency notes of higher values than Rs.5 for the purpose of remittances from one station to another. The Association having been invited to express an opinion, the subject has been entered on the Agenda Paper. A definite expression of opinion is desired by the Government of Madras as early as possible in the current month. For this reason the subject is entered high up in the list.

**Accounts** for the period from 22nd July, 1902 to 31st July, 1903 (both dates inclusive) have been duly audited and laid on the table, together with the customary balance-sheet.

**The Reserve Fund** is in the same position as last year, the balance available being Rs.7,059-12-0 of which Rs.7,000 is invested in fixed deposit with the Association's Bankers.

**The Ladybird Fund**, in accordance with the decision arrived at last year, has been transferred bodily to the

**Paris Exhibition Fund**, which now shows a credit balance of Rs.8,076-1-11, of which Rs.5,873-14-3 is represented by investments in  $3\frac{1}{2}\%$  Government Paper of the face value of Rs.6,000.

A change in the name of this account is suggested, as the Paris Exhibition is now a thing of the past.

The General Fund shows a balance of Rs.635-13-7 in hand, but it should be noted that the expenditure during the year has exceeded the actual income for the year.

Coffee Fund Cess Account,—a newly-opened fund—shows a sum of Rs.49-12-0 in hand.

The Balance-sheet submitted shows that the Association has a total surplus of Rs.16,156-7-6.

My thanks are due to the Chairman, the Planting Member, and other Councillors, among whom are included the Honorary Secretaries of the various District Planting Associations, for the courtesy they have shown me throughout the correspondence that has been necessary during the year.

#### THE ACCOUNTS,

after scrutiny in Committee, were formally adopted at the Meeting.

#### CHAIRMAN'S OPENING ADDRESS.

The CHAIRMAN (Mr. J. A. Harris) then addressed the Meeting as follows:—

The past year has been remarkable for the passing of two measures of first importance to us, the Madras Planters' Labour Bill, and the Tea Cess Bill. The former I consider is a distinct matter for congratulation. The labour troubles of the planter in S. India were the first grievance that this Association brought to the notice of the Government of India, and it is gratifying that we not only obtained its ear, but a practical result in the shape of the Bill now before us. Our success is in a great measure due to the sympathetic attitude of the Government of Fort St. George throughout the negotiations, and I think an expression at this Meeting of our appreciation of the action of both Governments would be becoming.

The Bill has been received with some hostility in certain quarters, but I would remind those who have criticised it unfavourably that the main points for which we contended are embodied in it, and that because circumstances in some Districts have changed so that there is not now the same necessity for a new law as there was, this is no reason why we should stultify our previous contentions. I would also remind those who regard what may be called the inquisitorial sections with dread, that a Labour Ordinance must of necessity be viewed from two sides, and that as the employer looks for protection from swindling, so the labourer must be guarded against oppression and ill-treatment. It may be as well to point out, on the other hand, with respect to the coffee area, that the fact of any District expressing a wish that the Bill should not be introduced at present need not necessarily be interpreted as disapproval of the measure, but rather that, owing to the critical state of the industry, when a single adverse swing of the pendulum may produce disaster, it hesitates to ask for a new law, the practical working of which has not yet been tested, lest it should find itself subject to disabilities which it is not in a position to bear. The Hon'ble Mr. Acworth had a by no means easy task, his difficulties being greatly accentuated by the fact that the revised version of the Bill was not published in time to allow Councillors to meet in consultation. He had, therefore, to extract his instructions from a voluminous correspondence. I think the result shows that he acted with wisdom and discretion, and I feel sure that this Association will show its appreciation of his labours, which were very prolonged, by a unanimous vote of thanks.

The passing of the Tea Cess Bill marks an epoch in planting history. It shows the willingness of Government to legislate in favour of a community taxing itself when it is clear that a large majority deem such tax to be for the general good; and it indicates the firm determination of tea-planters to push their product into all parts of the world. They may be sincerely congratulated on the result. The carrying out of the Resolutions passed at the recent Meeting of the Committee appointed to administer the cess will be watched with keen interest,

especially that which offers a bonus on the manufacture of green teas. The Hon'ble Mr. Acworth and Mr. Jackson have earned the thanks of tea-planters in S. India for representing them at this Meeting. It is pleasing to notice that there has been a decided improvement in the tea trade, especially in view of the disappointment that was felt at the refusal of the Chancellor of the Exchequer to reduce the duty. I wish I were able to record a similar improvement in coffee. Unfortunately, last season witnessed the lowest prices ever realised for East Indian kinds, and if it had not been for bumper crops the situation would have been more than critical. However, the depression in the industry, which we must hope will gradually pass away, must not be allowed to stifle enterprise. There are several matters of deep interest now before coffee-planters which, if it is demonstrated that they are likely to help their industry, they should not fail to support.

First, there is the coffee cess, with which I regret to say no progress has been made, save that it has been ascertained that several firms of good standing in different parts of the country have expressed their willingness to undertake the business of pushing the sales of lower grade coffees. It is obvious, however, that a voluntary cess will not receive adequate support, and should this Meeting determine that the question of a compulsory one is impracticable, the matter for the time being must be laid aside.

Second, comes the subject of the delegate to Brazil. The Government of India have been good enough to offer to assist us to the extent of Rs 5,000. It seems to be generally agreed that Rs.15,000 would cover the cost of the Mission, and when we have ascertained to-day what support District Associations are prepared to give, we shall be in a position to judge whether the project shall be proceeded with or not.

Third, comes the St. Louis Exhibition. Tea-planters throughout India are making great efforts to be adequately represented, and it would appear that the best chance coffee has is to accept the proposal, which the Hon'ble Mr. Acworth kindly brought forward when he was in Calcutta, for representation in the Tea Show rooms, provided satisfactory arrangements can be made. Funds, however, will be required. You will be asked to-day to consider what this Association on behalf of tea and coffee should subscribe, and I trust delegates have come ready to state what their Associations will give. The large sum that will be devoted by tea-planters to this object is proof of their belief that benefits will ensue, but there seems to be an idea prevalent among coffee-planters that because America has some of the mild coffees near at hand it would be useless to exhibit East Indian. I ask those who hold this view to consider what has been done by Indian tea, which previous to the Chicago Exhibition dealers refused to look at. By effectively exhibiting it there and by vigorous and well-directed efforts subsequently, a large demand was created, which has developed to such an extent that it has, in combination with increased business with Russia, relieved the pressure in London. I see no reason, if only funds be forthcoming, why by like measures we should not bring the United States to recognise the superiority of our coffee. Moreover, the Exhibition, which will be attended by people of all nations, will offer an opportunity of world-wide advertisement.

Last but not least comes the question of the quality and curing of East India coffee, which I am very pleased to see among the Agenda. To coffee-planters, I may say, it looms bigger than any other matter that will be discussed at this Meeting. The past season showed two remarkable features. One, the terribly low rates realised for the bulk of East India coffee, and the other the exceptionally high prices certain Mysore marks fetched. A thorough investigation is demanded, as to whether the quality of E. I. coffee has, generally speaking,

fallen off, and if so what steps may be taken to rectify it. I trust our deliberations will lead to some important practical Resolutions. It does not appear to me that the working of the Paris Shop is satisfactory from our point of view. It is on too small a scale to do the work that we hoped it might accomplish. Mr. Hodgson, however, will I trust give us full information, and we must decide whether we should continue to support it or not. Some sensible letters have appeared in the *Madras Mail* drawing attention to the enormous difference between the price realised by the producer and the price paid by the consumer, which suggest that it might be more profitable to devote funds to direct retailing of our produce than to the above-mentioned institution. Such an enterprise, however, bristles with difficulties, and would have to be approached with great caution.

It is satisfactory to notice that as a result of Dr. Lehmann's interesting Address last year several firms are offering fertilisers with analyses guaranteed, and I trust they will be widely encouraged.

Since our last Meeting the question of preferential duties has been launched by Mr. Chamberlain into the arena of possible, if not practical, politics. This Association has already pronounced itself in favour of such a tariff, but it is a matter of such huge and varied interests, such wide ramifications, and so much light has recently been thrown on it from both points of view, that it could scarcely be called inconsistent if we should pause, before giving our final dictum, until the proposed investigation has taken place. I apprehend that we entirely approve of preferential duties in principle, and should they be shown to be feasible, would cordially welcome them. As the question, however, is still, as it were, *sub judice*, it would perhaps be wise to express in the Resolution that we shall pass to-day our entire approval of the inquiry that is being made, and our hope that the result will be to show that a Commercial Union between the various parts of the Empire is practicable, and would be likely to be, as we anticipate, a boon to all who would enter into it. Thanking the Planting Member, the Councillors, and the Secretary for the support they have accorded me during my year of office I place my resignation in the hands of this Meeting. (Cheers.)

#### THE WORK OF THE PLANTING MEMBER.

The next business on the Agenda was the statement to be made by the Hon'ble the Planting Member of the work he had been able to do in that capacity. The Hon'ble Mr. Acworth said:—

Mr. CHAIRMAN AND GENTLEMEN,—I do not think there is anything to tell you more than you have already seen in the Press of my work as Planting Member. It has been almost wholly in connection with the Labour Bill, about which I shall not say anything just now, as it has a Section in the Agenda Paper and will be more fully discussed later. The only other matter that came up during the year was the Impartible Estates Bill, a sort of sequel to the Court of Wards Bill. I would here take the opportunity of warning members of this Association that if they wish to enter into agreements with Zemindars for leases of lands either for planting, mining or other purposes, it would be just as well for them to find out before doing so, whether the estate in question is on the schedule of the Impartible Estates Bill or not. If it is, they will have to take care to obtain the sanction of the Collector in whose charge the Zemindary is situated prior to entering on a contract, otherwise they will find that their contract will not be approved by the Government and will become null and void. I have nothing else to say, gentlemen, unless anybody has any questions to ask me. If nobody has any questions to ask, I now beg to place my resignation in your hands, as my term of office shortly expires, and ask you to elect another Planting

Member for the ensuing period, as I do not propose to seek re-election.

I have now served four years and have always endeavoured to do the work the office entailed conscientiously and to the best of my ability. I well know, particularly in the case of the Labour Bill, that I was not able to please everybody; but I never hoped to be able to do so. I was absolutely certain when the matter first came up that there would be a certain amount of friction and, I say it with regret, a certain amount of ill-feeling. I have very much to regret the intemperance of certain letters which I received, letters which made my work very much more difficult, inasmuch as their intemperance made it impossible for me to place them before the Select Committee appointed to consider the Bill. At the same time I admit that I received very great assistance from many Associations. I could not have got the work through but for this assistance so freely rendered. I would here express my regret that I was not sufficiently acquainted with the subject of local labour to do justice to the views of those employing that labour as we have none of that particular class of labour on our Hills. It was only after the Bill came under discussion and during the discussion that I really grasped the importance of local labour and its peculiar conditions. I think, therefore, that in this respect some other gentleman might have served your interests better than I have done. At the same time I did my best and I know that you all recognise that (hear, hear). I know that you all recognise that from the cordial votes of thanks accorded to me by almost every Association. Indeed, I may say by every Association but one, and I know that in that Association many members were absent from the Meeting whose votes would have swung the pendulum the other way, and would have converted the vote of censure into one of thanks.

I have now to lay my resignation in your hands; I do not seek re-election and I desire to thank you for the confidence you have reposed in me (cheers).

Mr. F. M. PARKER (Travancore Cardamom Hills) said that it was a matter for regret that the Hon'ble Mr. Acworth, the godfather of the Labour Act, was not able to remain in office long enough to see the infant walk. It would, he thought, be to the interest of the Association and to the Act itself, if he was able to see it through its first stages.

#### CURRENCY NOTES.

The CHAIRMAN, in connection with this subject, said that the Government of India had made a proposal which would tend to restrict the circulation of Currency Notes. Its proposal was that notes issued by a Sub-Circle—with the exception of Rs.5 notes—should not be encashable at the Circles. The proposal would only affect the Association so far as Calicut was concerned because there were only two offices of issue in this Presidency, namely, Calicut and Madras, and notes issued by the Calicut office would no longer be encashable at Madras. It seemed to him that anything that interfered with the free circulation of currency notes was to be deprecated, as it was a distinct advantage in commercial circles that there should be free circulation of currency notes. As the Bengal Chamber of Commerce had opposed the proposal he did not think they could do better than support the action that body had taken.

The Hon'ble Mr. ACWORTH, in seconding the proposal, read the summing up of the letter in which the Bengal Chamber of Commerce had opposed the proposal.

Mr. R. GOMPERTZ (Shevaroy) said that this was a matter which affected a wider circle than planters, and while he would support all that the Bengal Chamber of Commerce had said, he would go a little further and point out that the time had come when Government Currency Notes, of whatever Circle, should be encashable in every Treasury in India. He quoted largely from a previous speech he made on the subject

at a Meeting of the Association in 1897. In advocating his proposal he said that Government had made the general taxpayer a great bugbear, by insisting that trade would be benefited at the expense of the general taxpayer. He did not believe this. The proposal would be for the convenience of everyone, and it was the business of Government to consult the convenience of its subjects, and this was a good opportunity for doing so.

The Meeting then proceeded to discuss the matter in Committee, when the following Resolutions were passed and afterwards confirmed in open Meeting.

Proposed from the Chair "That this Association is in accord with the Bengal Chamber of Commerce and desires to support the policy it has laid down."

Proposed by Mr. GOMPERTZ and seconded by Mr. Romilly, "That the U. P. A. S. I. takes this opportunity of stating that in its opinion all Government currency notes should be encashable at every Treasury in India, without reference to its Circle of issue, because (1) it would encourage and foster trade, (2) it would be a great convenience to the public generally, since it would popularise currency notes and increase their circulation, and (3) because in consequence of the enormous profit to it in issuing notes, it can very well afford to do so."

#### THE ST. LOUIS EXHIBITION.

The Hon'ble Mr. G. L. ACWORTH, in opening the discussion on this subject, said:—

MR. CHAIRMAN AND GENTLEMEN,—It seems rather absurd to say over again all that I said this morning; but it is necessary to do so in order that it may be recorded in our Book of Proceedings. When I was in Calcutta last June, in connection with the Tea Cess Fund, the Committee determined to devote Rs.50,000 of their funds towards the St. Louis Exhibition. In one way and another, they hoped to altogether make up the sum of £10,000. I was asked whether the scheme would have our approval and whether we in South India would do anything to assist it. I suggested that I thought this Association would be willing to contribute to the Exhibition a sum of Rs.20,000 or Rs.25,000, provided Coffee and Cardamom were allowed to be exhibited in the same room with tea, and that coffee should be served in the cup in the same room as tea. I think the Indian Tea Association would be quite willing to agree to these terms and to allow our products to be exhibited alongside of theirs. I propose making up the funds necessary by a contribution of, say, Rs.10,000 from this Association; and I hoped we should make up the balance by contributions from the various local Governments which have always been generous to the planter on these occasions. On contributing Rs.20,000 or Rs.25,000 the Indian Tea Association would be willing to let us in and I hope to be able to tell them to-night that we have got the first Rs.10,000. I see from the Paris Exhibition Fund that we have Rs.8,076 to our credit; Mr. Hodgson, I think, will refund £120 from the Paris Shop Fund, making a total of Rs.9,876, which leaves a balance of Rs.124 only to be found, about which there will be no difficulty. That is the position and I would ask you to sanction an expenditure of this sum of Rs.10,000 towards the St. Louis Exhibition.

Mr. F. M. PARKER seconded the proposition.

Mr. H. P. HODGSON said that both as the representative of the Nilgiri and Annamalai Associations he was in favour of the proposal to exhibit their coffee at the St. Louis Exhibition if it could be done, Mr. Acworth had suggested the means by which it could be legitimately done. A fund of over Rs.8,000 had been raised for the express purpose of Exhibitions and it was only transferring the money from the Paris Exhibition to the St. Louis Exhibition, a legitimate transfer, as had been shown that day in Committee. He only repeated the

statement in order that it might be recorded. From what he had learned at home the results of advertising at Exhibitions had proved useless. Unless advertisement in the shape of exhibits is followed up by supplies, it was only money thrown away. At the Paris Exhibition their coffee and tea were both exhibited and distributed in cup. Large numbers of people liked them and appreciated them, and after the Exhibition considerable enquiries were made for both; but, as a matter of fact, none was to be had by people who wished to get them. The demand that had been created was lost and the money that had been spent on the Exhibition to create this demand was also lost. He would, therefore, like planters to bear in mind that if they are prepared to spend this sum of money on exhibiting their produce, they must also make some arrangements to see that the demand created is followed up by supplies. The Indian Tea Association would see that this was done in the case of tea, but he was afraid that it would not be done in the case of coffee. He, therefore, wanted coffee-planters to be prepared to arrange to follow up any demand for coffee that may arise after the Exhibition with supplies of coffee to meet it.

Mr. ROMILLY said that he agreed with what Mr. Hodgson had said. It always seemed to him that money spent on Exhibitions was money thrown away unless it was part of a big scheme of advertisement, Exhibitions did no good to anybody except it might be to the Railways, hotel keepers and the local people connected with them. He mentioned that in a letter to Mr. Acworth, who replied that it was the Chicago Exhibition which had really started Indian tea in America. It was then merely a case of following up advertisement with supplies. As Mr. Hodgson had said, all the money spent—and a large sum had been spent—on the Paris Exhibition, was practically money thrown away. He would, therefore, strongly advise them to consider what more money they could spend afterwards, and not consider as final the mere act of advertising their produce at the St. Louis Exhibition.

The CHAIRMAN said:—I think, with reference to what has fallen from Mr. Hodgson and Mr. Romilly that it would be advisable for us to formulate some scheme of backing up the proposal to exhibit at the St. Louis Exhibition. I think the best way to do that would be to appoint a Sub-Committee to consider the matter and bring forward some proposals. We have, I know, done that very often and such proposals have had no result. I should like to ask Mr. Acworth whether if the Rs.25,000 is subscribed by us, the Indian Tea Association would consider it sufficient to cover the representation of our tea, coffee and cardamoms.

Mr. ACWORTH: I presume so.

The CHAIRMAN, continuing: If we can get this sum in the manner suggested, I would propose that the money we would get from District Associations, etc., should be devoted to backing up the scheme.

The Hon'ble Mr. ACWORTH said he was in perfect accord with what had fallen from the previous speakers. If they liked to appoint a Sub-Committee by all means let them do so; but he believed that the whole scheme would end in smoke, as it had on every occasion in the last four years. There was no reason at all why the efforts to push the sale of coffee after the close of the Exhibition should fail. He could see no reason why a certain number of coffee-planters should not bind themselves together, in the event of their coffee being appreciated, and devote a certain proportion of their tonnage to meeting the demand that might arise. If 50 men would only ship a ton apiece of their produce to America, he was quite sure that large retail dealers would be quite willing to store it, and if it was better than what they had got, would be quite willing to push it, and they would find that they would get a better price for it than in the London Market at this moment. It

might prove the nucleus of a large business, just as many large businesses had sprung from very small beginnings. If they were unable to get the whole body of coffee-planters to join them, they ought to take action by themselves. It might seem presumptuous of him to give this advice as he was not a coffee-planter; but he could not help taking an interest in the industry and would like to see the coffee industry flourishing as it ought to flourish. He felt that if it went to the wall it would break up the Association. He was perfectly certain they could place their coffee in a profitable market in America, provided the coffee was liked, and if they could not do so as a general body they could do it individually, by forming a Syndicate, picking their men, who ought to be perfectly able and willing to push the article. This would be a businesslike way of setting to work.

The Meeting at this stage went into Committee to discuss details, when the following Resolution was passed:—

Proposed by the Hon'ble Mr. G. L. Acworth, and seconded by Mr. F. M. Parker, "That this Association do subscribe Rs.10,000 to the St. Louis Exhibition." It was carried unanimously and confirmed in open Meeting.

#### VOTING POWERS OF COMMITTEE.

Mr. GEORGE ROMILLY said that before they discussed this matter he would like to call attention to the proceedings of last year. On p. 44 it would be found stated that Mr. Lechler's Resolution on this subject was carried unanimously. He was instructed by the Honorary Secretary of his Association to enter a protest, as that gentleman said that when the subject was discussed in Committee he spoke against it and in open Meeting he voted against it. He thought that Mr. Gompertz, the Chairman at the time, would probably remember the fact and he thought it would be sufficient if the matter was admitted by those present at the time to be as stated. He merely desired to call attention to the fact that Wynaad did not vote for Mr. Lechler's Resolution. Mr. Gompertz said that Mr. Malcolm wrote to him at the time and that he sent a correction to the *Madras Mail*. He did not notice that the mistake appeared in the proceedings.

Mr. SCOT-SKIRVING said that at the last Meeting of the North Mysore Planters' Association the following Resolution was passed with the request that the delegates representing North Mysore would bring it up at the next Annual General Meeting of the U. P. A. S. I.:—"That the system of voting in the Council revert to that in use prior to 1902, with the exception that the Chairman shall have a vote equivalent to that of the largest voting Association, but he shall not vote for the Association which he represents." As all were aware, the voting at the annual General Meetings of the U. P. A. S. I. was on the basis of the subscriptions of the various Associations, and he was at a loss to see why the same procedure had been departed from in regard to Council Meetings held during the year.

Mr. GOMPERTZ: I think there is an initial error in your proposal. You say that we ought to revert to the system of voting existing prior to 1902. It was because there was nothing laid down in the rules as to the voting in Council that this proposal was brought forward.

Mr. ROMILLY said that with reference to what had fallen from Mr. Gompertz, during the two years he (Mr. Romilly) was Chairman, nothing came up between the Meetings which called for an enumeration of votes, and in consequence the question never arose. His Association had now instructed him to call attention to the same point that Mr. Scot-Skirving had raised and to record its desire that the voting throughout the year should be on the same basis as at the Annual Meetings, namely a monetary vote. He confessed he did not see any logical reason for giving a small Association with a subscrip-

tion of Rs.50 an equal vote with an Association subscribing Rs.500.

Mr. H. P. HODGSON supported what Mr. Romilly had just said. He could see no reason or consistency in altering the system of the voting power of the Association in intermediate business from what it was at the Annual General Meeting. He thought it very desirable that Associations paying a larger subscription should have a larger vote, not only at the General Meeting, but for all intermediate business which took place between Meetings.

The Meeting then went into Committee to discuss the matter in detail, when the Resolution proposed by Mr. Scot-Skirving and seconded by Mr. Romilly was withdrawn in favour of the following, brought forward by the same gentlemen:—"That the following be substituted for Rule 5:—'That in all Meetings and the conduct of business by the Council, the system of voting be on the subscription basis of one vote for every Rs.10 subscribed, and that the Chairman, Vice-Chairman, Legal Member and the ex-Chairman of the previous year shall each have one vote.'" It was carried in Committee and subsequently confirmed in open Meeting.

#### SECOND DAY, August 4.

The delegates met at 9 A.M. and sat till 1 P.M., the greater portion of the sitting being devoted to a very exhaustive discussion of the Madras Planters' Labour Act (Act I. of 1903) in Committee.

#### THE TEA CESS ACT.

The Hon'ble Mr. ACWORTH said he had nothing fresh to say regarding this subject.

Mr. ROMILLY said:—Mr. Chairman, with your permission with regard to the tea cess, I wish to ask Mr. Acworth what he actually did say at Calcutta with regard to the coffee industry, because, what he was reported to have said was in my opinion unfair to the coffee industry. It is with very great reluctance that I say anything that even seems to reflect on Mr. Acworth's public conduct, because no one knows better than I do all that he has done for our community, and no one appreciates it more than I do. We are all unanimous I am glad to think on that. But that does not affect our duty, though it does make it more difficult, to call him to explain anything we may object to in his public speeches when we consider that he has gone astray. So long as a gentleman is a representative of this Association on the Legislature, a post of great responsibility in which he has the full confidence of both industries he represents, in my own opinion he cannot in any matter dissociate the one industry from the other. He told us in Committee that for the moment he was merely acting as an advocate of the tea industry. That position I hold is untenable. If his sense of duty compelled him to speak on behalf of tea and tea only, there was, it seems to me, no necessity to introduce the subject of coffee at all.

The Hon'ble Mr. ACWORTH, in replying, said:—Mr. Chairman and Gentlemen, when I saw the paragraph in the *Madras Mail* to which Mr. Romilly refers, I could not help feeling what a pity it was that the paragraph had ever appeared, because it seemed to me a very great pity to try and stir up strife between our different industries. If you are going to do that then an Association must fall to the ground. This Association represents various industries such as tea, coffee, cinchona, pepper, cardamoms, etc.; but of these industries tea and coffee are the two greatest, and it is idle to pretend for a moment that these two products will work hand in hand. Rivals they are and rivals they will always be. Now to return to what I said in Calcutta; I beg in the first place to say that I was not very well reported—I am told I am a difficult person to report;

but this is the only time I have ever had my speech thrown up against me, for in school I was always in trouble because I was heard talking, etc. What I said was that we were starting the sale of tea in South India in a similar manner to what Messrs. Andrew Yule & Co. were doing in Northern India. I then proceeded to say that the condition of things was very different in North India. In South India every native liked a hot drink and was accustomed in the mornings to drink hot coffee. To a large section in South India coffee was a thing of the past and the consequence is—these were the words omitted—now that it is impossible to get it, the natives are turning from coffee to tea. I then went on to suggest that money would be well spent in endeavouring to get natives in South India to drink tea in place of coffee. As regards my position when making these utterances, I beg, in the first place, to state that I was not the representative of the United Planters' Association of South India. I was sent up as the representative of the whole tea industry of this Presidency and felt bound in duty to advocate every possible means of pushing that industry. My second contention is that the business of the Planting Member is merely to stand between Government and the planters. It is absurd to suppose that he cannot dissociate himself occasionally from his official position and push the sale of his product, which has nothing whatever to do with his work. As I said before, what is the use of pretending the two products tea and coffee are allied? They always must be rivals. Again I would ask what harm have I done to the coffee-planter? Personally I think I have done him a good turn by pointing out a market as open to him as to the tea-planter, and I think I deserve the thanks of every coffee-planter for pointing out a market which is still lying open to him, of which, however, he appears to have been ignorant, of which he has not yet availed himself, but of which he can still avail himself. It is as open to him as it is to me if he will only take the trouble of going down to it. Mr. Romilly knows as well as I do that tea cannot stand against coffee; it has no chance at all. The native of South India will not drink tea if he can get coffee. I think, therefore, that Mr. Romilly will agree that I have pointed out a market to him of which he appeared ignorant, and to which if he cares to send his produce, he ought to find little trouble in disposing of it.

Mr. ROMILLY said that he was much obliged to Mr. Acworth and was glad to have given him the opportunity of making the explanation which he had just offered. The matter then closed.

#### DIFFERENTIAL DUTIES.

The Hon'ble Mr. ACWORTH said:—Mr. CHAIRMAN AND GENTLEMEN,—It will be within the recollection of everybody, that some two or three years since we in this Association took up the subject of Preferential Tariffs, and with the object of ascertaining the feeling of the Commercial World we corresponded with almost every Chamber of Commerce of any importance throughout the Empire. At that time we had little or no hope of the topic being publicly discussed in the near future, but the Fiscal Policy of Great Britain is now not only agitating politicians at Home, but is creating a scare in such strictly protective countries as Germany. That the mere mooted of the question, the mere demand for an enquiry should create such a scare, seems to me most significant, and to my mind emphasises the absolute necessity for such an enquiry. My own opinion is that our present fiscal policy is unsuited to the times, that a careful readjustment of taxation, by which our Colonies and Dependencies would benefit, might be so made as not to add a single additional penny to the poor man's burden; that it is neither business nor policy to allow foreign goods to be dumped down on our own shores at under the cost of production; that such a system, if persisted in, must eventuate in the crushing of our manufactures, which after

all are our own life blood; that the policy of foreign nations being what it is, we ourselves in order to obtain concessions from them, must have something in our own hands to bargain with, and finally that nothing can so bind the Empire together as self-interest, and that that self-interest can only be found in an Imperial Zollverein. I do not like the words Preferential Tariffs. To trade freely with our own kith and kin, though it be only in certain specified commodities is no more fixing Preferential Tariffs than is the free trade intercourse between the different German States, and I am fairly confident that had it not been for their Zollverein these States would not have held together so long as they have done.

But, Mr. Chairman, I have no intention of making a long speech on this most interesting question, nor do I propose to give you a lecture on political economy. For my part, I am content to follow Mr. Chamberlain. There is no man living, in my opinion, no man has lived since the great Earl of Chatham, who has done more for the magnificent Empire of which we are so proud, than Mr. Chamberlain; and it is idle to suppose that this great statesman would carelessly throw away the immense reputation he has achieved for the mere sake of creating a sensation, as a certain section of the Press, both British and Foreign, would have us to believe. There is, however, one point, on which I would touch before I close. In the event of the enquiry leading to some sort of Zollverein, India must not be left out in the cold. India would benefit under such system as much as any other part of the Empire, and this is as much a part of the Empire as is any one of the Colonies. India has done much and suffered much for the Empire, and we all know the great part that India recently played when the Empire was in danger.

To sum up, then, I am of opinion—

- (1) That the whole of our manufacturing industry is in danger through the closing of foreign markets against us.
- (2) That for this we can receive no redress, until we have something to give for concessions made to us.
- (3) That we cannot hope to draw closer the Imperial ties, that should subsist between us, our Colonies and Dependencies without appealing to the self-interest of all concerned.

I beg therefore to move the following Resolution:—"That in the opinion of this Association Mr. Chamberlain has done a great public service in raising the question of the fiscal policy of Great Britain, her Colonies and Dependencies, and his demand for an enquiry into that policy has our most cordial support." If you pass this Resolution I would add by way of a rider that steps be taken to publish it in all the leading London daily papers and in the daily papers of the large manufacturing towns, so that the British public should know what is the opinion of a great British industry in Southern India. Mr. Fletcher Norton, under the instructions of his Association, seconded the Resolution. In doing so he said that Mr. Chamberlain's policy was the outcome of the Conference of Colonial Premiers two years ago, and his recent tour through South Africa opened his eyes to the way in which British trade and British industries were being destroyed abroad and in her own Colonies. The Resolution was put and carried unanimously.

#### BRITISH DUTIES ON TEA.

Mr. F. M. PARKER, in proposing the Resolution which follows, said that the subject could not be brought too frequently to the notice of the authorities. He thought that very often people suffered from their own unintentional apathy by not continually worrying to get their grievances remedied. He need not mention the tea duty which was a great incubus on the industry and kept prices high and tended towards checking consumption. He thought they should lose no opportunity of reminding the authorities that it would be greatly to their benefit if the duties

were taken off. He therefore moved "that in the opinion of this Association the Chancellor of the Exchequer should again be reminded of the heavy burden caused to the industry by the present heavy duty on tea, amounting to about 80 per cent. of its present market value.

Mr. ROMILLY seconded the motion, which was carried unanimously.

#### FLOWERS OF SULPHUR.

Mr. F. M. PARKER said that the Cardamom Hills Association had asked him to bring this matter to the notice of the Association for such action as it might deem necessary, as the restriction on the import of flowers of sulphur was causing much inconvenience. Flowers of sulphur were necessary for curing cardamoms, and at present the only port by which they could be brought in was Madras. Consequently flowers of sulphur obtained in Ceylon and landed at Tuticorin had to be re-shipped to Madras and brought from that place to the Cardamom Hills, entailing a great deal of inconvenience, expense and loss of time. To the best of his belief these restrictions had only been imposed within the past year. He therefore proposed "that the Government be requested to allow flowers of sulphur used in the curing of cardamoms to be imported into Tuticorin under a declaration."

Mr. FLETCHER NORTON seconded the motion though he did not think they would be very successful. When they approached Government about the import duty on manures they very kindly made a number of manures free of import duty, but they retained the duty on nitrate of soda because it might form a constituent part of gunpowder. For this reason they would probably retain the restriction just imposed on flowers of sulphur.

The Resolution was then put to the Meeting and carried unanimously.

#### TRAVANCORE EXPORT DUTY ON COFFEE.

Mr. E. E. WILLIAMS brought forward this subject, and in doing so, said:—

I feel sure all of you who read the proceedings of the various District Associations will have noticed that the question of the Travancore Export Duty on coffee has been continually brought up for discussion by our Association. Two years ago Baron Rosenberg brought up this subject at the U. P. A. Meeting, but it was pointed out to him that he should first exhaust the official channels of redress in Travancore before seeking aid from this Association. This we have done, but with no success. We now appeal to the U. P. A. S. I. for help. I cannot put the matter more clearly before you than by quoting parts of a letter from a correspondent signing himself "N. Travancore" to the *Madras Mail*.

The history of this export duty is this:—In 1872 the planters of Travancore asked for a reduction of the then ruling export duty of 5 per cent. to  $2\frac{1}{2}$  per cent., and this was granted in 1877. Subsequently, seeing that leaf-disease and borer were killing out their estates, they asked for the full export duty to be reimposed and their land-tax remitted. This again was granted by the Durbar in 1883. Those were the days in which coffee was grown only in South and Central Travancore. It has since almost entirely disappeared from those Districts, and tea has been almost entirely planted in its stead. Coffee-growing is now almost entirely confined to the High Range, where for years it has been a success and shows no sign of going out, as its southern predecessor did, provided of course that it be still possible to sufficiently cultivate it. But in 1872 the High Range was not opened, and in 1883, though we had begun operations in a small way we were not, so far as I know, consulted as to the proposed change in taxation, nor was our land-tax reduced, as was that of the other planting Districts.

It has been rightly urged by the authorities that we went into coffee with our eyes open, knowing that we would have to pay a land-tax of 12 annas, per acre and an export duty of 5 per cent., and that therefore we have no reason for complaint. But that surely is not the point of view that a liberal Government should take, when dealing with an industry which is suffering from causes (*viz.* over-production in other countries) subsequent, to a large extent, to its own beginning. Taxes are not based on cast-iron principles, and when they are likely to suffocate an industry, which, if suffered to keep itself alive through a crisis, may yet again become a valuable one, then it is desirable that the State should remit or at least ease the burden. Nor is there even a precedent wanting, for in this very question this has been shown by the previous reduction of the export duty in the hard times of 1877.

The correspondence between our Planters' Association and the Sircar asking for a remission of the tax dates over several years, but although the Dewan appeared to take a sympathetic view of the question when interviewed, the official reply in the negative has been absolute. The Resident was then approached for his advice on the subject, but his opinion was equally unfavourable. The total amount obtained from this duty is so small that it is perhaps not realised how few the pockets are it comes from, and how hardly it bears on the small acreage. Taking my own case as an illustration, and striking an average I find that it comes to approximately Rs 4 per acre, in addition to the land-tax.

Now, in the last Report of the Nilgiri Planters' Association a Resolution was passed to ask for a remission of their land-tax, in view of present times of stress; yet I believe they only pay from Re.1 to Re.1-8 per acre. This will emphasise how hard it is for us to pay nearly Rs.5 per acre. But it is made additionally hard to us by the fact that those estates which originally asked that coffee be saddled with this burden, pay now a tax of 2 annas per acre only on their tea—*i.e.* that our coffee virtually pays a portion of their land-tax. This may seem a dog in the manger view, but it is the plain truth. If it be necessary for purposes of revenue that the planting produce of a country should be taxed, surely it is fair that the contribution required be distributed generally and so be less felt, and not confined to one product grown on a very small part of the total acreage. As my own acreage under tea is larger than that under coffee, I cannot well be accused of undue partiality in this statement.

The Resolution I wish to put to the Meeting is as follows:—  
"That this Association views with regret the special disabilities the coffee-planters of Travancore labour under, and the refusal of the Government of that State to grant relief from the burden of an export duty on coffee during a period of stress such as the present, and that the Secretary be instructed to address His Highness' Government asking them to once more go into the question and express the hope of a more favourable consideration in view of the hardships the coffee industry is now suffering from—hardships undeserved and beyond its control."

The Resolution was seconded by Mr. Fletcher Norton and was carried.

#### THIRD DAY, August 5.

The delegates met at 9 A.M. when the Chairman opened the proceedings by announcing that he had received a letter from Mr. Meenachshiya with reference to certain experiments in coffee-growing which that gentleman was conducting. The letter was circulated for the information of the delegates.

#### ENHANCED RATES ON THE S. M. RAILWAY.

Mr. MARTIN, on behalf of the Coorg Planters' Association, drew the attention of the Meeting to the recent action of the

Southern Mahratta Railway authorities in suddenly raising the rates of freight on coffee from Parchamvalieni to Bangalore and asked for the support of the United Planters' Association in the protest that was being made against this action.

A Resolution was accordingly passed giving the support required.

### The St. Louis Exhibition.

#### THE COMMITTEE'S REPORT.

The CHAIRMAN then presented the following Report of the Committee appointed to consider the details in connection with the St. Louis Exhibition and after:—

With reference to the exhibits the Committee proposed:—

(1) That it be ascertained from the I. T. A. what quantities of tea, pepper and cardamoms would be required as exhibits, and how much coffee for coffee in the cup; when these would be required, to whom they should be sent, and how it is proposed to procure them

(2) That exhibits should include all the grades of coffee from No. 1 to triage as well as coffee dried in the cherry.

With reference to the subsequent action, the Committee is of opinion that planters themselves must arrange for the first supplies of coffee to meet any demand which may arise after the Exhibition and therefore propose:—

(1) That the members of the District Association be invited to contribute cured coffee of any grade in quantities of not less than 1 cwt. to be consigned to an Agent for sale. The proceeds on realisation to be remitted to the U. P. A. S. I. for distribution to the contributors in proportion to the amount and grade of coffee supplied.

(2) That the I. T. A. Commissioner be asked to kindly ascertain as soon as he conveniently can the names of a reliable firm or firms to whom such consignments could be made. Further that to save time, he be asked to instruct such firms to communicate with the Secretary, U. P. A., stating the terms on which they would receive such consignments.

The Committee is of opinion that a small portion of the Funds raised for the St. Louis Exhibition scheme should be reserved to cover expenses which may be incurred in connection with our object of promoting such a demand as may arise subsequent to the Exhibition. It is understood, however, that contributors should pay all ordinary charges on their respective consignments.

(Signed) L. KING CHURCH.

" G. R. MARTIN.

" J. H. HARRIS.

" H. P. HODGSON.

The Report was exhaustively discussed in Committee and the following Resolutions were finally adopted:—

(1) "That the Report of the Sub-Committee be accepted with thanks."

(2) That a Coffee Committee, consisting of Messrs. Harris, Hodgson, King Church and Martin, be appointed to carry out all business in connection with the St. Louis Exhibition, and with the subsequent efforts to promote the demand and the sale of coffee in the United States of America."

#### THE COFFEE CESS.

The CHAIRMAN:—The next subject on the Agenda is the coffee cess. As the only member present of the Standing Committee appointed last year to attend to this matter I think it necessary to make a few remarks. The chief reason why the Standing Committee was unable to make any progress was the lukewarmness shown throughout by District Associations—I may perhaps except the Nilgiris Association, in which a considerable amount of interest was shown. I wish before proceeding further to draw your attention to a letter published

in the *Madras Mail* received to-day. I do not attach much importance to the letter, because it is anonymous; but, gentlemen, I think I may say that the part of it which has reference to the representatives of coffee at the Meeting of the U. P. A. S. I. having shown themselves weak to a degree, is not only uncalled for, but absolutely untrue. The weakness has not been shown by the delegates but by the planters themselves in every coffee District. They have shown in this matter a great want of interest and have insisted on a full fledged scheme before they would consent to subscribe to the cess. I quite agree with the remark made by Mr. Hodgson, at an earlier stage of to-day's proceedings, that it is quite impossible to draw up any scheme until you know what funds you will have to deal with. The Committee, during its labours, ascertained the names of certain firms who were willing to take and push the sale of our lower grades of coffee. But these firms very naturally wanted to know what quantity we could supply and what prices we could quote for our coffee, information we were absolutely unable to give. The truth of the matter is that a voluntary cess is hopeless; men will not subscribe to a scheme under which those who do not subscribe will benefit equally with themselves. With respect to a compulsory cess I am afraid that it is very doubtful whether it will receive sufficient support to warrant its adoption. Moreover, it must be remembered that though the Government have given tea a compulsory cess, it does not necessarily follow that they will do so with regard to coffee because you must remember that tea stands alone. It cannot for a moment be contended that coffee—important though our interests are—is as important an industry as tea. If we ask for a compulsory cess for coffee, and it is granted by Government, it must be considered that the logical outcome of such a concession would be to grant a compulsory cess to pepper, cardamoms and other products and Government would see no end to these requests for a compulsory cess. I do not wish to discourage you in this matter, because it is one in which I personally have taken a great interest; but unless men show a greater earnestness in meeting the requirements of the situation—I still think there is a market for our coffee at our very doors, and the Standing Committee has shown how that market can be captured—I think we must abandon the idea.

Mr. GOMPERTZ:—In thanking you, Mr. Chairman, for your able account of the failure of the Coffee Committee I desire to take exception to one statement. You said you received no support from anybody but the Nilgiri Planters' Association.

The CHAIRMAN:—I said little support. I said the support was lukewarm.

Mr. GOMPERTZ:—I do not think it can be said that my Association was lukewarm. Immediately after the Meeting we agreed to subscribe Rs.5 per ton and no other Association did the same. I wrote several times to the Committee and got no reply as to what was going on, except from Mr. Windle, who said that he could say nothing. Finally I learnt that as the Committee were receiving no support for the scheme they were going out of office. Perhaps you will make an alteration in your speech in accordance with these facts, if the speech is to be published.

The CHAIRMAN:—I regret very much the omission to except the Shevaroy from my charge of lukewarmness. I am aware that the Shevaroy did show an interest in the scheme and I regret that I did not couple their names with that of the Nilgiris.

The Hon'ble Mr. ACWORTH:—Mr. Harris has referred to the letter which has appeared in the *Madras Mail* received this morning. You will observe that there is in it a second attack on myself, but I will pass that by, as the letter is from an anonymous correspondent. What I wish to draw special

attention to is the subject to which Mr. Harris has just referred. He has said that you can proceed no further in this work of opening out a market that lies at your very door or very close to your door, which we in tea propose to make use of. What I wish to ask now is, is that market to lie altogether fallow and neither tea nor coffee to be put into it? Is the tea-planter to be blamed for taking up and pushing his produce in a market you refuse to avail yourself of? And is the Planting Member to be blamed because, as a tea-planter, he has pointed out this market for tea which the coffee-planter refuses to use?

Mr. SCOT-SKIRVING:—As Planting Member you were blamed.

Mr. ACWORTH:—I am a tea-planter first; that is my living.

#### THE PARIS SHOP.

Mr. H. P. HODGSON, in speaking on this subject, said that he did not propose to take up much time with what he had to say about the Paris Shop. As promised before he went Home last year, he visited the shop and ascertained that it was in the hands of a Mr. Rogers who was managing the shop, and that there was a distinct demand for East India coffee in Paris, supposing supplies were there to meet the demand. Mr. Rogers had done a limited business in coffee by retailing packets of coffee, and the business was steadily growing. People who bought a packet came back for more; but the demand was one that would have to be built up, and this would take time and a certain amount of money. The U. P. A. had remitted him (Mr. Hodgson) a sum of £150, when he was in England, to use, at his discretion, in supporting this work. He went into the matter very carefully and came to the conclusion that it would not pay very much to support one shop. However, he paid a sum aggregating about £29-5-11 to Mr. Rogers for the purpose of purchasing coffee, sending out free samples and for printing advertisements, etc. He had written to Mr. Harris on his return giving the results of his enquiries, and, summarised, they were as follows:—Indian coffee was practically unknown as such in Paris, as it was all used for mixing with other coffee; when supplied pure it was much appreciated and there was a considerable demand for it after the Exhibition, but there were no supplies to meet the demand and finally if they wanted to push the sale of coffee in Paris they must make arrangements for their own supplies. In the concluding paragraph he said that considerable business might be done by subsidising retail dealers, but to work through one man was only a waste of money. Since then he had received a letter from Mr. Rogers giving a report of what he had been able to do and asking for further support to the extent of about £50 a year for a fixed period. He would have the letter circulated and members could decide what could be done. He thought it right to place their request before the Meeting, but would rather somebody else moved a Resolution on the subject. Some people were of opinion that it was a waste of money to support small concerns, but he did not regard this matter from that point of view. Perhaps it would be better to concentrate the greater portion of their money on a big concern, but he did not think it would do any harm to put a little money on an outsider if they could afford it, as this frequently turned up trumps. Lipton's, for instance, had originally started in a small shop; it had grown to a huge business with world-wide ramifications growing its own produce, etc.

The Meeting then went into Committee and discussed the matter at great length, and the following Resolution was finally adopted:—“That this Meeting regrets that, owing to large demands on its funds, it is unable to accord Mr. Rogers the support that he asks for, but it resolves that District Associations should be asked to communicate with him with a view to ascertaining on what terms he would receive small consignments of coffee and tea.”

#### Dr. LEHMANN'S LECTURE.

Dr. LEHMANN, the Agricultural Chemist to the Government of Mysore, at this stage attended the Meeting and delivered the following interesting and important lecture on the possibility of determining the quality of coffee by means of chemical analyses and on the absolute necessity for a guaranteed analysis for all manures.

#### QUALITY OF COFFEE.

Mr. CHAIRMAN and GENTLEMEN,—Wit the present low prices and the attempt to discriminate between different brands of coffee by other means than simply the appearance it presents to the eye the question of “quality of coffee” has come more prominently before us during late years than it did in the past. In order to get paying prices most of us want to improve the quality of our coffee. Personally, I have not the slightest doubt that this can be done in many instances. The soil and climate may be factors beyond our control; but if cultivation, manuring, shade and pruning have any effect on quality we will be able to do something in the direction of improving it. One of the factors is doubtless a careful and systematic selection of seed. What can be done in this direction in other agricultural products may be illustrated by the fact that in four years experiments with Indian corn have obtained from one cob of corn (originally taken) two strains (if I may so call them) one of which contained twice as much nitrogen as the other. There are two objects for which Indian corn is grown in America. The one is for feeding stock, the other for the production of starch glucose and syrup. For the former purpose a high percentage of nitrogen is desirable. For the latter a low percentage of nitrogen, or rather a high percentage of starch, is looked for. To get different varieties of corn best suited for these different requirements was the aim of some of the investigators at the American Experiment Stations. The result of the experiment I have quoted above is the outcome of some of these experiments, and illustrates most strikingly what can sometimes be done by careful selection of pedigree seed. This must, however, be undertaken systematically, and as it would lead too far to describe the methods fully at this Meeting I refer any who would like to try similar experiments to Bulletin No. 82 of the Illinois Experiment Station.

Of course with coffee it would be much more difficult to carry out such a line of work as the coffee-tree is perennial and requires three or four years to come into bearing, while corn produces its full crop in a few months. A much greater difficulty than this is, however, our lack of knowledge as to what is really required of coffee, or in other words what really constitutes quality in coffee. We have no reliable standard of quality. Without this we are groping in the dark; and, while it is not out of the question that by a lucky coincidence of circumstances we may possibly chance to improve our quality, there can be no systematic work without a reliable and easily applicable standard of quality, or without knowing exactly what we want to get. No doubt a step in advance has been taken by applying the “liquoring test” to coffee when determining its quality. But notwithstanding that it is the best at our disposal at present, it is really a very primitive one, and cannot be very reliable, as it depends entirely on the so-called personal element of the expert. It lacks the capability of accurate numerical expression, and is furthermore difficult of application in India, where, so far as we are concerned, most experiments in regard to the improvement of the quality of coffee from an agricultural standpoint would have to be conducted. The liquoring test, so far as I know it, consists of a uniform roasting of the various samples to be tested, and subsequently grinding and steeping each separately and the expert determining the relative merits of the samples by their taste. As we all know, the tastes of different individuals vary somewhat, and therefore the

possibility of different experts arriving at different conclusions regarding the relative merits of the same samples of coffee is not excluded. Moreover, the taste of the same individual varies sometimes when in different states of health, so that it appears to me to be in no wise impossible that the same expert may grade the same samples of coffee differently if he tests them at different times. And one of the chief essentials of a perfect standard of any kind is of course that it does not vary. It ought to give the same results no matter who uses it, nor when and where it is used. As our senses are always subject to variation and deception, they ought to be excluded as much as possible from all standards. Furthermore mechanical appliances and chemical tests are generally much more sensitive than our senses. However delicate a man's sense of touch may be he can never hope to detect differences in weight which a comparatively coarse balance will easily indicate. I am sure we all place greater reliance in the figures relating to the length of an object determined by a proper measuring instrument than if estimated by the unaided eye, however much training the latter may have. What applies to the senses of touch and sight applies also more or less to the sense of taste.

Undoubtedly the quality of coffee depends on its composition, and it is therefore to the chemists we have to look for a standard of its quality. It is rather surprising that they have not yet discovered on what constituents in coffee its quality really depends. No doubt one of the reasons is that it is likely a difficult problem to solve. At one time the quality of coffee was supposed to depend on the quantity of an alkaloid called caffeine which the coffee possessed. But as the chief alkaloid in tea is identical with that in coffee, and as tea and coffee have decidedly different tastes, and as the quality of coffee depends at least to some extent on the taste of the extract made from it, the quality of coffee cannot depend exclusively on its caffeine contents. To judge the coffee by its caffeine contents was therefore abandoned, or rather not seriously taken up. It is possible that the quality of coffee depends on the presence of a very minute quantity of some substance hard to determine; as for example, in wines. But even if this is the case the possibility of finding a fairly reliable chemical standard is not excluded, for, it is possible that other substances which can be more easily determined exist in a fairly constant or fixed ratio with the substances which actually give coffee its aroma.

With this assumption I undertook the analyses of five different samples of coffee supplied to me by Messrs. Binny & Co. The coffee, which was represented by these samples, had been sold in London a little over a year ago, the bulk of it on the strength of the liquoring test. The prices realised varied from 59 shillings to 80 shillings per cwt., and as the wholesale price in the open market is at present the best indication of quality we have the prices realised were taken to indicate the true quality of the coffee under examination. In these samples colour and size as judged by Messrs. Binny & Co.'s agent had not determined the market price, as the sample which in his opinion ranked highest in these respects had realised almost the lowest price, and the sample which brought the highest price had almost the smallest size beans.

From my experience with wheat I thought that possibly the compactness of the beans and their nitrogen contents might be made an index of their quality. The assumption was that the denser the bean or the higher its specific gravity the larger its percentage of nitrogen would likely be, and that the higher both of these were the better the quality of coffee might be found to be. Generally speaking, this has been found to be the case. But the differences are so slight and the number of analyses made too few to justify very definite conclusions.

*Analyses of five samples of raw coffee of 1901-02 from Mysore and Coorg, after drying at 100 C.*

No.	Price.	Specific Gravity.	Nitrogen. %.	Organic Matter.	Phosphoric Acid.
1	80	1.268	2.5	93.79	.45
2	77	1.267	2.3	95.54	.45
3	60	1.258	2.3	95.88	.44
4	59	1.259	2.3	95.83	.43
5	59	1.250	2.3	95.78	.43

The composition of these five samples (so far as they have been analysed) is surprisingly similar. The differences so far observed can hardly justify the difference in price obtained. Of course the analyses are only partly finished as yet; and as far as they go they are almost in complete harmony with the price. The most compact sample and that containing most nitrogen and phosphoric acid brought the highest price, while that of the lowest specific gravity and lowest nitrogen and phosphoric acid contents brought the lowest price, and the intermediate samples so far as the analysis goes brought intermediate prices. But notwithstanding that these results are very encouraging I want to carry the analyses much further and want to analyse many other samples before making any general conclusions. I have brought this subject before you now to tell you what I am doing in this line. I hope I may be able to continue this work and trust that if I do so I may get some very valuable results. But as the work connected with it is very heavy and takes considerable time I can make no definite promise in this direction. Possibly the Association might help me by getting say 15 or 25 1 lb. samples of coffee which have been sold this year in London on the liquoring test. They should cover as wide a range of price as possible, and should be accompanied by the name of the estate on which they were grown, the price per ton realised, all the details as to the liquoring test which can be obtained, and as much other information, such as colour, size, etc., as can be collected.

#### GUARANTEED ANALYSES OF FERTILISERS.

Before taking my seat permit me to again touch on the subject on which I addressed you last year, *viz.*, the desirability of buying all your fertilisers on the strength of a guaranteed analysis. I fear the great importance of this subject is not yet sufficiently understood. That the manurial value of a fertiliser depends on the composition appears self-evident to me. Nevertheless there appears still to be a temptation to judge a manure solely by its weight. I have heard of a manager of a coffee plantation being allowed a certain number of tons of manure irrespective of its nature. An agent told me that some planters would buy the manure for which they would have to pay the least number of rupees per ton, no matter what its composition; and that under such circumstances it was of course quite out of the question to think that by supplying a guarantee with their fertilisers they could reap any benefit. I am sure you will all agree with me that the planters described by this agent do not deserve the name of planter; that such men must be few and far between; and that if any of them are still able to buy manures they will have to adopt more intelligent methods if they wish to remain in the position to buy manures in the future.

The analyses I have made since last I had the pleasure of being with you have supplied me with figures which would enable me to speak even more strongly than I did at that time. Some poonacs, apparently unadulterated, contained much less than half of the percentage of nitrogen found in others having the same name, but undoubtedly of different variety. There can be no possibility of a doubt that the quality of the commercial fertiliser is liable to vary very materially. The name of an unadulterated fertiliser is not sufficient indication of its quality. To make this more impressive than I could by words

I give the following figures I sent to one of your brother-planters not long ago:—

*Analyses of Various Poonacs, Bone and Fish.*

Name.		Nitrogen %.	Phosphoric Acid %.	Relative Value.
White Castor (Bombay)	..	3.1	1.4	23
..... (Bengal)	..	8.0	3.4	60
..... (Mysore)	..	7.4	..	55
.....	..	6.5	2.3	48
Neem	..	4.4	..	33
.....	..	5.1	..	38
.....	..	4.1	..	30
Ippe	..	1.8	..	13
Hongay	..	4.1	.84	30
.....	..	3.8	1.4	28
Kurdi	..	5.8	1.9	43
.....	..	2.5	..	18
Bone	..	2.5	18.6	55
.....	..	4.0	23.3	76
Fish	..	4.0	1.7	33
.....	..	8.7	6.1	77

These figures should make it plain that every one buying a manure should strive to get a guarantee as to its composition, as one manure may be worth more than twice as much as another sold under the same name, and the only means the planter has of distinguishing between the two is a guarantee as to its composition. If times were so prosperous that we could afford to throw away half the money we may be able to spend on manures the necessity for a guaranteed analysis might not present itself with such irresistible force as it must do to those who really want to save every penny to make ends meet. There may be difficulties in the way of getting a guarantee as to composition for fertilisers. But these do not detract from the desirability of having such guarantee.

From the correspondence I had nearly a year ago with firms supplying fertilisers I am confident that most of them would have been prepared to give a guarantee if asked for it. In fact one firm volunteered to supply a guarantee with the fertilisers they offered for sale. But unless the users ask for or indeed insist on a guarantee they must be prepared to pay at times double the price for their fertilisers that they need have paid for the same amount of plant-food. Last year I told you how to select manures giving the best value for the money expended on them, and offered to help any one with the selection of his manures, provided he would send the guaranteed analysis and the price of the fertilisers available. Of course this promise still stands good.

The fact that some estates have passed more or less into the control of the agents is often spoken of as a barrier in the way of getting guaranteed analyses with the fertilisers these agents supply. But unless I am very much mistaken it should not be difficult to convince these agents that it is to the interests of the industry in which they have put their money and in which they are more or less directly interested to get the best value in the way of fertilisers for the money invested; and that this cannot be done without a guaranteed analysis. These agents are generally not specially interested in any one particular fertiliser, but would be quite prepared to stock the best procurable provided their managers and the planters as a whole demanded the best.

The matter of guaranteed analyses for fertilisers is within your reach. You can get them by stretching your hand out for them. But I doubt if they will be as easy to get in a year or two if you do not get them now. I fear they are not quite so easily got even now as they would have been nine months ago. Gentlemen, while striving to solve the difficult and interesting problems such as quality of coffee, do not let us neglect the simple and easy ones such as guaranteed analyses of fertilisers which we can practically get at present for the asking.

The CHAIRMAN proposed a hearty vote of thanks to Dr. Lehmann for his very interesting paper on two subjects so very important to the coffee-planter, and on the motion of Mr. Acworth it was decided, as was the case last year, to print this paper and the subsequent discussion with Dr. Lehmann separately in pamphlet form for the benefit of subscribing Associations.

There was then some technical discussion on the subject of the lecture, after which the Meeting resolved into Committee when Dr. Lehmann answered the questions put by members on various points raised under both heads of his lecture.

MR. CAMERON'S LECTURE.

Mr. CAMERON, Superintendent of the Lal Bagh, and Government Gardens in Mysore, then attended the Meeting and read a paper on "Rubber, Silk, Tannage and Fibres" as supplementary products for planters. He said he had specimens of three new plants at the Lal Bagh which members might like to inspect. One was the Arab tea-plant, another the newly-discovered Mosquito plant of Sierra Leone and a third was a new and valuable variety of Pineapple.

Mr. CHAIRMAN AND GENTLEMEN,—Three years ago I had the honour of reading you a paper on industrial exotics. Since that time considerable progress has been made in the acclimatisation of such plants, and knowing more about them, I make no apology for bringing forward the subject again to-day. The prevailing prices of coffee and tea are less hopeful than they were three years ago, and unless some unexpected reaction takes place in the supply from other countries, the outlook, especially in the former product, is not cheerful. But, fortunately for the Indian planter, there is an increasing demand in the markets of Europe and America for other products which he may be able to supply; and it is concerning some of these that I venture, with your permission, to say a few words. In official correspondence with planters I am frequently asked for advice in the selection of cultures suitable to this part of India. This paper may, therefore, be of some general service as a *précis* of my views on the subject.

The vegetable products for which there is a growing demand are india-rubber, textile fibres, tans, lubricating oils and fancy woods. There are also numerous other products which it is impossible to refer to in one paper.

RUBBER-YIELDING PLANTS.

So pressing is the demand for good rubber at the present time that, while experts are exploring the world for further supplies, the chemists are actually trying to manufacture an artificial caoutchouc. If they should succeed in the latter attempt, rubber-planting would, I suppose, become an unprofitable enterprise. But it is unlikely that they will succeed to copy nature exactly. I should here mention that an artificial product claiming to possess all the best properties of gutta-percha is now manufactured in Germany, and is used for insulating wires and cables. Then let us see, gentlemen, how we stand in regard to a possible rubber industry in Southern India. Of several rubber-producing plants on trial, the American trees stand out prominently in the estimation of the public. These are *Hevea brasiliensis*, producing Pará rubber, *Castilloa elastica* the source of Central American or Panama rubber, and *Manihot Glaziovii*, which yields Ceará rubber; here entered in the order of merit as regards the quality and value of their respective rubbers. But the prominence of these trees is due to their extensive use and productiveness in America, where they form part of the arborescent flora of the country, and we have still to learn, to a large extent, how far they may prove remunerative to the State and planter when cultivated as exotics in this country.

This brings me to my own experiences of the three trees, and as far as their utility to Mysore is concerned, I am going to

Reverse the order of things by putting Ceará first and Pará last. Within the past decade the Ceará tree has thriven amazingly, and has certainly come to stay in the country. It will flourish from the seaside to an elevation of at least 4,000 feet. Matured trees shed their seeds so abundantly that thousands of seedlings can be picked up wherever a few trees abound. Nor is it an unproductive tree, as it has so long been considered in this country. Recent tapping experiments in the Lal Bagh have conclusively proved that trees ranging in age from 8 to 14 years are highly charged with latex, and that the latter flows freely when tapped at the correct season and in the proper place. During the dry season, when the tree is leafless, the large root limbs should be tapped; and after the rains the operation should be transferred to the trunk, which yields its milk sap freely throughout the cold season. These experiments have also proved that, as regards the productiveness of latex, no two trees are exactly alike. Between the two extremes of a copious discharge and hardly any discharge at all, we seem to possess every degree of productiveness. This peculiarity does not appear to be due to situation, exposure, or even the quality of the soil, in whole, as two trees growing together under the same conditions of soil, etc., were found to be wholly different in the amount of latex they contained. It seems to be rather a constitutional feature that some trees contain more laticiferous vessels than others. In view to ascertaining what quantity of rubber a mature tree will yield without being injured, a specimen has been tapped twice a week for the past three months and the coagulated latex (it is not all pure rubber, as I shall explain later) now amounts to a trifle over 3 lbs. The experiment is going on, as the tree shows no sign of exhaustion either constitutionally or in the flow of latex. Early dawn is much the best time of the day for tapping, and the operation should cease about 8 A.M. The quantity collected from each of these tappings has varied from half an ounce to two and a quarter ounces.

What we have to do now is to raise nurseries of seedlings from the good trees and try to eliminate the bad ones. Being so hardy during long periods of drought, the Ceará tree would adapt itself readily to many of the scrub tracts at elevations ranging from 1,000 to 3,000 feet, with an annual rainfall of 25 to 40 inches. We know, of course, that it grows vigorously at higher elevations where the rainfall is heavy. But there seems to be a doubt (although nothing is proved) if the outturn of rubber would be as plentiful and good under the latter conditions of growth. Personally, I am in favour of the maiden as the best location for a Ceará rubber industry on an extensive scale. This you will naturally think cannot be of much advantage to the planter, who is confined to the hills. But in a large concern of this kind the planter, with his matured experience and larger capital, is bound to have a share sooner or later. It is now proved beyond a doubt that the Ceará tree is wholly adapted to the climate of Southern India. It is also being proved that as it approaches maturity some varieties of the tree are highly charged with latex, and I may here state that the dry climate of the plains is all in favour of a pure rubber being easily prepared from the latter. American imports of the rubber into the United Kingdom are valued at a somewhat lower rate than similar products of Pará and *Castilloa*. But with the improved methods of purifying the actual rubber by the extraction of hurtful ingredients such as phosphates, resin, and albuminous matter, the best tree of the future will be the one producing the largest quantity of pure rubber or caoutchouc. The latter is suspended in the latex fluid in the form of minute globules, and needs to be separated in much the same way that cream is separated from milk. An ideal preparation of pure rubber would be to drain the latex from the tree by means of a syphon into a kind of churn where the caoutchouc is
